Leading Concerns in the Industry

Buyers Use This Guide

Representative houses in all branches of the industry are to be found in this index. When purchasing look for names, addresses and product wanted, under proper classified heading

ACCESSORY MANUFACTURERS AND JOBBERS.

Alsten & Goulding Co., Worcester, Mass.

Auto Parts Co., Providence, R. I.

Bi-Motor Equipment Co., 180-182 Massachusetts Ave., Boston.

Denver Accessory Co., 18 Broadway, Pawtucket, R. I. (Daco.)

Johns-Manville Co., H. W., Madison Ave. and 41st St., New York City.

Miller, Chas. B., 97-103 Reade St., New York.

Branches: 203-204 Columbus Ave., Boston; Bridge and Dwight Sts., Springfield, Mass.; 274 Trumbull St., Hartford, Conn.; 924 Eighth Ave. and 2782 Broadway, New York; 1421 Bedford Ave., Brooklyn, N. Y.; 818 North Broad St., Philadelphia; 824 Main St., Buffalo, N. Y.; 1829 Euclid Ave., Cleveland; 227 Jefferson St., Detroit; 250 Peachtree St., Atlanta, Ga.; 601-603 Baronne St., New Orleans, La.; 185 Central Ave., Albany, N. Y.; 274 Halsey St., Newark, N. J.

Milwaukee Auto Specialty Co., 705-711 Chestnut St., Milwaukee, Wis.

Motor Parts Co., 185-187 Columbus Ave., Boston; 818 No. Broad St., Philadelphia; Springfield, Mass.

Northwestern Chemical Co., Marietta, O.

Weite Auto Supply Co., 81 Exchange place, Providence.

ACETYLENE TANKS. (See Tanks.)

AIR COMPRESSORS AND TANKS.

Williams Foundry & Machine Co., Akron, O.

AMMETERS AND VOLTMETERS.

Hoyt Electrical Instrument Works, Penacook, N. H.

AUTOMOBILES. (See Cars.)

AUTOMOBILE SPECIALTIES.

Cox Brass Mfg. Co., Dudley Ave., Albany, N. Y. (Brass Goods.)

BALLS AND BALL BEARINGS.

Ahlberg Bearing Co., 2624 Michigan Ave., Chicago.; 1786 Broadway, New York City; 806 Woodward Ave., Detroit.

Boyd, F. Shirley, 903 Boylston St., Boston. (R. I. V.)

Hyatt Roller Bearing Co., Detroit.

Marburg Bros., Inc., 1790 Broadway, New York. (S. K. O.)

New Departure Mfg. Co., Bristol, Conn. (New Departure.)

R. I. V. Co., 1771 Broadway, New York. (R. I. V.)

BATTERIES.

Edison Storage Battery Co., 127 Lakeside Ave., Orange, N. J. (Edison.)

Electric Storage Battery Co., Philadelphia. (Exide.)

Geissler Bros. Storage Battery Co., 514 W. 57th St., New York.

Johns-Manville Co., H. W., Madison Ave. and 41st St., New York City. (J-M.)

Weite Auto Supply Co., 81 Exchange place, Providence, R. I. (Success.)

BATTERY EXTINGUISHERS.

Johns-Manville Co., H. W., Madison Ave. and 41st St., New York City.

BODIES—WOOD AND METAL.

Springfield Metal Body Co., 20 Medford Ave., Springfield, Mass.

BRAKE BANDING OR LINING.

Johns-Manville Co., H. W., Madison Ave. and 41st St., New York City. (J-M Non-Burn.)

Russell Mfg. Co., Middletown, Conn. (Russco.)

Standard Woven Fabric Co., Framingham, Mass. (Multibestos.)

Branches: F. Shirley Boyd, 903 Boylston St., Boston; C. D. Schmidt, 276 Canal St., New York City; N. A. Petry Co., 1427 Vine St., Philadelphia; F. E. Sparks, 1430 Michigan Blvd., Chicago; Fred Ward & Son, San Francisco.

BRUSHES, WIRE.

Williams Foundry & Machine Co., Akron, O.

BUMPERS AND FENDERS.

Cox Brass Mfg. Co., Dudley Ave., Albany, N. Y.

Seger Co., J. H., 271 South Ave., Rochester, N. Y. (Diamond.)

CARBON REMOVERS. (See Cylinder Cleaning Compound.)

CARBURETORS.

Pindelson & Kropf Mfg. Co., 2127 Rockwell St., Chicago. (Rayfield.)

Branches: 1140 Michigan Ave., Chicago; 1211 Woodward Ave., Detroit; 1902 Broadway, New York City.

CARS—ELECTRIC PLEASURE.

Baker Motor Vehicle Co., Cleveland. (Baker.)

CARS—GASOLINE PLEASURE.

American Voiturette Co., Detroit. (Keeton.)

A Good Old Standby

Make your store
the centre of

Weed
Anti-Skid
Chain
activity

DO you display Weed Chains in your windows? Do you take advantage of every opportunity to remind the motorists in your community that your store is the hub around which Weed Chain activity whirls?

If you will only say the word, our Advertising Department will explain what *"Weed Service for Live Dealers"* really means in dollars and cents to you. ***We have Papier-mache tires, 30x3½, on which you can display our chains in your windows, and attractive cards, booklets, etc., on which we will imprint your name and address.*** All you have to do is to invest one cent in a postal card on which to assure us that you really desire to ***"Make your store the center of Weed Anti-Skid Chain activity" in your community.***

Awaiting your valued inquiry, we are, yours for co-operation,

PANHARD OIL

Don't Speculate, Buy Quality!

Stock of Standard Quality Has Value Wherever Offered for Sale

PANHARD OIL is the highest standard lubricant known to the motorists of the world. This recognition has been given because of QUALITY proven by use for 11 years.

PANHARD OIL is known for guaranteed quality wherever lubricants are sold.

PANHARD OIL has an established market. PANHARD OIL DEALERS do not deal in an UNKNOWN PRODUCT. They do not speculate. Their stock has a known value. Their trade has a constant productiveness.

DEALERS! The PANHARD OIL agency means stock of KNOWN QUALITY, the prestige of proven recognition, and the cooperation of the manufacturer in every endeavor to develop and retain patronage.

There are many opportunities for LIVE WIRE AGENTS. Write TODAY for details of our selling proposition.

GEORGE A. HAWS, 148 FRONT ST., NEW YORK

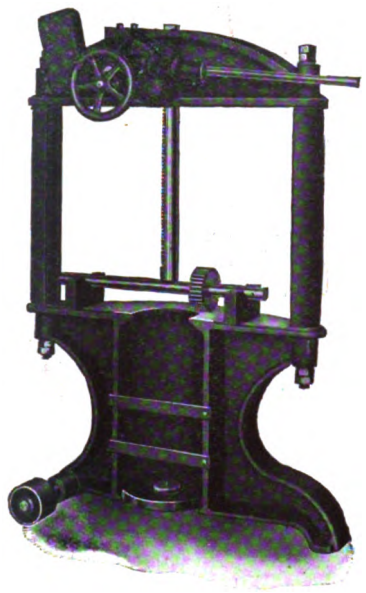
Mr. Automobile Repair Man:—



EVER have a good customer watch one of your men drive off a gear with a sledge hammer when your customer and you knew that your neighbor had a

GREENERD ARBOR PRESS

that would press the gear off or on and do a job better and in much quicker time?

You want your *service* the best. GREENERD ARBOR PRESSES help you to give that precious and profitable commodity known as SERVICE.

We want to tell you more about GREENERD ARBOR PRESSES. We build 15 sizes and have ***one size*** just right for your work. We have sold 168 No. 15 presses to Automobile repair men. We want to see 100 more sold before November 1st, 1914. Will you be a leader in your neighborhood, or will you wait until the other fellow boosts his reputation by installing the handiest tool that ever went into an automobile repair shop—a **No. 15 GREENERD ARBOR PRESS?**

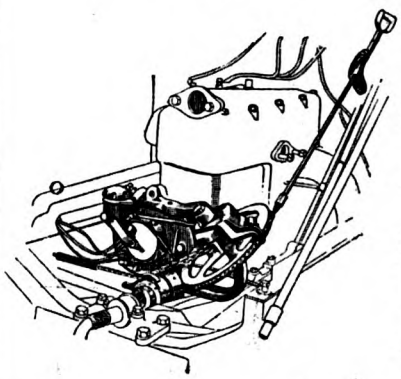
F. O. B. Boston



The fastest selling Ford Necessity of the year—The Starter that always starts the motor, gives universal satisfaction to the user, and brings business and prosperity to the dealer.

Is there a Boston Starter Dealer in your town? If not, learn the number of Ford Cars owned in your territory. Ask the owners their opinion of a Practical Starter; how it should be attached and the price that they will pay.

Hundreds of live wire dealers have done this. Hundreds of them are now making big money and doing better every day. The field is unlimited. Your opportunity for business is equal to theirs.

OUR SELLING PLAN TO THE TRADE IS THE MOST INTERESTING AND LIBERAL ONE EVER MADE. WRITE FOR IT.

DEALERS DOLLARS

$$$$$$$$

DEALERS WANTED IN ALL CENTERS NOT COVERED.

The Boston Starter could not be built better. It is strongly made and of the best material. Will last for years and any mechanic can install it. Wholly concealed and adds but little weight. A slight pull of the handle and the motor starts. No Springs, Batteries, or Motors to bother. Always Ready—Always Dependable.

DEALERS WANTED IN ALL CENTERS NOT COVERED.

The Boston Starter is built for Ford Cars. Thousands in use and every purchaser satisfied. It starts the motor from the seat. Anyone can operate it. All danger of back kicks are eliminated and every Ford equipped with a Boston Starter is equal to the most costly machine in this respect. It makes the Ford Car the practical family machine.

"NORMA"

BALL BEARINGS

HELP TO

WIN THE

INDIANAPOLIS SWEEPSTAKES

The twelve cars that finished in this record-breaking race were equipped with magnetos fitted with standard "NORMA" Ball Bearings. There could be no more convincing proof of the merit of these bearings. The strain was terrific—and one little bearing "gone wrong" might have lost a place for its car. "NORMA" Bearings are the standard in most of the high-grade magnetos, lighting generators, and starting motors made. You cannot ignore the results of such a test as this race afforded, or the judgment of the builders of these splendid machines.

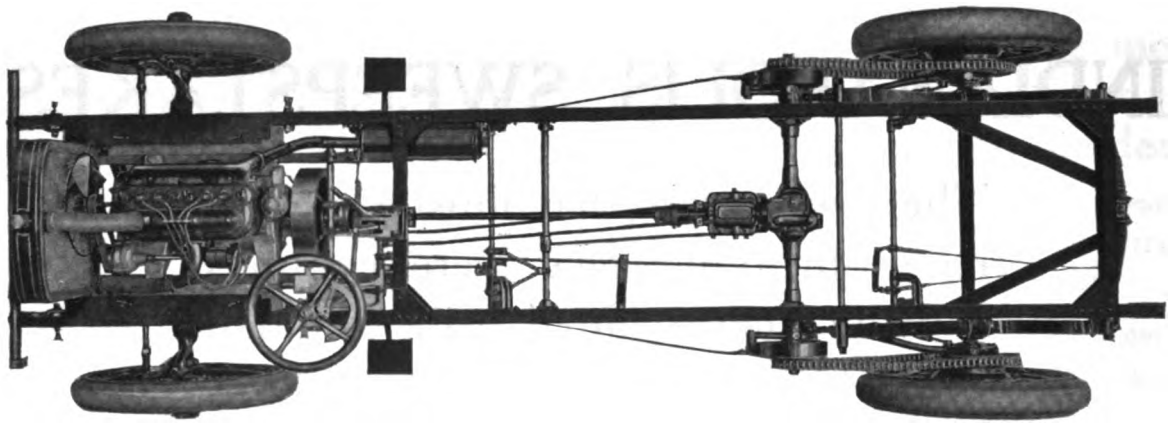
DEALERS

Known quality is an essential for the sale of the motor truck or wagon as for anything offered in the market, and the dealers who concentrate their endeavors in the distribution of a machine that has KNOWN QUALITY profit materially because of the confidence of the people.

KNOWN QUALITY in a commercial motor vehicle means the public understands that the individual dealer has locally to maintain the prestige and reputation of what he sells; that the manufacturer must preserve the confidence of the people, and that the designing, production, sales and service departments have been developed to insure the satisfaction of all users.

The SULLIVAN 3000-pound maximum capacity truck is a standard type, constructed with the best components that the leading specialists of the industry can produce, and concentration on one model means a perfected machine that is specialized in the fullest sense.



Sullivan Chassis, Maximum Capacity 3000 Pounds. $1600

The SULLIVAN Truck was designed to meet the requirements of the greatest number of business houses, to be the most practical unit for the development of general transportation needs, and to meet the demands of the most productive market.

The SULLIVAN Truck is STANDARDIZED in that in addition to the resources of the company and its agencies the purchaser is assured of the service of all of the great concerns that produce the material of which it is constructed. The maker and his agents may be eliminated, but the owner can obtain any component, at any time, and have the co-operation of the largest and best enterprises in the industry. One could say that the industry itself, and not the individual company, is ready to afford service.

The price of the SULLIVAN TRUCK is as low as is consistent with KNOWN QUALITY and KNOWN SERVICE. The type was designed with the experience of more than 30 years with commercial haulage. It is built as carefully as it was designed.

SULLIVAN TRUCK DEALERS have the largest market of the country to work in, they have the machine that will serve the largest number of general purposes, and they sell trucks because of the public confidence in KNOWN QUALITY, which is the indorsement of satisfied customers.

The SULLIVAN 1915 Truck is the best proposition in the market.
We can make a number of desirable agencies.

Write TODAY, specifying the territory you can cover. We can make a proposition that will mean big business for a LIVE WIRE.

MONEY-MAKING THE PURPOSE OF EVERY BUSINESS MAN

The MONEY-MAKING Accessory Dealer, Supply Dealer, Garage or Repair Man selects every line, but especially the oils, with absolute knowledge of quality and the confidence of the public in the manufacturer's guarantee.

The MONEY-MAKING Dealer, knowing his trade, concludes:

"I must sell an oil so good that it will be constantly in demand and bring me continuous profits.

"It must be an oil known for quality, must be constantly advertised, and its value must be proven by continuous and consistent use.

"This QUALITY REPUTATION, established by advertising and buyers' satisfaction, is the manufacturer's greatest asset, and is my assurance of selling the best that can be produced.

"I will not experiment with oil of unknown quality, for which I must make a market, lose the time necessary for developing it, and compete with the known and well exploited lines.

"I want oil for which there is an established demand when the motorists know I sell it, that is known to be all that the manufacturer guarantees, and is bought because of its quality.

"MONOGRAM OIL has been known for quality for 10 years and has been established as a standard of lubricants throughout the country.

"MONOGRAM OIL is sold in sealed containers, from one to five gallons capacity, which bear the manufacturer's guarantee, both to me and my customers."

The 1914-15 MONOGRAM OIL SELLING PROPOSITION is the most satisfactory ever offered the trade. We invite correspondence with all who want to sell the best lubricant known to motorists.

A MONOGRAM OIL AGENCY is a certain money producer.

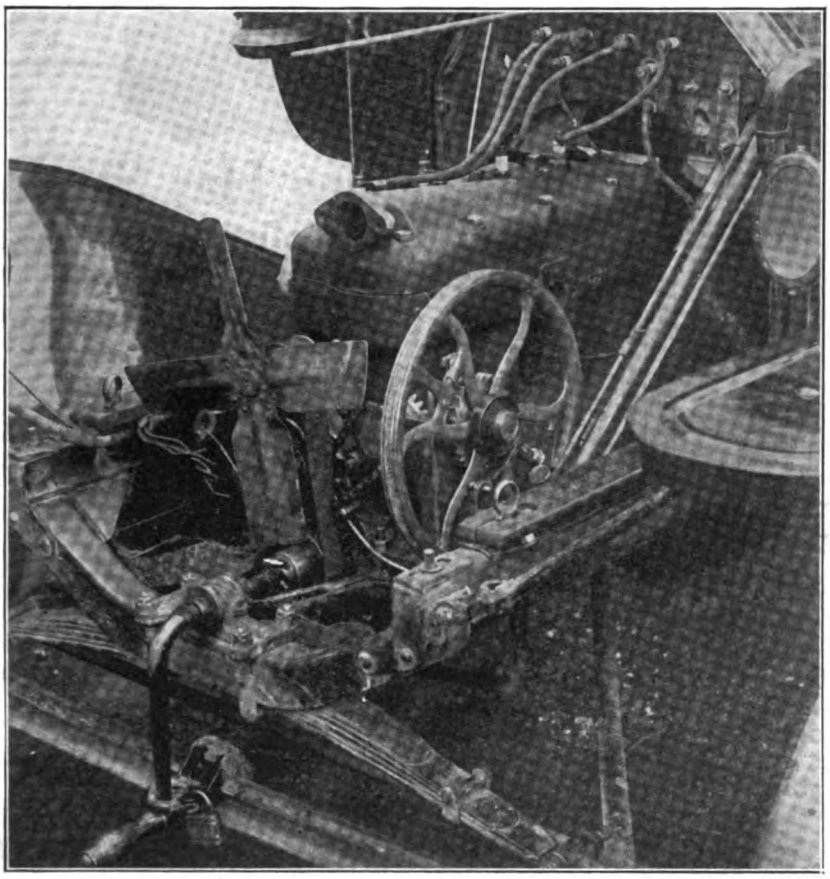
NO MORE BROKEN ARMS
NO MORE CRANKING IN THE MUD



The Universal Ford Starter for Ford cars has eliminated both the danger and the bother in starting the motor. It will turn your motor past firing compression so easy that your twelve year old son or your wife can start the car.

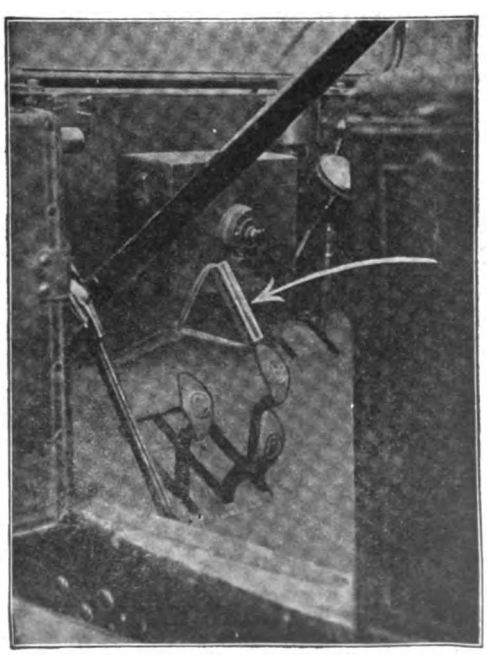
The Universal Starter Will Last as Long as Your Ford Car

It makes the Ford car a perfect convenience—a LADY'S car. It eliminates the hard and disagreeable work and risk of accident in starting your motor.

The Universal Starter is really the most practical Starter manufactured, regardless of price. It is always ready. There are no wires to short circuit, no dynamos to go wrong, and no storage batteries to run down. Get in the seat, adjust the starting mechanism, touch the priming device, pull the starting lever, and the motor starts.

When you trade your old Ford in for a new one you will take off the Universal Starter and put it on the new car. It is simple, easy to install and will outlast the car.

On account of its simplicity it can be manufactured and sold at a price that makes the cost a secondary consideration.



View from Seat

ALFRED A. STONE

Broad Exchange Building
25 Broad Street
New York May 22, 1914.

C. L. BRUNNER, ESQ., Treasurer and General Manager,

Brunner Manufacturing Company,

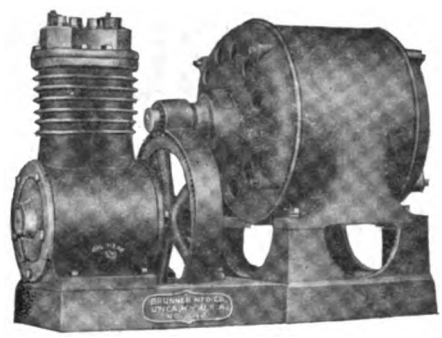
Utica, New York.

Dear Sir:

We have examined the books of the Brunner Manufacturing Company in order to ascertain the amount charged to customers for all repairs and replacements and materials for repairs on all air compressors, motors and accessories sold by the Company during the period from June 1, 1907 to December 31, 1913, and we hereby certify that the total amount of such charges during the period averaged less than eleven cents for each machine sold.

Yours truly,

APS. Barrow Wade Guthrie & Co.



No. 42. Motor Driven Air Compressor.

Average Repair Expense of less than 11c per Machine in 6 1-2 Years

"Brunner" air compressors are built on the principle of "how good."

Quality is predominant and quality prevails. Here is a record that speaks of the superiority of "Brunner" Air Compressors in time, trouble and money saving ***quality.*** It speaks volumes for the best materials obtainable; the cylinders true as rifle barrels; the proper fitting of all wearing parts; the correct design—all of which are put in the "Brunner."

Don't Take Our Say-So——Ask Your Banker

This record shows that of the many thousands of machines we've sold, the average repair expense on each, for 6 1-2 years, has been less than 11 cents. To be sure it's so, ask any banker as to the reliability of Barrow, Wade, Guthrie & Co., as auditors.

BRUNNER AIR COMPRESSORS

Are built to wear—to give efficient, economical service. That's why there are various sizes, different types—to fit all ordinary and peculiar conditions.

No. 52. Portable Outfit.

You want an air compressor and you want a good one. Once installed you want to forget your air compressor problem.

That being the case, insist on "Brunner."

There's a jobber in your territory who handles the "Brunner." Write us for his address.

BUSINESS BUILDERS

The highest type of business man is he who expects to get a new dollar and a little more for an old one, and to satisfy his customers because of the quality of the goods that he sells. The stock that is alive is that which is worth its face value in the market and which is always salable.

The best stock is that which can be sold the entire year around, which does not stagnate with seasons, and which will command an equal price every day that you do business.

The products of this company are recognized as standards of the market. They have been sold with the knowledge that they were all that they were represented to be, and the purchasers have learned not only that they have the qualities that are desirable, but they have the constant assurance that they are guaranteed —which means that any purchaser can have his money back if he simply says that he is dissatisfied.

This selling policy has established this company and it has made its products known as dependable. The Rub-On specialties have been distributed throughout the country and sold by thousands of dealers, each of whom has the same confidence in the products that have the users. Satisfied customers mean much to them.

The Auto Turn Jack

Every service station, garage owner and repairer has constant and practical use for the Auto Turn Jack. It is a simple and a useful tool every hour of the day and every day of the year. It means the saving of money to all who use it —the saving that can be accomplished by no other means. Floor space, labor and time are all economized, and the owner is the gainer. The Auto Turn Jack is purely a business proposition. It is exactly the same condition that you face when you consider an economy. **You** must realize it or the value is lost.

Special Cabinet Offer to Garages

Nothing is more promotive of business than a display of goods where they can be seen, and it is for the benefit of our customers that we provide a cabinet in which a complete line of the goods can always be shown where they must be observed by those who can use them. This is termed by us a Cabinet of Auto Aids, and it is of a size that can be placed in any convenient place. The cabinets are neatly made, are mission finished, trimmed with brass, have neat glass doors and have locks and keys by which the contents can be secured.

These cabinets are provided with an assortment of circulars for distribution, which specify the qualities of each of the products and the prices for which they are sold. The cabinet is designed to show a complete assortment, and the entire outfit is sold at an introductory price that is especially attractive.

Write us today for our propositions. They are business builders for us both, and there is no doubt that they will appeal strongly to you.

Insure Your Customers

¶ Insurance to you means security. You insure your business, your home, your health, why not take the same precaution with your customers?

¶ You know that braking efficiency of a car depends on the lining used. Is it not up to you, Mr. Garageman, when re-lining your clients' cars to use the best lining obtainable?

¶ Their safety from accidents due to non-gripping of the brake at critical times, is the protection that you owe them.

¶ This is insuring them, for satisfied customers is your success.

¶ MULTIBESTOS—the brake lining of quality, is close weaved from "long-fibre" asbestos and brass wire; it has stood every test.

"Let Multibestos Insure the Car"

¶ Used, recommended and sold by every dealer, repairman and garageman who puts his clients' safety above the "price tag."

THE ACCESSORY AND GARAGE JOURNAL

Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. IV. PAWTUCKET, R. I., JUNE, 1914. No. 2

OFFER FOR POPE COMPANY TURNED DOWN.

A Syndicate of Eastern Bankers Would Pay $1,800,000, $400,000 in Cash, and the Balance in Five-Year Notes.

IN THE Superior Court of Hartford, Conn., Judge William L. Bennett declined to authorize the sale of the Pope Manufacturing Company, now in the hands of a receiver, for the sum of $1,800,000. The plan submitted to the court provided for $400,000 in cash and the balance in five-year notes. Judge Bennett said Connecticut courts had never allowed its receivers to indulge in financial speculation.

Immediately after Judge Bennett's decision the interested parties held a conference looking toward a basis for another offer. George R. Nutter, representing the syndicate which made the offer, told the court it was the desire to pay enough for the Pope properties so that the merchandise creditors would be protected in full and also to pay the expenses of the receivership. He said further that a syndicate composed of Daniel Durnett and James T. Putnam of Boston, and Carl Bonney of Worcester contemplated the reorganization of the company with a capital of $2,800,000.

The inventory of the Pope Manufacturing Company properties in Hartford, filed with the court, is about $2,074,000, and the Westfield bicycle factory is estimated at about $1,300,000 in the earlier inventories. Colonel Pope has allowed about $1,600,000 of claims against the company and disallowed about $700,000.

PLAN CYCLECAR TAXICABS.

Twombley Taxicab Company Organized to Carry Passengers for 25 Cents the First Mile.

The Twombley Taxicab Company has been organized in the State of New York with a capitalization of $500,000 to carry passengers for 25 cents the first mile and five cents a quarter-mile thereafter.

The company is projected by W. Irving Twombley, New York City, who is the builder of the Twombley cyclecar. He is vice president and general manager of the new company. D. Stuart Dodge of Phelps, Dodge & Co., New York, is president.

The first cabs will be completed shortly and it is further stated that one has already been built. The cab will have a 44-inch tread, 92-inch wheelbase, four-cylinder, water-cooled motor, bore of 2.75 inches and stroke of four and improved landaulet body.

TWO RECEIVERS APPOINTED.

Randall-Faichney Company of Boston Is in Temporary Financial Difficulty.

Judge Dodge of the United States district court in Boston has appointed Charles P. Blinn, Jr., vice president of the National Union Bank of that city, and Benton Whidden of Brookline, Mass., receivers for the Randall-Faichney Company of Boston and Watertown, N. Y. The concern is well known in the industry as manufacturer of accessories, and also produces a line of druggists' supplies, etc. The receivers are ordered to furnish a joint bond of $50,000.

The petition for the appointment of receivers was brought by the Cutter Wood Supply Company of New Jersey, one of the creditors. Inasmuch as the schedule shows liabilities of $282,000 and assets of about $400,000, it is not thought that the trouble will prove of more than temporary character.

SURPRISING RESULTS.

Goodyear Company Finds They Follow Series of Meetings Held in Number of Cities.

Surprising results accompany a series of car and tire dealers' meetings which the Goodyear Tire & Rubber Company is conducting in the various principal cities. The Goodyear Company, having proved in the practise of its own sales policies that a remarkably successful tire business can be conducted on a standardized merchandising basis, has been interesting dealers in the development of standards in at least a part of their own business.

The meetings are held in behalf of better merchandising, and have not been merely occasions for the exclusive exploitation of the Goodyear products. The company takes the view that as fast as dealers declare themselves for certain standards, all tire companies must come into line; tire manufacturers, car makers, dealers and the consuming public will alike be benefited and the whole industry encouraged.

SHANKS WITH PREMIER.

Former Winton Man to Direct Sales and Advertising for Indianapolis Concern.

Charles B. Shanks has been appointed director of sales and advertising of the Premier Motor Manufacturing Company, Indianapolis, Ind. The status of Sales Manager Macey and Advertising Manager Bieling is not to be affected in any manner by the change.

Mr. Shanks is one of the pioneers of the industry, having been connected with it, chiefly in the sales and advertising department, since the days of the single-cylinder machines. He was formerly with the Winton Company,

MOTOR & ACCESSORY MANUFACTURERS.

Board of Directors Conducts the Organization on Business Principles—How Members Are Benefited.

Motorists and others connected with the industry will be interested in the brief explanation of the work and purposes of the Motor & Accessory Manufacturers as presented by James H. Foster, president of the association:

"Since the inception of the Motor & Accessory Manufacturers, 10 years ago, the board of directors had aimed to run the organization on a business basis and along conservative and productive lines. Many people probably do not know that the membership of the association now numbers 262 firms and corporations of the highest standing, and perhaps few people realize that the combined capital of the said interests represented in the membership is somewhat over $440,000,000.

"Its primary objects are to promote in all lawful ways the interests of makers of automobile motors, motor parts, or accessories; to aid in the protection of its members; to secure the advantages to be obtained by mutual co-operation; to facilitate the collection of the claims of its members and the diffusion of information concerning the trade, dealers, credits and other matters of interest to the association and members. Members agree that the credit department alone is a feature that makes membership worth while. The more progressive firms, selling either largely or in a limited way, feel that they cannot afford to be outside the privilege of these reports.

"The Motor & Accessory Manufacturers has been able to save the industry hundreds of thousands of dollars in needless or unwise expenditure. One thing that has been aimed at has been the matter of endeavoring to govern attempts to increase the expense of members exhibiting at shows. The fact that practically every city of any size has its annual automobile show—and quite frequently shows occur simultaneously—makes it impossible for a manufacturer of parts and accessories to exhibit at all of these during a show season. Incidentally the expense involved is too great. This resulted in what is known as the sanction rule. It was generally agreed that two national shows a season involve sufficient expense for the average manufacturer to afford, and accordingly, the two national shows in New York and Chicago, respectively, were chosen to be sanctioned by the Motor & Accessory Manufacturers. Their members were privileged to exhibit at these and not elsewhere. Hence, instead of chaotic competition reigning, the matter of exhibiting the goods of members to the public and to the trade each winter has been systematized so that every member is placed on an even footing with his fellow members".

James H. Foster, President, Motor & Accessory Manufacturers.

KELLY-SPRINGFIELD TIRE COMPANY.

More Than 90 Per Cent. of the Debenture Bonds Deposited Under the Terms of the Agreement.

Over 90 per cent. of the 50-year, four per cent. income debenture bonds of the Kelly-Springfield Tire Company, New York City, have been deposited with the Bankers Trust Company, under terms of deposit agreement of April 15. Directors of the company have adopted resolutions authorizing the Bankers Trust Company as depository under the said deposit agreement to exchange 50-year debenture bonds for six per cent. cumulative preferred stock on a basis of one share of said preferred stock of a par value of $100 for each $100 face value of said debenture bonds.

All conditions precedent to the payment of the 78½ per cent. cumulative dividends upon the present outstanding issue of the six per cent. cumulative preferred stock having been complied with, the directors have ordered that the said 78½ per cent. of cumulative dividends on the preferred stock, payable in seven per cent. cumulative second preferred stock of this company, declared April 9 to stockholders of record May 6, payable at a date to be thereafter fixed, be paid, and designated June 15 as date of payment on these cumulative dividends in second preferred stock to preferred stockholders of record May 6.

No fractional shares of second preferred stock will be issued, but in lieu of said fractional shares, cash will be paid equal to the par value for any fractional certificate of second preferred stock to any stockholder entitled to receive same. All due bills accompanying trades made since May 6 are now redeemable by the delivery of the stock dividend.

VEHICLE TAXATION.

Universal Fee for Road Maintenance Urged to Solve Difficulty of Highway Upkeep.

Howard E. Coffin, vice president of the Hudson Motor Car Company, Detroit, said recently that all vehicles, whether horse or motor driven, will be taxed for road maintenance. Appropriations for road building have been made generally, but little attention has been paid to financing a proper road maintenance year after year. He recognized the neglect of the highways as a serious offset to the large outlays for new roads that are constantly being made throughout the country.

BUYS PALMER & SINGER.

Singer Motor Company, Inc., Purchases Trade Name, Etc., and Will Supply Parts.

The Singer Motor Company, Inc., 630 Jackson avenue, Long Island City, N. Y., purchased at a private sale the trade name, good will, patents, drawings, etc., of the Palmer & Singer Manufacturing Company. The new company will supply repair parts for the car of that name and will also maintain a service station.

Work on the Singer Six is progressing rapidly and the first chassis is now being tested on the road. Deliveries will commence about July 15. The new car will be fully equipped and will sell at a price well below $2500.

A. A. A. GOOD ROADS PATRIOTS.

Will Rally July 6 in the White Mountains—Many Notables to Be Present.

Governor Felker of New Hampshire will head the list of noted speakers who will address the good roads sessions of the midsummer meeting of the American Automobile Association, to convene at Hotel Maplewood, Bethlehem, N. H., on the afternoon of July 6. White mountain visitors generally are invited to attend the highway gathering, which will be in charge of Chairman George C. Diehl of the A. A. A. National Good Roads Board.

State Highway Commissioners S. Percy Hooker of New Hampshire, Lyman H. Nelson of Maine and Charles W. Gates of Vermont will tell of roads development in their respective states. An address which will have some reference to federal aid will be delivered by Paul D. Sargent, the state highway engineer of Maine, who was formerly acting director of the United States office of public roads of the Department of Agriculture. Col. W. D. Sohier, chairman of the Massachusetts Highway Commission, also expects to be present.

MAKERS ELECT OFFICERS.

Col. Charles Clifton Again Heads the National Automobile Chamber of Commerce.

Col. Charles Clifton, treasurer of the Pierce-Arrow Motor Car Company, Buffalo, N. Y., for eight years at the head of the national motor car manufacturers' organization, was re-elected president of the National Automobile Chamber of Commerce at its annual meeting in New York City early in the month. The other officers are: Vice president, Wilfred C. Leland; second vice presidents, Hugh Chalmers, Windsor T. White, H. H. Rice; secretary, R. D. Chapin; treasurer, Col. George Pope; general manager, Alfred Reeves. Board of directors, the officers and S. T. Davis, C. C. Hanch, Alvan Macauley, W. E. Metzger, H. O. Smith, Albert L. Pope, L. H. Kittredge, John N. Willys and E. R. Benson.

PRICE SITUATION IN GENERAL MATERIAL MARKET.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period, for purposes of comparison. Southern iron and northern iron has dropped 25 cents and 75 cents respectively. Bessemer steel and open hearth has come down 50 cents a ton. Tin has a decrease of $4.50 a 100 pounds for the month. Pennsylvania crude oil dropped 10 cents on the barrel. Cottonseed oil rose 25 cents on the barrel.

THE ACCESSORY AND GARAGE JOURNAL

VOL. IV. JUNE, 1914. NO. 2.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

ADDING A TRUCK LINE.

The man who has built up a good little business in pleasure cars in a small town or city, is justified in considering the possibilities of adding a line of commercial vehicles. He will have to realize from the start that it requires a little different method to sell trucks and business wagons, and there is nothing to be gained by taking on too big a load. He has some advantages over the fellow who must begin at the bottom, however.

In the first place he has the equipment, the selling organization and the experience. The things he must learn can be learned much more readily by him than by a novice. He has established a reputation which will be a valuable asset when approaching business men. If he is one of those dealers who has been maintaining a garage in connection with his sales agency, he is in a position to offer that service which guarantees proper treatment of the man to whom he makes a sale.

Of course, it is just as necessary to apply business methods—perhaps a little more so. The manufacturer warrants his product within certain limitations, and the dealer, in any case, must be well established financially if he is willing to assume greater risks than the man who produces the machine he is representing. It is much better to make a little something on the deal than to make a sale and lose all the profit and something besides through assuming obligations that properly belong on the shoulders of the manufacturer. And this applies to the sale of pleasure cars as well.

THE TRADE PAPER.

Is it possible to realize an ideal? Probably not, for an ideal is illusive; the nearer it is approached, the farther away it seems. That is to say, a man is never completely satisfied, or, if he is, there is something radically wrong with him—he is not a true man.

Every business man should have an ideal. He should never be satisfied with the conditions under which he is working or the results obtained. There must be that something illusive, which spurs him to better things.

The trade paper has a splendid mission, in that it strives to present the ideal. No matter what business a man may be engaged in, he cannot afford to be without the inspiration that comes from a careful reading of his trade paper.

There is sufficient material within the covers of every trade paper that comes into the garage to set every man in the place thinking—different ways of doing simple things, possibly a hint as to that which made one business a success and another a failure, a suggestion of value with respect to systematic methods, a new accessory that will just fit into the stock already carried—a hundred things that cannot afford to be overlooked.

RESULT OF BUSINESS METHODS.

After visiting some 75 automobile manufacturing concerns in the Middle West, Alfred Reeves, general manager of the National Automobile Chamber of Commerce, reports that most makers will complete the shipment of their 1914 models by July 1, and that many concerns were out of cars the first of this month. In view of the conditions which have confronted the industry during the past year, this is a particularly pleasing situation in which its manufacturers find themselves.

There can be little doubt that the present situation is the direct result of the application of business principles on the part of the manufacturers. Dealers will do well to study this aspect of the proposition. Many already have done so, to find that it pays to know that when a car is sold there is a little something ahead on the right side of the account, without having to turn over another machine before the profit appears.

PREVENTING LEAKS IN THE GARAGE.

A Simple, Practical System Utilized at Bullock's Auto Station Which Protects Owners and the Proprietor---Garage Specializes Successfully in Storage and Supplies.

WHILE there has been some little confusion of terms in the minds of the public, it is obvious that there is a wide difference between the garaging of cars, involving storage, washing and polishing, and the complete care and maintenance of machines. A business which presents a number of interesting features is that conducted as Bullock's Auto Station, by Richmond B. Bullock, Providence, R. I., who entered the field some five years ago, and by close study of the needs of his patrons has built up a limited service which has afforded splendid satisfaction.

The plant consists of three buildings, all of fireproof construction. The main garage is of cement concrete, is lighted throughout by electricity and is steam heated. A large portion of the first floor is devoted to live storage, and here the washing and polishing and such minor adjustments as are required receive attention. A small section of this floor, at the right of the entrance, is set apart as a stockroom, where tires and tubes are the principal supplies featured. On the second floor are the offices, and back of these is a rest room for chauffeurs, equipped with every convenience to meet their needs.

Close to the garage proper is a second building, fitted with individual stalls, which are rented for a nominal sum. Each stall is provided with a door, to which the occupant is supplied with a private lock and key. The management assumes no responsibility for machines housed therein, other than to provide adequate protection in case of fire. A master key permits cars to be removed in case of need, although, since the structure is fireproof, the occasion for such action is held to be remote.

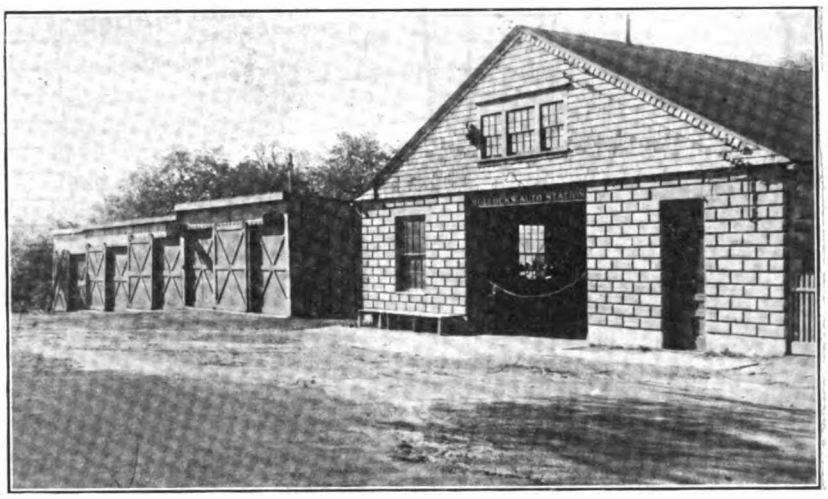
The third building is devoted entirely to dead storage.

Mr. Bullock looks after all matters personally, and no one else is permitted in the office except a young woman, who is employed for a period each month to do stenographic work, send out statements, etc. Since the station is open day and night, it is necessary to have a full working force in attendance. The manager, who has charge of the detail work, is at the garage from 7 in the morning until 7 at night during the winter months, while during the summer his hours run into the night, and he is paid by the hour for all overtime. The man who washes the cars comes on at 7 in the evening and works until 7 in the morning, and the polisher reports at midnight and is dismissed at midday. At all times one man is expected to help the other.

System, coupled with strict attention to minute details and habits of customers, is the keynote to success. That it is by no means necessary to adopt a complicated system is borne out by the experience of Mr. Bullock, who has devised simple ways and means to stop and prevent leaks.

In the first place, cars are not permitted to be taken out by chauffeurs unless authorized to do so by the owners. The proprietor holds a special constable's license, and each chauffeur is made aware of this fact. Whenever it is desired to take out an employer's machine, for which no order has been given, the applicant must assure the management that he has the necessary permission. This feature has been found especially beneficial, as it protects both owner and garage.

A record of all cars entering and leaving the garage is kept on the form shown at Fig. 8. This is printed on white paper, four by 11 inches, and conforms in every respect to the state law. At the end of each day this slip is filed, and, if for any reason it becomes desirable to produce the record, for inspection by state officials or otherwise, it is readily accessible at all times. It will be noted that these supply the necessary check on chauffeurs or others, who might be detected in using the car without being fully authorized to do so by the owner.



Front View of Bullock's Auto Station, Providence, R. I.

At Fig. 1 is shown the daily report sheet, printed on manila card, nine by 11 inches. In the first column is the owner's name or number of the car, with the workman's initials in the upper right hand corner, so that the proprietor knows what man worked on the machine, and the goods used. The next column is for washing, with the amount charged for this service. Polishing, gasoline used, cylinder oil, labor, storage

Digitized by Google

and total are the columns that follow, and as the particular car indicated was given full service, each space contains the cost and the total is carried out to the right. If the patron is a transient he pays for it and a rubber stamp entry with the word "Paid" appears alongside of the transaction. He also is given a receipted bill, shown at Fig. 3, this being on white paper, four by 5.5 inches.

At the end of each day these reports are sent to the office with those covering the previous night's business, and all entries are then made in the journal, Fig. 4, which is a small book consisting of loose leaves, measuring eight by five inches. The patron's name and address are entered thereon and the account number. Each page is heavily ruled to meet the requirements of this branch of the system, and the entries are made as shown by the daily report. Should the account run over, another page is inserted, instead of using the back of the original. This portion is reserved for the signature of the proprietor, which is utilized as a quick way to detect dishonesty on the part of others who have no right in the office. It is a simple matter to add the amounts and foot the bill for the month's work, etc., which has been done on an owner's car.

An itemized bill is sent out at the beginning of each month to each customer, and as he pays he is given credit in the journal column marked credit, and the word "Paid" is entered at the extreme right. In this way it is quite a simple matter for the owner of the garage to tell at a glance just who owes an account and who pays regularly. There is nothing complicated about it.

When cash is received, an entry is made in the cash book. This is another book of loose leaves numbered and dated consecutively. At Fig. 2 will be seen the method of handling all moneys that are received and paid out. The page is ruled and measures the same as the journal. The balance is carried to the extreme right. When money is received either in part or full payment, it is entered, with the date, the person's name and the amount in the "Received Payment" column.

When money is paid out, the same course is pursued, with the exception that the number of the check is placed at the right of the name and the amount carried to the "Paid" column. The bottom line is reserved for the total amount of incoming and outgoing cash. The balance is then carried forward onto the next page and it is possible to learn at all times just how much cash should be in hand. It must be understood, however, that the figures given herein in any part of this system, are for purposes of illustration, merely, and in no way apply to this company.

There is also an "Open" book used by the manager in the garage, and as supplies are furnished or work is done on the cars he enters the items against the customer's name. In the back of this book is an alphabetically arranged index with all the names of the customers entered thereon and the amounts owed by them, so that in the absence of the proprietor the manager may refer to this index and tell at once what amount is due the firm. When money is received by him, he gives the patrons a receipt and marks "Paid" in the column reserved for that purpose. This book is a duplicate of the journal used in the office, and accounts are transferred thereto at stated periods. As accounts are paid they are taken out of the journal and filed.

Tires are a very important feature at Bullock's Auto Station. The rule provides that they must be paid for the day the customer wants them, and in the case of regular boarders 10 days is the longest time that is allowed. There is no deviation from the general rule, except as stated.

Tires coming from the factory bear a yellow cardboard tag, 4.5 by 5.5 inches, Fig. 5, and as received are checked in the tire book, Fig. 6. The

Fig. 6, Style of Order Book Which Bullock's Auto Station Uses in Ordering Tires.

tag is divided into two parts, the upper half being useless after the lower half has been torn off when the tire is sold. The latter portion is sent to the stockroom and filed, so as to simplify matters when it is time to take stock, these tags notifying the proprietor what tires have been sold and what is needed. It would entail a great deal of work and, consequently, loss of time, to handle a large number of tires, such as is carried by this concern, in order to find out just what stock is on hand.

The tire book, Fig. 6, 8.25 by 10.5 inches, shows the method of ordering tires from the manufacturers, and includes the date when received at the garage, the style, size, etc., to whom sold, when paid for, and the date the manufacturer was paid by the garage, and the serial number of the check is also recorded, so that it would be impossible for any errors to occur in connection with tires.

Gasoline is carried in a large underground tank and a meter records the amount taken out each day. Assuming that the tank holds 800 gallons, and the daily report sheet, Fig. 1, shows that 300 gallons had been taken out previously and that 50 gallons were sold that day, there should be a total of 450 gallons still on hand, and the meter reading should correspond, so that the proprietor is able to tell at a glance how much fuel he has. The experienced garage man will detect any slight difference between the reading of the meter and the daily report. An allowance is made for any evaporation which may occur.

Should there be an unreasonable difference between the reading of the meter and the daily report, the employee whose initials are entered in the upper right hand corner of the first column is made to pay one-third of the loss that occurs. The manager of the garage and the proprietor must also do the same. This applies to all goods wherein there is a loss of any proportion. This method insures carefulness on the part of employees and as the proprietor is willing to bear a proportionate share of the loss, it retains the good will of all concerned. However, it is very rarely that mistakes occur.

Should an employee make an error in writing out the transactions on the daily report card, he must not erase it, but mark in the spaces, "Error", and then proceed on the next line. When this report is handed into the office it is seen at once the nature of the error and it is then corrected.

A portable 50-gallon tank is also utilized, this being filled from the main tank and equipped with a meter which is read in the same manner.

Repair work, other than minor adjustments, is not undertaken by Bullock's Auto Station, arrangement for this work having been made with outside repair shops. Before leaving the garage each car is fitted with a manila tag, 2.5 by five inches, bearing the car number, proprietor's name and nature of the work to be done. This rule applies for all repair work, including vulcanizing and battery charging. There is space on the tag

for the price at which the work is charged to the station and this is kept on file convenient for reference.

Patrons are given every consideration. A telephone pay station is on the main floor of the garage and placards are posted throughout the building calling attention to the different supplies on hand, and this has oftentimes been known to present an article to a customer's mind, with the result that a cash sale has been made.

A very novel idea of Bullock's Auto Station is the big display of tires that greets the visitor upon entering the garage. At different intervals, different makes of tires are displayed to advantage, and on either side of this showing is a list of all the standard makes carried. At night it is illuminated by electric lights, which makes it most effective and attractive.

Oils and greases are also shown, together with large signs indicating the brands carried in stock. However, a customer is not urged to take any particular brand, as the variety is such that at any time he can always get just what is wanted. It is one of the main points of Bullock's Auto Station not to talk a patron into buying one particular kind of tires, oils or greases, or anything else necessary for the car, and the proprietor finds that the customer is always much better pleased by getting what he wants and not what the garage wants to sell.

All persons are warned about entering cars or meddling with the mechanism. It often happens that a person not acquainted with the working of an automobile will touch some part and set going the machine, with the result that a great deal of damage is wrought. The rule not to allow strangers to enter cars is rigidly enforced and is a source of much protection to owners and the garage management.

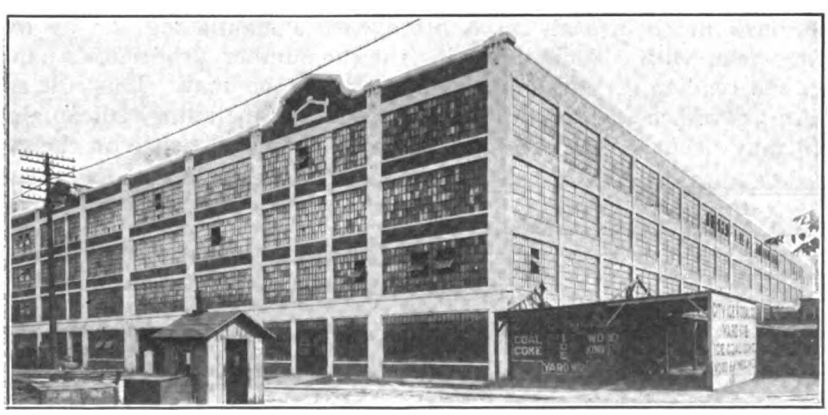
Bullock's Auto Station owes its success to promptness, courtesy and carrying fresh and reliable stock, with lowest prices at all times for services rendered and its plan of doing business on a systematic, cash basis.

GENERAL NEWS OF THE MANUFACTURERS.

The Commerce Motor Car Company, Detroit, had a narrow escape from fire as the result of an explosion, which made a total wreck of the adjoining plant of the Mexican Crude Rubber Company. While the explosion was terrific, demolishing the heavy machinery and killing 10 men, with scores of wounded, the only damage suffered by the Commerce factory was the loss of thousands of small window panes. Several of the men at work assembling the delivery cars were blown over in a shower of glass. George B. Wilcox, the sales manager, reports production is unhampered.

The Jones Electric Starter Company, Chicago, Ill., manufacturer of the Jesco line of electric starting, lighting and ignition apparatus, has established a Detroit office at 1211 Woodward avenue. This branch will be in charge of E. L. Jones, E. E. He is vice president and chief engineer of the company.

The O'Mullins Quick Adjustable Wrench Company, Trenton, N. J., will manufacture a wrench which can be quickly adjusted and which stays adjusted until changed.



General View of the New Building of the Cole Motor Car Company, as Seen from Market and Davidson Streets.

The Lozier Motor Company, Detroit, has started a sales contest among its dealers, sub-dealers and their salesmen, which will close Sept. 15. Each contestant will receive a certain number of credits, determined by the contest committee according to conditions in the contestant's territory, for each sale made during the time of the contest. The first 12 contestants will receive a trip to Detroit as honored guests of the Lozier company, all expenses paid, the time being donated by the employer. In addition the winner will have his expenses paid for a trip of one month to study automobile conditions in London and Paris, and incidentally to enjoy the sights and wonders of those cities.

The American Malleable Company, Owosso, Mich., is to erect a factory at Flint, which will be the centre of its activities in Michigan. The site is in the extreme north end of the city, close to the General Motors buildings.

The Abbott Motor Car Company, Detroit, is finishing one-half of its output in fancy colors, says Edward F. Gerber, president of the company. This new demand is causing automobile factories much extra work, as it means carrying three or four stocks of bodies and in addition to this it takes a considerably longer period of time to finish a body in special color than in standard black.

The Briggs Manufacturing Company, Detroit, maker of automobile bodies, has acquired the large plant formerly occupied by the A. C. Knapp Trimming Company. The building is three stories high and is 200 by 120 feet.

The Stutz Motor Car Company, Indianapolis, has gathered in all of its racing trophies and is exhibiting a costly collection of silverware. The Stutz trophies were won in a sensational campaign covering three years. A remarkable record was established last season when Earl Cooper and Gil Anderson won seven consecutive road race victories and the former gained the title of "official road racing champion for 1913".

The Lozier Motor Company, Detroit, has employed as first aid man, L. B. Williams, who was examining officer at the United States Army recruiting office in Detroit. He will organize a first aid corps of the factory employees, which will be in readiness to respond instantly in case of accidental injury to workmen. He will work under the direction of the welfare committee recently appointed by the Lozier Young Men's Club.

The Firestone Tire & Rubber Company, Akron, O., is again adding to its plant to meet the rapidly increasing demand for its product. The company will install a new 4000-kilowatt generator and steam turbine to furnish additional power needed for for the extensions. The present switchboard will be replaced by a new gallery board 70 feet in length.

The Century Electric Car Company, Detroit, announces through its general manager, W. J. Gordon, that the month of May was the best selling month for electric vehicles since he has been connected with that company.

The Gadabout Motor Corporation of New York, Newark, N. J., has leased the factory building at the corner of Badger avenue. The company manufactures two-passenger cyclecars.

The Allen Motor Car Company, Fostoria, O., is planning to erect a large factory.

The Haynes Automobile Company, pioneer automobile builder of Kokomo, Ind., reports, through its general manager, A. G. Sieberling, that the month of May was a record-breaking month with that company.

The Moon Motor Car Company, St. Louis, Mo., has established agencies in Canada, South America and New Zealand.

The General Motors Truck Company, Pontiac, Mich., has just closed an order with the Indian Refining Company for seven two-ton gasoline trucks. This makes a total of 12 GMC trucks which the Indian Refining Company has purchased within the past month.

Digitized by Google

The Dayton Rubber Manufacturing Company, Dayton, O., manufacturer of Dayton airless tires and Dayton pneumatic tires, has moved its New York City office from 1874 Broadway to 1851 Broadway, and now has one of the most attractive and up-to-date tire offices in that city.

The Sears-Cross Company, announces the removal of its service station to 218 West 65th street, New York City. The executive offices are located at the company's factory, 147 41st street, Brooklyn, N. Y.

The Champion Spark Plug Company, Toledo, O., announces that it is now turning out an average of 26,000 spark plugs a day. Four years ago the business was started in a small factory space in that city, the first daily production being about 400 plugs. The Champion plug is used in the factory equipment of Ford, Overland, Maxwell, Studebaker, Metz and many other cars.

The Swinehart Tire & Rubber Company, Akron, O., makes a variety of tires for truck use. A special cellular tire for electric trucks is stated to be extremely economical of current consumption, as the flow or "bunching" of the rubber is absorbed by the cells. Additional claims are that this tire transmits absolute traction; that it will not skid on wet or slippery pavements, and that the additional resiliency prolongs the life of both batteries and mechanism.

The National Rubber Filler Company, Midlothian, Tex., manufactures a rubber tire filler designed to take the place of the inner tube and air, which, the company states, ends all tire trouble. The company claims that it is made on the correct principle and out of the proper material to give service and satisfaction, high grade rubber cut in small pieces and vulcanized together being the medium employed.

The Leather Tire Goods Company, Niagara Falls, Ont., produces a new type of tire chain which differs from ordinary chains in having cross members made of heavy sheet metal pieces. These are formed so as to present the smooth, rounded side of the metal to the tire and the edges towards the road, and it is held that the best possible grip is obtained on the road and that there is a minimum amount of wear on the tire. They are known as the Kant Skid chains.

The Power Efficiency Company, Trenton, N. J., announces that it is entering the manufacturing field. The company will make automobile accessories, and the first of these that will be placed on the market will be a double spark plug. H. T. Caullet is president and E. Furman Hooper is secretary and treasurer. M. T. Minogue is general manager.

The Allen Motor Company, Fostoria, O., recently announced that the company's plant will be enlarged during the coming season.

The Saginaw Motor Car Company, Saginaw, Mich., which was recently organized with a capital stock of $150,000, will manufacture the Saginaw speedster. The new firm is composed of A. R. Thomas and W. L. Walls. The company recently acquired the property of the Brooks Motor Wagon Company, which is well equipped for manufacturing purposes.

The Aetna Motor Truck Company, Detroit, has secured a factory at the corner of Richmond avenue and East Grand boulevard. The company plans to build, during the first year, 200 trucks of two tons capacity. The officers of the newly formed company are: President and general manager, J. George Wagner; vice president, Ernest E. Kinney; secretary, William A. Eldred; treasurer, John J. Wilson; director, George Humbert.

A. O. Dunk, president of the Puritan Machine Company, Detroit, has purchased the assets of the F. A. L. Auto Company, Chicago. This purchase includes all the patterns, tools, service parts and other property formerly owned by the latter concern, and the entire stock has been moved to Detroit. The Puritan Machine Company is now supplying parts to over 56,000 private owners whose cars were made by firms now out of business.

The Goodyear Tire & Rubber Company, Akron, O., has just announced a reduction of approximately five per cent. in the price of its individual block motor truck tires. According to advice received from the factory, this was made possible by the constantly increasing demand for this type of tire by motor truck operators. Raising the production volume lowered the cost to warrant a decrease in selling price.

The Kissel Motor Car Company, Hartford, Wis., has recently completed additions to its large plant, which will increase the floor space by 60,000 square feet. The plant is one of the most complete in the country, including iron, steel and aluminum foundries, heat treating ovens, machine shops, motor testing department, tin shop, wood shops, sand blast, upholstery department, paint shops and final assembly department. The company manufactures its own motors, axles, clutches, crankshafts, bodies and tops, as well as many of the minor parts of the cars and trucks produced by this concern.

The Sprague Umbrella & Manufacturing Company, Norwalk, O., maker of automobile tops and accessories, has made an assignment for the benefit of creditors, with $10,000 assets and liabilities of $60,000. E. G. Martin was appointed assignee.

The Four Wheel Drive Auto Company, Clintonville, Wis., is about to commence the construction of an addition to its large plant. The building will be 40 by 80 feet and will be used exclusively as a paint shop.

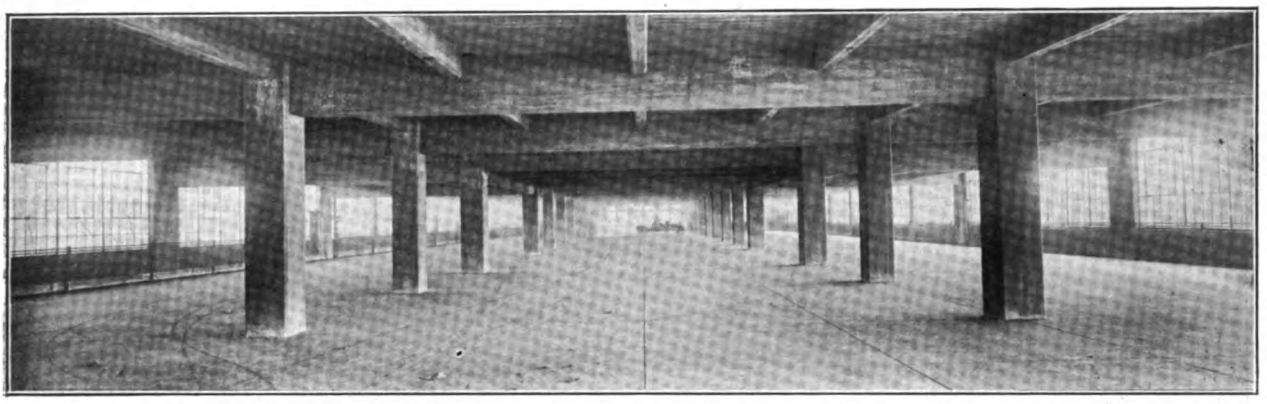
The Ford Company, Ltd., Walkerville, Can., has declared a dividend of 10 per cent. Although the company has paid dividends annually since it was organized in 1904, this is the largest dividend that has been paid. The amount distributed will be about $100,000.

The Carter Carburetor Company, St. Louis, Mo., whose main factory is at 912-14 North Market street, has bought the large modern factory located on Spring avenue, between St. Louis and Dodier avenues. The main building is of brick, three stories, 125 by 50, and another building 40 by 90 feet will be erected at once.

The Allen Motor Company, Fostoria, O., contemplates the erection of a large addition to its plant on the site of the Atlas Manufacturing Company, located across the street from the present plant. Application has been made to the city officials for permission to build a covered passageway across the street and if that is granted the additions will be started at once.

David Hughes, Racine, Wis., has engaged in the manufacture of an appliance by means of which motor car headlights are focussed in the same direction as the front wheels. The device is being given a thorough tryout on all Racine fire department vehicles. Patents have been applied for.

The Willys-Overland Company, Toledo, O., held its annual convention recently and 95 representatives assembled in that city from all over the world. Every state in the Union was represented and also such far away countries as New Zealand, South Africa and China.



Looking Down the Main Floor of the New Cole Building, Before the Machinery Had Been Installed.

INCREASES IN CAPITAL STOCK.

Shaefer Sales Corporation, Detroit, from $15,000 to $30,000.

Crow Motor Car Company, Elkhart, Ind., from $50,000 to $100,000.

Silvex Company, New York City, from $100,000 to $200,000.

Kelly-Springfield Tire Company, New York City, from $5,149,500 to $10,299,000.

The Acme Automobile Company, Glen Falls, N. Y., has been organized by George E. Smith and Herbert H. Patterson. The company will carry a full line of automobile accessories and supplies and will conduct a garage and repair shop.

The Brown Supply Company, Dallas, Tex., has taken the agency for Vulcan springs, manufactured by the Vulcan Spring Company, St. Louis, Mo.

The Panther Automobile Supply Company, Fort Worth, Tex., has opened a supply house at 603 Commerce street. Repair work will also be done.

The Ralston Electric Supply Company, Albany, Ore., has added a line of automobile accessories to its retail store.

Enger & Wright, Fargo, N. D., is a new firm located there. The company handles the Cartercar and has elaborate salesrooms to display the cars.

The F. W. Van Sant Company, Minneapolis, Minn., has taken the agency for the J. M. shock absorbers and the Peerless emergency tires. The company is located at 1206 Hennepin avenue.

A. D. Paine & Co., Salt Lake City, Utah, has opened an automobile supply house at 149 North Fourth street. A full line of accessories and supplies will be carried.

Digitized by Google

Arthur R. Corning and Henry C. Carr, Des Moines, Ia., have formed the Diamond Tire & Repair Company. The new company is located at 417 Twelfth street and Diamond tires will be handled in central Iowa.

Crosby's Gasoline & Oil Station, Syracuse, N. Y., is a new firm recently organized. The company is located at 216 East Onondaga street and will deal in all kinds of oil.

Charles Troup and T. A. Vernon, Salem, O., have formed a partnership and will engage in the automobile business. The company will handle the Chalmers cars.

Berry & Smith, Temple, Tex., is a new firm located at Avenue A and Second street. The company handles the Studebaker cars.

The United Auto Supply Company, Birmingham, Ala., has opened salesrooms at 421 South 20th street. A complete line of automobile accessories and supplies will be carried. Mohawk tires will be a specialty.

The Schmid-Jeffress Company, San Francisco, Cal., is the name of a new company located in that city. E. E. Jeffress, for some time past connected with the tire trade, is one of the organizers of the company.

The Santa Fe Trail Garage, Halstead, Kan., is the name of a new firm located there. The company will handle a line of cars and supplies. A pressed brick building, 37 by 70 feet, is now in course of erection for the new firm on Main street.

The Bliss Garage, Egremont, Mass., is the name of a new firm which recently opened an up-to-date garage and machine shop. The building is fully equipped for storage and repair work. Charles Dewers is the proprietor.

The Gem City Tire & Repairing Company, Dayton, O., has been formed and opened a store and repair department at the corner of First street.

August Stef and J. P. Briant, New Orleans, La., have opened automobile salesrooms. The company is agent for Moon cars. Mr. Stef was formerly president of the August Stef Lumber Company and Mr. Briant was associated with the J. P. Briant Motor Car Company of that city.

C. H. Tucker, St. Louis, Mo., has started in the automobile business and has opened a repair shop for both American and foreign cars at 4347 Olive street and has a number of experienced mechanics to assist him. Mr. Tucker was formerly superintendent of the Cole Auto Repair Company.

The Jeffery Motor Car Company, St. Louis, has purchased the business of the Burns-Ramsden Motor Car Company at 5033 Delmar boulevard. The company is a new one and the officers of the concern are: President, H. S. Albrecht; vice president, Albert Albrecht; secretary, George Eigel; treasurer and general manager, T. V. Murphy.

H. Winthrop Chandler, Boston, Mass., has the general agency for the Stahle mechanical tires. The syndicate, which has the exclusive license for the manufacture of the Stahle tires, has the 34 by four-inch now under construction, and expects to have them ready by early fall. This size will be for taxicabs, pleasure cars and for 1.5-ton commercial cars. The tire will be sold with a 25,000-mile guarantee and the price is $100 a wheel.

The Star, Salisbury, N. C., has opened for business. The company is located in a first class garage, which is in charge of Eugene Thompson.

The Hays Punctureless Tire Company, Columbus, O., has taken the agency for the Stanwell demountable rims, for Ford cars. The company is located at 203 East Town street.

The Olive Garage Company, St. Louis, Mo., has signed a contract to distribute the Clyde Adams gasoline economizer device in that territory.

The Excelsior Cycle Company, Harrisburg, Penn., has opened a motorcycle and bicycle store at 1007 North Third street. The company proposes also to open a store at 126 North Front street.

Ramer & Smith, Salt Lake City, Utah, has opened an automobile business at 71 Automobile row. The company is agent for the Chandler cars.

Ira Holden, Chester, Vt., has taken the agency for Ford cars. He has established a garage and repair shop on Depot street. During the summer months he will conduct an automobile livery. The building is modern throughout.

The Weber Implement & Automobile Company, St. Louis, Mo., has taken over the agency of the Hupmobile cars which was previously handled by the General Motor Car Company. T. C. Kaut and C. O. Stewart will join the sales staff of the former company, which is located at 19th and Locust streets.

The Jacksonville Distributing Agency, Jacksonville, Fla., will now look after the interests of the Lozier cars in this city and adjoining territory. The company is a new one and is located at 220 West Monroe street. C. M. Snow, who has been identified with the Lozier interests for several years, is manager.

Gragg & Rardin, Excelsior Springs, Mo., have reopened the East Broadway garage and will specialize in all kinds of automobile repair work, as well as conduct an automobile livery.

The Sea Street Garage, Lynn, Mass., carries a full stock of accessories and parts for general repairs.

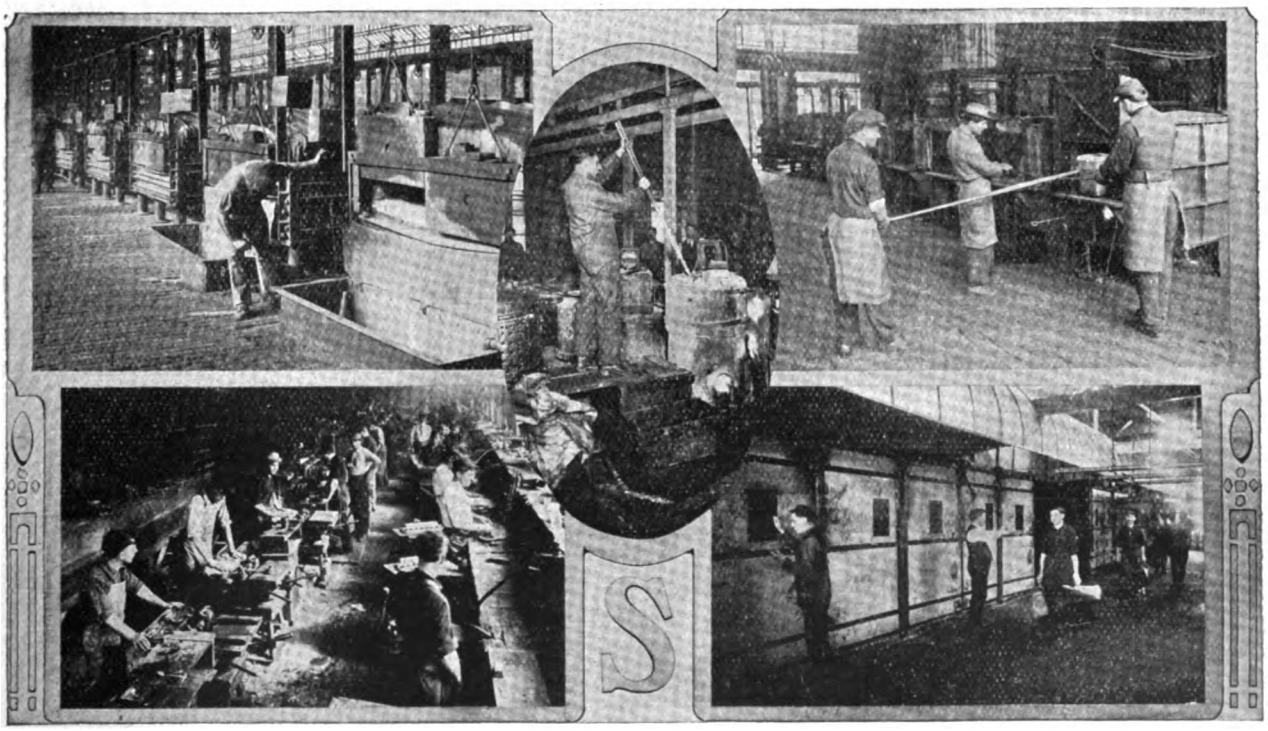
The Auto Sales Company, Jersey City, N. J., dealer in rebuilt cars, will open for business at Newar avenue and Coles street.

The Miller Rubber Company, Buffalo, N. Y., has opened an attractive salesroom at 1060 Main street, with R. J. Strong in charge.

The Savings Tire Company, San Francisco, Cal., has opened a large store at 1147 Van Ness avenue.

The Jeffries-Schmidt Company, San Francisco, Cal., has established an automobile tire business on Van Ness avenue.

R. F. Hodges, Huntington, W. Va., has opened automobile salesrooms. He has the agency for Reo cars.



Producing Studebaker Cars: Upper Left Hand View, Heat Treating Ovens at Plant No. 4; Left Hand Lower, Forming the Cores for Block Cylinder Castings; Centre, Heat Treatment of Camshaft After Forging but Before Grinding; Upper Right Hand, Battery of Heat Treating Ovens at No. 3 Plant, Showing Manner of Treating Small Parts by Means of a Metal Basket; Lower Right Hand, Enamelling Ovens Where Pressed Steel Parts, Such as Fenders, Hoods, Etc., Are Finished.

Digitized by Google

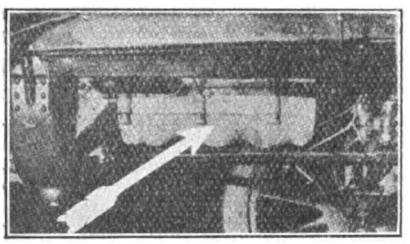
ACCESSORIES, SUPPLIES AND FITTINGS.

(When Writing, Please Mention The Accessory and Garage Journal.)

GARDNER ENGINE BASE.

For Ford Cars and Replaces Conventional Member.

The Gardner Engine Starter Company, 1455 Michigan avenue, Chicago, is manufacturing the Gardner auxil-



iary engine base designed for the model T Ford motor. One of the qualities emphasized is that it makes possible engine repairs without removing power plant from the chassis. The device is machined to fit accurately and as a further precaution against oil leakage is equipped with cork gaskets.

The maker states that new rings can be installed and the cylinders inspected with the Gardner base, and that connecting rods, etc., may be reached easily and adjusted in considerably less time than ordinarily. It lists at $10.

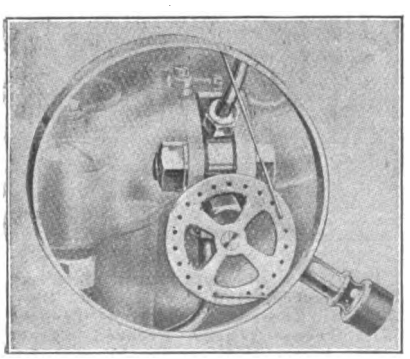
ALDERMAN PRIMER.

Operates from Seat and Combines Fuel Mixing Device.

The Alderman primer and power magnifier is produced by the Alderman Manufacturing Company, Rochester, N. Y., and, as the name implies, combines a priming and mixing device. The primer is constructed to be operated either from the seat or in front of the car and includes, in addition to the actuating means, a tube placed inside of the intake manifold. The fuel is led to this tube by a special connection, and when the piston descends on the suction stroke, the gasoline is sprayed, forming a rich mixture. Condensation is held to be eliminated. It is stated that the device can be fitted without drilling, etc.

The magnifier mixes superheated air in the proper proportion with the vapor from the carburetor, the heat of the exhaust being utilized and being carried through a special tube to the power magnifier. The control unit is mounted on the dash and is provided with a lever, enabling the driver to cut down or increase the air supply according to conditions. When a motor starter is utilized a press button is included.

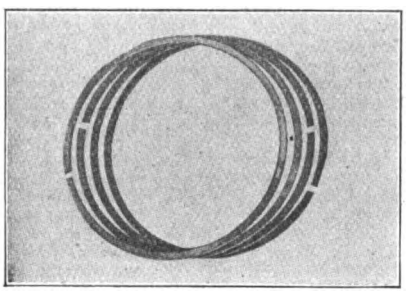
The fitting of the combined primer and power magnifier does not require any alterations, other than incorporating a union in the fuel line, and this member, as well as all necessary bolts, gaskets, screws, etc., is supplied with each outfit. It sells for $6. The Ford design retails for $5.



PERFECTION PISTON RING.

Is Constructed in Four Separate Sections and Is Very Light.

The Automobile Construction Engineering Company, 3324 Ludlow street, Philadelphia, is marketing the Perfection piston ring, which differs from conventional design in that each ring is made up of four separate members, all of which fit the single piston ring groove. It is claimed that they are lighter in weight than ordinary members, and that they cannot be broken when fitting as the piston can be entered into the cylinder without compressing them. An

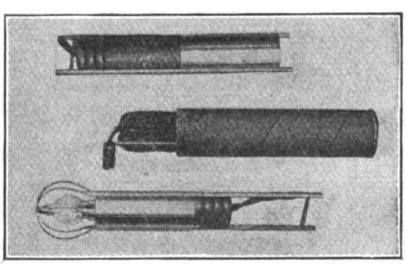


even tension and leak proof qualities are also claimed. Better lubrication is held to be obtained with the Perfection than with ordinary types.

CUNO INSPECTION LAMP.

A Novel Tube Design Having Reel for Winding up Cord.

The Cuno inspection lamp is marketed by the Cuno Engineering Corporation, 80 South Vine street, Meri-



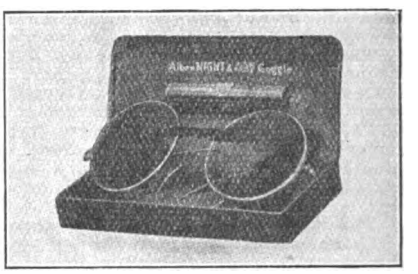
den, Conn. It has a black enamelled wooden handle with a special type of Ediswan socket, and the 10-foot extension cord is attached to a hard rubber plug connector. The bulb is protected from damage by a bronze spring guard projecting from the socket mounting. When not in service the bulb is protected by a brass tube which slides over it and the guard.

This provides a light for general purposes or concentrated rays, according to the position of the tube. The cord is wound up on a reel, a brass frame attached to the tube serving to accomplish this operation. One end of the reel frame provides a hook for suspending the light when in service. All metal parts are nickelled and polished, and the dimensions of the light are 1.5 inches diameter and 7.75 length. It retails for $1.65.

NIGHT AND DAY GOGGLE.

Includes Lense for Eliminating Glare of Headlights.

T. A. Wilson & Co., Inc., Reading, Penn., has brought out a new automobile goggle which presents practi-



cal features, in that its construction provides for eliminating the blinding effect created by powerful electric headlights. It is called the Night and Day goggle, and comprises all the desirable features of the ordinary goggle and, in addition, has an extra segment in the top of each lense. The small and lower section is of light amber, and the vision through this portion is for ordinary driving. The top lense is of dark amber, and is made smaller than the other member.

When the driver is confronted by dazzling headlights at night he simply tips his head to bring the vision through the dark segment, which so reduces the glare that the approaching machine and roadway can be seen with perfect clearness. A feature of the design is the use of a soft silk bridge band, adjustable to the face.

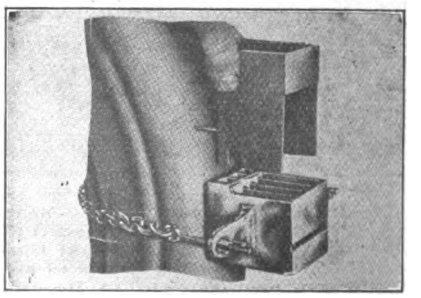
POSITIVE VULCANIZER.

Utilizes Heat from Steam and Is of the Portable Type.

Among the more recent types of portable vulcanizers designed particularly for the small garage and motorist is that manufactured by the Positive Supply Company, Davenport, Ia. In designing the vulcanizer the company had in mind the owner who is not familiar with vulcanizing and who wishes to perform repairs to casings and tubes.

It is stated that the Positive will not burn or overcure when employed by inexperienced persons, as the gasoline or fuel chamber is separated from the tube or casing by a water compartment.

It has a face measurement of three by four inches, weighs three pounds, and is so constructed that it may be securely mounted on the work bench, insuring accurate repairs to tubes. To vulcanize, the rubber is placed on the tube, the vulcanizer filled with fuel and water and the gasoline lighted. It retails for $3.50.

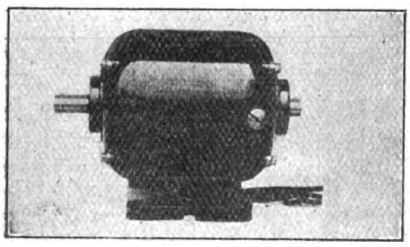


Digitized by Google

WARD LEONARD DYNAMO.

New Generator for Cyclecars Having Six-Ampere Output.

The Ward Leonard Electric Company, Bronxville, N. Y., maker of electric lighting and starting sys-



tems, has brought out a generator especially adapted for service on cyclecars. Dynamos, such as utilized on automobiles, are not adapted to the cyclecar motor, as the lamp load of a little car is approximately five amperes.

The output of the new Ward Leonard design is about six amperes at 1800 revolutions a minute, and it is a very compact generator, one having the same high grade material and workmanship for which the products of this concern are noted. The method of controlling the output of the new machine is the same as that used with standard types made by this company.

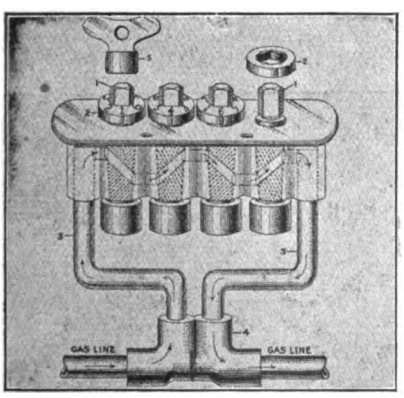
SECURITY AUTO LOCK.

Controls Fuel Supply by Ingenious Use of Combination Valves.

One of the most practical and efficient methods of preventing use of the car by others than those intended is to lock the fuel supply. When the flow of fuel is cut off, the amount remaining in the carburetor will be sufficient to operate the machine but a very short distance, and even this can be prevented by running the motor a little while after the fuel is locked.

The Security Auto Lock Company, 1733 Broadway, New York City, is making the Security auto lock, which is an ingenious device for incorporation in the fuel line, convenient to the operator. It comprises four valve members in a row, each having a passage for the gasoline. The fuel enters and flows as indicated by the arrows in the illustration, but it can pass only when the valve mechanism is set in a certain position. The failure of one of the valves, of course, locks the device.

At the top of each valve is a numbered ring, and the passages are made to register by turning the plug members with a small wrench key until those forming the combination are properly set. One of the qualities of the invention is that the numbered rings can be removed and re-



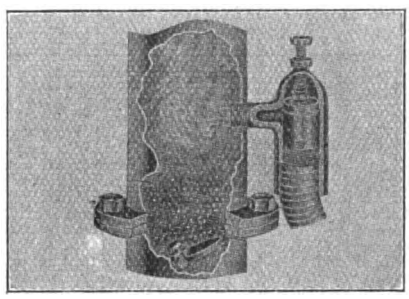
placed, providing an endless number of combinations known only to the owner. It sells for $7.50.

PEERLESS FUEL SAVER.

Introduces Heat into Intake Pipe Above the Carburetor.

The Peerless automatic gasoline saver is manufactured by the Peerless Motor Specialty Co., Inc., 1779 Broadway, New York City, for which the Harding Specialties Company, Inc., 755 Boylston street, Boston, is sole distributor. It is held to save from 25 to 40 per cent. of fuel, increase the efficiency of the motor, reduce carbonization to minimum and assist in starting.

The design differs from the usual application of heated air, in that the heat of the exhaust is utilized above the carburetor. A flexible metal tubing is connected with the saver,

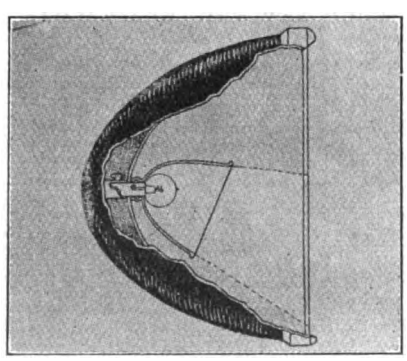


which is tapped into the intake manifold as shown. The hot air is injected and controlled automatically, and is supplied according to the demands of the motor. The heat thus introduced vaporizes any particles of fuel existing in the mixture.

LEGALITE REFLECTOR.

Eliminates Glare of Headlights by Novel Construction.

The Legalite Reflector Company, 1503 Bryant avenue, Bronx, New York



City, has brought out a novel device for eliminating the glare of headlights. As will be noted by the cutaway illustration presented herewith, an auxiliary reflector is utilized, and this is positioned at a downward angle.

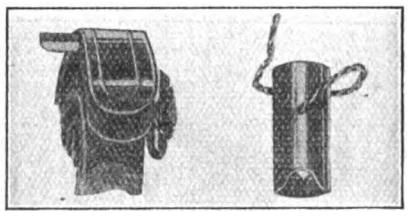
This projects the rays in such manner that the top of the beam is parallel with the ground, while the bottom of the beam strikes the ground close to the car. The small or auxiliary reflector is constructed to snap on over the Ediswan socket that ordinarily is fitted to electric headlights, when the bulb may be put back in place.

The maker states that the device may be slipped on or off easily, and that after being fitted it cannot work loose or change its position. It comes in sets of two and is inexpensive.

LITTLE GIANT TROUBLE LAMP.

A Combination Unit Including Magnetic Lifting Device.

The Harding Specialties Company, 755 Boylston street, Boston, and 1339 Michigan avenue, Chicago, maker of



the Boston tail light detector, is marketing the Little Giant magnetic trouble lamp.

It is a combination device, providing as it does an inspection or trouble lamp and a magnetic lifter. It will stick to metal, and the accompanying illustration depicts the device attached to the mudguard of a car, supplying the operator with light for making a change of a casing, for example.

One of the qualities of the device is that nuts, bolts, etc., dropped in places not easily accessible by the hands or tools, can be recovered easily, as the pull of the magnet is sufficient to lift ordinary tools. The Little Giant magnetic trouble lamp is inexpensive, and as above stated, can be made to serve a number of useful purposes. Its retail price is $8.

ALDERMAN MASTER VIBRATOR.

A Compact Unit Providing Battery and Magneto Control.

The Alderman Manufacturing Company, Inc., Rochester, N. Y., has brought out a new master vibrator intended for service with the model T Ford motor. The Alderman design is very compact, cylindrical in form, and the switch arrangement incorporated with the vibrator provides for control of the battery and magneto currents, as well as the usual "Off" position. The switch lever is very neat, and the terminals are not only sturdy, but well designed.

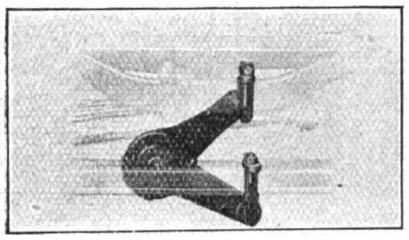
The special feature of the design is the condenser, the company stating that it absolutely prevents burning of the platinum contact points and that these members will not require attention. The advantage of a master vibrator with multiple-unit coils is well understood. Synchronization of the spark is obtained, and when batteries are utilized it makes for economy of current. The Alderman is moderately priced, is finished in black enamel, and can be supplied in brass or nickel if desired. It is sold under a 30-day trial. The Alderman master vibrator sells for $5.

Digitized by Google

FORD SHOCK ABSORBERS.

Connecticut Design, Same as Utilized on Large Machines.

The Connecticut Shock Absorber Company, Meriden, Conn., maker of the shock absorber of that name, is



manufacturing a special design for the model T Ford automobile. The same principle as that used with the absorbers made for large machines is employed and the workmanship and material are of high grade.

Three absorbers are utilized with the Ford car, one in front and two at the rear. The method of mounting the front member is shown in the accompanying illustration, and it will be noted that the design makes for easy attachment, being secured as it is, to the axle and cross frame member. The rear members are fitted by means of a bracket bolted to the outside of the frame and an axle clamp to the axle housing. The clamp is prevented from moving by the use of a V shaped bar.

In the Connecticut design, one arm is integral with the case containing a triangular set of springs, and the other is attached to a three-faced cam which turns between the springs. The absorbers are set so that the springs are slightly deflected, permitting unrestricted motion of the cam in one direction, but checking the movement in the other. It is this principle that allows the car springs to perform their function of compensating for inequalities of the road, while all reaction is checked. The set retails for $15.

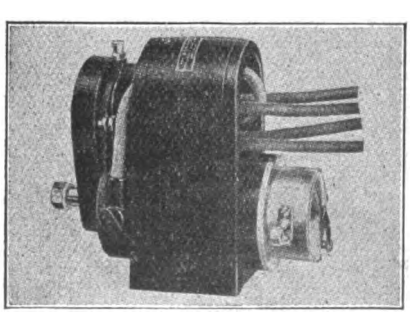
BERLING MAGNETO.

High-Tension, Dual, Water and Oil Proof Type for Cyclecars.

The Ericsson Manufacturing Company, 1119 Military road, Buffalo, N. Y., is producing the Berling magneto, a high-tension instrument of the dual type for two-cylinder V type cyclecar motors. The dual feature is obtained by a simple combination of the collector ring and distributor, and it is stated that gears and extra bearings are eliminated. The interrupter and timer are combined.

A transformer or dash coil is utilized for the battery current. The high-tension cables are so connected to the magneto that the possibility of short circuits is prevented, and a felt washer protects the driven end bearing from foreign elements.

The frame is a solid unit, and it is stated that there are no screws to loosen, causing short circuits. It is also claimed that the instrument is



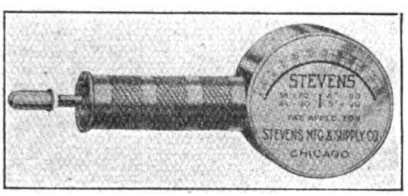
oil and water proof. Extreme efficiency is emphasized in the design, it being stated that the magneto will give off a spark of .1875 inch at 75 revolutions a minute.

The air gap between the armature and the field is about .005 inch and the armature is carefully wound. The bearings employed are imported and the platinum contact points are ample in size. The insulating material is noted for its high dielectric strength, and the interrupter mechanism is very accessible, as are other components utilized in service.

STEVENS PRESSURE GAUGE.

Indicator Remains Set After Pressure Is Registered.

Too much emphasis canot be laid upon the importance of keeping the tires inflated to the pressure recommended by the maker and for the particular size casing employed.



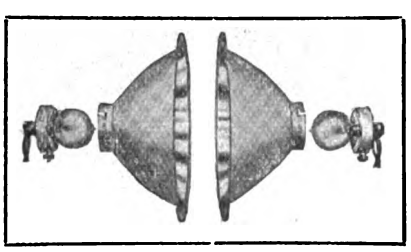
Over-inflation is held to be as bad as under, and the best method of determining the pressure is to utilize a gauge, which is not expensive.

The Stevens Manufacturing & Supply Company, Fisher building, Chicago, is marketing the Stevens auto tire pressure gauge, which is provided with special connections to fit any tire check valve marketed, and is guaranteed to register with perfect accuracy. The indicator remains set after the pressure is registered, enabling removal of the gauge and its reading at leisure. All gauges are tested before leaving the factory and an adjusting device is incorporated for correcting any lost tension in the spring occurring after considerable service. They sell for $2.25.

FORD ELECTRIC HEADLIGHTS.

A. H. Kling Company Marketing New and Practical Design.

The A. H. Kling Company, Detroit, distributor of accessories for the



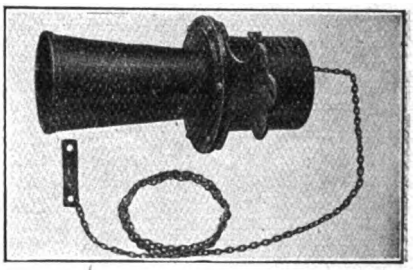
model T Ford car, is marketing a special design of electric headlight for this machine. The feature of the design emphasized is that the bulbs may be removed and new ones inserted without disturbing the reflector proper, as will be noted by the accompanying illustration, which depicts the attachments displaced from the lamp. This arrangement enables securely mounting the reflector.

Another feature of the equipment is the use of a quick make and break, flush type of switch, and it is held that it is positive in its action. The wiring connections are made on the hood side of dash, and the leads and connections are high grade in every particular. The outfit sells for $6.

THE CABLEPHONE.

A Mechanically Operated Horn Actuated by a Cable.

The Automobile Supply Manufacturing Company, 220 Taaffe place, Brooklyn, N. Y., maker of horns, an-



nounces a new design, which differs materially from conventional practise. It is a manually operated horn, but instead of being actuated by moving a lever, the signal is obtained by means of a cable. The Cablephone, as it is termed, is located at the side of the dash, and leading from it to the steering wheel or other convenient location, is a cable. A slight pull on the cable operates the horn, which is of the mechanical type. The design is moderately priced, comes complete with all necessary fittings and is guaranteed for three years. The Cablephone retails for $7.

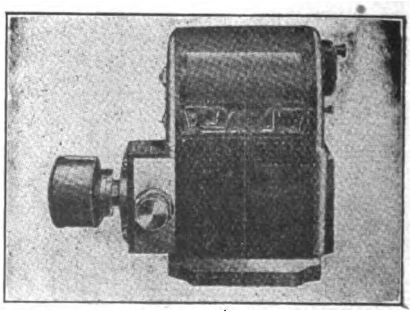
NEW-LITE LIGHTING DYNAMO.

Designed for Ford and Other Small Automobiles.

The New-Lite Manufacturing Company, Newton, Ia., is marketing a complete electric lighting system for small cars such as the Ford, Metz, etc. The system includes a belt driven generator, storage battery, headlights and tail lamp, dash switch, wires, connectors, etc. The outfit comes ready for installation.

Drive is taken from the usual fan pulley, one belt being utilized for the fan and the generator. The dynamo operates at six volts and is provided with an automatic cut-out. Provision is made for carrying the battery on the running board, a steel box with lock being included in the equipment. The lamps are finished in black and nickel, the headlights being eight inches in diameter and equipped with 15 candlepower mazda bulbs. The tail lamp is of two candlepower. Bullet side lamps are supplied at a slight extra cost. It is stated that the system may be installed on a Ford car in two hours, the generator being mounted on the left hand side of the motor by means of a plate bolted to the cylinder head.

The generator is very compact, and throughout the best of material and workmanship has been incorporated. Its output is stated to be sufficient to supply all requirements, and the bracket utilized for mounting the generator is well designed. Complete details will be given on request.

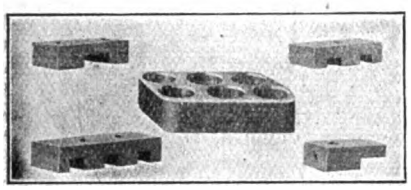


Digitized by Google

AMERICAN FIBRE CLEATS.

Made in Shades and Used to Secure Wiring on the Car.

The American Vulcanized Fibre Company, Wilmington, Del., manufacturer of hard and flexible vulcan-



ized fibre, kartavert and laminar fibre, is producing a large variety of vulcanized fibre cleats, some of which are shown in the accompanying illustration. These comprise a design having a single groove for twin or parallel wires, one for corners, for triple wiring, etc.

The company produces cleats which are not only compact and neat in appearance, but in shades to make them inconspicuous in places where appearance is considered. They are strong and durable and make an excellent substitute for wood and porcelain members. The value of fibre as a non-conductor of electricity is well known. The high-tension wire cleat shown in the centre of the illustration is designed especially for motors. The American Vulcanized Fibre Company also manufactures gears, etc. Catalogue and prices will be mailed upon request.

PRICE CUT-OUT SWITCH.

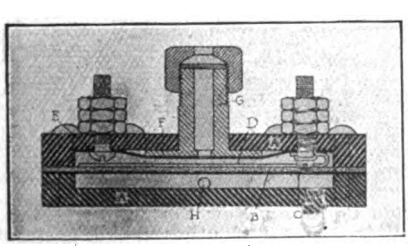
Automatically Cuts Out Horn and Electric Lighting.

John R. Price & Co., Basic City, Va., has brought out an ingenious device for preventing the operation of the electric horn or lighting system when the motor is not running, thereby locking these members against tampering. The Price automatic cut-out switch, as it is named, utilizes the pressure or suction of the intake manifold or pipe to actuate it.

A sectional view of the device is shown in an accompanying illustration with the various components lettered. It is a simple electric switch, comprising a strip or blade of special electrical copper D, which is normally out of contact with the contact piece E and terminal.

The spring is enclosed in a cylindrical chamber or fibre case A, which also contains a flexible leather diaphragm B, backed by a water proof oilcloth C. A protecting strip F is also utilized. The switch side of the chamber is connected by a small copper tubing G to the intake manifold, and the opposite side is provided with a vent H.

It is stated that a very slight suction, about two ounces to the square inch, will cause the circuit to close through the spring member making contact with the terminal contact. It it claimed that the action of the device is not affected by vibration, and that, as the circuit will be opened when the suction ceases, waste of current is prevented when the motor is stopped and when the driver forgets to turn off the lights. The



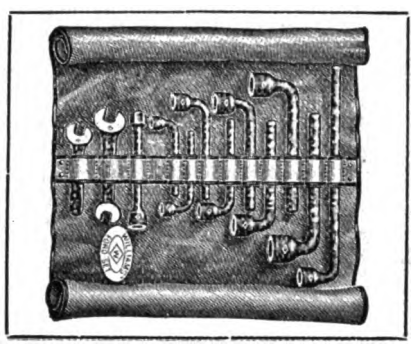
Price device weighs but three ounces, is 2.25 inches square and is sold with a one-year guarantee.

WILLIAMS FORD WRENCH SET.

Fit All Nuts and Bolts, Including Cylinder Head Members.

J. H. Williams & Co., Brooklyn, N. Y., maker of drop forgings, has brought out a wrench set for the model T Ford car, and one of the qualities of the outfit is that all wrenches are accurately milled. The wrenches in this selection have been thoroughly tried out and are drop forgings, case hardened.

They will provide adjustment for a large number of bolts and screws, including the cylinder head members. They will fit U. S., S. A. E. and A. L.



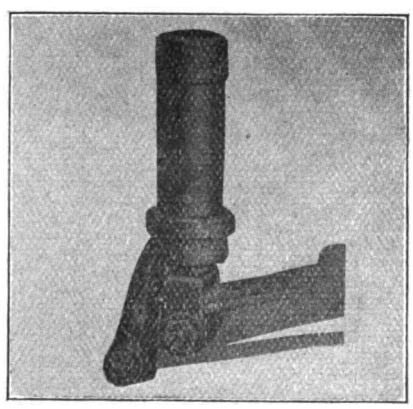
A. M. standard nuts and cap screws, the opening varying from .25 to .5625-inch.

The maker states that the wrenches will permit of removing and replacing nuts and bolts not accessible with the usual tools.

E. Z. SHOCK ABSORBERS.

Employ Coiled Spring and Are Constructed for Ford Cars.

The Forest City Electric Company, 5006 Windsor avenue, Cleveland, O., is marketing the E. Z. Rider shock absorbers, which are especially designed for the model T Ford auto-



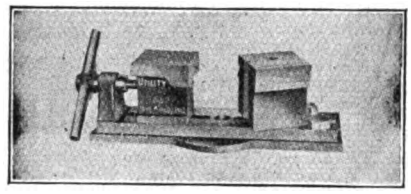
mobile. They come in sets of four, two for the front and two for the rear springs, and the principle involved is the use of a sensitive coil spring. One of the features of the construction is that they are interchangeable with the spring brackets, and can be easily and quickly installed.

It is stated that the springs absorb all jars, bumps and vibrations caused by rough roads, contributing to the comfort of the passengers, as well as making for tire economy. The complete set with all fittings, etc., weighs 18 pounds, and retails for $15.

JACKSON UTILITY VISE.

Designed Especially for Owner and Is Easily and Quickly Operated.

The Utility vise is manufactured by C. J. Jackson, M. E., Easton, Penn., and one of its qualities is its adapt-



ability for holding a variety of material in a number of different positions without the aid of clamps, bolts, etc.

Operation of the front jaw of the vise is by a steel screw and a bronze nut. The four-faced revolving rear jaw is in the form of a hollow cube, having one side left open to permit of using a wrench for actuating the locking screw nut. This construction permits of utilizing the jaws singly or in combination.

A type smaller than the standard size is manufactured, and is especially suited for the motorist who undertakes his own repairs. One of the features of the design is the rapidity with which the work may be clamped into position and removed.

AUTO-VALVE FUEL SAVER.

Extra Air Supplied Is Controlled by an Automatic Valve.

The Auto-Valve gasoline saver, manufactured by the Crary Company, 652 Woodward avenue, Detroit, is a simple device comprising two parts, a control lever mounted on the driver's side of the dash, which opens and closes an automatic air valve under the hood, and a connection to the intake manifold just above the carburetor. The function of the device is to admit extra air into the intake pipe, making for a homogeneous mixture, as well as to economize on fuel, etc.

The dash lever is operated after the motor becomes warm, permitting the piston to draw in extra air, thereby reducing the amount of fuel emerging from the jet of the carburetor by lessening the suction. It is pointed out that the stream of air encountering the mixture breaks it up, and that more energy is obtained from the explosion.

After turning on the air by the dash lever the automatic valve controls the supply of air, this being according to the speed of the motor. A priming cup is included in the equipment, located near the intake manifold, and it may also be utilized for introducing kerosene into the cylinders.

The company is also marketing the Handy automatic controller, a device which admits extra air to the intake pipe according to the requirements of the motor.

NEW CONCERNS RECENTLY INCORPORATED.

CAR MANUFACTURERS.

Reedsburg Motor Truck Company, Reedsburg, Wis.; $125,000; E. N. McNab, L. E. Montgomery, Edward Thom, J. Seamans.

Kel-Kee Cyclecar Company, Toronto, Ont.; $40,000; to manufacture cyclecars; J. J. Maclennan, J. N. Black, A. Adams and others.

Knox Motors Company, Springfield, Mass.; $2,500,000; E. O. Sutton, H. G. Fisk, C. H. Beckwith.

Columbian Electric Vehicle Company, Wilmington, Del.; $300,000; to manufacture vehicles of all kinds; W. M. Pyle, G. G. Stiegler, L. W. E. McCarthy.

Southern Cyclecar Manufacturing Company, New Orleans, La.; $10,000; to manufacture cyclecars.

Gary Auto Manufacturing Company, Gary, Ind.; $50,000; to manufacture automobiles; George E. Paff, L. G. Throckmorton, William C. Flanagan.

L. & M. Manufacturing Company, Chicago, Ill.; $10,000; to manufacture automobiles and accessories; Charles A. Larson, Louis Teuber, Iven Thorsell.

White American Locomotive Sander Company, Roanoke, W. Va.; $75,000; to manufacture automobiles and trucks; W. H. White and others.

Klingelsmith Electric Truck Company, Portland, Me.; $300,000; to manufacture electric trucks.

Dequindre Auto Repair Company, Detroit, Mich.; $5000; to deal in automobiles; Russell A. Lutes, Albert C. Glassner, Hugh M. Edwards.

Lomar Motor Car Company, Chicago, Ill.; $1,000,000; to manufacture automobiles.

Pneumatic Shock Absorber Company, Philadelphia, Penn.; $100,000; to manufacture automobiles and supplies; F. R. Hansell, George Martin, S. C. Seymour.

American Militaire Cycle Company, Cleveland, O.; $100,000; to manufacture and deal in motors and motorcycles; M. L. Thomsen, E. Frederick, A. Henry, Vernon E. Davis, H. E. Downing, M. H. Gallagher.

Jaegers Manufacturing Company, Dover, Del.; $400,000; to manufacture motor trucks, engines, etc.; Walter P. Garrow and others.

Canadian Bartlett Automobile Company, Toronto, Ont.; $1,000,000; to manufacture automobiles.

Flanders Electric Company, Pontiac, Mich.; $100,000; to manufacture automobiles; M. Rothschild, Don C. McCord, B. F. Edgar.

Herreshoff Light Car Company, Mechanicsville, N. Y.; $100,000; to manufacture cars; C. E. Herreshoff, N. R Holmes, A. L. Johnson.

Burrows Cyclecar Company, Ripley, N. Y.; to manufacture cyclecars; J. Watson Burrows, Robert P. Burrows, Robert Burrows.

Mutual Motor Service Company, Dover, Del.; $22,500; to manufacture automobiles, power boats, etc.

China Vehicle Company, Ltd., Portland, Me.; to manufacture motor vehicles of all kinds.

AUTOMOBILE DEALERS.

Hunter-Dammel Motor Car Company, Cincinnati, O.; $5000.

Knapp Motor Corporation, New York City; $10,000; H. Hughes, T. G. Jenkins, E. B. McKellar.

Lynn Motor Cycle Company, Lynn, Mass.; $2500; to deal in automobiles; Earl M. Lawrence, Fred A. Pratt, Ralph W. Reeve.

Long Ford Auto Company, Biddeford, Me.; $150,000; J. H. Pierce, R. O. Brewster, D. W. Snow.

Clemens & Grell, New York City; $5000; to deal in automobiles, motor boats, etc.; Otto Grell, Joseph Clemens, J. E. Smith.

H. J. Lupton Truck Company, Detroit, Mich.; $25,000; to deal in commercial cars; Harry J. Lupton, Elmer J. Richmond, Asa B. Haseltine.

Liverpool Motor Car Company, East Liverpool, O.; $10,000; to deal in automobiles; C. R. Larkin, S. J. Norton, H. A. McClain, Migarry Camarda, A. G. Ellis.

NEW LOCATIONS AND REMOVALS.

Chester A. Dodge, Worcester, Mass., has moved into new quarters in the Stafford Square garage building. He has large salesrooms and service station combined.

The People's Garage, Davenport, Ia., which was organized recently, will move into the building vacated by the Peterson Automobile Company on Main street.

Balcom & Rufe, Norwich, N. Y., has moved into its repair shop and garage on East Main street.

The Chandler Motor Car Company, Los Angeles, Cal., distributor of Chandler cars, has taken possession of a new building at 1144 South Flower street.

The American Auto Company, Tacoma, Wash., has located in larger quarters at 218 St. Helen's avenue. The company is agent for the Reo and Stearns-Knight cars.

Herbert Patterson and George Smith, Glens Falls, N. Y., have leased the Yarter property at 252 Main street and will establish a garage in connection with which they will conduct an automobile school.

Avery & Hurrie, St. Cloud, Minn., have moved into their new garage at the corner of First street and Sixth avenue, South.

N. A. Moquin, Holyoke, Mass., who conducts an automobile repair shop, has moved to 492 Dwight street, where he has obtained larger quarters.

The Romau Auto Company, Philadelphia, has moved from 849 North Broad street to the corner of Broad and Cherry streets.

The Oneida Garage & Machine Company, Rhinelander, Wis., is to move into the Pabst building on Rives street when repairs and improvements are made.

George Ward, Hibbing, Minn., has taken a lease of the third floor over the Advance Automobile Company, where he will conduct a paint shop for automobiles.

The Cartercar Sales Company, Washington, D. C., has secured headquarters at 1801 14th street.

The Krouse Motor Car Company, Philadelphia, Penn., has moved to larger quarters at 441 North Broad street.

The Ira S. Dill Company, Billings, Mont., has moved to larger quarters at 2909 Montana avenue. A garage and messenger service is conducted.

Jacob Willenbring, Richmond, Minn., has leased the Muggli building and will open a modern garage and repair shop.

The Miami Motor Company, Hamilton, O., has taken possession of the new salesrooms at 14-18 Main street. A line of accessories and supplies will be handled. The company is erecting a modern fireproof garage.

The Brewer & Van Vleck Company, Champaign, Ill., has opened its new garage. It is of fireproof construction and equipped with the very latest machinery and devices for a garage and repair business. The company handles the Overland cars and carries a large stock of parts for these cars, as well as a line of general automobile supplies.

The Exide Battery Depots, Inc., has opened an electric commercial vehicle garage at 527-541 West 23rd street, west of 10th avenue, New York City, to be known as the West Side garage. The Exide Battery Depots, Inc., also conducts the East Side garage at 141-155 East 25th street. The company has an area of 33,000 square feet and all of it is on the ground floor. The garages are devoted exclusively to storing and caring for electric commercial vehicles and batteries.

The Lafayette Smith Company, Little Rock, Ark., has opened new headquarters at Fourth street.

E. Anderson, New York City, rebuilder of high grade foreign and American cars, has moved to 250 West 54th street, which affords more commodious quarters.

The Virginia Auto Supply Company, Richmond, Va., has opened headquarters at 605 West Broad street. The company handles the Kelly-Springfield tires and tubes.

The Monte Cristo Garage, New London, Conn., will move to its new and large quarters on Washington street in the near future. James P. Sullivan is the proprietor.

The Oakland Motor Company, Baltimore, Md., has secured larger quarters at 321 North Watts street. The present address of the company is 227 North Broad street.

Heindl & Rothvoss, New York City, has moved to larger quarters at 211-15 West 19th street. The company makes a specialty of automobile repairing.

The Tire Company, Houston, Tex., is now located at 1514 Main street.

The Cutting & Smith Sales Company, Detroit, formerly located at Jackson, has moved and is now located in the Goldberg building at Warren and Woodward avenues.

The Motor Owners' Supply Company, Columbus, O., has leased larger quarters in East Gay street, where double the space is available as at the old quarters. The company handles a large stock of automobile accessories and supplies. A. I. Fishbaugh, formerly with the Early Motor Company of Columbus, is manager.

Callahan Bros., Worcester, Mass., is now located in its remodelled building at 36 Trumbull street. The building in the rear has been equipped by the company to carry on a garage and repair shop business.

The Butterfield Motor Company, Fairchild, Wis., has moved to a new garage on Main stret. The company handles the Mason, KisselKar, Maxwell and Crown cars, and also conducts a general repair and livery business.

The Trimble & Johnson Company, Wheeling, W. Va., has located in its new garage on Jefferson avenue, recently completed. It is modern throughout and the latest machinery has been installed.

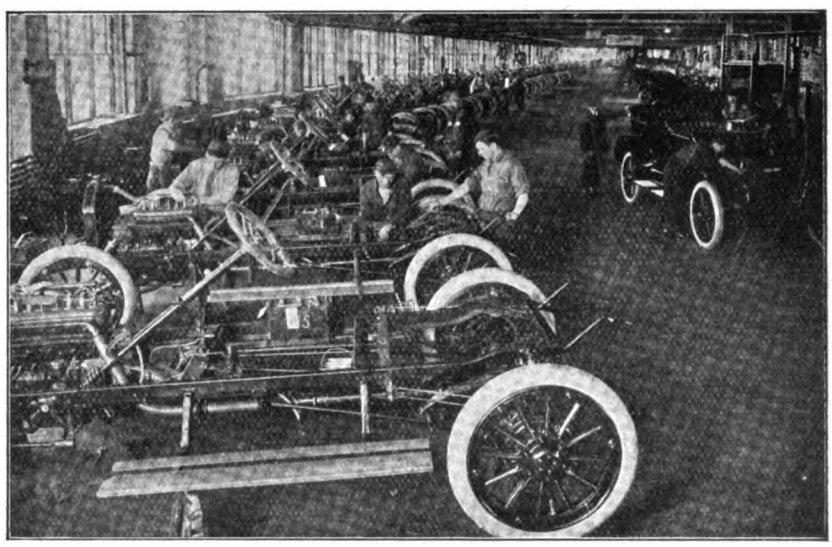
The Grand Rapids Republic Truck Sales Company, Grand Rapids, Mich., has secured quarters at the corner of Michigan street and Bond avenue. The company has established a complete service station and is also agent for the Republic trucks.

C. Pettiler, Pittsburg, Penn., has opened the Mammoth Auto Exchange at 6118 Station street.

The Panama Equipment Company, St. Louis, Mo., has opened a shop to equip automobiles with the Punctureless Cushion, a substitute for air.

Holmes, Lewis & Gaston, Portland, Ore., has opened a garage and repair shop in a large reinforced concrete building, which was formerly the home of the Portland Hunt club. The company will spend $25,000 in new equipment and machinery.

The Roberts Garage, Ltd., Boston, Mass., is now occupying the remodelled building at 320 Newbury street, which was recently vacated by the White Company. Velie cars are handled.



View of the Final Assembly of the Studebaker Four at Plant No. 3.

The H. L. Keats Automobile Company, Seattle, Wash., has leased the building at 1513-17 Broadway, and plans to have new showrooms and a service station.

The Thormey Auto Service, Inc., New York City, has leased a three-story garage at 241 West 68th street and will locate there.

The Hotel Taxicab Company, El Paso, Tex., has taken the entire fireproof building at Santa Fe street and will locate there.

C. J. Shannon, Chisholm, Minn., has leased the Bergeron rink and is remodelling it into a garage. New machinery will be installed and experienced machinists have been engaged. The company handles the Case cars.

The Winterset Auto Company, Winterset, Ia., has converted the premises recently vacated by the Smith Implement Works into a modern garage. The company represents the Maxwell line. M. G. Morarity is in charge.

Bolt & Maccracken, Milwaukee, Wis., has opened salesrooms in the building of the Gas Power Engineering Company, Second street and North avenue. The company is the agent for the Moline-Knight cars.

The Johnson Automobile Company, St. Louis, Mo., will shortly occupy the premises recently vacated by the Ford Motor Company at 3667 Olive street as salesrooms for the Ford and Empire cars. The Ford Company abandoned these quarters to occupy the new assembly plant at Forest Park boulevard and Sarah street.

The Moerschell Electric & Supply Company, St. Louis, Mo., has moved to more commodious quarters at 2827 Locust street, where a modern battery charging plant has been installed and a complete supply of electric appliances is on hand. The company makes a specialty of car wiring and equipping.

Digitized by Google

The Grassner Motor Company, Toledo, O., distributor of Hupmobile cars, has moved to larger quarters in the heart of the automobile district at 1420 Madison avenue. Greatly increasing business necessitated this step.

The Holland-Wood Motor Car Company, Nashville, Tenn., has moved to its new remodelled four-story building at 108 Third avenue, North. The salesroom and repair department are on the main floor and the second and third floors are for new cars and dead storage. The old building will be retained for storage purposes also.

The Walter-Williams Hardware Company, The Dalles, Ore., has just completed one of best garages in that city. The main garage, used for storage and sales, is 100 feet square, in connection with which is a service department and finely equipped machine shop, these having a floor space of 36 by 92 feet, with fire doors between the garage and shop. The offices of the company are located off the main garage.

Leighton H. Smith, St. Paul, Minn., agent for the Jeffery cars, has leased the entire premises at 197 West Fifth street. He previously had desk room for several months in the building, but now has ample room for display and a service station.

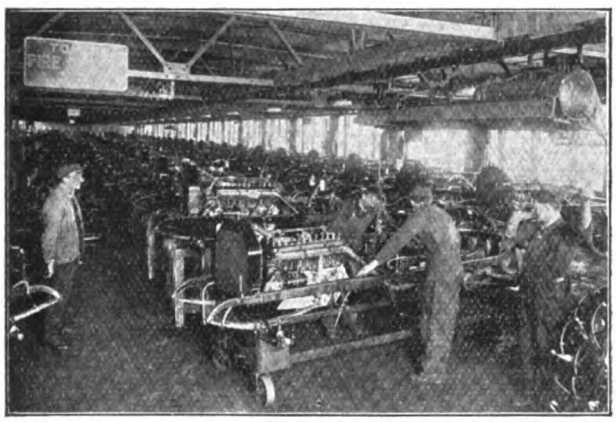
The Ozark Motor Car Company, Springfield, Mo., is to occupy the building at 208 South Jefferson street. It is to be remodelled and will cost $10,000. This building has been occupied by the Atkinson Motor Car Company.

The Nettleton-Crittenden Company, Boston, Mass., is now located at 1110 Boylston street. The concern is agent for Chandler and Paige cars.

The Wheelock-Jeffery Company, Boston, Mass., New England distributor for the Oldsmobile cars, is located in its new headquarters at 916 Commonwealth avenue. The showrooms are spacious and elaborately finished.

A. M. Signor, Scranton, Penn., has moved his garage from 329 Adams avenue to 515 Mulberry street, where he is better equipped to serve his patrons.

The Cole Motor Sales Company, Pittsburg, Penn., has moved into the salesrooms at the corner of Craig street and Baum boulevard, formerly occupied by the Lozier company. C. C. Laughner is in charge.



The Chassis in the Paint Shop of Studebaker Corporation.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

13,069. Medium Priced American Automobiles—A European representative of a high grade American made automobile, who has recently made sales of a number of these cars, believes that he can carry an agency for the whole country of a small low priced, medium powered American automobile of the two-seated runabout and small tonneau types, if the same can be laid down and still give him a reasonable profit when sold at $1400 to $1500. He informs an American consular officer that he would be pleased to hear from manufacturers of such machines, with catalogues, prices, and details regarding the establishment of an agency. It is suggested that the cars should be shipped complete, with all equipment, with or without self-starter. Correspondence, in English, should be sent at once, with a view to launching properly a campaign for 1915 models.

13,091. Cyclecars—A large foreign firm informs an American consular officer that it desires to get in touch with American manufacturers of cyclecars. One of its South African customers is considering the introduction of American cyclecars, and this inquiry is with a view to possible arrangements for an agency for the sale of such cars.

13,101. Small Motor Cars—A report from an American consular officer in the Far East states that he has received a request for price lists and discount sheets from American manufacturers of small motor cars. Reference will be furnished to interested firms.

13,108. Rubber Manufacturing Equipment—A business man in India has requested an American consulate to put him in touch with American exporters of machines for manufacturing bicycle inner tubes and solid rubber tires for carriages. He wishes the machine for his own use.

13,112. Automobiles, Cyclecars and Agricultural Machinery—An American consular officer reports that a firm in his district desires to represent American manufacturers of automobiles (medium priced and cheap cars, also cyclecars), agricultural machinery (tractors, steam or motor plows), etc. It is also interested in drainage and reclamation undertakings. Correspondence in German.

13,181. Chassis and Electric Motor Car—Tenders are invited by the Wellington City Council, Wellington, New Zealand, for the supply and delivery of an electric chassis for a 2000-pound parcel delivery van and an electric motor car, required for the electric tramways department. Copies of the specifications, etc., may be obtained from the office of the tramways and electrical engineer, Harris street, Wellington, on payment for each of the contracts of $5.11, which will be refunded upon receipt of a bona fide tender. Bids must be submitted by July 9, and local representation is necessary.

Spare Tire Holder, Alfred Freschl, Detroit, Mich.; No. 1,098,103. Filed Oct. 15, 1913.

Piston Ring, Harry Magee, Detroit, Mich.; No. 1,098,121. Filed Dec. 11, 1913.

Tire Inflating Apparatus, Frederick A. Ruff, Newark, N. J.; No. 1,098,173. Filed Aug. 26, 1912.

Tire, Ira C. Terry, Monroe, La.; No. 1,098,191. Filed July 10, 1913.

Spark Plug with Priming Device, Ira V Beam, Elmira, N. Y., assignor of one-half to Nicholas D. Doxey; No. 1,098,214. Filed Dec. 12, 1912.

Magneto, William Casey and Isaac Lessen, Kingston, Ont.; No. 1,098,226. Filed Feb. 15, 1913.

Shock Absorber, Jeremiah C. Lautenbacher and Albert Geary, Schuykill Haven, Penn.; No. 1,098,271. Filed Dec. 3, 1913.

Tilting Steering Wheel, Franklin C. Prindle, Washington, D. C.; No. 1,098,301. Filed May 19, 1913.

Incandescent Electric Headlight, Charles W. Dake, Chicago, Ill., assignor to Pyle-National Electric Headlight Company; No. 1,098,317. Filed June 17, 1912.

Starting Gearing, Percy C. Day, Milwaukee, Wis.; No. 1,098,344. Filed Oct. 22, 1912.

Speed Indicator for Passing Vehicles, Roy M. Dean, Chicago, Ill.; No. 1,098,358. Filed Nov. 18, 1909.

Spring Tire, Harry S. Gover, Bel Air, Md.; No. 1,098,375. Filed Dec. 13, 1914.

Buffer for Door, Joseph F. O'Brien, New York City; No. 1,098,393. Filed May 29, 1912.

Air Starting Means, Alfred Arnold Remington and Arthur John Rowledge, Birmingham, England, assignor to Wolseley Tool & Motor Car Company, Ltd.; No. 1,098,406. Filed March 18, 1913.

Valve Mechanism for Motors, Augustus F. Schmidt, Pittsburg, Penn.; No. 1,098,411. Filed Oct. 10, 1912.

Differential Mechanism, Harry E. Bayly, Indianapolis, Ind.; No. 1,098,422. Filed May 12, 1913.

Magneto-Electric Generator, Richard H. Cunningham, New York City, assignor to Splitdorf Electrical Company, Newark, N. J.; No. 1,098,431. Filed Oct. 8, 1912.

Locking Device for Steering Wheel, Joseph E. Gibbons, Washington, D. C.; No. 1,098,435. Filed Nov. 24, 1913.

Nut Lock, Thurston Matheny The Plains, O.; No. 1,098,454. Filed May 12, 1913; renewed April 17, 1914.

Motor, George McDowell, New York City; No. 1,098,455. Filed Aug. 17, 1912.

Anti-Skidding Device for Wheels, Martin Mossberg, Minneapolis, Minn.; No. 1,098,457. Filed Oct. 27, 1913.

Safety Engine Starter, William R. Clark, Muncie, Ind., assignor to Clark Crank Company, Indianapolis, Ind.; No. 1,098,480. Filed May 13, 1912.

Tire Tool, John W. Dyar, Detroit, Mich.; No. 1,098,488. Filed Aug. 6, 1913.

Motor, Herman W. F. Niekranz, Toledo, O.; No. 1,098,522. Filed Aug. 11, 1913.

Motor Sled, John Francis Oakes, Copos, Minn.; No. 1,098,528. Filed June 10, 1913.

Motor, Joseph A. Williams, Cleveland, O., assignor to K-W Ignition Company; No. 1,098,539. Filed Dec. 19, 1910.

Cranking Device, Selby L. Williams, Richmond, Ind., assignor of one-half to Abiathar L. Way; No. 1,098,541. Filed Sept. 22, 1913.

Rotary Valve, Henry Hopkes, Detroit, Mich.; assignor of one-half to Robert Hartenstein and one-half to Arthur F. Saenger; No. 1,098,574. Filed March 2, 1912.

Truck Brake, Russell Huff, Detroit, Mich.; assignor, by mesne assignments, to Packard Motor Car Company; No. 1,098,576. Filed May 7, 1908.

Resilient Wheel, Samuel Johnston, Sacramento, Cal.; assignor of three-eighths to Joseph D. Cornell and two-eighths to Sim Canman; No. 1,098,577. Filed July 17, 1913.

Tire Armor, Alvah L. Powell, Stockton, Cal.; assignor of one-fiftieth to Henry E. Wolfe; No. 1,098,588. Filed May 17, 1913.

Vehicle Spring, Marquis J. Todd, Buffalo, N. Y.; assignor to Buffalo Pitts Company; No. 1,098,598. Filed April 25, 1913.

Intake Manifold, Morton E. Hidden, East Orange, N. J.; assignor to Willis H. Simpson; No. 1,098,626. Filed June 13, 1913.

Spark Plug, Elmer C. Rauch, Coeur d'Alene, Idaho; No. 1,098,637. Filed Sept. 11, 1912.

Vehicle Jack, Brayton C. Richards, Chicago, Ill.; assignor to Henry S. Wilkel; No. 1,098,639. Filed Oct. 19, 1912.

Lathe Attachment for Crankshafts, Clinton E. Wilder, Erie, Penn.; No. 1,098,654. Filed Feb. 13, 1913.

Tire Pump, Charles P. McDowell and Richard H. Easter, Porter, Wash.; No. 1,098,674. Filed Sept. 19, 1912.

Pneumatic Tire Wheel, Julius Miskey, Dayton, O.; No. 1,098,677. Filed Oct. 4, 1913.

Motor, Paul H. Mueller and Ludwig H. Schuller, Brooklyn, N. Y.; assignors by direct and mesne assignments to L-M-S Motor Company; No. 1,098,679. Filed July 8, 1912.

Spark Plug, Adolph G. Bergstrom and Arthur Bergstrom, Rockford, Ill.; No. 1,098,705. Filed Dec. 30, 1912.

Resilient Wheel, William R. L. Ray, Fort Jones, Cal.; assignor of one-half to Maurice M. Zelle; No. 1,098,759. Filed May 31, 1912.

Motor Starter, Hans R. Setz, St. Louis, Mo.; assignor to Fulton Iron Works; No. 1,098,767. Filed March 24, 1913.

Resilient Wheel, Sanders Craig, Eagle Station, Ky.; No. 1,098,782. Filed Dec. 6, 1913.

Lubricating System, Paul Daimler, Cannstatt, Germany; assignor to the firm of Daimler-Motoren-Gesellschaft; No. 1,098,784. Filed Nov. 17, 1913.

Nut Lock, Jacob Farrell, Barronvale, Penn.; No. 1,098,790. Filed Aug. 13, 1913.

Motor, Charles Francis Jenkins, Washington, D. C.; No. 1,098,805. Filed July 3, 1911.

Axle Construction, John A. Marsh and Roy Ulrich, Jacksonville, Ore.; No. 1,098,816. Filed March 20, 1913.

Motor, Edward Moore, Syracuse, N. Y. ; No. 1,098,824. Filed Sept. 8, 1908.

Shock Absorber, Francis X. Mudd, Chicago, Ill.; No. 1,098,826. Filed Oct. 23, 1913.

Carburetor, Clyde S. Munroe, River Forest, Ill.; No. 1,098,827. Filed Sept. 6, 1913.

Steering Knuckle, John Einar Nelson, Hettinger, N. D.; No. 1,098,830. Filed May 10, 1913.

Bumper, Charles Welland, New York City; No. 1,098,860. Filed Feb. 14, 1914.

Starting Crank, Preston H. Breed, Pittsfield, Mass.; assignor, by mesne assignments, to Alden Sampson Manufacturing Company; No. 1,098,878. Filed March 2, 1910.

Intake Manifold, Howard S. Mountford, Algona, Ia.; No. 1,098,915. Filed Dec. 28, 1912.

Valve, Joseph Obermire and Daniel Krous, Catalpa, Neb.; No. 1,098,963. Filed Nov. 29, 1913.

Gasoline Gauge Structure, Frederick L. Pfahl, Akron, O.; No. 1,098,968. Filed May 26, 1913.

Nut Lock, John B. Young, Los Angeles, Cal.; No. 1,099,005. Filed March 7, 1913.

Ambulance Automobile, Frank E. Campbell, New York City; No. 1,099,020. Filed April 3, 1913.

License Holder, Louis Gottschall, New York City; No. 1,099,035. Filed April 17, 1913.

Motor, Charles M. Leech, Lima, O.; No. 1,099,065. Filed Oct. 8, 1912.

Shock Absorber, James Moir, Burlington, Ia.; No. 1,099,073. Filed July 20, 1913.

Carburetor, Thomas S. Hamilton, Tampa, Fla.; assignor to the Purified Petroleum Products Company. No. 1,099,086. Filed April 6, 1912.

Electric Lamp, Ellsworth A. Hawthorne, Bridgeport, Conn.; No. 1,099,087. Filed Aug. 2, 1913.

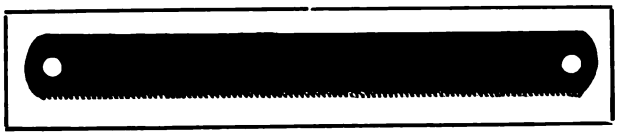
MACHINERY, TOOLS, AND EQUIPMENT.

ONE of the most important and useful small tools in the garage, repair shop and service station is the hacksaw blade. It is employed to cut metals of all kinds, tubing, pipe, steel, iron, brass, etc., and to obtain satisfactory results it



Sterling Hacksaw Blade.

is necessary that a blade be used that will obtain the best general service on all such metals.

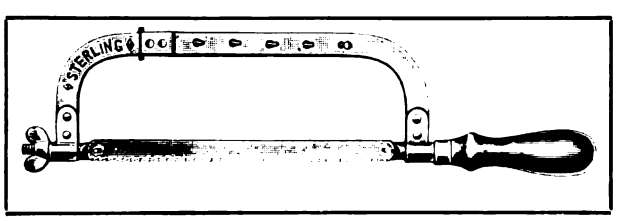
It is the opinion of practical hacksaw makers that a medium pitch blade about 24 teeth to the inch, in a 12-inch blade about .625-inch wide, and in an eight-inch blade, .5-inch wide, should give the best general results without the operator continually being obliged to shift the blade in the frame for different classes of work.

The Diamond Saw & Stamping Works, 361 Seventh street, Buffalo, N. Y., specializes in hacksaw blades and frames, and the Sterling trade mark is well and favorably known to the trade. An accompanying illustration shows its adjustable frame, which takes eight, nine, 10, 11 and 12-inch blades. The frames are light, strong in the centre, and can be quickly and easily adjusted to take the blades named. The blade is adjustable to four different angles. The frames come nickelled or polished.

The company also manufactures solid frames for eight, nine, 10, 12 and 14-inch blades. These are constructed of high grade material and are nicely finished. In addition to producing blades for hand frames and of different thickness, length, width, teeth, etc., the company makes a large variety of blades for power machines. Descriptive matter and prices will be mailed free upon request.

ECONOMY WELDING OUTFIT.

The Economy Welding Machine Company, Kansas City, Mo., specializing in welding equipments, is marketing what is known as the Economy Junior outfit. It was designed to meet the demand for the moderately priced high grade



Sterling Adjustable Hand Hacksaw Frame.

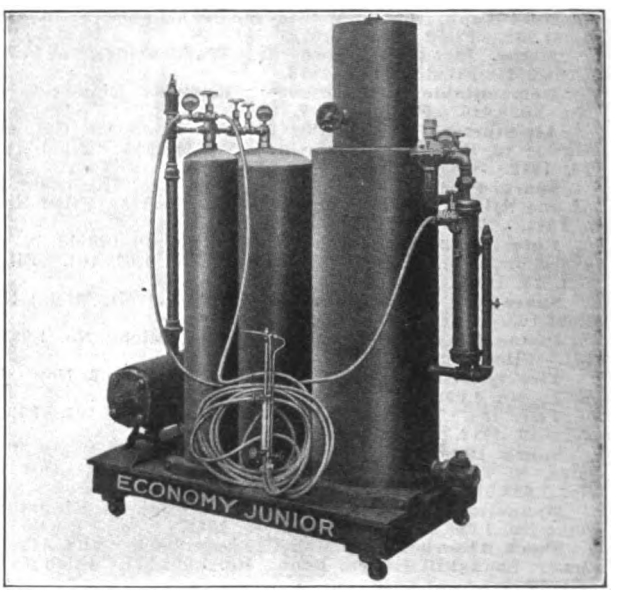
equipment, and one of its qualities is the provision made for generating the acetylene gas, a feature that will appeal to those not conveniently located to a source of supply.

As will be noted by the accompanying illustration the outfit is mounted upon a substantial wooden platform, which is 30 by 53 inches and fitted with roller bearing caster wheels. This permits of moving the apparatus in proximity to the work.

The oxygen generator is a steel storage tank, 16 by 48 inches, and the steel wash bottle is eight by 48 inches. All are constructed for 200 pounds working pressure and are tested to 300. The generator is provided with an Economy oxygen relief valve, regulating valve, high and low pressure gauges, stop pressure valves, hose connections, drain cocks, etc. The steel retort is five by 21 inches, fitted with gas or gasoline burners.

The acetylene pressure generator is 18 by 48 inches, oxy-acetylene welded, and tested to 20 pounds working pressure. The carbide hopper has a capacity of 25 pounds, and the carbide is fed by a hand feed of special design.

The balance of the equipment includes the



Economy Junior Welding Equipment.

Economy diaphragm relief valve, with gas tight bonnet connecting with relief pipe; regulating valve, flash back preventer, drying and filtering chamber, pressure gauge, hose connections, two-inch drain valve, etc. The torch is the No. 1 style, and has seven welding tips, numbers 1 to 7, and a removable cutting attachment with three tips. The company is issuing a pamphlet on welding which will be mailed free upon addressing the home office.

CINCINNATI BALL JOINTS.

The Cincinnati Ball Crank Company, Oakley, Cincinnati, O., is marketing a ball joint for spark and throttle controls. One of the qualities of the design is the use of an internal spring construction which takes up wear, eliminates noise and prevents backlash or lost motion. It comes completely assembled, 100 to the box.

Digitized by Google

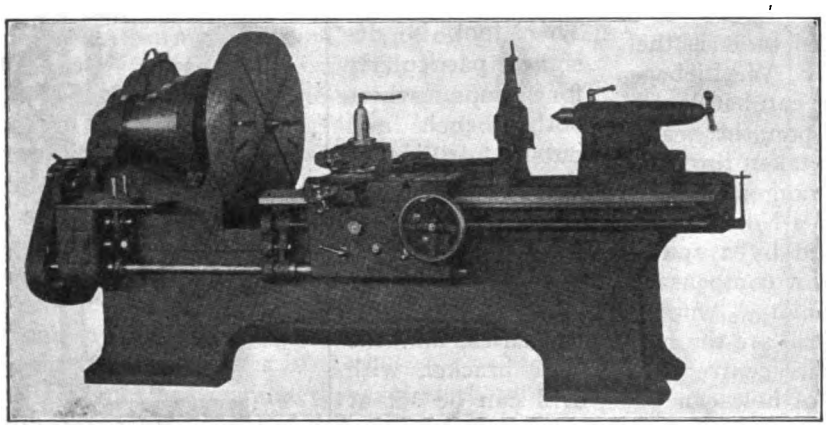
The material used is first class in every respect. Prices will be supplied upon request.

NEW BARNES LATHE.

A new 22 to 36-inch sliding extension gap lathe, having a bed 102 inches long, and adapted to a general class of work in a shop where the demands are of large range, has been brought out by the Barnes Drill Company, Rockford, Ill.

The lathe will take work between centres, with the gap closed, 50 inches in length, while the gap has a maximum opening of 36 inches. The top bed, which is 24.875 inches wide, extends beyond the main bed to provide a firm support for the carriage when turning large diameter work in the gap. This is held to eliminate the necessity of an auxiliary brace.

The lathe has a cone pulley drive, with a four-step pulley. There are 12 spindle speeds, ranging from 2.3 to 400 revolutions a minute, with a countershaft speed of 200 revolutions a minute. There are six geared feeds ranging from .008 to .123 inches a revolution of the spindle. Any number of threads ranging from two to 20 can be cut. Two sets of back gears, having ratios of 8:1 and 44:1, respectively, are provided. The net weight of the machine is approximately 5300 pounds.



Barnes New 22 to 36-Inch Sliding Extension Gap Lathe.

CHAIN-LUB.

Motor Accessories, Inc., 749A Boylston street, Boston, is marketing Chain-Lub, which is specially prepared for lubricating motor vehicle chains. It is stated to be a viscous, tenacious, mobile fluid that is easily and quickly applied; one that will penetrate between the rollers, etc. It is stated that it is not affected by centrifugal force or water. Samples will be forwarded upon request to the trade.

SLOCOMB MICROMETER.

The J. T. Slocomb Company, 29 Oxford street, Providence, R. I., is manufacturing the Slocomb micrometer, which is constructed to withstand severe service without affecting its accuracy. It is made in all styles and sizes and comes with inch or metric measurements.

THE CALCULAGRAPH.

The advantages of keeping an accurate record of the time spent on each job is appreciated both by the car owner and the proprietor of a garage or repair shop. Instances of a motorist questioning the time charged to him in a repair job are not uncommon, especially if the shop is not equipped with some form of time keeping instrument or practical system.

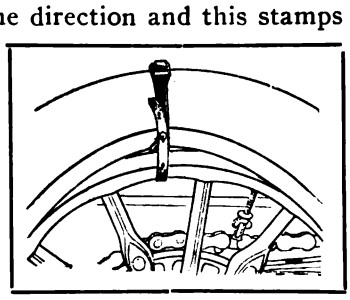
Calculagraph, a Time Record Clock.

A device that is stated to maintain an accurate record of the time spent by the workman on a job, and which prints the elapsed time or actual working time in hours and minutes or fractions of an hour, is the Calculagraph, made by the Calculagraph Company, 13 Maiden lane, New York City.

The clock is shown in an accompanying illustration and stamps on on a card the time the work is started, completed and the elapsed time. All the workman has to do is to insert a card in the clock and pull the stamping lever. When the job is completed he places the card in the clock again and the time consumed is automatically recorded.

The advantages claimed for the system are: Saves time wasted when workman makes out time slip, simplifies bookkeeping, as actual time is recorded, and insures accuracy.

The calculagraph has three dials. That at the right shows the time the work is commenced and the other two the time employed, the left indicating the hours and the centre the tenths. When the card is inserted in the machine the handle is pulled in one direction and this stamps the starting time, also the figures of the other two dials. When the job is completed the handle is moved the other way and this stamps two arrows, indicating hours and tenths on the card. Each arrow and its dial rotate together. A date printing attachment is supplied if desired.



Morgan Tire Tool.

The Morgan Manufacturing Company, Newport, R. I., is marketing the Second Man tire tool, shown herewith, which makes easy tire removals and replacements.

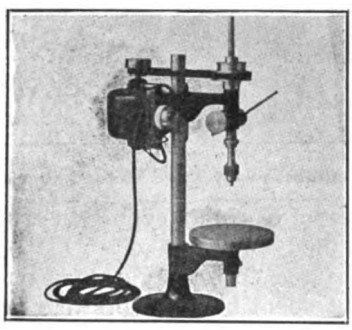
ELECTRICAL TOOLS AND EQUIPMENT.

Various Types of Portable Drills, Grinders, Etc., Capable of Completing a Wide Variety of Work at a Minimum of Expense.

THE practise of electrifying the repair shop and garage is becoming more general, and this is more specially noticeable in the tool equipment. The convenience of electrically operated machines appeals to the mechanic, and their use in many instances is a benefit to the customer, as considerable time is saved over the manually operated equipment. Where the drill, grinder, etc., are to be used occasionally, it is obvious that electric power results in economy in operation.

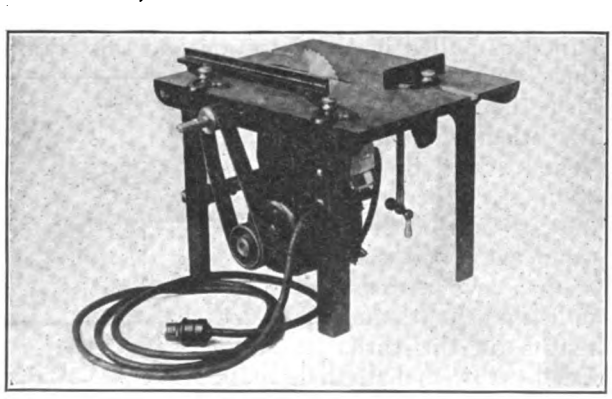


Portable Electric Drill Press.

PORTABLE DRILL PRESS.

Among the electrically operated tools is the portable drill press marketed by F. W. Lieberknecht & Co., Brookline, Mass. It can be placed on the floor, bench or directly upon the work to be drilled, and current supply is taken through the usual cord and lamp socket arrangement. It is held to be absolutely sensitive to a No. 70 drill, and its sensitivity can be adjusted by a spiral spring. Means are also provided for compensating for wear of the rack and pinion. Among other advantages claimed for the drill are the following: Platen will turn about its centre and about the upright column; depth of hole can be adjusted by a micrometer screw, which is not shown in the illustration; and drill press can be set directly on work for drilling vertical holes.

The specifications are as follows: Maximum diameter of drill, .375 inch; diameter of platen, 6.5 inches; maximum distance from chuck to platen, eight inches; face of driving pulleys, .75 inch; weight, 45 pounds; motor, .125 horsepower, alternating or direct current.

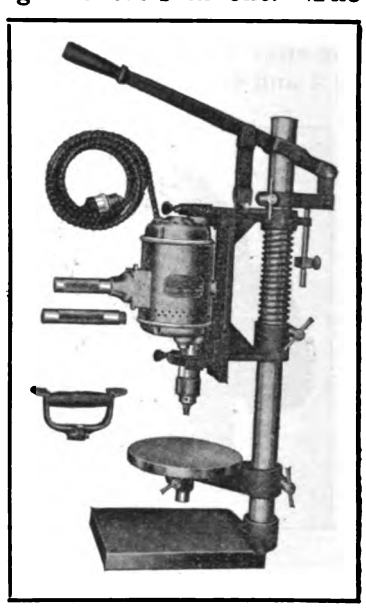


Lieberknecht Portable Electric Saw Table.

The same company is marketing a portable type of electric saw table shown in an accompanying illustration. It is held to be very efficient and economical of current, and to be well constructed. Prices and details of both the drill press and saw table will be supplied on request.

CINCINNATI BENCH DRILL.

The Cincinnati Electric Tool Company, Cincinnati, O., is manufacturing a line of electric drills, and herewith is shown the No. 0 combination sensitive bench drilling stand with a portable type of hand drill. The latter can be utilized independently of the stand, or as a sensitive bench drill, providing two tools in one. The hand drill is locked or released in a bracket, by means of thumb nuts. This tool is designed particularly for shops where both bench and outside drilling is to be done.



Cincinnati Bench Drill.

The stand is made to hold portable hand drills of .25, .375 and .5 inch capacities, and the drill bracket with drill can be set at any point on the column, and raised or lowered as desired. The weight of the drill and the bracket is counterbalanced by means of a spring on the column, and the drill is maintained in vertical alignment by means of a key on the bracket and keyway in the column. The depth of the hole to be drilled is regulated by a stop at the rear of the column. The lever feed is provided with a quick return.

The height of the column is 30 inches and the distance from base to drill chuck is 14 inches when the bracket is set at its highest point. The distance from column to centre of table is five inches and the diameter of the latter is eight inches. The base dimensions are nine by 11 inches. The weight of the stand is 60 pounds. Larger stands are made with lever or hand feed wheel, to carry portable drills of .75, .875 and 1.25 inches capacity. The capacity of the drills is from .25 to .5-inch steel, according to the type. Complete details and prices will be supplied upon request.

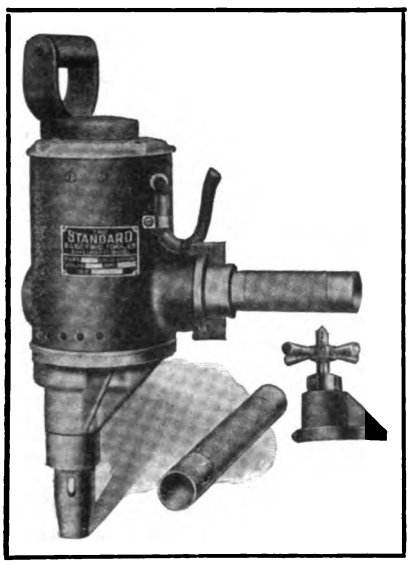
STANDARD PORTABLE DRILL.

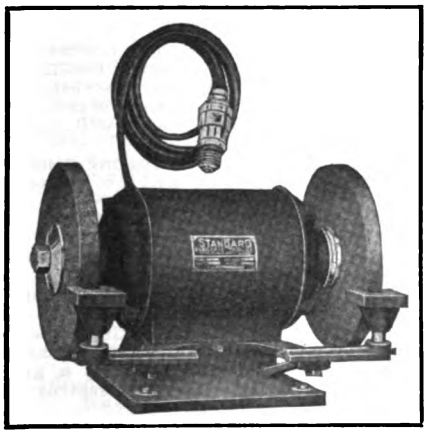
The Standard Electric Tool Company, Cincinnati, O., is marketing a line of high power universal portable electric drills, one of which is shown herewith. They are not only constructed of the best of material, but are designed to be run off any lamp socket or power circuit, both alternating and direct current of the same voltage. They will also operate satisfactorily on low frequency circuits, 60 cycles or less.



Standard Portable Electric Drill.

The Standard drills are built on the unit plan, consisting of five units, and can be easily disassembled. All armature spindles run on enclosed ball bearings and thrust is cared for by ball bearings. The motors are of the series commutating type, gears of high grade hardened steel, and the make and break type of switch is located in the handle. Special attention has been paid to cooling and they are guaranteed not to heat under severe and continuous service. Extremely high power is emphasized in the design. In tests of the drill it has been demonstrated that it requires but one minute and 26 seconds to drill a .5-inch hole through two inches of steel.

Nine types are manufactured, these having a drilling capacity ranging from .25 to 1.25 inches of steel. The reaming capacity varies up to .6875 inch. Spade handles are supplied with four types and feed screw or spade with five. The last named come equipped with No. 2 and No. 3 Morse taper socket, and breast plates are furnished when specified.



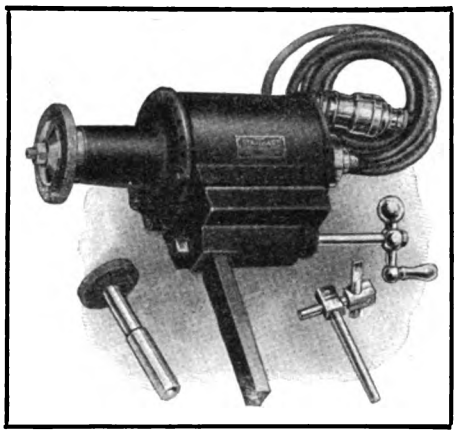
Standard Bench Grinder.

Each drill has variable speed, which regulates automatically up to its maximum capacity, and there is no racing. Standard tools will operate on all, no change in winding being necessary, only the voltage must be the same in each instance. They will also operate off any one-phase or two or three-phase circuits of the same voltage, thus enabling alternating current power circuit connection where this is desirable. Each drill is carefully tested before shipment. The company issues a booklet giving details and prices, which will be mailed free upon request.

STANDARD GRINDERS.

The Standard Electric Tool Company also manufactures a number of portable electric grinders, two types of which are shown herewith, a bench design and a universal grinder. These machines are very light and are constructed to meet the requirements of those who desire a high grade, efficient, durable tool.

The motors utilized are compound wound, and careful attention has been paid to the armature and commutator. The best of ball bearings is employed and enclosed in dust proof casings. The maker states that there is no chattering. The motors are cooled by forced ventilation, a fan being mounted on the armature shaft, expelling warm air, which is replaced by cool. The direction of the circulation being from the commutator end to the wheel end, emery dust cannot enter the tool. The brush holders are well enclosed, making it impossible for the operator to come in contact with them, thereby preventing opportunity for shocks. One of the qualities of the product of the company is that it is tested under actual service conditions and all motors subjected to a high voltage test before shipment.



Standard Universal Grinder.

The bench grinder shown is mounted on a pedestal when desired and the types made comprise 3B, 6B, 2Ba and 3Ba, and are useful for grinding small tools, castings, polishing and buffing. An emery wheel is fitted to either end, one coarse and one fine, or with one emery wheel and a buffing member. The tool rests are detachable. They operate on direct current of 110 or 220 volts and the usual lamp socket, etc., are included.

The universal grinders operate on both alternating and direct current, 60-cycle or less, and have a speed of 6000 revolutions a minute. They are especially adaptable for lathe and milling machine work, grinding centres, reamers, dies and rolls, and may be used also for surface work on the shaper and planer. They come with an internal grinding attachment and tooth rest as shown. The company issues a complete catalogue, which will be mailed free upon request.

CONTEMPLATED NEW BUILDING OPERATIONS.

PLANS AND SPECIFICATIONS.

Edward P. Hanisch, 123 North Halsted street, Chicago, Ill.; one-story garage, 20x24.

Frank E. Christensen, 1224 West 55th street, Chicago, Ill.; one-story garage, 50x121.

M. C. Bersted, 1516 North Harding avenue, Chicago, Ill.; two-story garage, 40x44.

Neils Buck, 3806 North Clark street, Chicago, Ill.; one-story garage, 25x56.

Gustave Marquardt, 416 Liberty avenue, and Henry Kreckman, 205 Pennsylvania avenue, Brooklyn, N. Y.; one-story garage, 25x100, $4000.

Olean Brewing Company, Olean, N. Y.; one-story garage and barn, 25x100, $3000.

Petry Express & Storage Company, 320 East State street, Trenton, N. J.; two-story garage, 75x116, $12,000.

Aaron A. Benedict, Waterbury, Conn.; one-story garage, 21x24, $1000.

Harris & McAmbly, Bradford, Penn.; three-story garage, 47x100, $25,000.

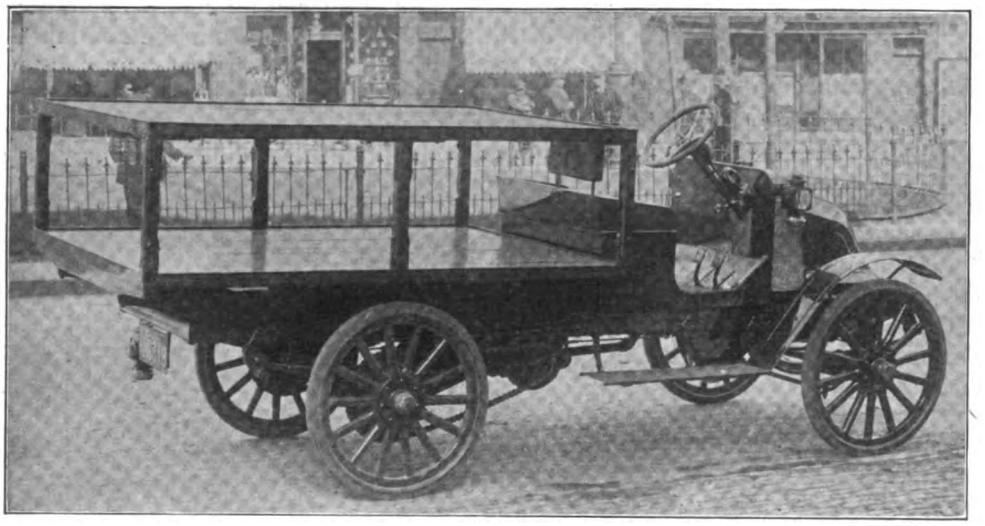
George R. Balch, Cincinnati, O.; three-story garage and salesroom, $3000.

Troy Laundry Company, 517 North Market street, Canton, O.; two-story garage, 70x50.

L. F. Howell, Scotts Bluff, Neb.; one-story garage, 50x140, $8000.

Anthon Auto Association, Anthon, Ia.; one-story garage, 75x150.

E. J. Healy, Detroit, Mich.; two-story garage, 22x40.



Double-Decked Platform Fitted to a Palmer-Moore Delivery Wagon for the Service of the Zenith City Bottling Works, Duluth, Minn.

Dr. Creswell, Danbury, Ia.; one-story garage and office, 30x40, $4500.

A. Bergenthal, 79 Buffalo street, Milwaukee, Wis.; garage, 23x43.

S. Plotkin, 90 Hendrie street, Detroit, Mich.; two-story garage and apartment building, 34x60 and 20x30, $10,000.

John S. Holmes, 69 West Washington street, Chicago, Ill.; one-story garage, $12,000.

Mack & Kounts, Nagle building, Hagerstown, Md.; two garages, each two stories, $4000 and $6000.

Wayne M. High, 416 Penn street, Reading, Penn.; two-story garage, 53x105, $12,000.

Louis Larquier, Monessen, Penn.; two-story garage, 46x65, $6000.

J. J. Schnurmacher, 179 East 111th street, New York City; four-story garage, 50x100, $25,000.

L. W. Morrison and A. M. Ulman, 53 Exchange place, New York City; two-story garage, 100x100, $25,000.

E. Hanckel, 35 Fort Washington avenue, New York City; four-story garage, 99x99, $55,000.

John Hamilton, 6216 Kimbark avenue, Chicago, Ill.; one-story garage, $3000.

W. Wojciechowski, 900 West Chicago avenue, Chicago, Ill.; one-story garage, $5000.

S. S. Corl, 28 Commerce avenue, Grand Rapids, Mich.; two-story garage, 50x135.

Dr. C. D. Owen, 106 Monroe avenue, Grand Rapids, Mich.; two-story garage, 23x26.

Northwestern Garage & Storage Company, Kansas City, Kan.; two-story garage, 94x123, $30,000.

Charles Wurdeman, Columbus, Neb.; two-story garage and office, 44x90, $10,000.

Paolone Bros., North street, Rochester, N. Y.; two-story garage and warehouse, 30x50, $6000.

CONTRACTS AWARDED.

Charles Gilpin, Philadelphia, Penn.; one-story garage, 15x15, $2000, at Cynwad, Penn., for the Philadelphia Electric Company, Philadelphia.

The Martin Construction Company, 82 West Washington street, Chicago, Ill.; one-story garage, $4000, for John R. Thompson.

The Turner Construction Company, 11 Broadway, New York City; two-story garage and shop, 70x150, $10,000, for the Spring Brook Water Company.

The Cowan Building Company, 106 West Madison street, Baltimore, Md.; two-story garage, 20x24, $3500, for Mary P. Baldwin.

F. E. Dandelin, 1815 South Turner avenue, Chicago, Ill.; one-story garage, 24x35, $7000, for Dr. J. N. Roe.

J. E. Warren, Marlboro, Mass.; 1.5-story garage, 19x30, for F. Lincoln Pierce, Newtonville, Mass.

Calhoun & Miller, Pittsburg, Penn.; two-story garage, 28x43, $7000, for W. S. Mackintosh, Ellsworth avenue.

GARAGES AND REPAIR SHOPS.

The Butte Water Company, Butte, Mont., will erect a new building to cost approximately $15,000 on West Mercury street. The first floor of the new structure will be used as a garage and repair shop.

H. J. Tinkman & Son, Grand Ledge, Mich., is building a new garage adjoining the present building, and the latter will be remodelled as soon as the new one is ready for occupancy. It will be modern throughout.

The Marshall Machine Company, North Adams, Mass., has purchased property on Main street and will establish a first class garage on the site.

Andrew M. Reidy and Timothy J. Lynch, Warrensburg, N. Y., have purchased property and will erect a large modern garage.

The Webster Avenue Garage, New York City, has erected a modern garage.

The Twentieth Street Garage Company, New York City, is erecting a garage between 10th and 11th avenues. The company was recently formed.

The Standard Garage, Grafton, W. Va., has purchased land on the West side and will erect a modern building. The company at present is located on Walnut street.

The Independent Oil Company, Brockton, Mass., is erecting a new and up-to-date garage which will have capacity for 12 automobiles.

Andre S. Hansom, Worcester, Mass., is erecting a new public garage at 143 Main street. It will be modern throughout.

The Dixie Motor Car Company, Nashville, Tenn., is erecting a new building on Ninth avenue.

Higley & Hart, Brooklyn, N. Y., is erecting a new and modern garage, costing $8000, at Park place.

Alexander Laird, Trenton, N. J., is building an up-to-date garage on East Clinton avenue.

Alfred D. Poirier, Providence, R. I., is erecting a new garage. He is agent for Crow Elk-Hart and Vulcan cars.

William Siebald, Skowhegan, Me., is building a garage on the site of the Coburn hotel, which was destroyed by fire recently. It will be of concrete.

Jeppe Christensen, Rodney, Ia., has begun the erection of an up-to-date brick garage.

Granger & Whittaker, Hammond, Ind., is erecting an up-to-date garage at 486 South Hohman street. It will be of fireproof construction.

Lincoln Kinnicutt, Worcester, Mass., is erecting a large garage at 72 Cedar street.

The Ford Sales Company and the Ford Service Station, Leadville, Col., are erecting an up-to-date garage and will operate it under the name of the Cloud City garage.

Grant Jones, Youngstown, O., is preparing to build a new and up-to-date garage and repair shop on Holmes street. The building will be provided with stalls in which machines may be placed and the doors locked.

Digitized by Google

The McGregor Company, Waltham, Mass., is to erect a modern garage near Music Hall avenue.

H. V. Drown, Barton, Vt., is erecting a modern garage in the rear of his residence. Modern machinery will be installed and an up-to-date repair shop will be conducted.

J. D. Heard, Pittsburg, Penn., will erect a one-story brick garage on Center avenue, at a cost of $3500.

Geoffrey Winslow, Tacoma, Wash., has purchased two lots on South C street and will begin the erection of a three-story reinforced concrete garage.

Snavely Livery & Transfer Company, Green Bay, Wis., is building an up-to-date garage 22 by 100 feet. The company is agent for Jeffery cars.

R. I. Pollock and Rudolph Ahrens, Nora Springs, Ia., are erecting a large modern garage on the site of an old landmark, known as the old Furniture building.

N. S. Speer, Dallas, Tex., is to erect a modern garage on South boulevard. It will cost $30,000.

M. Boy, Philadelphia, Penn., is to erect a garage and factory at 20th street. It will be three stories in height and will be modern throughout.

Herbert Robinson, Hurley, N. M., is erecting a large modern garage, to be operated in connection with his livery business.

Bryan Motor Service Company, Bryan, O., is erecting a modern brick and reinforced concrete garage and salesroom. It will be 44 by 132 feet.

The Esplanada Garage & Supply Company, Chicago, is erecting a modern garage at Clark and Maple streets. It is to be two stories high, 65 by 160 feet and will cost about $25,000.

Ralph R. Moore, Wheeling, W. Va., will build an up-to-date garage at 300 South Penn street. He has secured the agency for Grant cars. Upon the completion of the building a line of accessories and supplies will be handled as well as parts for the Grant cars.

William Mohler, Ebensburg, Penn., is erecting a garage which will be modern throughout. New machinery will also be installed.

Atkinson Bros., Tuckerton, N. J., is to erect a new concrete garage, which will be one of the best when completed.

The Armfield Percival Motor Company, Fayetteville, N. C., is erecting an up-to-date garage and repair shop.

Ernst & Bush, Spokane, Wash., is completing its new garage and repair shop on Oak street and will occupy it in the near future, where the company will be prepared to handle cars and make repairs in a thorough manner.

Charles E. Renford, Indian Orchard, Mass., is erecting a new fireproof garage at 46 Main street. It will have the most up-to-date equipment.

Daniel F. Mehan, Wilkes-Barre, Penn., is erecting a first class garage on Terrace street. It will be two stories high and of brick construction. It will be modern throughout and fireproof.

Rodney Sharp, Wilmington, Del., is erecting an up-to-date garage on Greenhill avenue at a cost of $12,000. Modern machinery will be installed.

The Herring Motor Car Company, Des Moines, Ia., will erect a first class garage at a cost of $7700. It will be modern throughout and of fireproof construction.

C. C. Moore, New York City, is erecting a two-story garage at 203 West 64th street, costing $23,000. When completed it will be one of the best in that city.

Thomas W. Wright, Boston, Mass., is erecting a new fireproof garage on High street.

Katherine T. Moore, New York City, is building an up-to-date four-story garage at 516 West 20th street at a cost of $120,000.

H. N. McLernon, New York City, is erecting a new one-story garage at Fordham road. It will cost $5000 and will be modernly equipped.

Seinik & Thal, New York City, has leased two large floors in the building at the corner of Eighth avenue and 49th street, and also two adjoining buildings. The combined properties will be altered into one of the largest garages in that city.

H. A. Weber, Irvington, N. J., has secured a site on Ellis avenue and will erect a first class garage which will be modern throughout. The latest machinery will be used.

Bell & Conley, Pittsburg, Penn., is erecting a fireproof public garage at the corner of Fifth and Hamilton avenues. It will be modern throughout.

The White Star Motor Company, San Diego, Cal., is erecting a modern garage at 1063 India street. It will be fireproof throughout.

William H. Schieffern, Santa Rosa, Cal., agent for the Ford line of cars, is having a garage erected which will be modern in every respect.

ADDITIONS AND IMPROVEMENTS.

The Schutte Garage, Fredericksburg, Ia., is having extensive improvements made to its building. New machinery will be installed.

The Lewiston Auto Company, Lewiston, Mont., is having extensive improvements made to its garage. Frank E. Doran is manager.

Cushing Bros., South Duxbury, Mass., is building an addition to its garage at Hall's corner. New machinery will be installed.

The Aaby Garage, New England, N. D., is erecting a large addition to its building. A gasoline tank has also been installed.

G. C. Downs, Springvale, Mo., is having a large addition made to his garage which, when completed, will more than double the present floor space.

Stout & Dils, Parkersburg, W. Va., is erecting a large addition to its garage.

Kahn & Greenberg, Philadelphia, is having extensive improvements made to its garage and showrooms at 2415 North Broad street, costing $8000.

The Souhegan Auto Company, Milford, N. H., will make large and extensive improvements to its buildings.

Willys Utility Delivery Wagon Used by Emil Roesler, Baker and Confectioner, of Heidelburg, Germany, to Serve Royalty and Other Patrons.

The Parker Avenue Garage, Detroit, is having large and extensive improvements made to its building at 253 Parker avenue.

Benjamin Siebel, Detroit, is having a one-story addition put on his garage at Woodward and Brady streets. The new improvement will be 100 by 120 feet.

Hannah & Henry, Plattsburg, N. Y., is building an addition to its garage on Margaret street, which will be the same size of the present building, 50 by 170 feet. The company is representative for the Cadillac car.

Forest S. Lowell, Hinsdale, N. H., has purchased an old carriage factory and will remodel it into a first class garage.

The Powers Hotel Garage, Rochester, N. Y., is adding two stories to its building at a cost of $12,000.

The East Court Street Garage, Urbana, O., is installing a new vulcanizing plant in its building. Frank Prince is the proprietor.

Herbert Kimmens, Appleton, Me., has leased one of the carriage shops of the G. H. Page concern and is remodelling it into a garage. He will also repair motor vehicles and stationary marine engines of all kinds.

Joseph Trethway, Bagertown, Penn., who has been conducting a vulcanizing plant and repair shop in the rear of his home on South Reading avenue, has purchased a plot of ground on which he will erect a two-story brick building. The first floor will be used for a garage and the second for vulcanizing and repairs.

The Grinnell Electric Car Company, Detroit, has taken a lease of the building on 467 Woodward avenue and will remodel it into a modern garage.

EISEMANN MAGNETO ATTACHMENT FOR FORD.

IN KEEPING with its policy not to market a new product until it has been thoroughly tested in practise, the Eisemann Magneto Company, Brooklyn, N. Y., has withheld details of its magneto attachment for the model T Ford motor until recently. In designing the equipment the company gave careful consideration to the method of drive and lubrication, important factors with this high speed motor. Quietness of operation and accessibility, as well as ease of installation, are features.

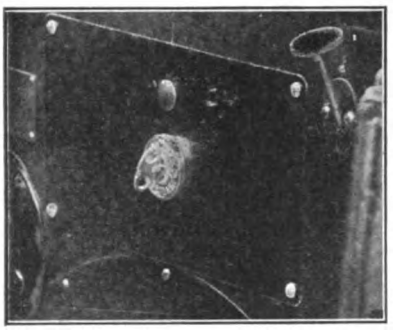

Fig. 1—Switch Used with Eisemann Ignition System for Ford.

The simplicity of the equipment will be noted by reference to Fig. 2, and each detail has been worked out very carefully. For example, the trouble generally experienced in removing a gear from a conical shaft without the aid of a special tool, is eliminated in the Eisemann design by a simple device in which the removal of the nut retaining the gear in place automatically pulls off the gear. Another feature, one that will appeal particularly to those not familiar with timing a magneto, is the use of marked gears and an indicating window on the instrument.

Gears Well Mounted.

The attachment is an aluminum casting, it serving a double purpose, in that it provides a bracket for mounting the magneto, also a housing for the driving gears. The structure provides a rigid, well ribbed mounting, and as all bolt and screw holes are accurately machined, it is simply a case of utilizing the parts supplied.

The gear housing, which is integral with the bracket, has two removal covers, these permitting of the fitting of the large camshaft gear and armature gear. The entire construction is proof against leakage of lubricant, special gaskets being utilized.

For driving the magneto, two bronze gears are employed. The larger one is securely fastened to the camshaft by means of a spacing ring, dowel pin, lock washer and a nut. The dowel pin is extra heavy and, passing through the gear directly into the shaft, assures a positive and reliable drive. The magneto pinion is retained by a Woodruff key, lock washer and nut, and the magneto is secured to the bracket by dowel pins and straps. Control of the movement of the breaker box of the magneto, providing variable ignition, is by means of a shaft passing through a solid bearing in the support, and a lever and link. This linkage is connected to the Ford ball joint at the base of the steering column by a second lever and rod. The movement provided is sufficient to permit the timing lever of the magneto to be advanced to its maximum without the spark lever travelling over the entire length of the quadrant.

Reference has been made to the easy timing feature. The Ford crankshaft and camshaft gears are marked and, with these marks registering, the camshaft gear is removed and replaced by the marked new gear. With the magneto on its base, its armature is turned until the figure 1 appears in the indicating window. The magneto pinion is then slid on and so meshed with the camshaft gear that the marks coincide. As the new camshaft gear is retained by a dowel, it is a simple matter to install it correctly.

Careful attention has been paid to supporting the high-tension wires leading from the distributor of the magneto to the spark plugs, a solid bracket being utilized. It is secured to the two middle bolts of the stirrup holding the intake and exhaust manifolds.

Spark Coil Eliminated.

As the Eisemann system eliminates the coil, the space on the dash is neatly covered by an enamelled steel plate, as indicated at Fig. 1. This plate carries the Eisemann switch, a simple and efficient construction, one permitting of securely locking the car, as its key is removable.

The magneto supplied is the well known EM type, a true high-tension magneto, which provides a very hot spark at very low motor speeds, and it is stated that the Ford motor car be started easily on a quarter turn. For those owners desiring to start the motor on the spark, the Eisemann Magneto Company supplies the dual ignition system, type EB. This includes a flush type dash coil, having a starting button, which, when pressed, produces a shower of sparks in the cylinder on compression.

The dual system lists for $5 extra.

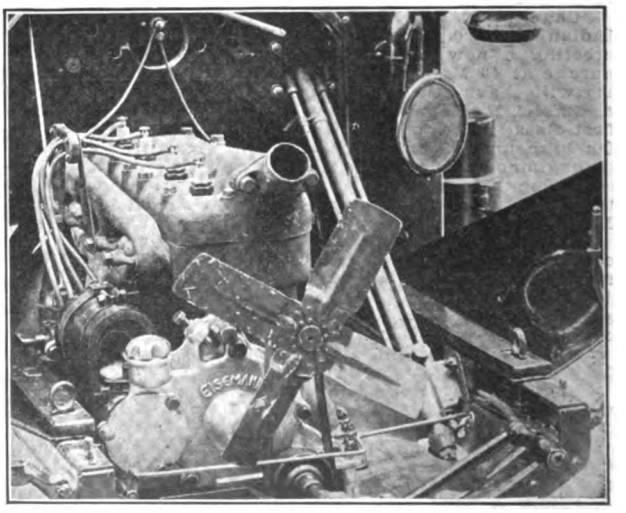

Fig. 2—Showing the Eisemann Magneto Attachment for Ford Motors Installed—A Quiet Gear Drive, Well Lubricated, Is Among Its Practical Features.

The Eisemann Magneto Company is issuing a booklet, which describes and illustrates in detail the magneto attachment for Ford motors.

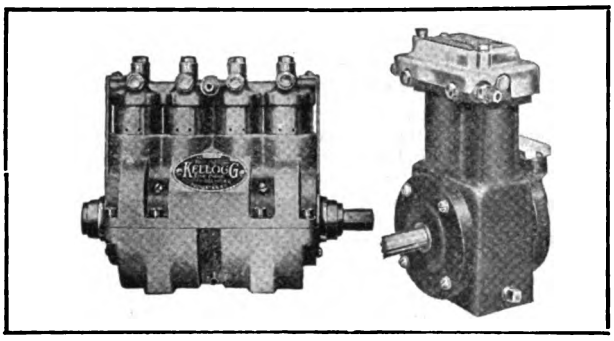
TOOLS, MACHINERY AND SUPPLIES.

THE introduction of the power driven tire pump was largely due to the demand of the owner for relief from the laborious work of inflating by the manually operated pump. As a result many 1914 machines were equipped with the more convenient method, one



Kellogg Motor Driven Tire Pumps for Motor Cars Come Complete with Attachments for Fitting: At Left, Four-Cylinder Unit; at Right, Two-Cylinder Design.

which makes for greater tire economy, as maintaining the proper pressure in the casings involves no other labor than attaching the hose and the valve.

The engine driven pump is in demand by owners of cars made previous to 1914 and many of the late models are not equipped with the new accessory. Many owners have hesitated to install the power tire pump because of special attachments, gears, etc., but this problem has been solved by the Kellogg Manufacturing Company, 128 Circle street, Rochester, N. Y., which concern has specialized for years in power pumps.

The company has been designing special attachments to go with the different designs it makes for over five years and is now prepared to supply them for a large number of standard models. One of the qualities of the equipment is that it may be installed easily and correctly by the garage man and dealer. Some idea of the number of attachments made by the Kellogg Manufacturing Company may be obtained by the list given in their advertisement which is contained elsewhere in this issue.

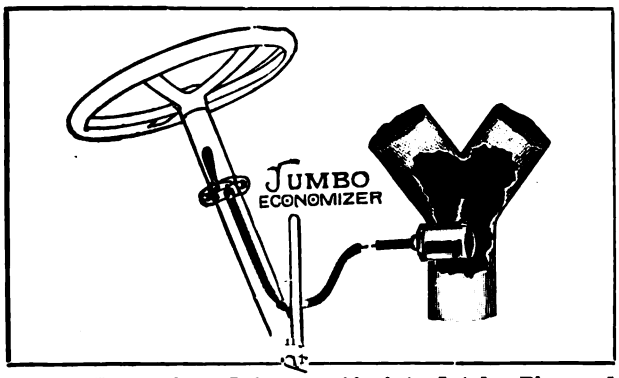
The company has inaugurated a practical selling campaign that should appeal to the garage, repairman and the dealer. It promotes sales and good profits and does not involve any outlay of time, as the Kellogg Manufacturing Company attends to all details. This proposition will be forwarded to the trade upon request, also the Kellogg News, which teems with practical and pertinent data on power driven pumps for the motor car, garage, service station and repair shop.

The product of the company is very well known. It manufactures one, two, four and six-cylinder models, and one of the four-cylinder type is shown in an accompanying illustration. It retails for $30. The two-cylinder model, which sells for $26 with attachments, is adaptable to a number of cars.

JUMBO ECONOMIZER.

Sold by E. Edelmann & Co., Under a Money-Back Guarantee.

E. Edelmann & Co., 227 West Illinois street, Chicago, is marketing the Jumbo economizer shown in the accompanying illustration, which varies the air supply injected into intake manifold and fully vaporizes the fuel.



Jumbo Economizer, Injecting Air into Intake Pipe and Having Steering Post Lever Control.

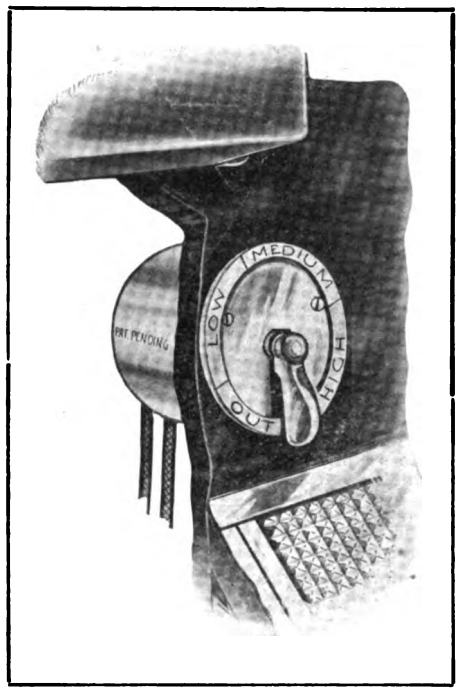
The Jumbo is controlled from the seat, a lever being provided for attachment to the steering column under the wheel. By this lever the amount of air supplied may be regulated to produce the best results. The maker states that the Jumbo may be easily attached in 10 minutes; is very durable and is a big seller. It is adaptable to all types of gasoline cars and retails for $2.50. It is accompanied by a money-back guarantee. Liberal discounts are offered to the trade, which is invited to write for prices, samples, etc.

CHANEY HEADLIGHT DIMMER.

Provides Graduated Control of Lights, Can Be Operated by Foot and Is Easily Installed.

One of the latest devices for dimming the electric headlights of a motor car is the Chaney, manufactured by the L. F. Chaney Company, Springfield, O. It not only enables the driver to eliminate the glare of the lights, but the control is so arranged that their intensity can be graduated, and that, too, by a slight kick of the foot.

The design makes possible the elimination of the electric side lamps and without altering the head members in any manner. The same headlights are utilized and the intensity of the rays is modified by the Chaney device, which is very compact, as will be noted by the accompanying illustration. The Chaney is fitted to the dash and it is stated that it can be installed and wired in less than 10 minutes. As will be noted by the illustration, there are three light positions, these being low, medium and high, which arrangement provides for all conditions of driving. There is also an "out" position. Operation is by kicking the sturdy switch lever.



Chaney Headlight Dimmer, Enabling Graduation of Intensity of Electric Lights and Eliminating Need of Side Members.

The maker has a very interesting trade proposition and has a number of agencies to award. The device retails for $3.50 and the margin of profit to the dealer is very attractive. The company stands back of its product and will forward details of its proposition upon request.

EXCLUSIVE AGENCIES OPEN.

Opportunity to Handle Houk Detachable Wire Wheels in Many Localities.

The George W. Houk Company, 1699 Elmwood avenue, Buffalo, N. Y., maker of the Houk detachable wire wheels, announces that exclusive agencies are open in many localities for representative dealers who will have highly developed co-operation from the company in the sale of its product.

The Houk wire wheels are made to fit all cars and one of their qualities is that they can be installed in one hour. The advantages of the wire wheel have been demonstrated in road and track contests and their production in form adaptable to used cars make them a good proposition for any dealer. The George W. Houk Company has a special dealer's proposition, the details of which will be forwarded upon the receipt of a postal card or letter.

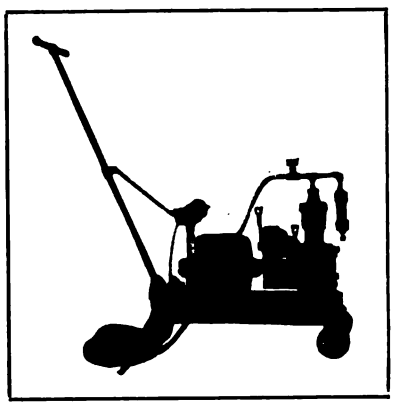
NEW AND ATTRACTIVE LINES.

VELOS PORTABLE COMPRESSOR.

A Complete Electrically Operated Garage Type of Equipment, Easily Moved About the Building.

The Philadelphia Timer & Machine Company, 51st street and Lancaster avenue, Philadelphia, Penn., maker of a wide variety of compressors, is marketing the Velos portable garage compressor, which is a complete equipment, mounted on a three-wheel metal base, as shown in the accompanying illustration. The design is such that it makes for convenience in the garage, and one of its qualities is that it can be operated for a few cents a day. It is stated that the compressor will inflate a 3.5-inch tire in three minutes.



Velos Portable Garage Compressor.

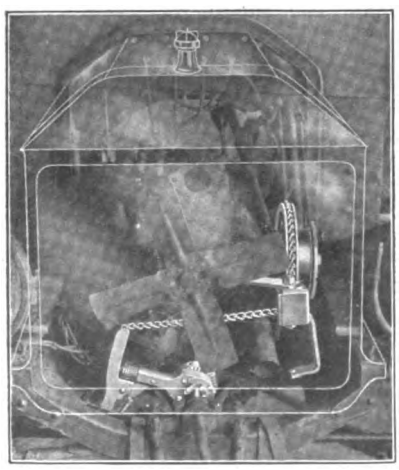
The cylinder of the compressor has a bore of 1.75 inches and the crankshaft revolves at 450 revolutions a minute. A safety pop valve is provided, eliminating danger of injuring the tire through over-inflation. Ten feet of tire hose with connections are included, also 20 feet of high grade flexible wire cord, and socket plug for connection to a lamp socket.

The workmanship and material utilized are first class in every respect. The cylinders are accurately bored and the pistons are carefully fitted, carrying two rings. The connecting rods are of bronze and all bearings are lubricated with grease cups, with the exception of the cylinder, which is oiled by splash from the crankcase. The speed reduction from the electric motor is by cut gearing of ample size, and all parts are constructed for durability. The motor is of .25 horsepower. The size of the base is 10 by 22 inches over all. The Velos is supplied with 100-volt motor for alternating or direct current. The company issues a catalogue of its compressors which will be supplied with trade prices upon request.

UNIVERSAL MOTOR STARTER.

Mechanical Type, Operated from the Seat and Designed Especially for Ford Motor.

The Universal Manufacturing Company, Racine, Wis., is placing on the market a new style of motor starter for the model T Ford car. It is of the mechanical type, the crankshaft of the engine being rotated by the driver giving a slight pull to a starting handle which is placed in the toeboard near the dash, where it is out of the way, yet conveniently operated.



Universal Ford Motor Starter.

The device installed is shown in an accompanying illustration, and it will be noted that considerable energy may be imparted to the crankshaft with but little effort by the construction, the maker stating that a child can operate the handle easily.

The design includes a device for preventing injury to the motor or operator in the event of a back fire, and a rapid rotation is imparted to the crankshaft by the leverage obtained. One of the qualities of the starter is that it may be installed in a short time without any alterations, etc., the Universal coming complete for attachment. Simplicity and a few number of parts are emphasized by the construction. The maker guarantees it for one year against defective material and workmanship, also that it will turn the motor past the compression and firing stroke every time. The price is an attractive one and dealers are invited to write for the company's sales proposition.

BOSTON FORD STARTER.

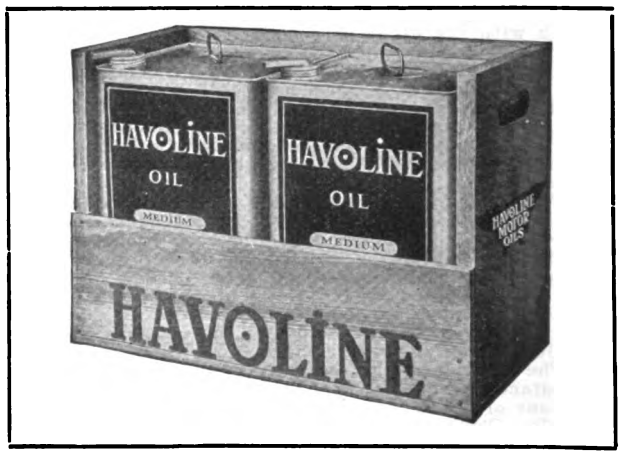
Automatic Appliance Company's Product Obtainable Through Large Number of Distributors.

The Boston starter, which spins the Ford motor by a pull of a handle convenient to the driver, is now obtainable from a number of distributors appointed by the Automatic Appliance Company, 172 Columbus avenue, Boston, maker of the device. The company calls attention to the thousands of Ford cars in service, affording opportunities to the live dealer to add considerably to his season's profits. A special proposition is offered to dealers and agents and it will be mailed upon request.

HAVOLINE OIL.

Indian Refining Company Inaugurates Selling Policy to Aid the Dealer, Etc.

Dealers handling Havoline oil will be pleased to learn that the Indian Refining Company, New York City, is backing up the trade handling this well known lubricant by forwarding suggestions for selling, as well as literature to interest motorists in the qualities of Havoline oils. The company's house organ, the Sales Oiler, will be supplied, and it contains much valuable information upon lubrication of the motor. It will be sent free upon request. The company also has a new price scale policy, the details of which will be given upon addressing Dept. L. The Indian Refining Company is issuing free a booklet entitled "Lubrican" for distribution among customers of the garage, etc.



Container Utilized for Shipping Havoline Oil.

OPPORTUNITY FOR DEALERS.

Sullivan Motor Car Company Has Interesting Proposition for 1915.

The Sullivan Motor Car Company, Rochester, N. Y., maker of the Sullivan 3000-pound motor truck, has a 1915 proposition which should be of decided interest to dealers. It is broad, liberal and progressive, and the company states that it enables a dealer to make a large number of sales and big profits.

The price of the Sullivan truck is $1600 and the company prides itself upon the high grade material and workmanship entering into the design. The vehicle was built to serve the purposes of the business interests that constitute the largest and most constant market.

Every detail of the design makes for simplicity, accessibility, economy of operation and maintenance. The truck is built for service wherever highways exist and business is transacted. The company back of the Sullivan truck is an old and well known concern, one entirely familiar with transportation problems. A postal

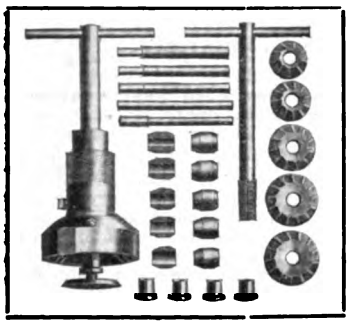
Digitized by Google

will bring complete details of the proposition above referred to, which is a profitable one for live dealers.

FOSNACHT VALVE RESEATER.

Restores Worn Valves and Their Seats Quickly and Accurately, Effecting Economy.

H. G. Paro, suite 719, Michigan boulevard building, 30 North Michigan boulveard, Chicago, is marketing the Fosnacht valve reseater, which presents a number of practical features, among which is that the tool can be utilized to cut new seats as well as restore the faces of the valves.



Fosnacht Valve Reseater Outfit.

One of the qualities of the design emphasized is that it will do accurate work and in very fast time, thereby effecting a saving when worn and pitted valves are to be reseated or cut. As will be noted by the accompanying illustration, the equipment is sufficient to handle all types of motors. Every tool is guaranteed.

The Kraemer valve spring releaser and retainer shown herewith is also marketed by H. G. Paro. It has an adjustable jaw, adapting it to any valve spring, and when the latter is compressed it is retained, leaving both hands free. The maker states that it will save its cost in one job. The retail price is $1.50. Full information of the reseater and Kraemer tool will be sent upon receipt of a postal.

GREENERD ARBOR PRESSES.

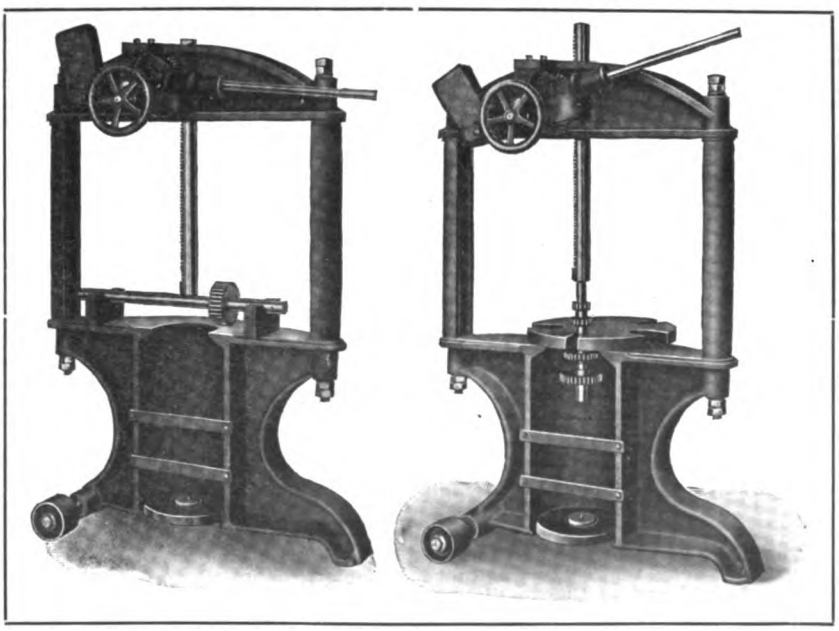
Edwin E. Bartlett Company Markets Design Especially Adapted to the Garage and Repair Shop.

One of the most practical and useful units of the machine equipment in the garage, repair shop and service station is an arbor press which can be employed for a number of purposes. For example, the old fashioned method of removing a transmission gear from its shaft is to utilize a sledge hammer, a practise that not only runs up a labor bill for the owner, but is likely to result in damage to the shaft. Removing flywheels, straightening axles, etc., which frequently require a pressure of several tons, is easily and quickly accomplished by the arbor press.

The Edwin E. Bartlett Company, 322 A street, Boston, has been making a specialty of arbor presses for years and the product of this concern is well and favorably known among the machinery and manufacturing trade. The No. 15 Greenerd shown in the accompanying illustration was designed especially for garage work, and the maker points out that it will repay its cost in a short time and that it will build up trade, in that the cost of labor to the owner is considerably reduced by its use. The press is easily handled and the ram can be quickly run up or down by a small hand wheel in front of the machine.

The press provides 36 inches between the uprights, has a 12-inch opening under the plate, 26 inches over the plate and 48 inches over the lower or auxiliary plate. Being mounted on wheels the press can be easily moved to the centre of the shop to straighten an axle, or over a trap hole through which a crankshaft may be placed to remove a flywheel. The auxiliary plate at the bottom of the chamber under the revolving plate having a receding centre and a self-conforming surface to press against, makes it very convenient when needed. This plate is removable.

The gearing is all of special heat treated steel, and vanadium is used in gears subject to the greatest stresses. One man can exert a pressure of 10 tons and two men, 16. The workman is able to "feel" what he is doing; therefore a pressure gauge is not needed. Greenerd arbor presses are built to endure and the No. 15 weighs 1500 pounds. The company makes 15 sizes and of different capacities. Complete details will be mailed upon request.



No. 15 Greenerd Arbor Press, Designed Especially for Garage Use, Enabling a Variety of Work to Be Performed at a Saving of Time and Labor.

PANHARD OIL.

Maker of Lubricant Marketed Since 1904 Calls Attention to Its Quality.

George A. Haws, 148 Front street, New York City, manufacturer of the well known Panhard oil, is issuing a series of bulletins in The Accessory & Garage Journal which should be digested by its readers. This lubricant has been on the market since 1904 and those dealers who have not investigated the merits of this oil are invited to write the manufacturer for details of the selling campaign. The simplicity of the advertising copy is noticeable, comprising as it does, bulletins directed to the trade.

NEW MOSSBERG CATALOGUE.

General and Special Wrenches and Socket Sets Listed, Described and Illustrated.

The Frank Mossberg Company, Attleboro, Mass., well known maker of Mossberg wrenches, etc., is issuing a new catalogue, in which is described and illustrated the numerous types of general and special wrenches, also socket sets. The No. 16 catalogue will be mailed free upon request. The company also has catalogued its line of Ford necessities, which will interest the trade. When writing ask for catalogue No. 16 A.

APCO CUTS PRICES.

Steering Rod Anti-Rattlers for Ford Cars Reduced to Fifty Cents Each.

The Auto Parts Company, Providence, R. I., whose trade mark Apco is a household word among Ford owners, announces that its anti-rattler prices have been reduced from 75 cents to 50 to dealers.

The Apco steering rod anti-rattlers are licensed under the Towle patent and come packed in individual cartons, 50 cartons to a corrugated box. They are nickel plated and polished. They can be obtained direct or from the numerous branches of the company.

WIRE WHEELS FOR FORD.

Mott Wheel Works Wants 1000 Dealers to Handle Its Ready-to-Attach Design.

The Mott Wheel Works, Utica, N. Y., is manufacturing a design of wire wheels for the model T Ford car, and one of their qualities is that they come ready for attachment, being constructed to be fitted without any alterations whatsoever. The company wants 1000 wide awake dealers to write for particulars of its agency proposition. The wheels retail for $20 the set and the discounts are stated to be very liberal.

Digitized by Google

LAX-FAL TUBES.

Made in Gray or Red Colors, of High Grade Rubber and Are Guaranteed.

The Lax-Fal Rubber Company, 77 Chambers street, New York City, is calling attention to its Lax-Fal tubes, which are constructed for those who desire a high grade tube, one that is made to give the best of service. The tubes are made of an excellent Para rubber, in gray or red, come 40 per cent. off the list and are guaranteed. Considerable territory is open to live dealers.

BALL CARBON REMOVER.

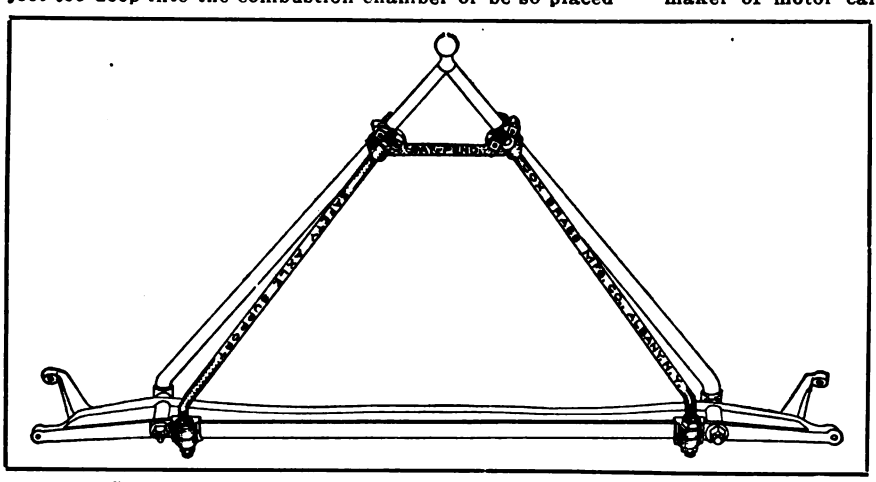
Some Territory Still Open for Dealers Desiring a Practical Carbon Remover.

The Bowling Green Sales Company, 42 Broadway, New York City, sole distributor for the United States and Canada of Ball Carbon Remover, announces that it still has territorial rights open. The chemical compound removes carbon from the cylinders of a motor when it is running, eliminating delays. Details of the agency proposition will be submitted by addressing Dept. A.

SPARK PLUG DATA.

A. R. Mosler & Co., Issuing Booklet on Sizes and Styles of Plugs for All Cars.

To obtain the greatest efficiency from the motor it is important that the spark plugs employed should not project too deep into the combustion chamber or be so placed that the gas will be pocketed. A. R. Mosler & Co., New York City, is issuing a brochure called "Spark Plug Size Booklet", which enables one to determine promptly the size and style of plug best adapted to the respective cars and motors. It will be mailed free upon request.



Cox Safety Axle and Radius Rod Support for Model T Ford Automobiles.

THE MOTOKART.

A Light Commercial Delivery Car Adapted to a Large Number of Trades.

Dealers who are in the market for a light, high grade delivery car, will do well to investigate the merits of the Motokart, manufactured by the Motokart Company, with factories at Peekskill and Tarrytown, N. Y., and with general offices at 1790 Broadway, New York City. The Motokart is a four-wheeled vehicle, especially designed for business men who desire a practical, light, economical machine. It retails for $365 and compares favorably with many large commercial vehicles.

THERMOID BRAKE LINING.

Is Hydraulically Compressed, Is Lining Clear Through, and Is Liberally Guaranteed.

Thermoid hydraulically compressed brake lining is manufactured by the Thermoid Rubber Company, Trenton, N. J., and one of the qualities emphasized by it is that it can be worn down to a ribbon thinness without losing its efficiency. It is lining clear through, grips positively without chattering and is not affected by water, oil or gasoline. The guarantee is unusually liberal. Thermoid brake lining comes in different sizes and thicknesses. Prices and details will be supplied upon request.

TRUNK RACKS.

Connecticut Steel & Wire Company Manufactures Designs to Fit All Cars.

With the approach of the touring season there is a demand for trunk racks. The Connecticut Steel & Wire Company, 61 Allyn street, Hartford, Conn., produces a high grade, moderately priced trunk for all types of automobiles. A special design is manufactured for the model T Ford car. Liberal discounts are offered to the trade.

BRAKE LINING CABINET.

Maker of Multibestos Lining Has Free Neat Container for Handling Its Product.

The Standard Woven Fabric Company, Framingham, Mass., maker of the well known Multibestos brake lining, is offering the trade a neat cabinet for carrying and displaying the material. It not only saves time in selecting the particular size desired, but economizes on room and is a decided improvement over the usual method of keeping the lining on the floor, in the storeroom, etc. Details of this free offer will be mailed upon request.

NEW SAFETY AXLE.

Cox Brass Manufacturing Company Brings Out Axle and Radius Rod Support for Ford Car.

The Cox Brass Manufacturing Company, Albany, N. Y., maker of motor car specialties, has brought out an entirely new accessory for the model T Ford car. The Cox safety axle and radius support embodies "Safety First", the popular phrase of the day. The maker states that owing to the construction and design of the Ford front axle, the triangular radius rod being supported or connected above the centre, it has a tendency, on rough roads at rapid speed, to tilt or bend the axle toward the back.

The Cox device increases the rigidity of the car, and is stated to make driving much easier. It insures safety, as it provides a double truss support. As will be noted by the accompanying illustration, which depicts the device fitted to a Ford axle and radius rod, there are no holes to drill or alterations to make. An adjustable, movable clamp is utilized to connect the Cox device to the front axle, and it has an additional advantage in that it may be employed to line up the front wheels. The rear extensions and cross member are secured by clamps to the radius rod just back of the ball member, as shown. It is obvious that the design greatly adds to the sturdiness of the structure. The Cox safety axle and radius rod support is moderately priced and is constructed with the same high grade material and careful workmanship for which the products of this concern are noted. Complete details and prices will be forwarded upon request.

AGENTS WANTED.

Palmer-Moore Company Has Proposition for Dealers in Unoccupied Territory.

The Palmer-Moore Company, 104 North Geddes street, Syracuse, N. Y., maker of the 1600-pound Palmer-Moore truck, desires to hear from dealers in unoccupied territory. The company fits a large variety of bodies to its chassis. Details of its agency proposition will be submitted upon receipt of a postal.

FORD DELIVERY BODIES.

"Lew" Fales, Providence, R. I., Specialises in Bodies for Runabout and Touring Car.

"Lew" Fales, one of the oldest carriage makers in Rhode Island, is carrying a complete line of delivery bodies for the model T Ford car. They are constructed especially to meet commercial requirements and a postal addressed to "Lew" Fales, Dean and Washington streets, Providence, R. I., will bring a circular giving complete details and trade prices. The bodies come ready for attachment.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

GASOLINE PLEASURE CAR AGENCIES.

10,118—Kansas Dealer is in the market to represent a line of pleasure cars selling from $350 to $800.

10,120—Nebraska Firm wants to secure the agency for pleasure cars selling from $500 to $1000.

10,123—Nebraska House is in the market to secure the agency for pleasure cars selling from $750 to $2000.

10,128—Rhode Island Company wants to secure the agency for pleasure cars selling from $1785 to $2785.

10,133—New York House wants the agency for four and six-cylinder cars; the fours selling from $500 to $3300, and the sixes selling from $3850 to $6000.

COMMERCIAL CAR AGENCIES.

6121—Arizona House wants to represent a line of electric commercial cars selling from $600 to $1500.

CYCLECAR AGENCIES.

1778—Texas Dealer is seeking information relative to cyclecars selling from $350 to $500.

1780—West Virginia House wants the agency for cyclecars.

ACCESSORIES, EQUIPMENT AND SUPPLIES.

405—Canadian House wants the following: Anti-rattlers, axles, batteries, bearings, carburetors, chains, coil springs, commutators, dimmers, dynamos, engines, forgings, gears, guards, headlights, horns, ignition, jacks, joints, lamps, levers, magnetos, mechanical starters, motors, mufflers, plugs, pumps, radiators, rims, rods, rubber, speedometers, spokes, starters, steering wheels, storage systems, switches, tanks, tools, tops and parts, washers, windshields and wrenches. The above products to be used in assembling cars.

406—Indiana Firm is in the market for air compressors, air pumps, cements, cloth, cutters, gaskets, gasoline, headlights, injectors, jacks, rims, rubber, tanks, tire accessories, tires, tools and vulcanizers. The above goods to be used in the trade.

411—Arizona Dealer wants air pumps, autogenous welding equipment, batteries, bearings, brakes, cable, carburetors, charging apparatus, clutches, cones, couplings, dynamos, electric starting and lighting outfits, engines, fans, gauges, gears, generators, headlights, hydrometers, ignition, jacks, locks, magnetos, odometers, pins, radiators, rectifiers, rims, searchlights, speedometers, tools, transmissions, wheels and wrenches. Products to be used on Vim cars, Republic and Standard trucks.

413—New York Concern wants a three-ton electric elevator.

418—Massachusetts Dealer wants fire extinguishers, carbon removers and wheels.

422—New Jersey Firm is in the market for cements, stampings and terminals.

426—Oregon House is interested in air pumps, bulbs, bumpers, cable, carbide, cements, chains, coils, gaskets, horns, jacks, magnetos, patches, plugs, pumps, rectifiers, shock absorbers, speedometers, storage systems, tape, tire accessories, tools and vulcanizers. The goods to be used for wholesale and retail.

428—California Company is in the market for ball bearings, retainers and races; also bolts, cylinder grinders, cylinder machines, cylinders, drills, engines, fenders, gear cutting machines, gears, reamers, shapers, valves and wire and wooden wheels. The above goods to be used in a general garage and machine shop business.

431—Kansas Dealer wants a general line of automobile accessories and supplies.

432—New Jersey House wants bodies.

435—Nebraska Company is interested in washers.

438—Indiana Dealer wants forgings.

439—Iowa Concern is in the market for the following: Air compressors, camshafts, charging apparatus, cylinders, dynamometers, pistons and steel.

442—Indiana Company is interested in batteries, bearings, dynamos, engines, gears, generators, ignition magnetos, mufflers, odometers, plugs, racks, radiators, rheostats, speedometers, starters and tanks. The goods to be used for self-propelled railway cars.

445—New York Dealer is in the market for the following: Air compressors, air pumps, batteries, chains, electric horns, fire extinguishers, spark plugs, speedometers, starters, tape, tires, vulcanizers and waste.

448—Wisconsin Company wants one and five-gallon oil cans.

451—Nebraska Dealer is in the market for tires and tire accessories.

455—California House wants bearings, cable, camshafts, charging apparatus, coils, couplings, dimmers, dynamometers, generators, headlights, ignition, magnetos, platinum, plugs, rectifiers, reflectors, regulators, rheostats, searchlights, shims, starters, storage systems, switches, terminals, testers and timers. The above products are to be used for automobiles.

459—Colorado Dealer is in the market for the following: Air compressors, air pumps, gear cutting machines, lathes and shafting; also mechanical starters for Ford cars. The products wanted are to be used in equipping a new garage.

463—Massachusetts Concern is interested in the following: Air compressors, air pumps, axles, batteries, bearings, belts, bolts, brakes, brushes, bulbs, bumpers, carbide, carburetors, castings, chains, charging apparatus, chemical tanks, coils, cylinder machines, drills, fire extinguishers, gauges, generators, goggles, horns, hose, jacks, lamps, lubricators, patches, pins, plugs, tape, tire accessories, tires, tools, tubing, valves, vulcanizers and wrenches.

COMING EVENTS.

June 30—Track races, Sioux City, Ia.

NEW SIX-CYLINDER CAR.

Willys-Overland Company to Market a Seven-Passenger Car of This Type.

An announcement of more than general interest to the automobile trade and public, and particularly to the many dealers handling Overland cars, is that the Willys-Overland Company, Toledo, is to market a seven-passenger, six-cylinder car, which will be fully equipped, for $1475.

So quietly were the plans made that no inkling of Mr. Willys' intention to enter the six-cylinder field was made public until recently, although the Overland engineers have been developing and testing the new car for some time. There will be a larger number of four-cylinder machines built in 1915, and the new car will serve the purpose of providing Overland dealers with a complete and inclusive line which will enable them to satisfy the demands of all customers with the product of a single manufacturer.

In appearance the Overland six is stylish and attractive. It has a long stroke motor, rated at 45-50 horsepower, streamline body, 35 by 4.5-inch tires and demountable rims, electric lighting and motor starting, as well as other modern conveniences. The wheelbase is 125 inches.

GASOLINE IS CHEAPER.

Automobile Owners Interested in the Drop in the Fuel Market.

Automobile owners have been watching the gasoline market for several months. As the summer approached the price dropped somewhat until now gasoline is being sold as low as 18 cents a gallon. Only a few years ago the price of gasoline at retail was around 12 cents. This has steadily advanced until last summer and in some cases it actually doubled.

REMY LINE IN EUROPE.

Walter H. Johnson of London, England, is Appointed Agent for the Continent.

The Remy Electric Company, Anderson, Ind., maker of ignition, lighting and motor starting systems, has appointed Walter H. Johnson, 60 Haymarket, London, England, as manufacturer's agent in Europe. Mr. Johnson will also open a completely equipped service station to take care of all users of and dealers in the well known Remy products in that section of the world.

FORDS FOR BOSTON.

Following in the Footsteps of a Western City to Supply City Officials with Fords.

Ford runabouts will be purchased for all employees of the City of Boston who are provided with cars in the future, according to Mayor Curley of that city. "I have decided to make the Ford runabout the official car under my administration. It does not cost so much to buy and can be run 20 miles to a gallon of gasoline. By discarding the heavy cars now in use and putting in an equipment of Fords, the city will save several thousands of dollars without impairing in any way its automobile service".

At present the City of Boston owns about 75 automobiles, ranging in price from $3500 down to $1800. These will be replaced by Fords as soon as the change can be made. Boston is following the example of Kansas City, which a short time ago sold 11 cars at public auction and replaced them with Fords.

AUTOMOBILE PLANT SOLD.

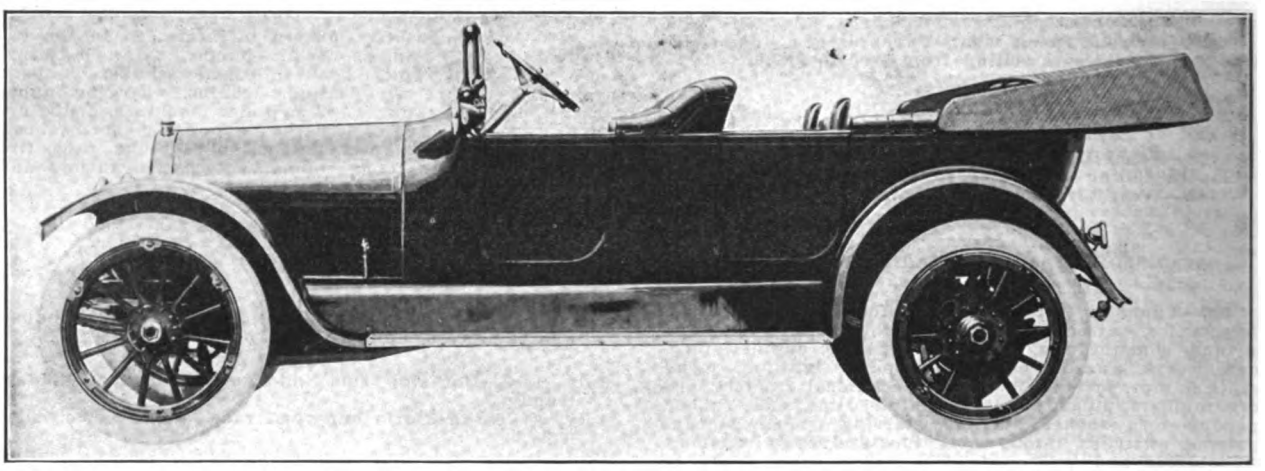
Brown Motor Car Company Acquires Factory of Ohio Falls Concern.

The automobile manufacturing plant at New Albany, Ind., formerly owned by the Ohio Falls Motor Car Company, has been taken over by the Crown Motor Car Company of Louisville, Ky. It is said the company soon will be reorganized under the name of the Hercules Motor Car Company, new capital will be infused and the plant will be operated on a more extensive scale than has been attempted heretofore.

MERCER DEFEATS STUTZ.

Texas Owners Seek to Determine Relative Merits of Two Makes of Cars.

Following the recent 500-mile race at Indianapolis, Ind., the feeling between the Mercer and Stutz owners in Houston, Tex., ran high. Varied claims were made for the cars of each make, and the rivalry finally culminated in a match race between a stock Mercer touring car carrying driver and two passengers and a stock Stutz "Bear Cat" raceabout with driver only.



Overland Six-Cylinder Seven-Passenger Touring Car, Announcement of Which Is Made by the Willys-Overland Company—The New Machine Is Provided with Every Convenience and Will Sell for $1475.

Two one-mile trials were held, in which the Mercer covered the distance the first time in 57 seconds and the second time in exactly one minute. The Stutz made the mile the first time in 1:06 and the second in 1:07. The Stutz owner is said to have challenged the Mercer owner for another race on the Galveston beach during the beach meet to be held the latter part of July.

WORKING HOURS REDUCED.

Ford Company of Detroit Continues to Cut Down Its Operating Schedule.

The Ford Motor Company, Detroit, recently cut down the operating schedule of its plant to five days a week and the night shift was done away with, this arrangement to be in effect for from two to three months during the usual slack summer period, before work is commenced on the new models. Parts have been stocked up ahead and operations will be confined to assembling cars. Those on the night crews were placed on the day shift, and the plant will run only eight hours daily for five days a week. At this rate the $5-a-day men will draw about $100 monthly. The company now is manufacturing parts which formerly were supplied by Dodge Bros.

The Studebaker six, in the second of its five 200-mile tours, averaged 15.3 miles a gallon of gasoline. In connection with this, two quarts of oil and three quarts of water were used. The car carried six passengers. The run was through the foothills of the Alleghenies, the exact mileage being 206.7.

BUICK MANAGERS' CONVENTION.

Branch Heads and Distributors from All Over the Country Assemble at the Plant.

The annual meeting of the Buick branch managers and distributors was held at the factory at Flint, Mich., June 19 and 20. The branch managers who attended were: George M. McCutcheon, Atlanta; E. T. Strong, Chicago; J. E. Trotter, Indianapolis; Robert McKay, Battle Creek; H. K. Noyes, Boston; J. A. Coy, Buffalo; J. W. Atwood, Dallas; C. C. Starkweather, Detroit; J. F. Martin, Kansas City; N. J. Munson, Milwaukee; A. G. Southworth, New York; W. H. Vesper, Oklahoma City; P. S. Russell, Philadelphia; A. H. Sarver, Pittsburg; B. R. Webb, San Antonio; J. E. Finney, Savannah, and R. H. Martin, Washington.

The distributors present were: A. G. Randall, Boise; C. C. Coddington, Charlotte, N. C.; H. S. Leyman, Cincinnati; G. G. G. Peckham, Cleveland; F. L. MacFarland, Denver; H. E. Sidles, Lincoln; Edgar M Rowe, Little Rock; F. S. Howard, Los Angeles; H. E. Pence, Minneapolis; Lee Huff, Omaha; Mel G. Johnson, Portland; C. L. Whiting, Rochester; G. S. Garber, Saginaw; F. W. A. Vesper, St. Louis; A. E. Thourssen, Salt Lake City; C. S. Howard, San Francisco, and S. C. Douglas, Sioux City.

KRIT COMPANY PROSPEROUS.

Pays 20 Per Cent. on Outstanding Indebtedness, Making a Total of 30 Per Cent. in Four Months.

The Krit Motor Car Company, Detroit, has made a payment of 20 per cent. on its outstanding indebtedness, which, with a 10 per cent. payment in February, makes a total of 30 per cent. in four months. The officers of the company state that business has been at least two per cent. better thus far this year as compared with the corresponding period last year. The business in the West is reported excellent, and as the crops in Oklahoma and Kansas are large, a big business is anticipated in those states. The exports of the company have grown steadily, especially in the foreign field, which includes South Africa, South America and New Zealand.

SCRIPPS-BOOTH WINS.

Well Known Make of Cyclecar Carries Off First Honors in Club Meet at Teaneck, N. J.

That the cyclecar has arrived was demonstrated by the very successful race meet held under the auspices of the Cyclecar Club of New Jersey, which organization has the honor of being the first to give a meeting under the sanction of the Cyclecar Association of America. The contests, which were varied, were held Saturday, June 13, at Teaneck, the farm of Dr. Charles G. Percival, president of the Cyclecar Club of New Jersey.

Four events were on the card, these comprising a slow race, up grade on the high gear; reverse gear event, 75 yards, up grade; highest average or secret time and a hill climb. The machines were divided into classes, according to the classification adopted by the association, comprising the cyclecar, having motors of not more than 71 cubic inches cylinder displacement and 750 pounds chassis weight; light cars, with motors of not more than 101 cubic inches cylinder displacement and 1150 pounds chassis weight.

William Boulding, 3rd., of East Orange, N. J., carried off the honors at the meeting with his Scripps-Booth stock cyclecar, winning the hill climb, reverse gear race and secret time event. The slow race was also won by a Scripps-Booth, P. G. Schull of Newark, N. J., being declared the winner over James Pearsons of New York City, who drove an O-We-Go. Boulding captured the McIntyre cup offered by W. H. McIntyre of the Imp Cycle Car Company, Auburn, Ind., and president of the Cyclecar Manufacturers' National Association, for the driver who scored the largest number of points in the meet.

The manufacturer's cup in the cyclecar class was won by the Scripps-Booth team, captained by H. C. Fairchild of Newark, N. J., with 30 points. The two Twombleys, driven by F. Haag and G. A. McLaren, the Newark distributors, won the manufacturer's cup for the light car class.

The events took place over a specially constructed track 50 feet wide and 1500 feet long. Dr. Percival took special pains to make it as uneven and as steep in grade as possible, it having a gradient of one in seven.

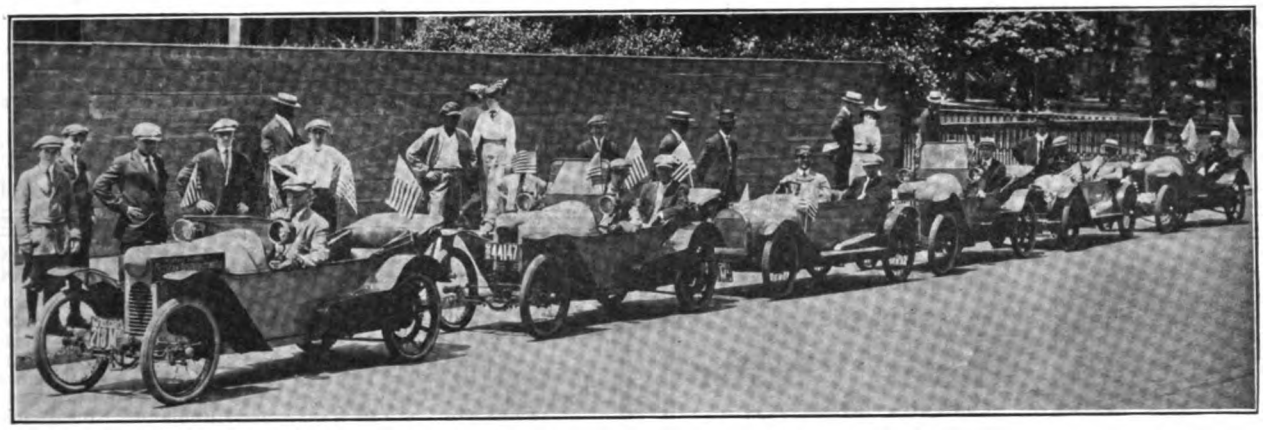
The events were held under the rules compiled by the contest committee of the Cyclecar Association of America, which governs all cyclecar competitions in the United States. The meet was a success from every viewpoint.

AUTOMOBILES IN ENGLAND.

Perry of Ford Motor Company Says the Industry Could Not Be More Flourishing.

P. L. D. Perry, general manager of the Ford Motor Company in England, who is visiting the main plant at Detroit, says that the motor industry in England could hardly be in a more flourishing condition.

"England has been enjoying an unprecedented trade boom for the last three years", said Mr. Perry. "Work has been plentiful and many people have been making money. This perhaps has benefited our business more than any other one thing, for the Ford plant is increasing its output more rapidly than any other. Although established a comparatively short time, we are turning out more cars than the five next largest plants put together, and are increasing our capacity as fast as possible. We seem to have reached the British field at the psychological moment".



Some of the Participants in the Endurance Run from Newark to the Farm of Dr. Percival, Where the First Cyclecar Meet Was Held.

TO BOOST DETROIT.

Moving Pictures Inaugurated by the Ford Motor Company to Show What an Important Centre Detroit Is.

Henry Ford, the well known Detroit automobile manufacturer, has inaugurated a somewhat novel publicity plan in which he has enlisted the aid of moving pictures. This is known as the Ford-Detroit Weekly, and is intended to show what an important manufacturing centre Detroit is, and, incidentally, to advertise the huge Ford plant.

BUSINESS IS GOOD.

Fisk Rubber Company Shows Big Increase in Trade This Season.

The Fisk Rubber Company of Chicopee Falls, Mass., which was reorganized in 1912 and succeeded in meeting its preferred dividend requirements in the first year of operation, has just issued a statement showing, in addition, a realization of about eight per cent. on the common stock, and a gross business of nearly $12,000,000, about 50 per cent. in excess of the business of 1913.

It enables you to graduate the intensity of your light. Turn down electric light the same as you would an oil lamp. No need of side lamps. High, Medium or Low.

GUARANTEED 10 YEARS

All that shows is the plate and it is a little larger than a dollar. It can be placed on the floor or dash. If placed on the floor, the other part of dimmer is placed underneath; if placed on dash, the other part of dimmer is placed on the outside of dash.

Dimmer is 2 1-2 in. by 1 1-2 in.

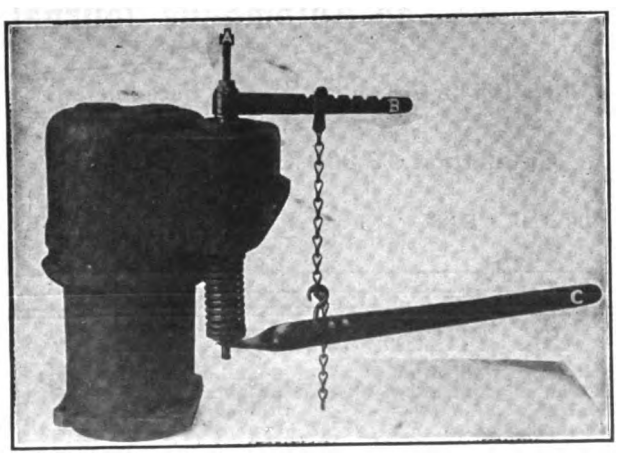
Recommended for Ford Electric Lighted Cars.

PRICE $3.50 COMPLETE

The CHANEY Dimmer can be placed on any car in 10 minutes. Easily worked with the foot.

DEALERS should write us at once and get our Trade Proposition. It means money to you right from the start. We stand back of every Chaney Dimmer you sell. No dealer can afford not to carry the Chaney Dimmer. Your trade demands them. Get in touch with us by first mail and secure agency for one of the best selling accessories ever offered.

L. F. CHANEY COMPANY, - - - Springfield, Ohio



WINSOR PATENT ADJUSTABLE MOTOR VALVE REMOVER

TO USE: Remove spark plug, insert Barrel A and screw down spindle with fingers, which prevents valve from lifting. Attach adjustable chain to Lever B which revolves around the spindle A. Hook chain to adjustable Lever C. A slight depression, because of the enormous leverage obtained, will compress valve spring, permitting of easy removal of locking mechanism. Note the length of Barrel A and Lever B, accommodating every type of motor.

Made in sizes to fit all spark plug openings. In ordering, state size of spark plug.
LIST PRICE—Enameled black, each $1.50. Nickel plated, each $3.75
Extra barrels, each $1.20.

Dealers, Write Today for discounts. Manufactured by

Winsor Manufacturing Co., 55 Eddy St., Providence R. I.

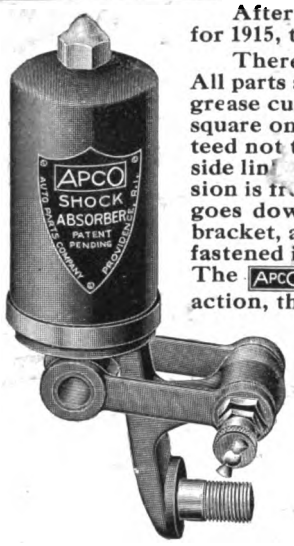
TRADE APCO MARK Safety First Shock Absorbers



After two years experimenting with different types and styles of shock absorbers, we offer for 1915, the APCO

There has always been a demand for quality absorbers for Fords and ours will fill the bill. All parts are 30 degree carbon steel drop forgings. Every bolt is a lubricating bolt fitted with a grease cup. Every bearing is phosphor bronze. The springs are square in section and ground square on the ends. They are made from the finest tempered alloy spring steel and are guaranteed not to settle or break during the life of the car to which they are attached. The cantilever side links prevent all side sway, reduce skidding and by using these links, the center suspension is free and therefore it requires no lubrication. The casing or shell is attached so that it goes down with the car and prevents the shell from being crushed by the front mud guard bracket, a trouble met with by practically every other absorber on the market. The shell is fastened in place by the top nut and can be removed easily but will not drop off on the road. The APCO Shock Absorbers have no internal strains within themselves to contend with and in action, they are as free and resilient as the air itself. They contain all that is good and efficient in shock absorber construction and resilient suspension. There are no castings of any description used in their make up. They will prevent spring breakage, increase tire mileage, reduce upkeep and lengthen the life of the car. Sold on a 30 days free trial. They cost more but they are worth more and when you realize that a broken shock absorber would turn your car over, we think you will pay the difference and be sure.

OUR GUARANTEE

We guarantee the APCO Shock Absorber for life and will replace any defective parts absolutely free of charge, including transportation charges and *cost of making the change.* This is the most liberal guarantee ever made and we know there will be no replacements or we would not make the offer.

New Apco Starting Crank Holder

Ford Owners have been looking for an Automatic Starting Crank Holder and here it is. Made from one piece of spring steel. Easily applied, positive in action and no attention is necessary. Does not interfere with spinning of the car and holds the crank out of the mud and stops the rattle.

Application is simple. Remove two nuts from spring clips and put on holder, pointing up, as shown in cut. After cranking car, lift crank to position shown in cut and it will stay there.

PANHARD OIL

QUALITY, ALWAYS QUALITY!

The DEALER WHO BUYS WISELY BUYS STOCK OF KNOWN QUALITY.

His market is always constant, his stock has a definite value and his profits are sure.

The MOTORIST WHO BUYS WISELY BUYS WHAT HAS A RECOGNIZED QUALITY.

He is certain of satisfaction, he can depend upon results, and he has the guarantee of both dealer and manufacturer.

KNOWN QUALITY means guaranteed satisfaction from a standard established by continued use in all conditions.

PANHARD OIL has been a STANDARD of the trade for 11 years. Its recognition has been through its uniform excellence.

PANHARD OIL QUALITY has been proven innumerable times. It has never failed to satisfy.

PANHARD OIL DEALERS have the benefit, the prestige and the advantage of universal recognition by the motoring world, the guarantee and the support of a firm of highest rating, and a market absolutely established.

The AGENCY proposition is Panhard quality, too. Write TODAY for details.

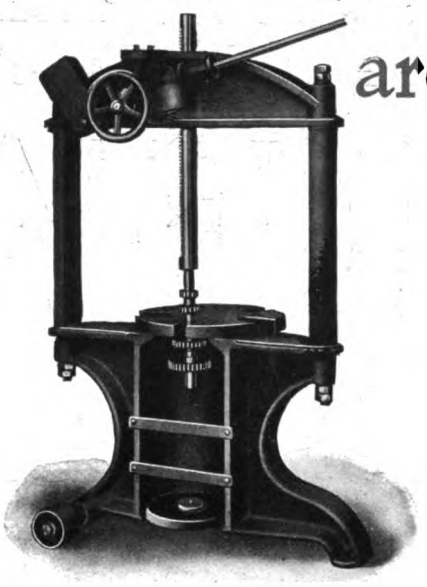
GREENERD ARBOR PRESSES

SAVE TIME AND MONEY

AND HELP TO CIVILIZE

Some Automobile repair men are looking foward



to the time when they can make a forcing press. The home-made press seems to be all right until it is about finished, when the weakness or unhandiness appears.

The first time the press is used the maker is disappointed.

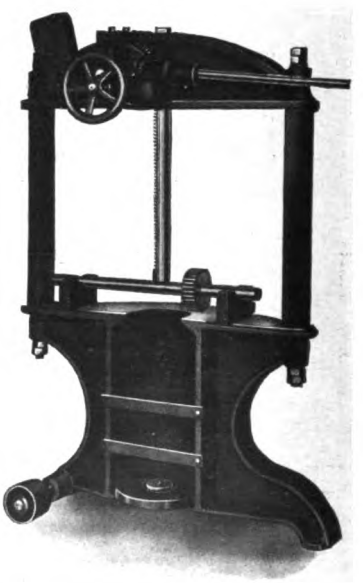
The first machine is usually a failure.

This home-made press has undoubtedly cost more than would a

No. 15 Greenerd Arbor Press

A score of practical mechanics using the Greenerd Arbor Press have given us their ideas and experiences.

In this way we have been able to build a press that brings us unsolicited testimonials, thus,–



40 Mathewson St., Providence, R. I. July 15, 1914.
Edwin E. Bartlett, Boston,

Dear Sir:- The No.15 Greenerd Arbor Press is proving more usful every day. We would not be without one for three times its cost. We are discovering new uses for the press that we did not think of when we bought it.

You are at liberty to refer any one to us.

Yours truly,
CORP BROTHERS.

Why wait? Sometime you will have a

The GREATEST ASSET FOR THE MAN WHO RE-TAILS AUTOMO-BILE OILS

IS A KNOWN LUBRICANT OF QUALITY

The DEMAND for STANDARD, RECOGNIZED Oils, like the MONOGRAM Brands, will more than offset the gains made by selling inferior grades, unless a dealer deliberately swindles his customers, by substituting cheap quality lubricants.

The honest dealer is as careful of the brands of oil he sells as is the car owner of the oil he buys. A QUALITY OIL means for the dealer a constant business and certain profits, and for the purchaser positive satisfaction and the greatest value for his money.

The MONOGRAM QUALITY and MONOGRAM SELLING POLICY equally protects the dealer and the owner. MONOGRAM OILS are sold with an ironclad guarantee of quality, and in sealed packages that insure the purchaser that he is receiving precisely what he wants.

MONOGRAM OILS have been maintained at a definite standard for years. They have been proven in every condition of use. They have been exploited until their value is known wherever motor vehicles are used. The demand for MONOGRAM OILS is universal.

A MONOGRAM AGENCY IS THE BEST BUSINESS ASSET A DEALER CAN HAVE

The MONOGRAM OIL selling proposition is liberal and will interest any dealer. It will be explained in detail at request.

NEW YORK LUBRICATING OIL COMPANY

Consolidated with the COLUMBIA LUBRICANTS CO. OF NEW YORK

116 BROAD STREET, NEW YORK CITY

Branches at Newark, Boston, Chicago, Cleveland, Philadelphia, San Francisco, Los Angeles, Portland, London, England, Johannesburg, South Africa. Distributing stations in all principal cities.

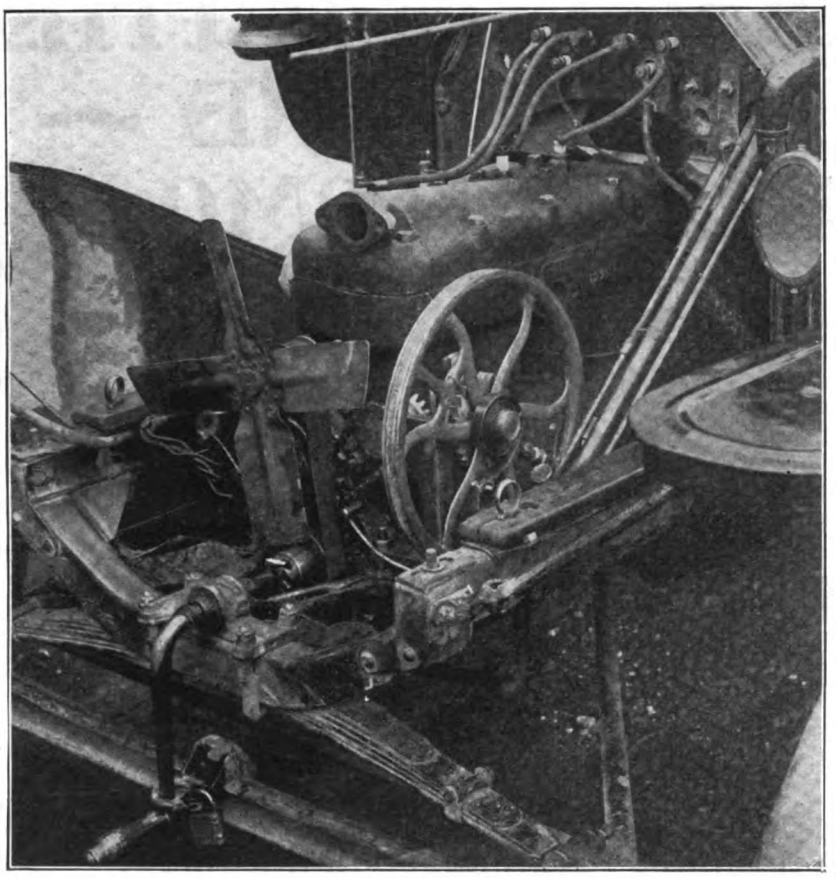
NO MORE BROKEN ARMS
NO MORE CRANKING IN THE MUD



The Universal Ford Starter for Ford cars has eliminated both the danger and the bother in starting the motor. It will turn your motor past firing compression so easy that your twelve year old son or your wife can start the car.

The Universal Starter Will Last as Long as Your Ford Car

It makes the Ford car a perfect convenience—a LADY'S car. It eliminates the hard and disagreeable work and risk of accident in starting your motor.

The Universal Starter is really the most practical Starter manufactured, regardless of price. It is always ready. There are no wires to short circuit, no dynamos to go wrong, and no storage batteries to run down. Get in the seat, adjust the starting mechanism, touch the priming device, pull the starting lever, and the motor starts.

When you trade your old Ford in for a new one you will take off the Universal Starter and put it on the new car. It is simple, easy to install and will outlast the car.

On account of its simplicity it can be manufactured and sold at a price that makes the cost a secondary consideration.

"The Lubricant that Kills Heat"

SPEDOLENE

For Transmissions, Universal Joints Differentials, Timing Gears, Worm Gears

Is Revolutionizing Automobile Lubrication

If it were possible to reach 100% efficiency in lubrication practice, automobiles would never wear out. Spedolene gives the highest efficiency possible to secure in gear lubrication, consequently it makes an automobile last longer and give better service than any other lubricant. From every standpoint, Spedolene has proved to be the ideal lubricant for all automobile gears.

Asbestos the Foundation of Spedolene

A lubricant manufactured with asbestos is revolutionary in principle, chiefly because this idea is such a radical departure from ordinary methods. As employed in Spedolene, asbestos becomes the foundation of one of the most valuable lubricants ever discovered.

Investigation and trial, either by the engineering expert or the motoring amateur, are sufficient to convince any one of the practicability, and the superiority, of this foundation. Spedolene has revolutionized the gear lubricating problem of the country in less than three years and is unquestionably the greatest success in the shortest period of time in the history of lubrication.

LOOK FOR THIS SHIELD

ON EVERY CAN AND BARREL

Those who are using Spedolene find that it will positively eliminate gear noises; will not run out or throw out at axle drums or gear cases; will not gum; will keep the gears cool, as well as lubricate them; will last longer than any oil, grease or compound; is not affected in any way by any degree of heat or cold; has no corrosive action, no fats, grease, acids, lye, soda or water; is the most efficient and economical lubricant under any temperature.

Used Extensively in Foreign Countries.

Where You Can Get Spedolene

Spedolene is now sold by progressive dealers in many parts of the country. If you experience any difficulty in getting Spedolene from, or through, your regular dealer, we will see that you are supplied, without expense or inconvenience. Ask your dealer or write us.

Dealers: We are rapidly extending our distributing organization and need an agent in every town, city and state. Write us to-day for full information. Every live automobile dealer and jobber can profitably add Spedolene to his stock.

Continental Asbestos Corporation

Manufacturers of Asbestos Lubricants, etc., Spedolene, Journolene, Asbestolene, Cupolene, Axolene, Gearolene

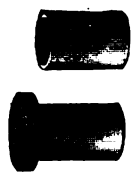
FORD DEALERS AND REPAIRMEN

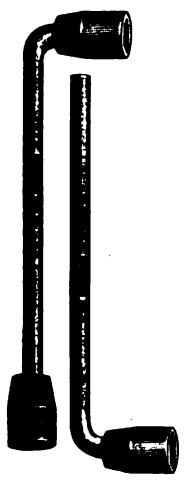
Do you know that the APCO Line of Repair Parts for Ford Cars consists of more than fifty of the best selling articles on the list and our prices represent a saving of 25 per cent. over the factory prices? The goods are absolutely guaranteed in every way and by insisting on APCO you are absolutely protected against inferior substitutes.

APCO STEERING GEAR BUSHINGS



Consisting of four large bushings and two small as shown in cut. Ford Repair Catalog No. 2713-2714. They are both turned from the highest grade bearing bronze obtainable and we are sure a set will outlast three sets of the ordinary soft brass that you are familiar with.

Price 10c Each



APCO SOCKET WRENCHES

On the Model T" Ford" it is necessary to remove the cylinder head to grind the valves and to do this the sixteen bolts in the cylinder head have to be removed. It is impossible to remove these without a special wrench and we have designed our No. 1 and No. 2 socket wrenches for this purpose. They are made from high grade hardened steel throughout and will outlast two or three cars. Both sockets on the double wrench are the same, but the bolt is loosened with one end and spun out with the other.

PRICE

No. 1, Double End 50c
No. 2, Single End 40c

APCO ADJUSTABLE SPINDLE ARM BOLT

These bolts are made to take the place of Ford part No. 2718, but they are hardened and ground and will outwear ten of the soft ones you are familiar with. As shown in the cut they are 1-16 inch shorter than the regular bolt and are made this way so as to provide an adjustment, which, heretofore, has been impossible. Tightening down on bolt closes up the yoke on steering arm and prevents rattle from this source. This adjustment is easily made and it will be appreciated by Ford owners.

Price 20c Each

EMERGENCY BRAKE SHOES

These are furnished in Iron and Manganese Bronze. Price is for complete set.

Iron 80c Bronze $2.50

APCO FORD LOCK WASHERS

To be used under nuts instead of using cotter pins. Size 3-8 inch.

5c Dozen

No. 2811 Small Ball, 3-8 in. **4c Each**
No. 2810 Large Ball, 1-2 in. **5c Each**

APCO HOSE CLAMPS

These clamps are the famous "Thompson" same as used on the Ford car. They represent the highest development of hose clamps and are very easily adjusted and removed. They are twice as heavy as the regular clamp and will last twice as long. We are able to quote the same price as on the cheap kind, owing to the large quantity we use.

5c Each
Large Hose Connections 25c Each
Small Hose Connections 25c Each

No. 2704

Inner Stationary Cone for inside bearing of front wheel.

Each 30c

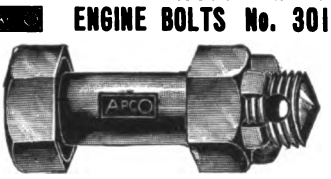
No. 2807
LARGE RETAINER
Each 5c

No. 2808
SMALL RETAINER
Each 5c

No. 2805
Large Inner Ball Race.
Each 35c

No. 2804
Small Outer Ball Race.
Each 25c

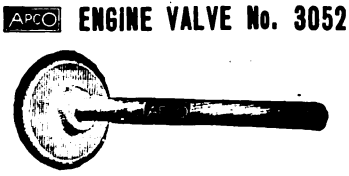
APCO ENGINE BOLTS No. 3014



With casteled nut and hole for cotter pin. Size 3-8 inch. Threads run to within 1-4 inch of head of bolt.

5c Each

APCO ENGINE VALVE No. 3052



This is as good a valve as they use on the high priced car. Steel stem cast iron head.

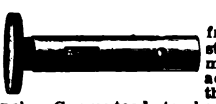
30c Each

REAR AXLE FELT WASHERS No. 2510-B

Made of high grade felt and if these won't keep the grease in the axle housing, nothing will.

5c Each

APCO PUSH ROD



These rods are made from the highest grade steel obtainable, finely machined, hardened and accurately ground to the thousandth part of an inch. Guaranteed to be satisfactory in every respect.

Price 20c Each

APCO PISTON RINGS

These rings are made from the very best close grained gray iron and each ring is cast individually instead of being cut from a pipe shaped casting. They are carefully machined and accurately ground to size and are superior in every way to the ring you are familiar with at the same price.

Price 17c Each

No. 2705-6.

Right and left Adjusting cone. For outside bearing of front wheel.

Each 20c

APCO SPINDLE BODY BOLT

This is to take the place of Ford part number 2710. It is made from high grade steel and is ground after hardening. This is a very important feature as each bolt must be perfectly true and straight, while those that are hardened after grinding are inclined to be distorted in the hardening process. You can see the quality at a glance.

Price 40c Each

THE ACCESSORY -AND- GARAGE JOURNAL

Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. IV. PAWTUCKET, R. I., JULY, 1914. No. 3

BOSCH ABSORBS RUSHMORE WORKS.

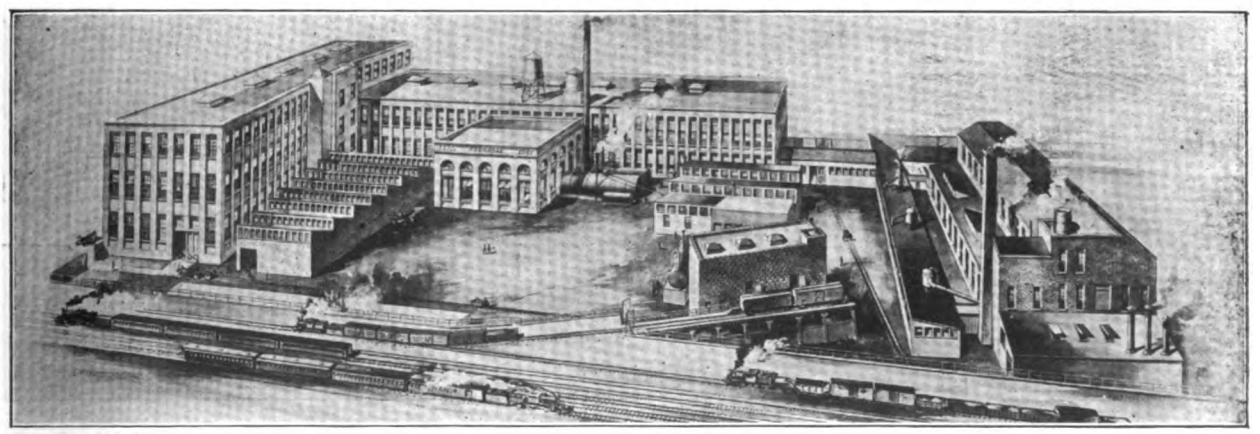
Company Will Manufacture Full Electric Car Equipment, with Motor Starters, Dynamos, and Lamps Under Trade Name of Bosch-Rushmore.

WHAT is considered the largest merger of the motor vehicle electrical accessory industry was consummated July 11, when the Bosch Magneto Company, New York City, absorbed the Rushmore Dynamo Works, Plainfield, N. J., one of the oldest concerns of the kind in the country. Announcement of the Bosch lighting and starting system was made last autumn, but no extensive advertising and selling campaign was inaugurated. Careful analysis of the market demonstrated very large undeveloped possibilities. The great advantage to both the vehicle builder and the owner having a complete electrical equipment for ignition, lighting and engine starting produced by one manufacturer, and all of a quality recognized as standard throughout the world, was such that the company decided to develop its resources for producing lighting and starting systems that would be sufficient to meet any demand made upon it.

With this policy the Rushmore Dynamo Works were taken over in their entirety. The Plainfield plant will be known as the Rushmore Works of the Bosch Magneto Company and operated in conjunction with the Springfield, Mass., factory and will have manufacturing facilities probably second to none for the particular lines to which they are devoted.

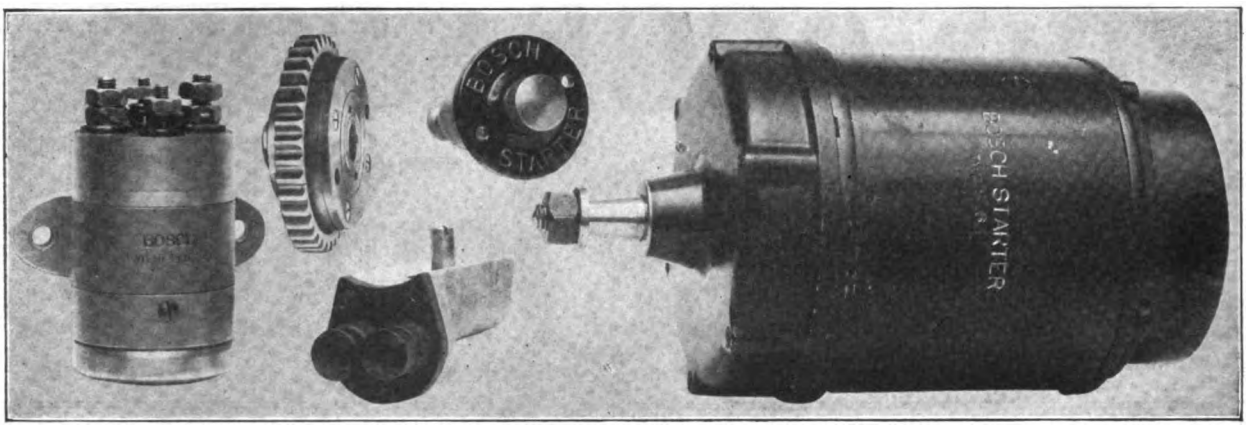
The Bosch Magneto Company will continue to manufacture and market its well known ignition apparatus and specialties and the production and marketing of all products of the Rushmore Company. The selling organization, method of distribution and supply is exceptionally large, there being, beside the four branch houses, a main office and more than 239 distributors and supply stations.

The addition to the Bosch Company production department is more than 100,000 square feet of floor space, with equipment entirely modern and complete. At the Springfield works of the company, all material is received and shipped on a private siding from a main line of a through railroad. The Rushmore Works has its own foundry equipped with power moulding machines; it has its own lens grinding factory in fact, every part of the Rushmore-Bosch products including lamps, searchlights, lighting and start-



Rushmore Dynamo Works, Plainfield, N. J., Purchased by the Bosch Magneto Company—The Plant Is Now Known as the Rushmore Works of the Bosch Magneto Company.

Digitized by Google



Bosch Starting Motor with Over-Running Clutch.—The Main Starting Switch Is Shown at the Left; the Small Lower Illustration Is the Pilot Switch Above Which is the Automatic Ignition Switch.

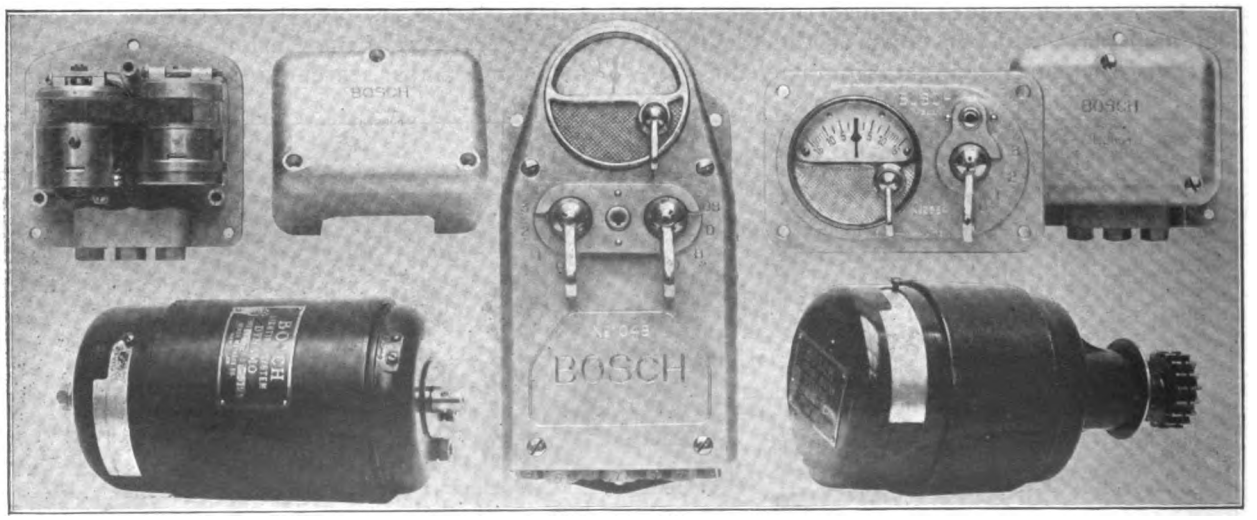
ing systems for trains, automobiles, motor boats, etc., can be produced in the new plant. The factory employs more than 700 men, and the Springfield works is even larger.

The growth of the Bosch Magneto Company is one of the most interesting annals of the automobile development. The Bosch magneto was first built by its inventor, Robert Bosch, in a small shop in Stuttgart, Germany, about 1885. Twelve years after Mr. Bosch established his two-men magneto plant, he was ready to enter the foreign field and in 1900 a selling agency was made in France under the name of the Compagnie des Magnetos Simms-Bosch, with Frederick R. Simms as selling representative to introduce the magnetos in France and England under the name of Simms-Bosch. After several years the arrangement was terminated. Mr. Bosch taking all rights to the trade name, trade marks, etc.

In 1903 a factory was built in Stuttgart, and two years later the plant was increased, having then an annual output of 40,000 magnetos. In the summer of 1906 a selling branch was located in New York City, directed by Otto Heins, E. E., president of the Bosch Magneto Company, for the purpose of introducing and distributing Bosch magnetos in America. Under his direction the business has grown at a remarkable rate. At first the magnetos were imported, but several years ago a modern plant was erected at Springfield, Mass., where Bosch magnetos are manufactured complete, save a few small parts that are still made abroad.

The absorption of the Rushmore Dynamo Works will greatly increase the business scope of the Bosch Magneto Company, New York City, and its products for 1915 will be very much more general. The company now produces magnetos in a great variety of types, electric motor starters and generators, lighting accessories, starting switches, oilers, searchlights, a battery ignition system, control devices, spark plugs, etc. The Bosch Magneto Company occupies a unique position in the automobile industry in that, with the exception of electric horns, it can supply all electrical equipment needed or desired for the average modern car.

The Bosch lighting systems include five different generators, with a diversity of design that the company may meet the many requirements as to mounting, drive and speed. The two Bosch motor starters are over-running clutch types and are 12-volt machines, the standard voltage of the company, such as is generally used abroad. The Bosch company states that it has overcome



Bosch Lighting Dynamos.—The Upper Left View Is the Control Box with Cover Removed; the Centre Is the Bosch Combination Switch and Control Box for Standard Dashboard; at the Right Is the Lighting Switch and Control Unit for Cowl Dashboards.

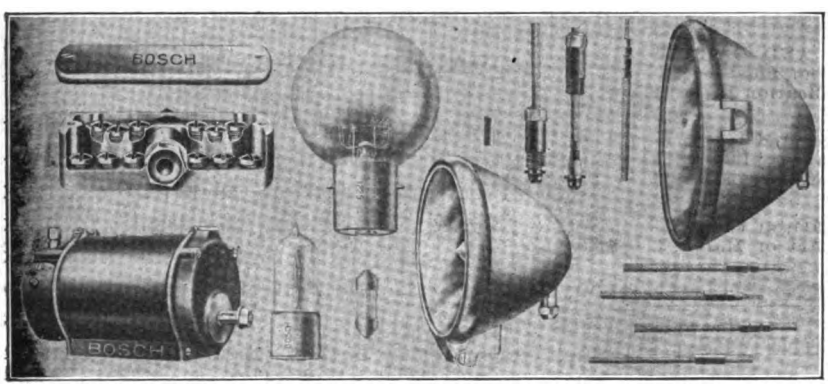
Digitized by Google

the obstacles to manufacturing lamps of this voltage, and that there is now an advantage in the use of a 12-volt system, as the current required for any particular lamp load is considerably less than with a six-volt system. As the commutator of the first-named system is smaller, the loss due to brush friction and electrical resistance is less.

The Bosch lighting generators are of the shunt wound type, and the excitation of the field magnets is governed by an automatic controller of the electro-magnetic type carried in the switchboard. This controller reduces the strength of the field as the speed increases and conversely increases the field strength as the speed decreases, thus maintaining the output of the dynamo constant.

The switchboard is a novel construction and is made for standard and cowl dashes. The switch is a kick type and affords use of the battery or dynamo, or both, for carrying the lamp load. A combination voltammeter is included, and the double reading scale shows both charge and discharge currents. A quality of the switchboard is a removable key.

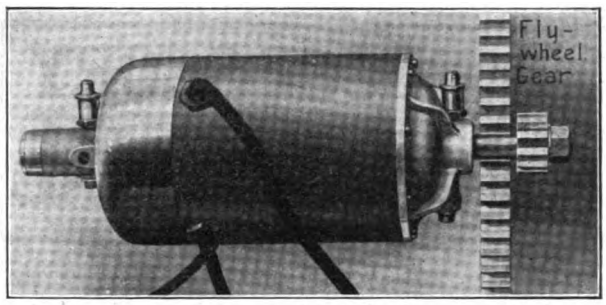
The Bosch Magneto Company will market two types of motor starters, the Bosch, which includes an over-running clutch, and the Bosch-Rushmore, which is a direct drive to the flywheel construction. Both will be wound for 12 volts, permitting of their use in conjunction with Bosch dynamos.



The Bosch Dynamo with Magneto Shaft Height Drive and Base, and the Accessories Utilized with the System.

An interesting type of starter switch is utilized with the Bosch design, one eliminating long leads, devices in the circuit, etc. In the Bosch system the switch proper and its operating device are separated. The switch is actuated magnetically and is attached directly to the starting motor. The energizing of the switch magnet is by a pilot switch, composed chiefly of a plunger through the dashboard, which is pressed by the driver. Closing the pilot switch energizes the switch magnet, admitting current to the motor starter. This eliminates the necessity of resistance in the circuit.

The Bosch Magneto Company is marketing a safety device which automatically retards the spark in case the driver cranks the motor by hand. This device, which is shown in the group of motor starters, is attached to the forward part of the engine and is so arranged that when the starting crank is introduced by the driver, he automatically pushes aside an arm which is connected to the ignition lever, retarding the spark.

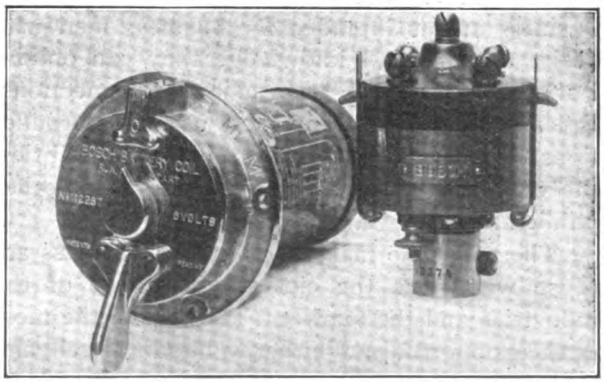


Bosch-Rushmore Starting Motor, a Type Especially Adaptable to the Used Motor Car.

The motors, generators and accessories of the Rushmore system are well known and will be continued under the name of Bosch-Rushmore. The line includes three dynamos of different size, all wound for six volts; four starting motors wound for six volts, and three starting motors wound for 12 volts.

The Bosch-Rushmore starting motors are simple four-pole machines of comparatively low speed, with forged steel electrically welded frames. The armature shaft carries a small pinion which meshes directly with a gear secured to the flywheel of the engine, obtaining a single reduction, one resulting in a high efficiency of transmission as well as a high starting speed. The driving pinion is meshed and unmeshed automatically by a patented end throw of the armature and spring. The device is particularly adapted for equipping used motor cars and it is easily installed. A feature of the Bosch-Rushmore dynamo is the manner of controlling the charging current. Its principle involves use of high positive temperature and resistance coefficient of iron.

The Bosch Magneto Company is also marketing a battery ignition system, comprising a combined circuit breaker and high-tension distributor. The circuit breaker is practically the same as used in the magnetos constructed by this company, except that it is operated by an external instead of an internal cam.



Bosch Battery Ignition System, Consisting of Combined Circuit Breaker and High-Tension Distributor.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

YOUR BUSINESS OPPORTUNITIES.

The value of the Accessory and Garage Journal to every interest of the automobile industry is the information it contains that relates to your business. It reaches every manufacturer, sales manager, sales agent, jobbing house, dealer, garage or service station owner or manager, and repair shop 12 times a year with a wealth of facts that are pertinent and will concern every reader.

The Accessory and Garage Journal is a collation of dependable information, all of which is verified. Every detail is authentic. It is purely business and is intended for business men who desire the broadest knowledge they can obtain. For those who wish to reach new connections, to learn of the latest and most perfected productions, to learn of practical selling possibilities, the magazine cannot be equalled by any other publication.

The men who make successes of business are those who have the closest knowledge of the industries and the market. They make the most of their opportunities, either to buy or to sell, and they learn of them by studying the demands of the people and supplying them. Reaching business men, the real buyers, the publicity value of the Accessory and Garage Journal is 100 per cent. at all times. Its distribution is made with the strongest guarantee to advertisers that can be made. As an advertising medium it is unequalled.

MODERN EQUIPMENT.

Competition is the life of business. The garage or repair shop not equipped with modern time and labor economizing facilities cannot expect to compete with those that have installed them. For example: It is hardly probable that a customer will sanction the dismantling of the motor when carbon deposits must be removed from the cylinders, when the work can be performed in less time and at less expense by the oxygen process. Not only does the modern equipment of the repair shop save time and money for the customer, but it advertises the garage. The motorist has been educated to prompt and efficient service and to charges proportional to the work performed. The day of the poorly equipped repair shop is past.

QUALITY, NOT QUANTITY.

The garage or dealer who attempts to foist inferior quality goods upon his customers because of the profit accruing is penny wise and pound foolish. No concern can expect to build a stable business by such methods. Experienced buyers are not caught, but hundreds of new motorists are frequently influenced. The result of such salesmanship is the eventual loss of custom. The original packages are demanded by purchasers who know what they want and insist upon having their requirements satisfied.

VALUE OF SYSTEM.

The value of a system accounting for all material, parts, labor, etc., and the disadvantages of slip shod methods, was strikingly demonstrated in court recently. The time and material were questioned in the one case, but the system of the plaintiff enabled him to account satisfactorily to the court. The other repairman's method of keeping track of time and labor was such that the amount sued for was considerably reduced by the court.

TOOLS AND SUPPLIES.

The arrangement of tools, etc., in the repair shop is not always given the consideration deserved. It is a simple matter to construct racks or stands in which the workman can locate tools quickly. A systematic arrangement of the tools will save valuable time that is wasted in finding them if scattered over benches or the shop floor.

PRACTICAL GARAGE ACCOUNTING.

Comprehensive System Developed to Provide for a Public Service Station Conducting a Car Agency, Repair Shop and Accessory Department.

WHEN a garage proprietor arrives at the conclusion that he is not securing the profits to which he believes his investment entitles him, he ought immediately to institute inquiry into his business to locate the trouble. It is possible this may disclose it, but unless he has been in close touch with the activities of the different departments he will be confronted with a tedious task. He may conclude that finding the leak is practically an impossibility, but the idea of again facing the deficit is by no means pleasing. He can begin another and different kind of investigation,—that of securing a corrective.

The only protective remedy to prevent leaks which always cause a substantial loss, is the inauguration of a system of account keeping, which protection may have been neglected principally because the owner was too busy to consider the matter. When there is a deficit he realizes the importance of a system that will cover all departments. The all important question of finding a simple method has to many been difficult to solve.

However, there are systems that are suitable and are not complicated and confusing. It is essential always to select a system that does not require a complex set of books. The method herein described has been used to advantage in a garage of large proportions for a considerable period and the owner is able to learn at a glance the volume of business he is doing. For accounting purposes the books deal with four departments, namely, sales, supplies, garage and repairs.

A fixed charge for each department, including such items as rent, interest, light, power, water, advertising, office expense and salaries is made, and as this is based on the expense of the year previous, it permits comparison for any particular month and shows whether there has been a deficit or gain. In the bookkeeping there is a ledger account for each department in which the charges are made for each division. On the credit side are placed all the earnings, the balance indicating the profit or loss, as the case may be. The sales for each day are posted to the credit of the department, but in the sales department, the total cost and total sales are the principal items of record.

The stock is arranged carefully and neatly, so that attention is attracted to every department, and it is grouped according to its size. A well kept garage and neat arranging of supplies, always impresses a customer favorably. Most of the stock, however, is placed in locked compartments and on shelves and bins to prevent indiscriminate handling by customers, which would of course be detrimental to the goods. The show cases are also closed in such manner that the stock carried on display cannot be obtained by anyone except those authorized. Thus there is no undue depreciation, nor an unnecessary shrinkage in the stockroom.

A summary is made each month which includes 13 totals of items as shown at Fig. 1, a glance at which is sufficient to indicate the expense, cost or revenue of any of the different departments. The first column is that of the cash revenue from storage of cars, labor, battery charging, and sale of gasoline, oil, tires, parts, accessories and cars; the second, for charges made of similar transactions; the third, the total income from each source, which should equal the totals of the first two columns. The fourth column shows the expenditure charged against each item; the fifth, the difference between the receipts as shown in the third column and the expense as shown in the fourth. The third, fourth and fifth totals show gross and net reve-

advantage of having the supplies locked up, with the keys in charge of a foreman, is at once apparent.

As in many garages, it had been the custom for amateur mechanics to enter and work upon their own cars, using wrenches and other tools. At the conclusion of the work if they returned the tools in as good condition as when they were borrowed, which was very rarely the case, they helped themselves to a small quantity of gasoline to clean their hands. Of course this was freely given, but a number of such incidents happened daily, and a gallon of gasoline often disappeared for which there was no record. The garage of course suffered the loss and at the end of the month the gasoline account would show a perceptible decrease.

Consequently it became necessary to put tools, oils and all materials used in such an establishment under lock and key and the losses were stopped. As the proprietor of the garage is doing repair work of all kinds, the client now is forced to go to the office and clearly state his needs. A repairman is then assigned to the work and if the job be a simple one, necessitating only a few moments, the garage profits a small fee. Should the work be of such a nature that no charge is made, the proprietor has

whatever may not have been done within the facilities of the garage shop. This is shown at Fig. 5, which completes the record of the entire job and which is then sent to the office by the foreman with the notification that the car is ready for service. The owner is then notified that his car is ready for use.

Fig. 7, Sales Slip, Which Records the Items Sold to a Customer.

Owners of cars stored in the garage are required to keep their property in lockers, so that no responsibility for private property is incurred by the management. The cars of transients are kept under lock and key, so that it is absolutely impossible for either the owner or the chauffeur to touch the car without the knowledge of the garage management. One cannot too strongly emphasize that care should be taken in the choice of employees. Paying good wages insures a class of workmen who will value their employment and incidentally take an interest in the affairs of the garage. There will also be less possibility of visitations by their friends who may be attracted by unprotected property of the establishment.

Each workman keeps account of his own time under the direction of the foreman and the cards are collected each day and sent to the office. These are grouped with reference to each job, and they must coincide with the records of the foreman. The time card is shown at Fig. 6. The repair blank is a bill in itself from which the outgoing bill is made up and passed upon before being sent to the customer. Should the account be paid immediately, it is recorded by a sales slip, a copy of which is given as a

GASOLENE AND OIL SCHEDULE

Fig. 8, Gasoline and Oil Record, Used to Keep Account of Goods Shipped for Boarders' Cars.

voucher with the receipted bill, there being two records, for the patron and office, instead of one. This method is shown at Fig. 7.

A gasoline and oil schedule with account for every day in the month is made out for each car in live storage, and entry is made whenever the tanks are filled. This is original and is kept on file, being a check against sales records. A copy is sent to the owner of the car for verification of the items entered on the bill. This shows gasoline in gallons, cylinder, high speed and gearcase oil in quarts, with incidentals and the total value. From these slips the charges are made monthly. This is illustrated at Fig. 8 and has been found to be of great value to the owner and garage alike.

A feature of the business is found in the fact that the stock is carefully kept and is tagged whenever possible. When a sale is made these tags are turned into the cash register and these give the information of what stock has been sold and also permits immediate ordering, so that there may be always the required amount of goods on hand.

GENERAL NEWS OF THE MANUFACTURERS.

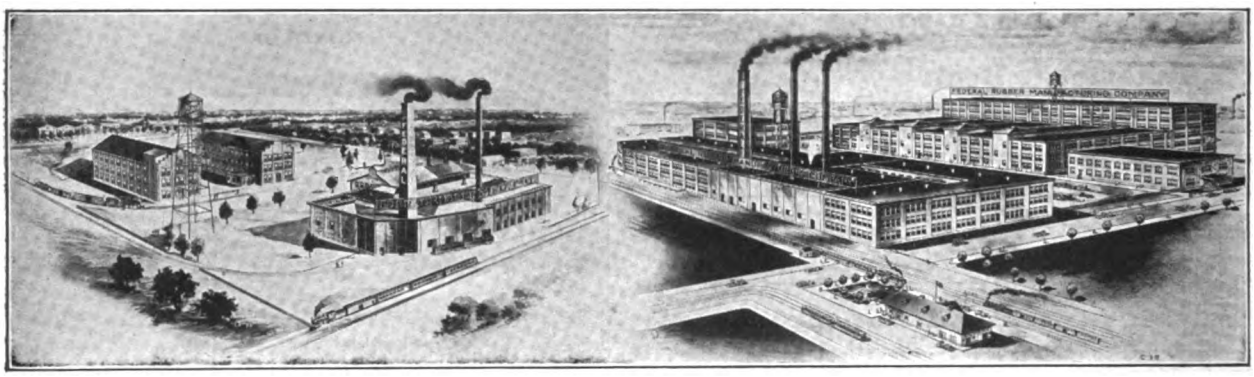
The Buick Motor Company, Flint, Mich., is erecting a three-story building for its enamelling plant. The structure will be 108 by 265 feet and according to Buick officials it will be one of the most complete factory buildings in the world. In addition to the standard equipment of the modern enamelling plant, in the Buick building will be installed the mono-rail system for moving the raw material and the finished product to the various parts of the factory. There will be 15 ovens and two high-speed electric elevators of 4000 pounds capacity each. There will be washed-air ventilation, dustless floors, ice-cooled drinking fountains of running water, well-lighted and sanitary lunch and locker rooms and shower baths for employees.

The Splitdorf Electrical Company, Newark, N. J., maker of the Splitdorf and Apple electrical equipment lines for motor vehicles, has established branches at Minneapolis and Dallas.

The Paige-Detroit Motor Car Company, Detroit, has opened a branch at Birmingham, Ala., in charge of John H. Campbell.

The Dallas Body & Wheel Works Company, Fort Worth, Tex., is establishing a large plant at 23 Commerce street for the manufacture of automobile bodies, wheels, etc. Another plant will be operated at Dallas.

The Federal Rubber Manufacturing Company, Milwaukee, Wis., celebrated its third anniversary on July 1 by the issuance of orders for the erection of new factory buildings costing more than $500,000. These will consist of a separate building 60 by 497 feet with six stories and basement and additions to four of the present buildings, all 50 by 500 feet and five stories high. Brick mill construction will be used throughout. When completed the new buildings will mean an increase of 150,000 square feet, making 450,000 square feet in the entire factory. At the present time the number of men employed on night work equals the number on the day shift. Three years ago the Federal Rubber Company employed about 30 men, and today the company employs over 1500 men.



Federal Rubber Manufacturing Company's Present Plant at Left; at Right, Sketch of Projected New Plant.

The Pacific Rubber & Tire Manufacturing Company, Seattle, Wash., has established a large plant in that city.

E. L. Carmody, Pittsburg, Penn., of the Motometer Company, has announced that headquarters have been located at Baum boulevard. The company manufactures a device for automobiles to warn the drivers of any derangement in the cooling system.

The Hendee Manufacturing Company, Springfield, Mass., maker of the Indian motorcycle, has opened a branch and service station at 501 South Sixth street, Minneapolis.

The Nordyke & Marmon Company, Indianapolis, Ind., has removed its Chicago branch to 2430 Michigan avenue.

The Cole Motor Car Company, Indianapolis, has added a little six model which resembles the larger six very closely and sells for $1865.

The Peerless Motor Car Company, Cleveland, announces a line of four-wheel tractors, to be used for hauling trailers. One type hauls the trailers behind as with the standard truck. Another type carries one end of the trailer upon the tractor chassis.

The Schiedel-Thompson Manufacturing Company, Indianapolis, has changed its name to the Metal Auto Parts Company. The company intends to enlarge its plant. The management and stockholders remain the same as in the past.

The Four Wheel Drive Auto Company, Clintonville, Wis., held its annual meeting recently. The articles of incorporation were amended, increasing the board of directors from seven to nine members, and A. W. Priest and A. Kuckuk were elected as directors. The company expended about $500,000 in the past year for improvements to its factory and also machinery. A dividend of four per cent. on all stock outstanding on June 30, 1914, was declared and paid in cash. The sales for the past year for Four Wheel Drive trucks showed an increase of 165 per cent. over the preceding year.

The Kearns Motor Truck Company, Beavertown, Penn., has acquired 25,000 square feet of additional floor space which will be used for the building of a small car known as the Lulu.

The Buckeye Machine Company, South Lima, O., is erecting a new factory between Atlantic avenue and Broadway. The main building will be of brick. The company manufactures gas engines.

The Pullman Motor Car Company, York, Penn., has under consideration plans for a big expansion of operations at its factory. The firm is under new management and will build several types of high class cars.

The Chandler Motor Car Company, Cleveland, after operation for seven months, has declared a dividend of five per cent. on its common stock. The company has paid full dividends on its $200,000 seven per cent. preferred stock.

The Reo Motor Car Company, Lansing, Mich., will erect a large addition to its plant. The new buildings will represent an increase of about 30 per cent. of the present capacity and will be located on South Washington avenue. The company plans to build 18,000 for the 1915 season.

The Maxwell Motor Company, Detroit, entertained about 100 of its dealers from Indiana recently. They were taken to the Tuller hotel where arrangements had been made for them. After a visit to the Maxwell plants a tour of the city was made and the Hoosiers were afterwards entertained at luncheon at the Detroit Motor Boat Club. In the evening the visiting Maxwell dealers were the guests of the company at a theatre party. The dealers returned home in new Maxwell 25's.

The Willys-Overland Company, Toledo, O., has for several months past been making extensive additions to its plant. A number of large buildings is being added. One of them will be 410 by 500 feet and will have four stories and basement. Another will be an immense body plant which will be 200 by 410 feet, including two stories and basement. The power building is 162 by 134 feet and built of brick, containing four 500-horsepower McNaul water tube boilers.

The Weson Tire & Rubber Company, Springfield, Ill., is erecting a new automobile tire factory costing $25,000. This company is the successor of the Detroit Pneumatic Tire Company, Ford building, Detroit.

The H. W. Johns-Manville Company, New York City, has moved its Duluth office to larger quarters at 327 West First street in order to take care of its increased business. The new office is on the ground floor, with windows for the display of the company's well known and varied lines of automobile accessories and supplies.

The Lyons-Atlas Company, Indianapolis, was elected to membership in the National Automobile Chamber of Commerce at the meeting of the board of directors held recently. The company manufactures the Lyons-Knight car.

The Flanders Manufacturing Company, Lansing, Mich., has been reorganized with an increase in capital and will be known hereafter as the Flanders Electric Company. The new officers are: President, M. Rothschild; vice president and general manager, D. C. McCord; secretary and treasurer, B. F. Edgar.

The Carson Rowell Company, Appleton, Wis., manufacturer of babbitt metal for bearings and other purposes, has started work on the construction of a new plant which will enable this concern to produce about three times the tonnage of the past. The new factory is 66 by 90 feet and is two stories high, with a large basement. The equipment includes 12 large furnaces, with a combined capacity of 5,000,000 pounds of babbitt metal annually.

Fitzgibbon & Crisp, Trenton, N. J., manufacturer of automobile bodies and carriages, will build an addition to its shop on Bank street.

PRICE SITUATION IN GENERAL MATERIAL MARKET.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period for purposes of comparison. Southern iron and northern iron has dropped 25 cents. Bessemer iron and steel dropped 50 cents a ton. Copper, lake, showed a decrease of 25 cents a hundred pounds. Tin rose 65 cents a hundred pounds for the month. Pennsylvania crude oil and cottonseed oil fell 10 cents on the barrel.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

GASOLINE PLEASURE CAR AGENCIES.

3000—Minnesota Dealer desires to represent a line of cars selling from $500 to $700.

3006—Pennsylvania House wishes to secure an agency for pleasure cars selling from $1000 to $1800.

CYCLECAR AGENCIES.

1782—Texas Dealer is desirous of securing the agency for a cyclecar with the seats arranged side by side.

ACCESSORIES, EQUIPMENT AND SUPPLIES.

464—Texas House wants to acquire a line of cements and rubber stock.

465—Wisconsin Dealer is interested in information relative to drills, gaskets, hose, hydrometers, jacks, platinum, ratchet drills, reflectors, carbon removers, shock absorbers, timers, voltmeters and wrenches.

468—Maryland Firm wants trade information of axles, engines, fenders, frames, horns, magnetos, pumps, radiators, stampings, steering wheels, tanks, transmissions and wheels.

471—Pennsylvania Concern is in the market for air pumps, batteries, bearings, bolts, bulbs, bumpers, chains, gasoline, lathes, magnetos, maps, mechanical starters, platinum, plugs, pullers, pumps, radiators, ratchet drills, reamers, reflectors, carbon removers, shock absorbers, soaps, speedometers, springs, tools, turntables, vises, voltmeters, vulcanizers, washers, washstands, waste and wrenches.

475—Ohio Company is interested in trade facts of batteries, bumpers, celluloid, cushions, cylinders, gasoline, headlights, horns, lamps, locks, machinery, mechanical starters, paints, plugs, carbon removers, speedometers, bulbs, bumpers, jacks, lamps, magnetos, mufflers, pans, tire accessories, tools, turntables and wearing apparel.

477—Minnesota Dealer wants quotations on batteries, pumps, radiators, reflectors, carbon removers, searchlights, shock absorbers, tanks, tops and parts, trimmings, washstands, waste, whistles and windshields.

480—Missouri Dealer is interested in bodies, charging apparatus, curtains, cushions, discs, fenders, generators, glass, headlights, lamps, leather, radiators, reflectors, seats, starters, steel, steering wheels, trunks, upholstery and windshields.

483—Mississippi Firm wants batteries, carburetors, cements, chemical tanks, coils, engines, ignition, lathes, magnetos, molds and cores, mufflers, platinum, plugs, testers, tire accessories, tires, vaporizers and vulcanizers.

486—Michigan Dealer is in the market for air compressors, carbide, dimmers, tire accessories and tires.

489—Pennsylvania House wants air compressors, air pumps, cans, charging apparatus, lathes, motors, pulleys, tires and vises. The above products to be used for garage equipment.

FOREIGN TRADE OPPORTUNITIES.

No. 13,220. Auto Trucks—An American consul in a South American country reports that a municipality in the country in question is in the market for two motor trucks of two tons capacity for use in hauling away garbage and waste.

No. 13,279. Motor Cars and Motorcycles—An American consul in a Latin-American country has recently received a number of requests for catalogues of American motor cars and motorcycles and for information as to the terms under which representation may be procured. The consul would welcome catalogues, descriptive advertising matter, and correspondence furnishing full information as to the prices, discounts and agents' commission that can be granted, and a demonstration machine secured. Several copies of the catalogues should be sent for distribution to the firms interested. More than a dozen motor cars and motorcycles have recently been imported, and it is considered likely that at least an equal number will be ordered within a short time.

No. 13,281. Fire Fighting Apparatus and Supplies—The fire department of a South American city has decided to replace its horse-drawn engines and trucks with motor-driven ones of up-to-date type. The chief of the department has informed an American consulate that he would be pleased to receive catalogues of American fire fighting apparatus and supplies, especially of motor-driven engines, hose carts and ladder trucks. Catalogues and correspondence may be sent in care of the consulate or directly to the chief of the department. They should furnish full information as to prices, discounts and terms that can be granted.

No. 13,285. Motor Cars and Motor Trucks—A report from an American consul states that the use of automobiles is increasing in his district, and there are now more cars of American make used than of any other make. There would also appear to be an opening for the use of motor trucks to convey products from the farms and villages to the ports and to bring back general supplies needed. A municipality is advertising for bids to supply motor sprinklers and motor garbage carts to the street cleaning department. The sprinklers must use sea water and be equipped with a motor-driven pump capable of lifting the water from a source six meters below the tank. Further details, as well as a list of dealers in automobiles and supplies, will be furnished to interested American manufacturers.

No. 13,335. Motor Cars and Motorcycles—An American consul reports that a local dealer in motor cars and motorcycles desires to take the exclusive agency for low and medium priced motor cars and motorcycles of American make. He wishes to receive catalogues with price lists and discounts, so as to make a selection of the kind of motor vehicles he desires to handle. Firms wishing to correspond with him may use English, setting forth whatever proposition they may have for the establishing of an agency. It will be useless to send catalogues without prices and discounts. C. i. f. prices port of delivery should be given as an inducement to overcome European competition.

TRIAL OFFER OF WELDING OUTFIT.

Warehouse Welding Company Makes Liberal Proposition to the Trade.

The Waterhouse Welding Company, 4 Pelham street, Boston, specializing in welding and cutting equipments, is making a free trial offer to the garages and repair shops. The company will forward an apparatus for a two weeks' trial and will accept the return and refund all monies without question if the purchaser does not care to retain it.

The Waterhouse Welding Company is a pioneer in the manufacture of welding outfits. Some of the features of its apparatus are: The low cost of operation, that it is non-flashable, is absolutely safe, is mechanically right and scientifically constructed. The equipment includes one B welding torch with five tips, one oxygen reducing valve with 50 pound line pressure gauge, acetylene reducing valve, one set of special welding hose, one pair of welding glasses, one carbon burning torch and complete instructions.

Supplies are included at a slight extra cost and comprise one bottle of aluminum flux, one can of cast iron flux, one can copper and brass flux, two pounds of brass, five pounds of cast iron, two pounds of aluminum and two pounds of steel welding rods. The welding and decarbonizing apparatus comes in a neat, substantial hardwood box. Complete details of the offer made by the company will be supplied upon request.

CORRECTION OF ERROR.

In the May issue of the Accessory and Garage Journal, under the heading of Agents Appointed During the Month, an error was made in connection with the agent for the Cole car at Harrisburg, Penn. This should have read Bowman & Company and not Hasting's Garage.

The Republic Tire Company, Grand Rapids, Mich., has established a salesroom at 124 Division street. George E. Moran is in charge.

The Chalmers & Saxon Sales Company, Macon, Ga., is a new company which has started business in that city. The company has opened salesrooms in the Grand building. A service station has been established and all parts are carried.

The Lee Tire & Supply Company, Grand Rapids, Mich., is now handling the products of the Lee Tire & Rubber Company, Conshohocken, Penn. The company is located at 206 Ionia avenue.

E. Isenflam, Indianapolis, has entered the trade as proprietor of the Indianapolis Auto Tire & Accessories Company. He is located at 1702 West North street. Until recently he was manager of the Marmon branch in that city.

The Bartles-Maguire Oil Company, Milwaukee, Wis., has been appointed distributor for the Knight tire. The company is located at 539-543 Broadway.

The Panama Tire & Rubber Company, Newark, N. J., announces that it has taken the sole agency for Portage tires for Newark and the surrounding territory. This tire is said to be one of the most satisfactory on the market and in use has lasted upward of 6000 miles.

Julius Andrae & Sons Company, Milwaukee, Wis., has taken the exclusive selling agency for the Kemco fan-type generator and reports good business on both the regular type and the special Ford generators. The company is also the Wisconsin distributor of Willard storage batteries, Remy magnetos, Stromberg carburetors and a standard line of accessories and supplies.

The Asheville Steam Vulcanizing Company, Asheville, N. C., will handle the Braender tires for that territory. The company is located on East College street.

C. L. Thayer, Columbus, O., has taken the agency for the Gould batteries. He also operates a garage and charging station at 174 South Wall street.

The Como Garage, St. Paul, Minn., carries a complete line of supplies and fittings for automobiles. The company also deals in used cars of all makes.

The Willis-Halff Company, Waco, Tex., is establishing a large and up-to-date accessory and supply house at Temple. The company will locate on East avenue, A. The Willis-Halff company is one of the largest firms in the South and will carry the same stock at Temple as characterizes the Waco house. H. L. Smith is manager of the new firm.

The Morris-Westall Auto & Tire Company, Birmingham, Ala., is the name of a company which has just opened for business at 422 South 20th street. The company will be temporarily located on this site, pending the completion of plans now under way to build a mod-

Digitized by Google

ern sales house. The company has the agency for the Premier cars and also handles the Ajax tires. Thomas E. Morris and Henry Westall are the proprietors and are both well known to the trade.

Little & Kennedy, Tacoma, Wash., has opened an automobile supply house at 739-745 C street. The company handles the Cadillac cars.

A. S. Pearson, Salem, O., has opened an automobile supply store on West Main street.

Thomas S. Kendall, Des Moines, Ia., has organized the Kendall Auto Taxi Service Company. He will conduct a taxicab business. The company is located at 324 West Seventh street.

Andrew Murphy & Son, Des Moines, Ia., has opened an automobile salesroom and will carry the Kelly and Stewart trucks.

The Red Letter Tire Company, Columbus, O., is the name of a new concern located at 20 East Town street under the management of Leo Sulzer. Acme tires are handled.

The Ellis-Ward Company, Boston, will handle the New England distribution of the Gaulois tyre. A temporary location has been secured at 817 Boylston street, in the heart of the tire row, and already a brisk demand has been reported for these well known tires.

L. L. Barnes, Atlanta, Ga., formerly southern district manager for the Hudson Motor Car Company, and Max Springer, have formed the Saxon Motor Company of Atlanta and opened salesrooms and a service station at 397 Peachtree street.

R. G. Sloan, Greensboro, N. C., formerly with the Greensboro Motor Car Company, has sold his interests in that company and formed the R. G. Sloan Motor Company. The new company will handle the Hupmobile cars and will also conduct a garage. A building has been leased on South Davie street.

Campbell & West, Spokane, Wash., is the name of a new automobile supply house that has been opened. A. J. West and R. Campbell are the proprietors.

W. A. Sanders & Son, Detroit, has opened first-class salesrooms for the Cricket car at 762 Woodward avenue.

The Craighead Motor Sales Company, Columbus, O., has opened a sales department for the Corbin-Brown speedometer and will maintain a service station for them. The company handles the Crescent cars.

E. H. Rhinehart, Menominee, Mich., has started in the automobile business, having taken the agency for Buick cars. He was formerly manager of several local theaters.

The Don Lee Company, Los Angeles, Cal., has added an accessory and supply department to its garage at 12th and Main streets. The company repairs cars of all makes.

Elbert Ferrell, Everett, Wash., has re-entered the trade and now conducts an automobile supply store at 2413 Hewett avenue.

A. Schlueter, Milwaukee, Wis., has gone into business for himself and has opened an up-to-date garage at 319 Farwell avenue. He was formerly with the Creek Motor Sales Company.

The Auto Sales Company, Mobile, Ala., has been purchased by C. H. McBroom and F. E. Tacon. The company was formerly conducted by E. L. Moran. The new firm has fitted up a first-class repair shop for automobiles and motorcycles and has also started a taxicab service.

The Grand Rapids Oil Company, Grand Rapids, Mich., has opened two new oil and gasoline stations at Commerce avenue and Louis street northwest and 1496 Lake drive.

The Townsend & Kinney Automobile Company, Reedsburg, Wis., has been organized to conduct a general automobile business. The new company has purchased the garages of Paul Fiber and of Foss & Sorge Automobile Company, and will operate both under one management. The consolidation gives the concern the agencies for the Overland, Buick, Studebaker, Jeffery and Ford cars.

The H. W. Nichoalds Company, Detroit, motor car parts and accessory dealers, has opened a branch at 250 East Jefferson avenue.

The Excelsior Motor Supply Company, Harrisburg, Penn., has opened a branch store at 126 North Front street, Steelton, Penn.

The Franklin Motor Car Company, Pittsburg, Penn., will handle the Baker electric car exclusively in that city. Murray Carr is president.

GARAGE TRANSFERS.

The Carlton-Faulkner-Bowles Motor Car Company, Los Angeles, Cal., is the name of a new concern which has opened a salesroom and garage at the corner of 10th and Hope streets. The company is agent for the McFarlan and Fiat cars.

Benjamin W. Mosher, Greenwich, Conn., has taken over the business of the Opperman & Hennessey Company. He has equipped the garage with new machinery.

The Orange Street Garage, Redlands, Cal., has been purchased by F. E. Stowe, who is agent for the Studebaker cars.

Burton & Roach, Rehoboth, Del., has purchased the Rehoboth Avenue Garage and will conduct the business. J. L. Carmine was the former owner.

The Manley-Wilkins Garage, Mt. Carmel, Ill., has been purchased by E. L. Wilkins and Jay Lescher, who will operate same. The garage is located at Fourth street.

George O. Athorne, Dover, N. H., has purchased the Granite State Garage and will operate same. Improvements will be made.

Ruh Bros., Bayonne, N. J., has taken over the Broadway Garage, at 815 Broadway. A repair shop will also be conducted by the new company.

The Greenecastle Garage, Greencastle, Ind., has been purchased by Guy Coons, formerly of Advance, Kan., and he will operate it.

Bert W. Cole, Grand Rapids, Mich., has purchased the garage of Williams & Hann at 1010 Godfrey avenue. The business will be conducted under the name of the Godfrey Avenue Garage.

Ernest Coffey, Lawton, Okla., has purchased the Ford Garage, and will conduct the business. He will make many improvements.

A. L. Hendricks, San Diego, Cal., has sold his interests in the Park Garage. This sale includes the well known Dill Pickles. Charles C. Albright is the new holder of the stock.

The Auto Service Company, Marinette, Wis., has been purchased by D. F. Poyer of Menominee, Mich. He will continue the business. Improvements will also be made.

The Frank X. Parker & Company, Portsmouth, Va., has been purchased by T. W. Westbrook and will be operated by him as the Virginia Garage & Supply Company. The new firm will handle a complete line of accessories and will also have the agency for the Partin-Palmer cars. Repair work and storage will be specialized in. The company is located at 709-711 Crawford street.

Joseph Fratus and William Hurd, Plymouth, Mass., have purchased the automobile tire repair shop on Water street from N. J. Wentworth. The new company will operate the business.

Bisensius & Hemberger, St. Cloud, Minn., Overland agent, will be continued as the garage at the corner of Seventh avenue and First street south. Mr. Bisensius has purchased the interest of his partner, J. A. Hemberger.

P. L. Gannon, Larchwood, Ia., has purchased a half interest in the Griffin-Frans Automobile Company.

Chestnut Bros., Clay Center, Kan., has purchased the Yohe garage at Wapello, Ia. Many improvements will be made.

August H. Klatt, Algoma, Wis., has sold his interest in the Klatt & Son Garage to Berl F. Rider. The new firm of Klatt & Rider will conduct business along former lines.

The Seventeenth Street Garage, Columbus, O., has been purchased by J. R. Jones and is now being operated under the name of the Columbus Auto Service Station.

Thomas Brooks, Detroit, who operates two garages at 2674 and 2711 Woodward avenue, has purchased the Highland Park Garage, formerly operated by W. S. McEvoy. The name will be changed to Brooks—The Automobile Exchange.

W. Martin, Huntington, W. Va., has purchased the Modern Garage and will operate it.

The Brassill Service Station, Hartford, Conn., has taken over the Dillon Court Garage. It was formerly conducted by Charles Yetter.

H. A. Anderson & Son, Adams, S. D., has sold its garage to Anton Swenson, formerly of Warren, who will operate it.

H. W. Stone, San Diego, Cal., formerly in the employ of Leonard & Stone, has assumed control of the business and will continue at the old location on Broadway.

H. J. Neverman, Denver, Ia., has purchased the garage and Ford agency of Diekman Bros.

Johnson Bros., Irene, Ia., has sold its garage to the George J. Sogge Auto Company. The company will make extensive improvements.

Albert Albright, Webster City, Ia., has purchased his partner's interest in the automobile establishment known as Ead Hamlin, and will operate the business.

W. J. Burns and Bert Peterson, Pendelton, Ore., have purchased the garage of the City Motor Company on Cottonwood street and also the galvanizing plant of the Pendelton Auto Company. The new company will operate both plants.

The Park Garage Company, Roseville, N. J., which was formerly the Roseville Garage, has been purchased by Harry Pitt of Westfield avenue. The entire garage will be romedelled and a full line of accessories carried.

Cleve Fisch, Gaza, Ia., has purchased the Gaza Garage and is operating same. He has made several improvements and installed modern machinery.

The Electric Service Garage, Indianapolis, Ind., has been taken over by H. L. Krieger and William E. Roby. The company is located at the corner of Meridian and Walnut streets.

Stockley & Quigley, Middletown, Del. has purchased the automobile repair business of W. S. Burris and will operate same. Improvements will be made.

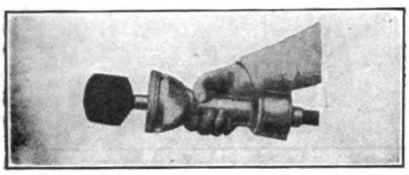
ACCESSORIES, SUPPLIES AND FITTINGS.

WIZARD WASHER.

Hands Are Not Wet and Design Is Stated to Be Very Efficient.

The Century Foundry Company, 1620 North Carolina street, Syracuse, N. Y., is marketing the Wizard wash-



er, designed to enable the owner and others to wash the machine without the usual equipment of rubber boots, aprons, etc. One of the qualities of the washer is that the hands do not come in contact with the water.

The Wizard consists of a special nozzle, a ball bearing turbine motor, a 14-inch extension and two interchangeable brushes, one long and pointed for washing corners, etc., and the other shaped like a sponge for flat surfaces. The nozzle throws a hollow film of water completely around the rapidly rotating brush, and it is stated that it removes all deposits without injury to fine finishes.

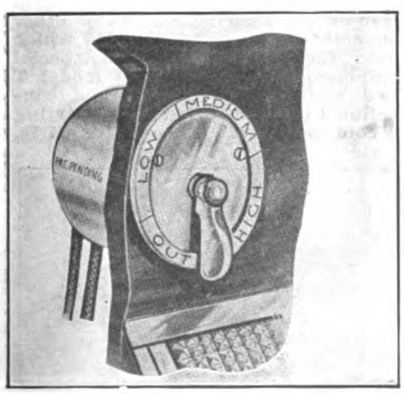
CHANEY HEADLIGHT DIMMER.

Practical Design for Eliminating Glare of Electric Lamps.

One of the latest devices for eliminating the dazzling effects of the electric headlights is the Chaney automobile incandescent lamp dimmer, manufactured by the L. F. Chaney Company, Springfield, O. The design is simple, very compact, and may be installed easily by the owner without a knowledge of electricity, as the wiring is very simple, there being but the connections shown in the illustration.

One of the qualities of the design is that the lights may be regulated to meet all requirements. The dimmer is mounted on the dash and being equipped with a kick type of lever, the driver can move the last named member to each of the four positions provided.

Placing the lever to "Low" effectually dims the lights, eliminating all glare. Medium and high positions are included, also an "Out". The installation of the Chaney dimmer is made easily. Three small holes are bored in the dash to retain the front plate and dimmer and a fourth opening for the shaft member, to which the handle or lever is attached. Being of the flush dash type, the design does not detract from the appearance of the car. The dimmer retails for $3.50.



MAXIM FORD MUFFLER.

Embodies Same Principle as the Firearm Silencer.

The Maxim Silencer Company, Hartford, Conn., maker of the well known Maxim gun silencer, has brought out a design of muffler for the model T Ford car in which is embodied the same principles as those incorporated in the device used on firearms. The design differs radically from the usual type of muffler.

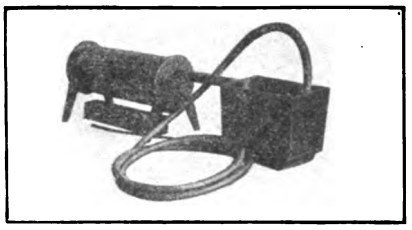
The exhaust gases enter the Maxim muffler at the expansion chamber, then pass to the whirl chambers, a feature of the Maxim silencer. These are formed by three segments of sheet steel separated from each other at the joints, so as to obtain a circumferential discharge. The next chamber is made in a similar man-

ner and has discharge spaces pointing in an opposite direction, thus obtaining the whirl referred to. The noise wave is thus divided and subdivided and is gradually dissipated. The silencer comes with brackets to fit car and includes a tail pipe for clearing rear spring. Its dimensions differ from the Ford muffler only in diameter, being 5.75 inches. It sells for $6.

PROGRESSIVE DECARBONIZER.

Employs Oxygen and Includes Rechargeable Generator.

The Progressive Manufacturing Company, Reading, Penn., is introducing a popular priced oxygen car-



bon removing equipment which is designed for the small garage and the owner. It consists of an oxygen generator, which is held to be easily operated and which may be utilized indefinitely when refilled with the proper dry chemicals.

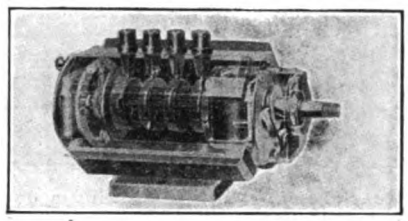
One of the qualities of the equipment is stated to be the use of non-poisonous material. Another feature is that the gas is always at low pressure, which eliminates the need of reducing valves. The outfit comes complete with sufficient material for cleaning a large motor, and the usual flexible hose is provided. Extra charges may be obtained at a nominal cost. The principle is similar to the conventional decarbonizing equipments. It retails for $6.

Ed. Note—Always consult The Buyers' Guide, found elsewhere in this issue, when in need of anything new in cars, accessories, supplies or fittings. It is an authoritative list of the reliable concerns of the industry. These are alphabetically arranged, making it an easy matter to obtain the name and address of the maker of the material desired.

HIBBARD MAGNETO.

A Novel Design Differing Radically from Usual Practise.

The Grip Nut Company, Chicago, is marketing the Hibbard magneto, presenting several interesting fea-



tures which differ from conventional practise. It is of the true high-tension type, operates at half engine speed with four-cycle motors, and has two armatures, each containing its own primary and secondary winding. It is of the four-pole type, four straight bar magnets being employed instead of the horseshoe design.

It is stated that almost any degree of advance or retard may be obtained, the change in the spark occurrence being accomplished by shifting the armatures and not the field or breaker box, as is used in present constructions. Another innovation is that the distributor is located inside the magneto, and the entire so-named distributor board revolves.

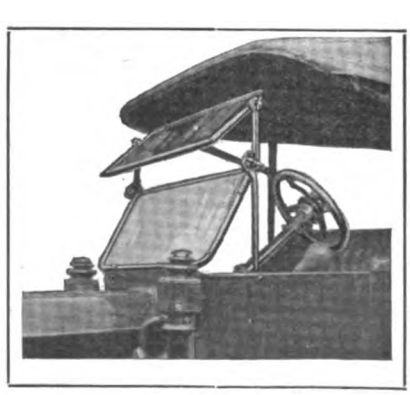
The breaker mechanism carried at the end, consists of four stationary cams, for the four-cylinder type, and they are made of fibre. Each point of the interrupter is carried on a separate strip of metal and the two are held together by the pressure of a spring. The shifting of the armature is accomplished by a slot in the shaft, a sleeve and a spool. A pin attached to the spool is moved backward or forward.

BANKER WINDSHIELD DEVICE.

Permits Adjustment of Ford Shield and Provides Ventilation.

The Banker Windshield Company, Ellsworth and Negley avenue, Pittsburg, Penn., is manufacturing a device for windshields for the Ford car and machines of similar size. The design is particularly intended to provide a clear vision when driving in a rain or snow storm, when the view is more or less obstructed.

The attachment permits of adjusting the top half of the shield, it replacing the usual hinges, and the maker states that any owner can fit the design without trouble and in a short time. As will be noted by the accompanying illustration, the shield may be set at an angle and the adjustment can be made as desired.

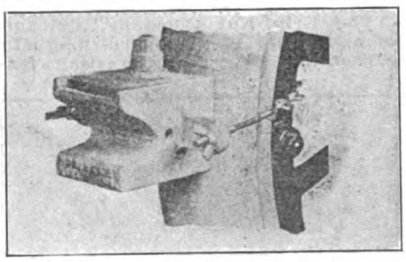


Digitized by Google

NURINKLE VULCANIZERS.

Proper Temperature Is Automatically Regulated.

Among the manufacturers specializing in vulcanizing equipments for the private owner is R. E. Stevenson,



Muncie, Ind., who is marketing a device termed the Nurinkle. It is constructed for motorists who undertake the maintenance of their tires and inner tubes, and who are not familiar with the operation of vulcanizing. The Nurinkle is of the portable type, very compact, and the maker states that the instructions are so simple that anyone can obtain perfect results with this design.

It employs gasoline as a fuel, and one of the qualities of the construction is that too large a supply of fuel cannot be utilized, as a cup integral with the vulcanizer prevents this mistake. The amount is held to be such as to provide sufficient heat to maintain a correct steam pressure, and to keep the vulcanizer at a uniform and proper temperature to effect a repair. One of the qualities of the design is that the flame is turned away from the tire without the use of a separate deflector. It sells for $5.

PRENTISS KITCHENETTE.

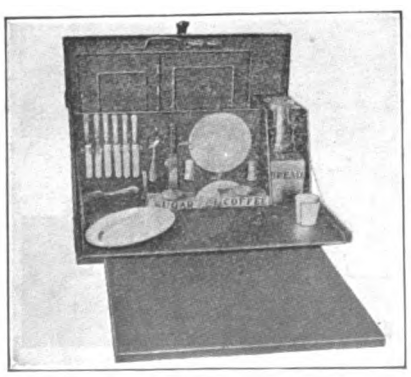
Includes Stove, Full Set of Dishes, Cooking Utensils, Etc.

The Prentiss Manufacturing Company, Racine, Wis., is making a specialty of cooking outfits for tourists, and the steel kitchenettes, as they are termed, are very compact and may be carried on the running board of the car. That illustrated is the No. 1 or six-party outfit.

It contains a full set of dishes for six persons with the necessary knives, forks and spoons, and, in addition, containers for coffee, sugar, salt and pepper. There are also frying and baking pans and other cooking utensils. The dishes are made of the best white enamelled ware.

The case is made of No. 22 gauge auto steel, nicely finished in black, and adjustable leg supports are fitted to the outer leaf of the table. All openings are felt lined to exclude dust and foreign elements. The case measures 28 inches long, 17.5 high and 12 wide. It weighs 75 pounds.

The folding stove utilized with the equipment employs gasoline as fuel and has three burners, two of which



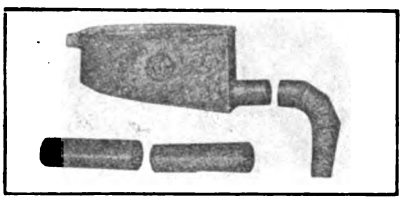
are for cooking and the other for the oven. The last named folds out of the way when not in use. It retails for $37.50.

METALCRAFT FUNNEL.

Has Offset and Two Extensions and Two Filters for Fuel.

William Vogel & Bros., 47 South Ninth street, Brooklyn, N. Y., is manufacturing the Metalcraft offset funnel, one of the qualities of which is that filler caps not accessible with ordinary funnels may be reached easily. The design is particularly adaptable to special types of cars having fuel tanks not easily reached.

As will be noted by the accompanying illustration, the Metalcraft funnel is provided with two sectional spout extensions, these being seven inches long, also an offset elbow, which when coupled with the other members gives an extension some 20 inches long, sufficient to reach the



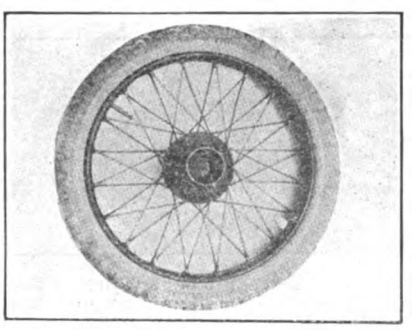
filler of any rear tank of the pressure type.

The design is constructed of seamed sheet iron with locked seams, and is galvanized.

CAMERON WIRE WHEEL.

Ford Design Installed Without Any Alterations.

The Cameron Wire Wheel Company, 47 Adelaide street, Detroit, is marketing a wire wheel for the model T Ford car. One of the qualities of the design is that it is interchangeable with the regular wood wheels



fitted to the Ford machine. The Cameron construction is also detachable, and is designed to carry 30 by 3.5-inch tires.

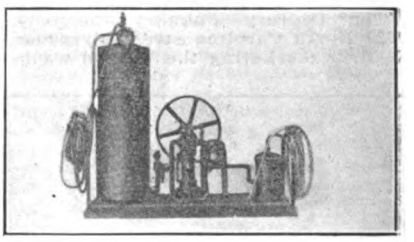
The wire wheel is securely locked by means of special studs, these taking the place of the old bolts used in the wooden members. The locking studs are operated by a socket wrench, much in the same manner as the demountable types of rims. As the original brake drums are not interfered with there is no change to the brake adjustment, etc.

One of the features emphasized by the maker is the lacing of the spokes, it being held that they will not catch in ruts, and that at the same time they afford ample resistance to torque and lateral stresses. The wheels are finished to withstand weather, being first copper plated, then given two coats of black enamel. The Ford design comes in sets of five. The company also manufactures wire wheels for standard cars.

DUNKLEY COMPRESSOR.

Combines Power Pump, Motor Cleaner and Vacuum Cleaner.

The Dunkley Company, Kalamazoo, Mich., is manufacturing an equipment for the private as well as pub-



lic garage, which combines the functions of a high grade air compressor, a vacuum cleaner and a motor cleaner, all mounted on one base.

The compressor is designed to be driven either by a belt or by an electric motor, provision being made for the installation of the last named unit. The compressor proper is of the double acting, water-cooled type and is a high pressure design. The tank has a capacity of 80 gallons and is provided with a gauge, suitable length of high grade flexible hose and connections.

Mounted on the same base is the motor cleaning attachment. It comprises a fuel tank and a two-way nozzle, which has passages for the air and gasoline, which breaks the liquid up into a very fine spray. Being projected under considerable pressure, the atomized fuel will reach and clean places not easily accessible by the usual methods. It is stated that heavy deposits of grease and oil may be displaced readily and that the surface is left very clean.

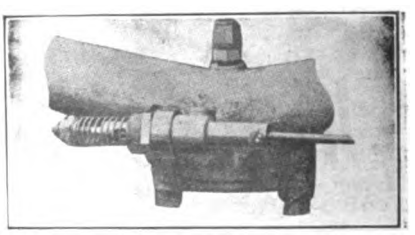
The vacuum cleaner is obtained by utilizing the intake of the compressor, a vacuum tank and dust collector being provided. This permits of utilizing the equipment for removing dust from tufted cushions, tops and places difficult of access with ordinary cleaning members.

HANDY CONTROLLER.

Automatically Admits Air to Intake Manifold as Required.

The Handy carburetion controller is the product of the Crary Company, 652 Woodward avenue, Detroit. It is a simple, compact device, which is fitted to the intake manifold between the carburetor and the cylinders. The function of the controller is to automatically provide extra air to the mixture, thereby reducing the suction at the spraying jet and preventing undue enriching of the mixture at all motor speeds. The stream of air striking the fuel vapor breaks it up into a fine spray and mingles it with the air, thereby obtaining a rapid burning charge.

The Handy controller is automatic in its action. After the motor has become warmed up a small control lever on the steering column or other convenient place is moved, which opens the Handy valve. A special equipment is made for the model T Ford motor, including a tube connection to a dash primer for starting in cold weather. It sells for $7.50.

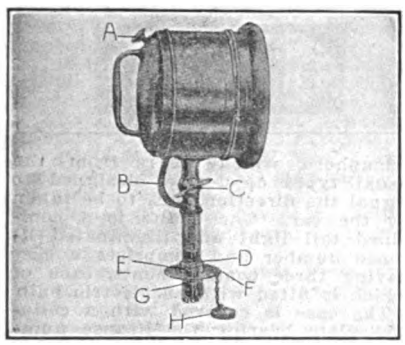


Digitized by Google

CELLO SEARCHLIGHT.

Wireless Design Operated by Push Button with Dry Cells.

The A. S. Campbell Company, 284 Commercial street, Boston, is manufacturing the Cello Wire-Less search-



light. As the name implies the construction is without wires, to prevent opportunity of short circuits, and the design makes for easy and rapid installation. The light is equipped with the same reflector as is used in high grade lamps.

The connection to the batteries is made through a highly polished flush deck socket, and when the light is not in service, a cap screwed on to the deck socket makes a water proof fitting. The push button A operates the lamp, and pressing down obtains a flash, while a half-turn gives a steady illumination. The flexible cable is indicated by B, and C is the hinge joint obtaining movement.

The deck swivel is locked by a nut D. E is the bronze contact spring and F the deck socket, which connects to the main wiring below. The self-cleaning, positive contact is shown at G. H is the cap screw utilized when the lamp is not in service.

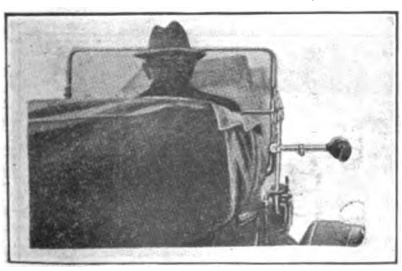
The design is very sturdy and can be set at any convenient angle. It is stated that ordinary type can be read at a distance of 1000 feet and that the lamp will operate economically on six dry cells. It is adapted for service with a storage battery or dynamo, and the bulb is an eight candlepower six-volt member. The finishes are: Brass, bright nickel and black nickel. It retails for $7.50.

COLUMBUS TRAFFIC SIGNAL.

A Day and Night Signal Operated by Pedal and with Red Light.

Edward S. Adams & Co., Columbus, O., is manufacturing the Columbus traffic signal, which presents a number of interesting features, among which is that it is of service in the daytime as well as night. As will be noted by an accompanying illustration the signal is in the form of a disc attached to an arm which, when raised as indicated, denotes that the machine is about to make a right hand turn.

There are two of these signals, one on either side of the windshield to which they are attached, and each disc is raised independently of the other by pressing a pedal convenient to the driver. Normally the arm



bearing the signal is in a vertical position, but upon wishing to signal the traffic officer or a machine approaching in the rear, the pedal is touched with the foot, raising the arm. The signal is finished in red, and at night is illuminated by an electric bulb, current for which is supplied by a set of six dry cells. A switch is included for cutting off the current supply in the day time. The Signal sells for $15.

MULTIBESTOS BRAKE LINING.

Special Weave Eliminating Brass Wire and Cut to Size.

The Standard Woven Fabric Company, Framingham, Mass., maker of the well known Multibestos brake lining, is marketing the Multibestos Ford special, a brake lining which is held to meet every condition of service on the Ford car.

It is similar in weave and appearance to the standard material, but differs in that the interwoven brass wire is eliminated. As the lining operates in a bath of oil in the Ford machine, it is treated by a special process with a composition that renders it oil proof.

Multibestos Ford special comes in neat pasteboard boxes, each containing a complete set of linings, three in number, these being 23.5 inches

long, 1.125 wide and .15625 thick. Brass rivets are enclosed for attaching the linings. The straight lining and rivets will be sold separately.

SECURITY TIRE ENAMEL.

A Rubber Compound for Protecting Shoes from Weather.

Security tire enamel is manufactured by the Security Reliner Company, Montgomery, N. Y., for which the D. Henry Bonner Company, Cambridge, Mass., is New England distributor. It is a specially prepared

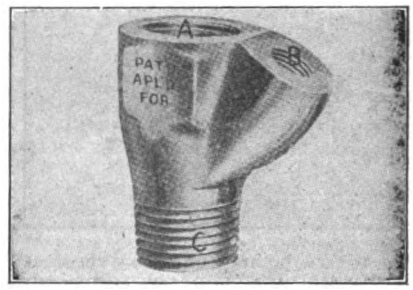
liquid paint made from a pure rubber combined with selected pigments, and is stated to be quick drying.

The preparation is made for protecting and preserving tires, mats and other rubber articles exposed to the action of the weather, and when applied to a casing dries rapidly, imparting a beautiful gray appearance. It is applied with a soft brush after the shoes have been cleaned, and it is stated that it spreads perfectly, leaving no brush marks. The maker claims that it will fill cuts, preventing moisture penetrating to the fabric, etc. Security tire enamel comes in press top cans, having capacities ranging from one-half pint to a gallon. The half-pints retail for 50 cents and the gallon cans for $3.50.

STRYKER STARTER FITTING.

Provides Means for Introducing Fluids into Cylinder.

C. W. Stryker, 240 Shonnard street, Syracuse, N. Y., is manufacturing the Stryker starter fitting, which is de-



signed for the model T Ford and other makes of motors in which provision has not been made for the fitting of petcocks or means for introducing gas or fluids as is necessary with some forms of motor starters.

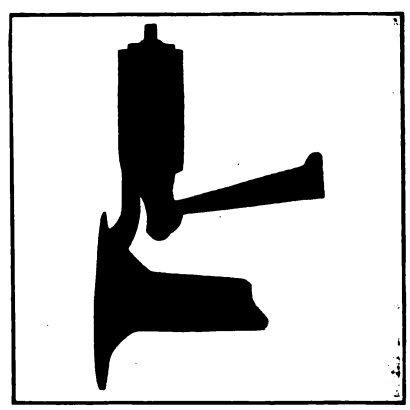
The Stryker device is constructed much in the same manner as the shell of a spark plug, but differs in that it is made much thicker at one side, this section being indicated at B in the illustration. The lower part C is threaded and this is screwed into the cylinder, replacing the usual spark plug, which is threaded into the opening at A. The member B is also threaded and into this is screwed the starter connection or a petcock for priming purposes.

J. M. SHOCK ABSORBER.

New Design Termed No. 3 for the Model T Ford Automobile.

The J. M. Shock Absorber Company, Inc., 210 South 17th street, Philadelphia, maker of the well known J. M. shock absorber, has brought out a new design, termed the type No. 3, for the model T Ford car. It is based on the same helical spring principle and the same high grade material and workmanship for which the products of this concern are noted is incorporated. The maker calls especial attention to the sliding sleeve container, the automatic oiling attachments, and the adaptability of the design to the Ford machine.

The hanger is a high grade steel drop forging with rigid attachment for insertion and great strength is emphasized in the construction. The interior of the hanger contains a bronze bushing and at a point where the wear is concentrated. This part may be replaced for a very slight cost, doubling the service of the absorber. The new J. M. type comes in pairs for the rear springs, but front members are supplied. That illustrated is a rear design. The rear members retail for $15 the set.

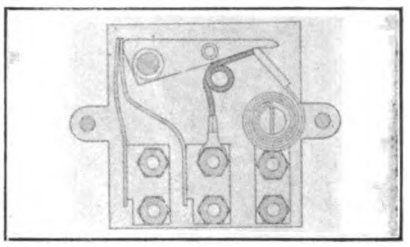


Digitized by Google

MAPLE THERMO CUT-OUT.

Replaces Fuses in Lighting System and Breaks Circuit.

The R. H. Maple Company, Indianapolis, Ind., has brought out the Maple Thermo cut-out, which is a de-



vice for replacing fuses in the electric lighting system of the motor car. It employs the thermostat principle, being affected by the heat of the current passing through it, and it is adjusted to break the circuit at a temperature of 200 degrees.

The thermostat metal is in the form of a coil, as shown to the right in the illustration, and the connections are two nuts at the lower corners. The electricity passes through the thermostat metal and wire connection to the central metal fitting, thence to a similar member at the left through contact points at the upper corner.

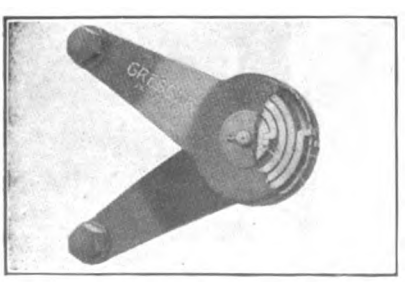
Any excess current causes the thermostat to coil more closely, allowing the lever across the top of the cut-out to be lowered under the influence of the spring contact points, interrupting the current. With a two-wire system two cut-outs are combined. A post projects through the cover near the middle of the lever, serving as a visual indicator when the current is interrupted by the cut-out, by assuming a position opposite the word "Off". It is stated that the device offers only a fraction of the resistance of fuses. It is placed on the dash and wired between the battery and the switch.

GRESSER SHOCK ABSORBER.

Coil Springs Utilized and Device Acts in Both Directions.

The Buckeye Suspension Company, Cleveland, O., is manufacturing the Gresser shock absorber, which resembles those employing the friction principle, but the shock absorbing action is obtained by two coil springs. One of these is secured to one arm of the device and the second to the other member in such manner that the absorber acts in both directions. The special feature claimed for the device is that a limited amount of spring movement is permitted without the absorber being actuated, but with large oscillations of the springs the movements are controlled.

This is explained by the fact that with seven or eight-inch leverage the outer coils of these springs will offer practically no resistance when wound at an angle of 12.5 degrees. With this leverage approximately 1.5 inches play above and below the normal position is allowed, or three



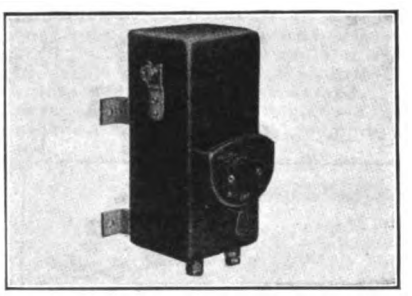
inches in all. The Gresser is made in one style, that for cars over 1500 pounds. They retail for $25.

BROWN MASTER VIBRATOR.

New Design for Model T Ford Motor Held to Be Very Efficient.

The Brown Company, Syracuse, N. Y., is manufacturing a new type of master vibrator for the model T Ford motor, and one of its qualities is the purely mechanical adjustment employed. It is stated that it is so simple that a novice may adjust it without trouble and in a very short time. It is also stated that when once set it will require no attention, as the adjustment is permanent.

Another feature is the use of non-sticking contact points. This is obtained by the method of separation, a sharp blow action being utilized instead of their being drawn apart. They are constructed of a specially hardened material. The vibrator is mounted in a mahogany dash case equipped with a substantial kick

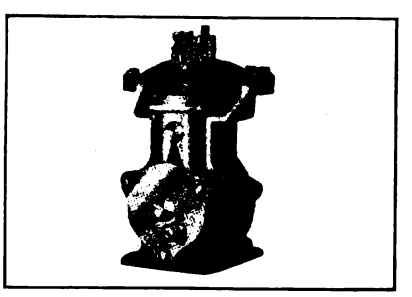


switch, and can be attached to the dash between the regular coil and the source of current supply. A Puritan switch is utilized, the design being thief proof, as the lever or handle may be displaced. The advantages of a master vibrator are well known. The new design is constructed of high grade material and the workmanship is first class in every respect.

TAYLOR POWER PUMP.

New Design Has Many Improvements and Is Lighter.

The Taylor Manufacturing Company, box 485, Chicago, maker of the Taylor engine driven tire pump, has



made a considerable change in the original design, which has been described in these columns. The air valves in the head are now machined out of bar stock and replace the rough casting formerly utilized.

It is pointed out that this tends to keep the pump much cooler. The body has been stripped of all unnecessary corners, ribs, etc., and now presents a very smooth, attractive appearance. The weight has also been reduced by the removal of all surplus material. A larger oil filler has been incorporated for replenishing the supply to its crankcase. The Taylor is of the plunger and diaphragm type and the maker states that it will positively exclude all oil and its vapors from the tube.

WALTZ AUTO SEMAPHORE.

A Combined Tail Light and Illuminated License Number.

The Irwin-Waltz Interests, City Hotel building, Ellwood City, Penn., is manufacturing the Waltz Auto

semaphore, which differs from the usual types of devices designed to signal the direction, etc., to be taken by the car. The Waltz is a combined tail light and illuminated license number and comprises a case having three compartments, each of which is fitted with an electric bulb.

The case is covered with a celluloid plate bearing the license number in the shaft of a double headed arrow which is set in an opaque background. The heads of the arrow rest on separate compartments of the case and are illuminated when desired by means of two push buttons located convenient to the driver. A dashboard switch operates the license number. The current supply may be the electrical equipment of the machine or a set of dry cells, etc.

LIVINGSTON RADIATOR.

V Type, Honeycomb Design for Model T Ford Cars.

The Livingston Radiator & Manufacturing Company, 146 West 52nd street, New York City, is marketing a V type radiator for the model T Ford car. It is of the honeycomb design, constructed with bronze tubes, and the water channels are sufficiently large to flush out foreign deposits easily. Small corrugations, which are formed in the sides of the tubes, are designed to give additional strength, to increase the radiating surface and to allow for expansion. The radiator holds 4.5 gallons of water.

HILL AUXILIARY SEATS.

Lock Automatically, Fold in Small Space and Are Detachable.

The Hill Manufacturing Company, 27 Fuller street, Buffalo, N. Y., specialist in seats for motor cars, is marketing the revolving auxiliary seats shown in the accompanying illustration. These designs have folding cushions and the seats are square, with slightly rounded corners. The width is 13 inches; depth, 11.5; height from bottom of seat to top of back, 17.5; back, 16 by five. The spring cushions are trimmed plain or tufted and with dark leathers.

The seats lock automatically in two positions without the use of springs or levers, fold up in a small space and are instantly detachable without the aid of tools. The riding qualities are said to be all that could be desired and the best of material is utilized throughout. Attaching irons are included in the price, which varies according to the design. The Hill Manufacturing Company produces a wide variety of types to meet individual requirements.

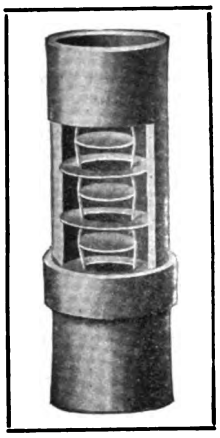
NEW AND ATTRACTIVE LINES.

THE CLEMMER VAPORIZER.

A Series of Baffle Plates Imparts a Whirling Motion to Carburetted Fuel, Making a Homogenous Mixture.

A device which is claimed by the maker to save from 20 to 30 per cent. fuel, to add greatly to the engine power and to make for easy starting, is the Clemmer patented vaporizer, manufactured by G. H. Clemmer, West Alexandria, O. As may be noted in the accompanying illustration, a series of baffle plates are utilized, every other one having an opening through which the mixture is drawn from the carburetor. When the mixture strikes the small baffle plates in the centre of the pipe it is deflected or spread outward, then driven inwardly and through the next baffle plate with an opening. This constant whirling and contact breaks any fuel into a fine spray, and the repeated mixing makes a highly explosive and economical mixture. The Clemmer vaporizer is placed in the intake manifold between the carburetor and the cylinders, and is adaptable to motorcycles, motor boats and stationary internal combustion engines. The manufacturer has an attractive proposition for the trade, the particulars of which will be forwarded free upon request addressed to the office of the manufacturer.



Clemmer Vaporizer.

CAMPBELL SEAT COVERS.

The Perkins-Campbell Company Is Producing a Complete Line for Standard Makes of Motor Cars.

The Perkins-Campbell Company, 603 Broadway, Cincinnati, O., specialist in water proof seat covers, has an interesting proposition for garages, repair shops and dealers which will be supplied upon the receipt of a postal or letter.

PARTS AND ACCESSORIES.

The Times Square Automobile Company Offers Many Attractive Bargains to the Trade in Its Catalogue.

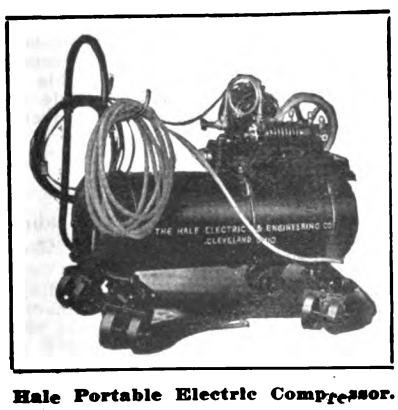
The Times Square Automobile Company, 56th street and Broadway, New York City, and 1210 Michigan avenue, Chicago, is issuing to the trade what it terms its price wrecker catalogue. In it are listed thousands of bargains in parts, material, supplies and accessories. The "price wrecker" will be mailed free upon request.

THE HALE COMPRESSOR.

A Portable Electric Unit, That Is a Practical Equipment for the Public and Private Garage.

The Hale Engineering & Manufacturing Company, 1232 East Third street, Cleveland, O., is producing the Hale portable electric air compressor shown in the accompanying illustration. This equipment is adaptable to the private as well as public garage and the maker calls particular attention to the selling proposition made to dealers.

The outfit is a unit and includes a steel tank for storing the air, electric motor, gauges, 12 feet of high grade flexible hose, and an electric cable and socket. The tank is subjected to rigid tests before installation and is built to endure a maximum pressure of 175 pounds. The capacity of the pump is 1½ cubic feet a minute. The Hale equipment can be operated from any lamp socket, and, being mounted on wheels, can be moved quickly about the garage. It is guaranteed to give good service for years and the material and workmanship are first class in every respect. Prices and details will be supplied at request.

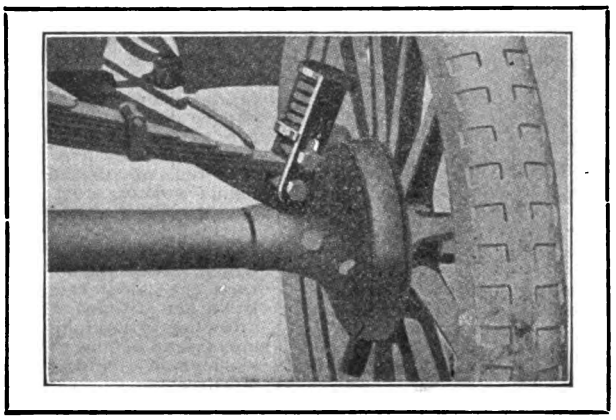


Hale Portable Electric Compressor.

WALLACE FORD SHOCK ABSORBERS.

This Device Replaces the Spring Shackles, Are Sold in Sets of Four and Are Moderately Priced.

The Bresler Wallace Sales Company, 1031 Dime Bank Building, Detroit, is producing Wallace shock absorbers for the model T Ford car. As may be noted in the accompanying illustration the Wallace absorber replaces the usual spring shackles and, being installed in direct line with the path of the shock impulse, and moving with it, transmits directly the slightest shock to the springs so that no stress is taken by moving parts resulting in friction and abnormal wear. The Wallace shock absorbers are sold in sets of four, and retail for $10 the set. The maker emphasizes the comfortable riding qualities with their use.



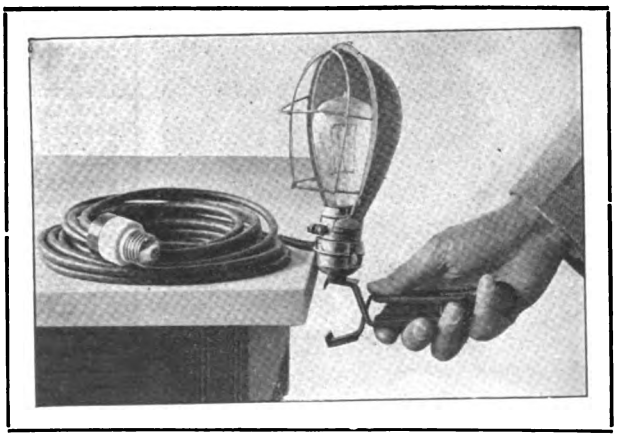
Wallace Ford Shock Absorber.

THE MUELLER CLAMP LAMP.

A Practical Light Having Adjustable Jaws for Clamping, Also a Hook.

A practical lamp such as is necessary in the repair shop, should have maximum illumination and be constructed to endure severe service. R. S. Mueller, 423-425 High avenue, Cleveland, O., is producing the Mueller clamp light, in which is combined a number of practical features. As may be noted from the accompanying illustration, the lamp is provided with the usual wire cage or guard and hook, and also a highly polished nickel plated reflector.

The guard is mounted on a clamp of special design, having jaws that may be spread 2⅛ inches, by which the lamp may be attached to a bench, machine or any part of the motor car. The socket is so mounted that it is insulated from the lamp proper and it contains a switch operated by a short hard fibre knob. The



Mueller Clamp Light, Having Adjustable Jaws, Polished Reflector and Ample Length of Cord.

Digitized by Google

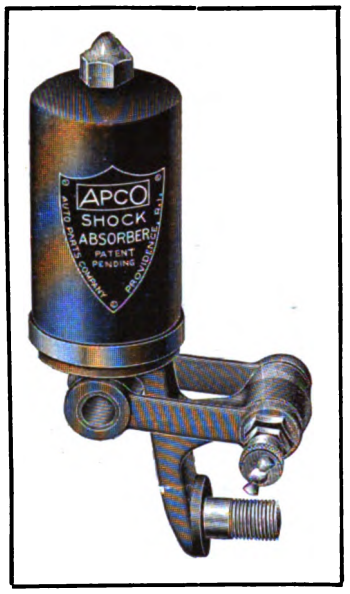
socket may be rotated to reflect the light as desired.

Twenty feet of cord and a lamp socket are included in each outfit. The Mueller clamp light retails for $3.

APCO SHOCK ABSORBERS.

The Auto Parts Company Announces New Type for Model T Ford Cars That Is Liberally Guaranteed.

After much experimentation with shock absorbers for model T Ford cars the Auto Parts Company, Providence, R. I., has adopted what is known as the Safety First shock absorbers. This construction is shown in an accompanying illustration and much stress is laid upon the material and workmanship, all parts being high grade carbon steel drop forgings. Each bolt is fitted with a grease cup and every bearing is of phosphor bronze. The springs are square in section and are ground square on the ends. They are constructed of the finest grade spring steel and are guaranteed not to settle or break during the life of the car on which they are attached. Cantilever side links are utilized, these allowing freedom of movement of the centre suspension and preventing side sway as well as skidding. The casing or shell is so fitted that it moves with the body of the car, a construction preventing contact with the mud guard brackets, etc. The shell is retained by a nut.



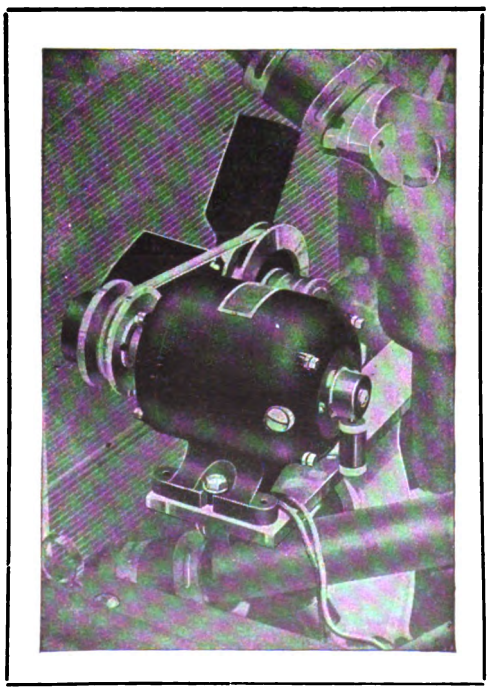
Apco "Safety First" Shock Absorber.

The Apco Safety First shock absorbers are sold on a 30 days' trial and are guaranteed for life. The company will replace free, including transportation charges and cost of making the change, any defective part.

NEW LIGHTING DYNAMO.

The Charles A. Jackson Company Marketing Equipment Adaptable to Ford and Other Makes.

The Charles A. Jackson Company, Motor Mart, Park Square, Boston, is marketing the Jackson generator, which is designed especially for used motor vehicles. The generator has an output of seven volts and eight amperes, at normal speed, and its dimensions are such that it may be easily installed. The drive is by belt, the generator being adapted to a pulley drive. The complete equipment lists for $27, and includes the dynamo, governor, automatic cut-out and meter. The governor is a special construction, entirely enclosed, and the maker states that the output of the dynamo may be varied instantly from one ampere to the the maximum capacity of the generator by turning a nut.



Jackson Generator Installed on Ford Motor.

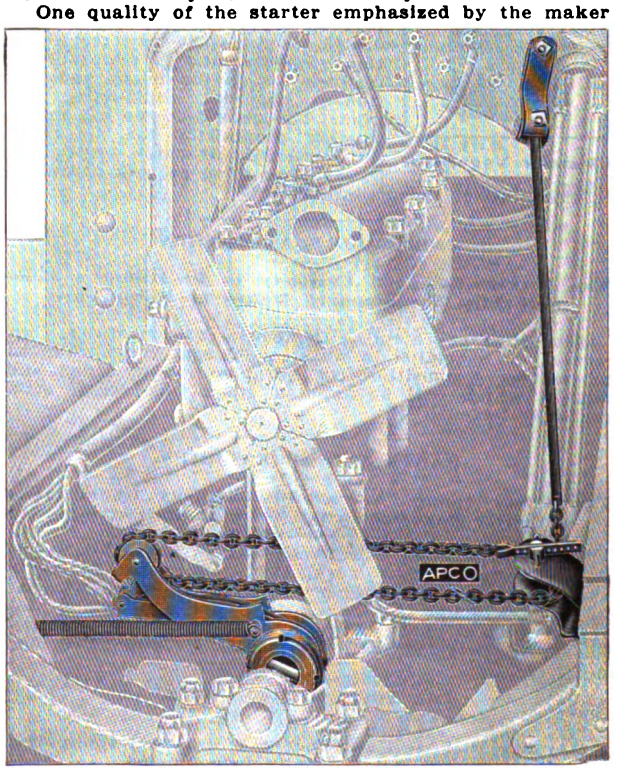
The Charles A. Jackson Company is prepared to supply installation fittings for nearly every make of car, and produces a special Ford attachment, consisting of a bracket, pulley, belt and special bolts. One of the qualities of the equipment is that it can be fitted to the Ford motor by the use of a screw driver and a wrench. The drive is taken from a pulley on the fan shaft as shown in the accompanying illustration. The No. 1 storage battery marketed by the company will fit under the seat of the Ford machine. Complete details and trade prices will be supplied at request.

THE APCO FORD STARTER.

Mechanical Type, Having Handle on Dash with Power That Will Spin Motor with Minimum Effort.

The Auto Parts Company, Providence, R. I., which is well known to the trade as the manufacturer of Apco Ford accessories and specialties, has begun the production of a starter for model T Ford car. The company experimented with a large number of starters and selected its design after subjecting it to exacting road tests. The price, $15, complete, is not prohibitive, and the Auto Parts Company anticipates a large demand for this extremely desirable accessory.

One quality of the starter emphasized by the maker is that it will spin the motor with a minimum of effort. As may be noted from accompanying illustration it is of the mechanical type. The crankshaft of the engine is rotated by operating a handle on the dash.



Apco Motor Starter for Ford Car, a Light, Mechanical Type, Easily Installed and Operated.

Statement is made that the starter can be installed in a short time, that the work is easily done and without alterations. The lightness of the starter is especially noticeable. When applied the only part visible is the starting handle on the dash. Provision is made to insure against damage to the mechanism in the event of a back fire.

NEW VALVE RESEATER.

The Fosnacht, Marketed by H. G. Paro, Is Now Supplied with Two Universal Chucks and Four Reamers.

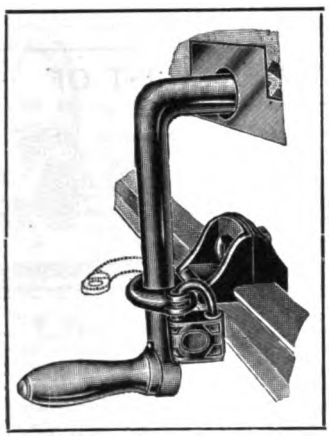
H. G. Paro, suite 718-719 Michigan boulevard building, 30 North Michigan boulevard, announces that the Fosnacht valve reseater has been much improved and that the new model is sold with the same broad guarantee of accurate work as was the original. The Fosnacht is now supplied with two universal chucks that are adaptable to any size valve stem from 5-16 to 1-2 inch inclusive. Four improved reamers are also included in the equipment, these being for valves of from 1 1-2 to 2 3-8 inches. Special size reamers are supplied at order. The tools are packed in a neat hardwood box.

Digitized by Google

UNIVERSAL AUTO LOCK.

It Secures the Starting Handle, But Does Not Prevent the Machine from Being Moved by Hand.

The Universal Manufacturing Company, Racine, Wis., is producing a new form of lock for motor vehicles. One of its desirable qualities is that its utilization does not prevent the moving of the machine by hand when desired, as in case of fire, etc. As may be noted in the accompanying illustration the lock is attached to the front axle of the car and has a hinged member which encircles the starting crank.



Universal Auto Lock.

To use the lock, the starting crank is engaged as for cranking the motor, and the hinged arm slipped around the handle and secured by a padlock. This prevents any movement of the crank but the car can be moved by hand as above explained. The maker states that the Universal lock is constructed of malleable iron and that a sledge hammer must be used to break it. The lock is a high grade type. The Universal retails for $1.50.

GREENERD ARBOR PRESSES.

The Edwin E. Bartlett Company Is Now Producing Special Size Adapted to Motor Vehicle Work.

The Edwin E. Bartlett Company, 322 A street, Boston, maker of the well known Greenerd arbor presses, is manufacturing a size especially adaptable to motor vehicle work. With the No. 15 press a wide variety of work can be done and the maker states that it will earn its cost in a short time. The press is 36 inches between the uprights, has a 12-inch opening under the plate, is 26 inches over the plate and 48 inches over the lower or auxiliary plate. Being mounted on wheels the press can be moved easily about the shop. One man can exert a pressure of 10 tons and two men 16 tons. Complete details and prices will be supplied upon the receipt of a postal card or letter.

STEERING WHEEL SALE.

The Metalwood Manufacturing Company Offering Two Plain and Corrugated Types.

The Metalwood Manufacturing Company, Leib and Wight streets, Detroit, is offering for sale hard maple bent steering wheels, of 14, 15, 16, 17 and 18-inch diameters, made with a screwed on type of spider of brass or aluminum. The rims are plain and the finish is ebony. The spiders are ¾ inch plain bore and special machining is to be obtained at a slight extra cost.

The company is also offering a lot of 25 steering wheels of mahogany and black walnut, built with concealed, continuous rims and inserted spiders. These wheel rims are made both plain and corrugated. These sales afford the trade an excellent opportunity to obtain high grade wheels at prices considerably less than the regular figures.

SAUNDERS FUEL SAVER.

It Is Controlled from the Seat, and the Operation of Car May be Prevented by Locking a Lever.

The Powers Sales Company, 122 South Michigan boulevard, Chicago, is marketing the Saunders gasoline saver, made by the Leslie R. Saunders Company. The instrument is fitted to the intake manifold of the motor between the carburetor and the cylinders, and sprays air at high velocity into the carburetted fuel, insuring a homogenous mixture. It is easily installed.

Air enters the valve through four large holes, the volume being regulated by a taper plunger that is air tight when seated. The total movement of this plunger is but 9-16 inch, and to obtain the maximum opening the control lever, which is conveniently located, must be moved nearly two inches. The operation of the car may be prevented by moving the lever to the lowest position and securing it with a miniature padlock.

The maker states that the Saunders fuel saver will require no attention after installation, that it can be utilized as an air brake when descending hills, and that it will greatly increase the efficiency of the motor. A desirable quality is that the control is convenient to the driver. The valve is actuated by a bronze wire enclosed in a flexible seamless tube. The fuel saver is made in brass and nickel finish, and can be fitted to any car. It is stated that the fuel economy of the Saunders device will save its cost in a month.

CRUDE OIL PRICES.

Stop the Blinding Headlight Glare!

The law says it must be done —blinding glare is a menace to public safety. Screens simply interpose an obstacle between the light and the street —the user pays for the full power of his headlights and gets half power. The logical solution of the problem is the

Chaney Automobile Headlight Dimmer

It enables the driver to graduate the intensity of the light. It can be changed from high to low as you would turn down an oil lamp. Installed on the dash and operated by moving the dimmer handle, it gives complete control of the headlights from the seat. In city driving the light is kept low with small current consumption—in the country where full power is needed a touch of the handle brings back the full searchlight efficiency.

This device is practical, dependable and efficient, costs little to buy and is readily installed on the dash of any car. The average car owner can do it himself in ten minutes. It can be operated by a slight kick of the foot, while both hands are on the wheel.

Clemmer's Patent Vaporizer

Vaporizer for Gasoline Engines

Saves From 20 to 30 Per Cent. Gasoline---Adds Greatly to Engine Power---Completely Vaporizes the Fuel.

MOTORS HARD TO START; START EASILY WITH THE CLEMMER'S VAPORIZER.

THE PRINCIPLES ARE RIGHT

The Clemmer Vaporizer includes a series of baffle plates, every other one having an opening through which the mixture is drawn from the carburetor. When the mixture strikes the small baffle plates in the centre of the pipe it is deflected or spread outward, then driven inwardly and through the next baffle plate with an opening. This constant whirling and contact breaks up any fuel into a fine spray, and the repeated mixing makes a highly explosive and economical mixture. Makes the motor run sweet and smooth. **Clemmer's Patent Vaporizer** is placed in the intake pipe and is easily fitted to any make of car.

THE
AUTO TURN JACK
A GARAGE NECESSITY

"Better than a Turn Table"
Patented March 3, 1914

Weighs 100 lbs. Lifts the Largest Cars. Instant adjustment for all heights of axles. Length of handle, 5 ft. Height of wheels, 10 inches. It is almost a turn table, and a car can be moved around with it almost as quickly as we can tell it to you. By tipping up the Jack handle, it tips back and lowers the lifting post, ready to run under the axle. Then raise the adjustment up against the axle by one move of the small lever and pull down the long 5 ft. handle. The car is then ready to place in any position.

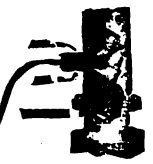
Saunders' Gasoline Saver

has proven positively that it will save from 25% to 50% gasoline —increase power and speed proportionately— give absolute control of fuel mixture under all conditions without readjusting carburetor.

Other good features described in booklet. Easy to operate. Consumes nothing but air Never gets out of order

Only one size. Fits any car.



Think Twice before you pass this by—it's a Money Maker—a Satisfaction Builder!

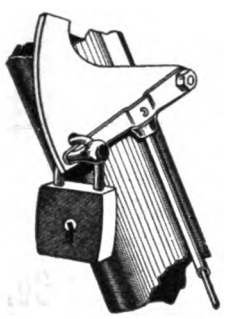
Every car owner in your community—every touring customer—is a logical buyer of this simple, practical device; and **every buyer is a booster** of the—

Saunders Gasoline Saver

the one gas saver that is **not** an experiment. Saunders Saver is a proven success—**thousands in use—a** sure seller and sure "repeater" (to enthusiastic car owners' friends) wherever shown.

A $5.00 device that will save $5.00 a month or more, to every car owner that does much driving. **25 per cent. to 50 per cent. More Mileage per Gallon**—enables the user to travel farther on his original supply and **come back to you for his gasoline!**

Easy to attach—a few minutes work and no special tools required. Adds a modest charge for putting on, to your liberal sales profit!



A Secure Motor Lock

Not the least bit complicated—vital feature is the **patented valve principle. Scientifically correct**—no substitute or make-shift will do the work.

Operates by lever just under steering wheel—**action positive**—a touch of the finger does it!

Wonderful in many other ways besides fuel economy. Our **Free Booklet** explains.

Push this remarkable device and ADD SEVERAL HUNDRED DOLLARS TO YOUR SEASON'S PROFITS!

Here is Proof Positive Mr. Dealer

Over 49,000 Kellogg Air Pumps have been placed on cars through dealers and manufacturers, and they are saving tire bills for those car owners. You know what tire saving means in making the owner feel satisfied with the car you have sold him. You can afford to push the sale of

Engine Driven KELLOGG Air Pump

One, Two, Four, Six-Cylinder Models

With Attachments and Instructions, Ready to Install

The owner does not have to have misfit gears made. For 5 years we have been designing special attachments to go with the different designs of our pumps so that they would give maximum efficiency on every car. You cannot go wrong in installing the pump that is standard or special equipment for these cars:

Packard	Havers	Chandler
Peerless	Stearns	Howard
Stevens-Duryea	Imperial	Mitchell
Lozier	Jackson	Fiat
Franklin	Lexington	Speedwell
Winton		

and made with special attachments that any dealer can install on the:

Chalmers 1914	Studebaker Six	Pierce
Hudson	Buick	Cadillac
Maxwell 6	Overland	Reo
Simplex	Abbott	Stutz
Henderson	Oakland	Cole

SEND NAMES OF OWNERS

There are probably quite as many old cars giving good service in your locality as there are 1913 and 1914 models. They ought to have the Kellogg pump. Send us the names of some of the owners and let us send literature and tell them about the Kellogg pump. Our arguments added to your own will induce more business. Do you look over the Kellogg News? It is an unpretentious sheet, but it has information for you and we send it each month. Ask for it if you do not see it.

Universal Test Clips

Time savers for charging automobile storage batteries—made of copper—indestructible—may be used over and over again—will carry 15 Amperes without heating—the jaws have a wide spread—the spring is strong.

To charge batteries in series, provide a number of pieces of lamp cord 15 to 20 inches long and equip with clips on each end. Connect the batteries by snapping the clips over the lugs.

Write for a free sample, using your company's letter head. No attention paid to postals.

Single Lots - Each 15c.
Lots of 10 - - Each 12½c.
Lots of 100 - - Each 10c.

PANHARD OIL

OIL IS OIL, BUT PANHARD OIL IS THE OIL OF QUALITY!

The Motor Vehicle Manufacturer uses the most carefully constructed bearing to minimize friction. He increases the efficiency of a motor car to a maximum by the highest scientific engineering. But this efficiency is lost without sufficient lubrication.

PANHARD OIL has been as carefully developed and by expert scientists, to realize the fullest value of perfected bearings. It is oil, but it is an OIL OF KNOWN QUALITY—a quality established by use for 11 years by the motoring world.

PANHARD OIL is a STANDARD LUBRICANT wherever motor vehicles are used—standard in quality, standard in the degree of satisfaction afforded.

PANHARD OIL DEALERS begin with a productive market, with the certainty of continued patronage, and with a stock that is worth the face value at any time and at any place. Their business has almost unlimited possibilities.

The PANHARD OIL selling proposition means much to any progressive dealer. A request will bring a statement worth big money. Write TODAY.

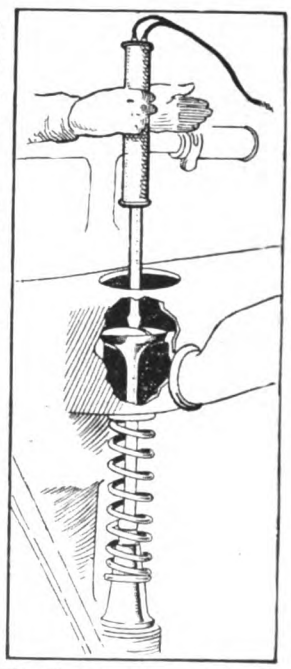
W & L MAGNETIC Lifter Tool and Valve Grinder

GARAGE AND REPAIR SHOP LABOR ECONOMIZER

A TOOL WITH 100 REAL UTILITIES

Will Save Its Cost in Men's Time in Any Shop in a Single Day

THE W. & L. MAGNETIC TOOL consists of a case that serves as a handle from which a steel extension projects. This extension is drilled and threaded for the coupling of either one or two sections, the middle section being used for reaching inaccessible places.



The W. & L. Magnetic Tool

The tool is particularly useful as a screwdriver, for grinding valves, either with or without magnetic influence, the large handle and great length affording unusual power. When the handle is connected with a battery the extension and shank become strongly magnetized, this continuing until the battery connection is broken.

When magnetized the tool may be introduced into the engine case, cylinders, timing gear case, oil reservoir, gearset case, differential housing, dust pan, or any other inaccessible place. to remove nuts, bolts, tools, or any metallic part. Valves can be ground without removing the springs. Cuttings can be removed from tapped holes, metal particles eliminated from oil.

The W. & L. MAGNETIC TOOL HAS ALWAYS FULL LIFTING STRENGTH. It is saleable to every man who owns a car and to every shop where economy is a factor. It will always be in demand.

We want to establish selling agencies in every town and city where motor vehicles are used. We have a dealers' proposition that is very liberal. Full information will be sent at request.

The W. & L. MAGNETIC TOOL is sold at retail for $3.00, postage prepaid. Liberal discount to the trade

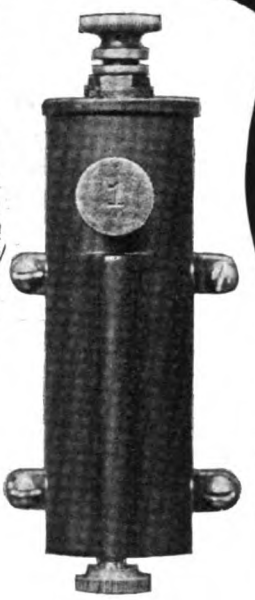
Insure your Ignition System

Coil~Magneto~Battery



The W. & L. Protector

The W & L COIL AND BATTERY PROTECTOR

Will Safeguard the Magneto, Battery and Coil Against Short Circuits and Will Afford the Fullest Efficiency of the Car's Ignition Equipment. It Will Effectively Protect the Magneto Points and Insure Full Power Production.

The W. & L. Protector is so constructed that the heating of the resistance coil will melt a sealing composition at the spring, so that the spring separates from the adjusting screw and the circuit is broken.

With the breaking of the circuit the sealing compound hardens and the protector may be used again, and the service may be repeated indefinitely.

The W. & L. Protector is the only device of the kind in the market. It is compact, can be easily installed, is sightly in appearance, and insures to the owner the highest protection satisfaction, and economy.

The W. & L. Protector is a useful equipment on every type of car and sells at sight to every experienced motorist. It is intensely practical and will endure as long as the car. It is an article that sells the entire year.

The W. & L. Protector is sold with a guarantee of entire satisfaction. It is scientifically constructed, of the best of material and is an ornament to any car. It sells for $4.00. postage prepaid.

We Have a Liberal Selling Proposition and Want Selling Agencies in Every Commercial Center. Full Information on Request.

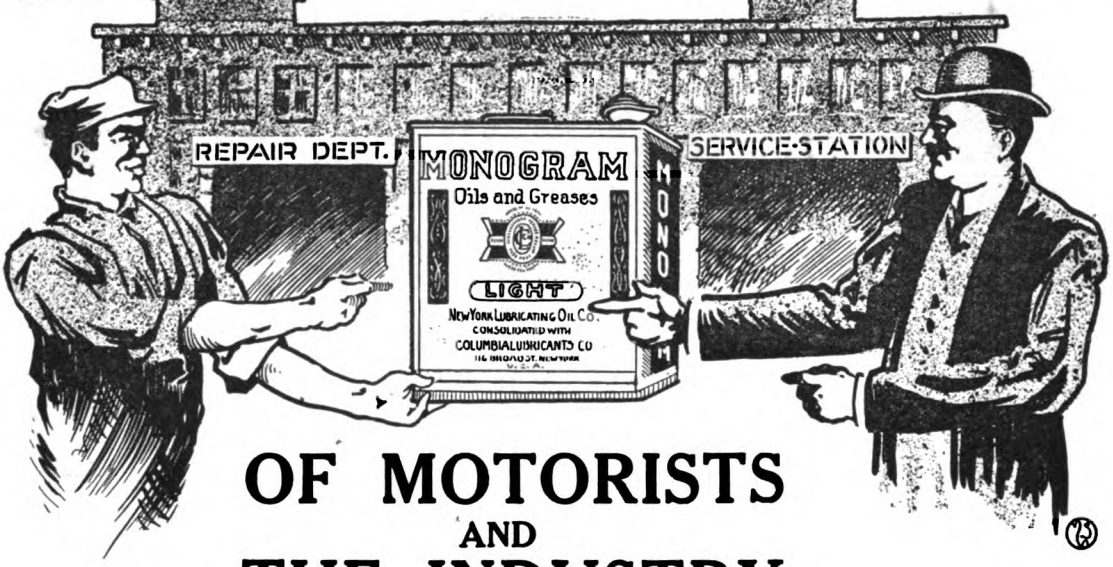
PUBLIC OPINION



OF MOTORISTS AND THE INDUSTRY

HAS ESTABLISHED MONOGRAM OILS

PUBLIC OPINION is based on the knowledge of products that are the highest grades that are offered to the people.

MONOGRAM OILS, the lubricants of QUALITY, have always been manufactured, prepared, distributed to the trade and delivered to the consumers in such form that their quality is known and assured to the purchasers.

The SELLING POLICY IS COOPERATION of the manufacturer and the agencies, to meet every demand, to maintain the quality, and to afford means for the motorists obtaining MONOGRAM OILS and GREASES wherever motor vehicles are used.

A MONOGRAM OIL AGENCY means a business established on public opinion,—a business that is developed by years of advertising and maintaining MONOGRAM QUALITY,—a source of constantly increasing revenue. A grade of oils and greases for every purpose.

A MONOGRAM OIL AGENCY, either distinct from or as a department of a business, has a substantial value and a certain profit.

The MONOGRAM OIL SELLING POLICY is to meet the demand, in every City and Town. The sales proposition will interest every dealer. We solicit correspondence from the trade. Write us TODAY.

VOL. IV. PAWTUCKET, R. I., AUGUST, 1914. No. 4

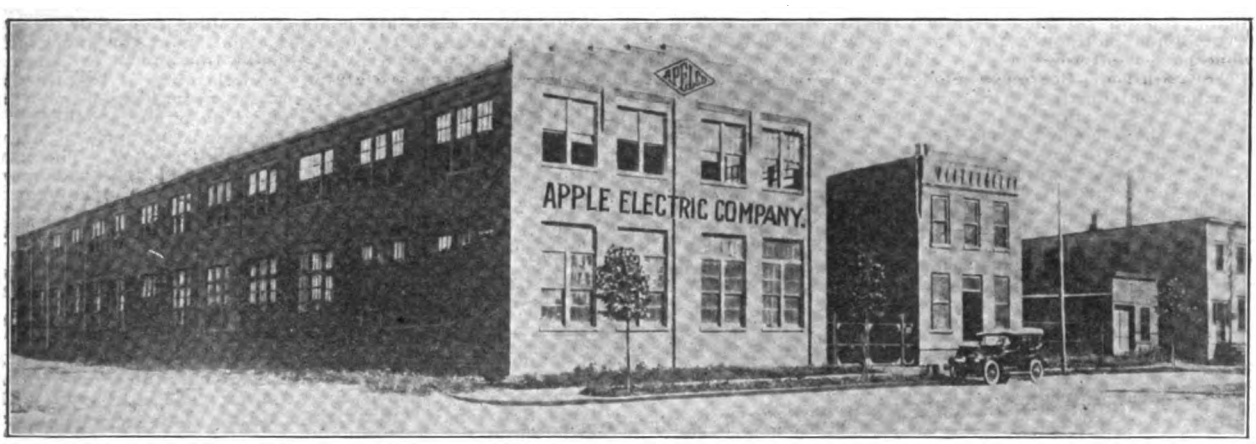
GENERAL NEWS OF THE INDUSTRY.

Apple Electric Company to Remove to Newark, N. J., and Plans Minimum Daily Output of 200 Lighting and Starting Systems, Also Storage Batteries.

ANNOUNCEMENT is made of the purchase of five acres of land, and buildings providing 70,000 square feet of floor space, exclusive of an office building, by the Apple Electric Company, Dayton, O., which concern is preparing to move its headquarters from that city to Newark, N. J. The company will, however, continue to manufacture automobile and motor boat starting and lighting systems and batteries at Dayton until the Newark plant will have demonstrated its efficiency to turn out the work in sufficient volume and up to the Apple standard of quality in every respect. This plan was decided upon to prevent any opportunity of delay in filling orders, and was made possible by the elaborate preparations for an increased product, together with ample financial resources, as well as modern manufacturing facilities.

This important move follows the consolidation of the manufacturing and selling policies of the Splitdorf Electrical Company with those of the Apple interests, and the controlling of the Apple output by the dominant Splitdorf sales organization. The Splitdorf executive offices and manufacturing plant have been located in Newark for two years, and, with mutual interests at stake, a greater degree of co-operation from this closer association is anticipated.

The new Apple factory will comprise the buildings formerly occupied by the Lansden Electric Company, and the surrounding land purchased by the Apple company gives ample room for almost unlimited extension, should occasion arise. Located on Frelinghuysen avenue, a broad thoroughfare outside the congested territory, the property backs on the main line of the Pennsylvania railroad, and a spur, with sidings to the several factory doors, insures the prompt and economical handling of the incoming raw material and the outgoing finished product.



New Factory of the Apple Electric Company at Newark, N. J., Which Will Have a Minimum Daily Capacity of 200 Electric Lighting and Starting Systems.

Work is now being rushed with the installation of banks of new up-to-date machinery, including special boring mills, turret lathes, multiple-spindle drills, high-speed milling machines; in fact, every modern device, saving time and labor without impairing quality, is being installed. It is expected that the Apple line will include its well known marine and motor car

Digitized by Google

storage batteries, which will be produced in the new plant in October, and the minimum daily output of the starting and lighting systems is figured at 200.

APCO PATENT SUSTAINED.

Auto Parts Company Secures Permanent Injunction Against Seller of Its Valve Stem Adjusters.

According to a decision handed down by Judge Arthur L. Brown in the United States district court at Providence, R. I., Thomas F. Wilson, doing business as the Auto Parts Company, has been granted a permanent injunction against George H. Flint, who was adjudged to be an infringer on patents held by the Auto Parts Company. Mr. Flint must also pay the costs of the suit, and render an accounting, through a master, of all profits.

The case was entered in the equity session of the federal court several months ago. A degree pro confesso was entered by counsel for Mr. Flint on June 10, and the final decree was entered before Judge Brown on Aug. 12. The patents involved were those covering the Apco valve stem adjusters, which have been marketed by the Auto Parts Company for some time. They comprise hardened steel cap and thin steel discs and are fitted to the end of the valve stem to compensate for wear. Mr. Flint conducts a supply house and specializes in accessories, etc., for Ford cars.

PROVIDENCE DEALERS OUTING.

Guests from New York and Boston Make Total of 150 Present at Accessory Dealers' Affair.

The annual outing of the Rhode Island Auto Accessory Dealers' Association was held Aug. 21 at the Pomham club. There were a total of 150 present, including guests from Boston, New York and other cities. Over 50 automobiles were in the line, and many of the 1915 models were seen on the streets of Providence for the first time.

A complete programme of sports was the main feature of the day, and after luncheon was served the card of sports was run off. This included a ball game between the Providence and Boston dealers, the former winning, 4-3; a shoe race, a tug-of-war, lucky event, tire rolling contest and 100-yard dash. First and second prizes were awarded in every event, donated by accessory manufacturers from all over the country.

Exasperated by the defeat by the Providence ball team, Boston returned strong and literally walked the Providence men over the line in the tug-of-war. The shoe race went to Richmond Bullock of Providence, with Percy Ford of Boston a close second. J. McWard of Boston won the tire rolling event, and Richmond Bullock became a two-time winner when he crossed the tape first in the 100-yard dash event.

Thomas Wilson of Auto Parts Company, Providence, R. I., won the novel contest where lettered squares of paper were thrown about the grounds, each contestant endeavoring to find the letters that spelled "Klaxon". The genial Apco man was successful in finding the required letters and won the horn as a reward for his efforts.

At the post-prandial exercises Frank Kellogg acted as toastmaster, and the principal address was made by President William Rankin.

NEW FACTORY BRANCH.

Auto Parts Company of Providence, R. I., Takes Over Philadelphia Specialty House.

Announcement is made by the Auto Parts Company of Providence, R. I., that it has taken over the John V. Wilson Company, located at 1424 Vine street, Philadelphia, Penn. The establishment is now a direct factory branch. The rapid increase in business in Apco specialties, which were exclusively handled by the Wilson company, decided the Auto Parts Company to make the change in the interest of better service to the dealer.

The branch will be known as the Wilson Ford Shop, and will continue to be under the management of Walter M. McLoon, with the same sales force as before the change.

TRUCK CONVENTION IN DETROIT.

To Be Held Oct. 7-10 at the Cadillac Hotel—Owners Are Especially Invited to Attend.

The Motor Truck Club of America will hold a national convention in Detroit on Oct. 7, 8, 9 and 10, which 10 other commercial vehicle associations have been invited to attend. The meetings will be held in the convention hall of the Cadillac hotel, which has a seating capacity of 1000. There will be no admission fee and no exhibits. Owners are especially invited to attend. The first day of the convention will be Manufacturers' day; the second, Dealers' day, and the third and fourth, Get-Together days. At a meeting of the trade, held recently, the following committee chairmen were appointed: C. R. Norton, Packard, general committee; M. L. Pulcher, Federal, finance committee; E. D. Anderson, Anderson, electric truck committee; R. B. Spencer, Denby, publicity committee. The programme is in the hands of the regular club committee.

GIVING AWAY GARAGE CLOCK.

Handsome Eight-Day Timekeeper Free with Each Case of Non-Fluid Oil Ordered by Garages.

The New York & New Jersey Lubricant Company, 165 Broadway, New York City, maker of the well known Non-Fluid oil, announces a novel premium offer. The company will give absolutely free a handsome, standard eight-day jeweller's regulator, of the type utilized by watchmakers and jewellers. The clock is 38½ inches high; it has a 12-inch dial, and runs eight days with one winding. It is incased in solid oak, nicely finished, and will keep accurate time.

It is shipped with one case of Non-Fluid oil, a lubricant that is easily stocked and sold, as it is recommended by a large number of car makers. The New York & New Jersey Lubricant Company is mailing an illustrated circular which gives the details of the proposition, and also includes a coupon. Complete details of the free garage clock will be supplied upon addressing the company.

CUT IN GASOLINE IN KANSAS CITY.

Fuel Selling at 10.3 Cents a Gallon, Lowest in Four Years —Distributing Facilities Increased.

Gasoline is selling in Kansas City, Mo., at 10.3 cents a gallon, the lowest price in four years. There is strong competition between the Standard Oil Company of Indiana and minor producers in the local market, and as a result prices have been forced down from 15.5 cents last April to the present level. About a month ago the Cudahy Oil Company, which entered the field three months ago, announced its intention of allowing the members of the Kansas City Automobile Club a half cent on every gallon of gasoline sold at its stations for the good roads fund. A little later W. E. Judd, manager of the Standard Oil Company of Indiana, followed this up with an announcement that his company would give four of the leading Kansas City charities a half cent for every gallon of gasoline sold by it during the month of August.

Some refiners are already complaining of inability to earn a profit from gasoline at the prevailing prices, but still lower prices are predicted. The minor producers, it seems, have been most active in cutting prices, being desirous of gaining a foothold in that section. The gasoline distributing facilities have been increased more than 50 per cent. in Kansas City during the past year.

FORD REPEATS ORDER.

Buys Akron-Williams Tire Repair Vulcanizing Outfits for 14 Distributing Plants.

Announcement is made by the Williams Foundry & Machine Company, Cleveland, O., that the Ford Motor Company has given a repeat order for the Akron-Williams tire repair vulcanizing outfit. The Ford company ordered 14 of these machines, after careful comparison and tests, and the service obtained was so satisfactory that the second order for 14 outfits was placed, making a total of 28. The apparatus is utilized by the 14 distributing plants of the Ford company. The Akron-Williams equipment is noticeable for its separate unit feature and localized steam chamber.

DEVOTES PAGE TO HIGHWAY.

E. J. Day & Co., California Supply House, Gives Space in Catalogue to Lincoln Highway.

That those interested in the automobile industry are co-operating with the officials of the Lincoln Highway Association is noted in the new catalogue issued by E. J. Day & Co., an Oakland, Cal., jobbers' supply house. This concern has given the inside cover of its book to "boosting" the Lincoln highway. The donor of the page suggests that other concerns give space for a similar purpose in their forthcoming catalogues.

GENERAL MATERIAL MARKET QUOTATIONS.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period, for purposes of comparison. A rise from 70 cents to $1.20 is to be noted in fine up-river Para rubber, which is, of course, the result of the rubber supply being cut off by the European war. Slight changes are registered in steel, iron and copper, and antimony climbed from its steady level of 5¼ cents to 18 cents per pound.

Owing to the fact that the New York stock exchange, the Consolidated exchange and other exchanges throughout the country were closed on July 31, owing to disturbed financial conditions and the heavy liquidation forced by the European situation, it is impossible to give the customary quotations on automobile securities in this issue. They will be resumed following the opening of the exchanges.

AUTO TURN JACK.

Replaces Turntable, Is Capable of Lifting the Heaviest Car and Is Instantly Adjustable.

The Rub-On Manufacturing Company, 93 Brayton street, Buffalo, N. Y., is producing the Auto Turn jack, which is a valuable addition to the garage equipment. The maker states that it is better than a turntable, as it may be utilized where the latter is not convenient. One of the qualities of the Auto Turn jack is that a car may be lifted quickly and moved to any desired position even when the room is limited. It has a quick adjustment, making it adaptable to every size of machine, and the maker states that it will raise the largest cars with ease. The control of the adjustment of height is on the handle and the jack may be operated without stooping. The Rub-On Manufacturing Company will forward descriptive matter and prices upon request.

CHANEY HEADLIGHT DIMMER.

Controls the Light from the Seat, Is Practical and Dependable, and Is Easily Fitted.

The L. F. Chaney Company, Springfield, O., is manufacturing the Chaney headlight dimmer, an inexpensive dash device for eliminating the glare of the headlights. It enables the driver to graduate the intensity of the light as desired, by a simple movement of the lever member. The dimmer can be operated by the foot if desired. There is nothing complicated about the Chaney device, and the average owner can attach it in a few minutes. Details and prices will be supplied upon request.

SPRINGFIELD CIRCLE CUTTER.

Shawver Manufacturing Company Marketing a Practical and Efficient Tool.

Making gaskets by hand or cutting glasses for lamps by hand not only takes considerable time, but the result is not always satisfactory. The Shawver Manufacturing Company, Springfield, O., is producing the Springfield circle cutter for cutting lamp glass, sheet copper, rubber gaskets, felt and fibre washers, etc. The tool has a capacity for circles up to 14 inches and is provided with a positive measuring scale to determine sizes. The equipment includes one steel-point glass cutting tool, one knife for square and one for bevel edges. Prices will be supplied upon request.

THE ACCESSORY AND GARAGE JOURNAL

VOL. IV. AUGUST, 1914. NO. 4.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

SATISFIED CUSTOMERS.

It is not an uncommon occurrence for the repair shop to experience difficulty in collecting its bills from a certain class of motorists. Among the excuses offered by the delinquents is that the work was not satisfactorily performed, and generally the repairman, after making a generous allowance or deduction, is unable to collect his due. If forced to resort to the courts, much capital is made of the deduction, and after all expenses are paid the repairman discovers he has lost money.

The method utilized by a repairman, one long in the business, is worthy of consideration: After completing overhaul of a machine or other mechanical repairs, the owner of the car is notified that the job is finished, and is asked to call. The customer is taken out and requested to operate the car, and if satisfactory is requested to sign a slip to this effect. The advantage is obvious.

CYCLECAR AND ACCESSORY SHOW.

The first light car, cyclecar, small delivery car and accessory show will be held at Boston, Oct. 10-17. Manufacturers all over the country will be represented, and the exhibits will afford the trade an excellent opportunity to note the progress made in this latest addition to the automobile industry. The event is to be conducted under the auspices of the Manufacturers' and Dealers' Cyclecar Association, under sanction of the Cyclecar Association of America. That the show will receive the support of the trade is evidenced by the large number of applicants for space. New England can be relied upon to contribute her share in making the first big show of the season a success.

ANTICIPATING DEMANDS.

With the close of the summer season, the live dealer, garageman and repairman plan their fall and winter selling campaign. The selection of the supplies, material and equipment demanded by the trade requires careful consideration. Those who are progressive and experienced keep their fingers upon the pulse of the public and anticipate its demands. By carefully studying conditions the requirements of the customer are fulfilled. In these days of keen competition no dealer, garage or repair shop can afford to lose a sale. It behooves every trade interest to investigate those lines which would appeal to them.

DO DISCOUNTS PAY?

Does deducting from the repair bill to obtain a cash settlement pay? The practise of some shops, especially when hard pressed on Saturday to obtain sufficient cash to meet the pay roll, of offering to make a substantial reduction in the bill rendered, is apt to give the customer the impression that the profits must be large to offer such an inducement. Consequently, the customer is inclined to recall the discount when rendered another bill, and will proffer cash, less what he thinks is a fair discount. A precedent has been established, one of which advantage will invariably be taken by the customer.

DEVELOPMENTS.

Every dealer, garageman and repairman should keep in touch with the developments in the automobile industry and allied trades. The Accessory and Garage Journal is the one publication that should be subscribed for, as latest developments in machinery, tools and equipment are fully described and illustrated each issue. This, coupled with the listing of the latest accessories, completes a valuable book of reference for the trade. Last, but not least, is the Trade Information Exchange. The information published is the basis for records, mailing lists, trade directories, news bureaus and other sources of industrial information.

SYSTEM FOR A SMALL REPAIR SHOP.

A Simple Time Card to Prevent Leaks in Time, Material and Supplies—Its Benefits to the Shop and Customers.

THERE is a growing tendency among garage men, especially the smaller garages, to standardize their methods and place the work on a thoroughly systematic basis. There is and always will be a demand for repair shops employing skilled workmen, and in this respect it may be stated that the small shop, when properly equipped, may compete successfully with the larger and more established concerns. Many of the latter began in a small way and through diligence and practical methods built up a profitable business.

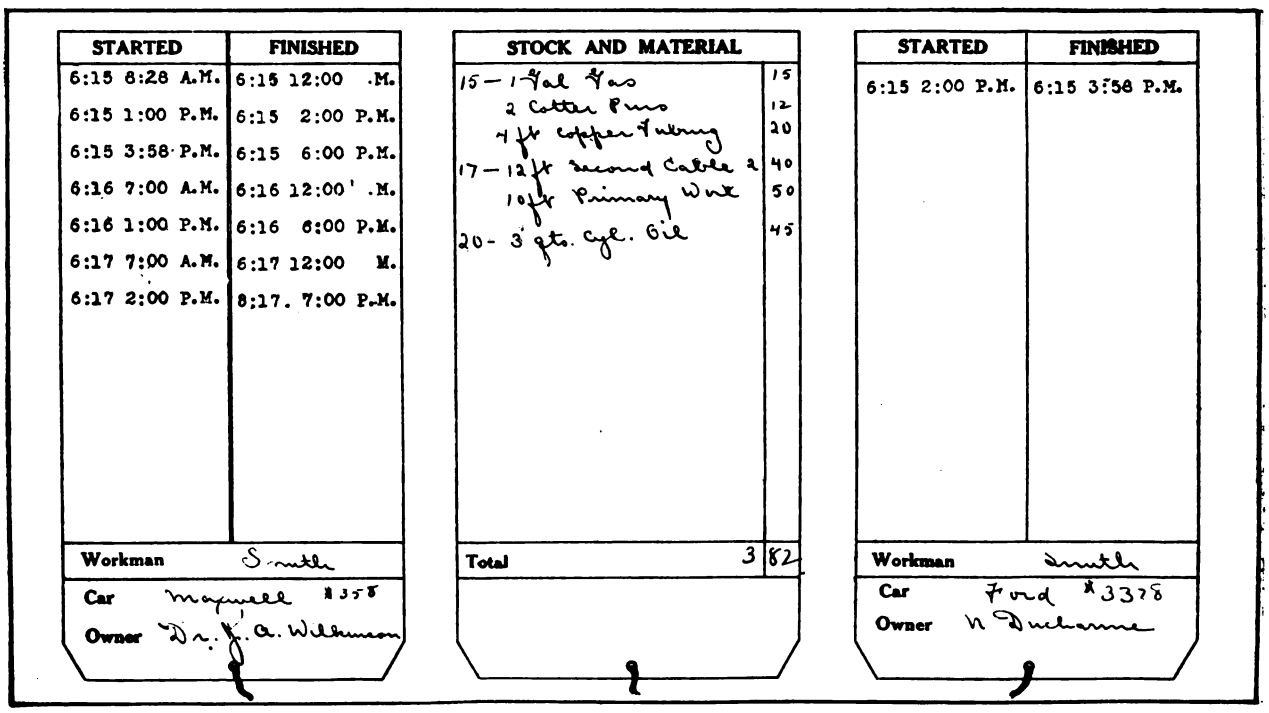
However, it should be pointed out that many competent workmen, thoroughly familiar with the motor car and it needs, have endeavored to establish a business of their own, and while their work was satisfactory to the trade as employees, yet they have failed to attain success in their own business because of lack of executive ability.

Assume that three expert repairmen form a partnership in the repair business. They are all specialists, one being particularly efficient upon motors, the second is a master of the components of the chassis and is a skilled machinist. The third is a general all-around man, clever at locating motor car troubles, as well as proficient with ignition and carburetion.

It is only natural to assume that the nucleus of the new trade will consist of those owners who have followed the workmen from their former place of employment. Personal solicitation and friendship also prove a valuable asset in securing a large clientele, and in a short time the new firm appears to be established upon a sound basis and its members are working overtime, including Sundays.

Leaks That Are Costly.

The bookkeeper is dispensed with to reduce overhead expense. This position is now taken by one of the firm, and the only salary is paid to an apprentice, who runs errands, cleans the cars and acts as an assistant to each workman. From the beginning, although having a good equipment of tools, the company has been obliged to secure supplies and material, which cuts deeply into the capital. At the end of the month the firm proceeds to take an account of its financial standing, and although the books show that the business for the month has been all that could be desired, there appears to be a shortage of ready cash, in spite of this favorable showing.



Depicting Time and Labor Checking System, Showing Start and Finish of Work, Reverse Side of Card for Material, and Tag for Workman Called Off to Attend Another Customer—It Will Be Noted That Each Minute Is Accounted for by the Time Stamp.

At this stage of the game, one member of the company, or possibly all, begins to compare his financial standing with that of the past when on Saturday he received his envelope with its regular sum of money and its contents frequently swelled by reason of overtime. At the end of the second month another discussion takes place. Although they have been working overtime to turn out the work for new customers secured, yet after paying the lighting, power, telephone and supply bills, it may develop that the amount of cash available when divided into three parts, proves to be a small salary and particularly dis-

Digitized by Google

couraging when the overtime labor is considered.

The books show a handsome profit, but many of the outstanding accounts are hard to collect and several are discovered to be almost worthless. As a result the clerical member of the firm takes an account of supplies and goes through the books and begins to check up material and compare that on hand with that charged. He is apt to discover that there are many leaks, and that these leaks are costly. The books show that during the month 500 gallons of gasoline were purchased and 200 were charged up. The tank now contains 250 gallons, leaving 50 gallons unaccounted for.

Lack of System.

The oil question is next looked into and a similar discrepancy discovered. Other supplies show a balance on the wrong side of the ledger, small amounts in most cases, but when figured on an annual basis they total a considerable sum. The bookkeeper decides to check up stock at the close of each day. It has been customary for each workman to make up his time slip and material account at night, relying upon his memory for details. Taking each slip, the bookkeeper compares the charges with stock of fuel and oil and discovers a shortage of five gallons of gasoline. One member of the concern then recalls that Mr. Jones had his tank filled to that extent. Another refilled the crank case of a motor and told the boy to enter it at the office. Another sold a gallon and put the change in his overalls. Consequently, each member resolves to remedy the faults, but errors occur frequently, eating into the profits. The new concern also learns that considerable diplomacy is required in handling customers. Some trade is going to other shops, the result of work on one job being completed ahead of another customer whose car should have been turned out first.

Management Badly Needed.

Further complications set in, as work promised is not delivered on time, and general dissatisfaction is created among the customers. This, like numerous other difficulties encountered, could have been avoided if the firm in its anxiety to please had been more conservative in its estimates of time and labor. Operating under these conditions, a small concern will not be successful, unless one member possesses executive ability. Even that is useless unless the other members agree to conform to his orders implicitly. It is conceded by those familiar with the operating conditions of the repair shop employing two or more workmen, that more or less difficulty is experienced by the proprietor in keeping an accurate account of the time and material utilized by the employees. This, of course, applies to the shop not equipped with a system.

Clocking System.

Most shops hesitate to install a system because of the expense and clerical labor involved. With small garages, employing three or four men, the proprietor may keep the books and attend to many small details usually looked after by a bookkeeper. With such a concern the system should be as simple as possible, yet provide accurate means for checking up the labor and material. In the sketch is outlined a system which would not be expensive to install and, in addition to keeping an accurate account of the time spent on each job, would serve also to check up the time of the workmen; that is, denoting the time they began and finished each day. It requires a form of time clock, which provides for stamping the month, day, hours and minutes, a device employed by many firms to register the time orders or letters are received and answered. This clock is located in or near the office and is fitted with a rack for each workman, also another holder containing blank cards.

We will assume that Dr. Wilkinson makes arrangements to have his motor overhauled. The proprietor instructs Smith to start on the job the next morning. Smith is given a copy of the orders entered on the order book and, upon arrival next morning, takes a blank card and stamps it in the clock device. Smith was late that morning, and the "started" side of the card shows he began work at 8:28. At noon he stops, stamps his card and leaves it in his rack, restamping it upon his return.

At 2 o'clock he is called off by the foreman to do a little work on Mr. Dutcharme's car, who has just driven in. Smith goes to the time clock, stamps his card, places it in its holder, takes a new card and stamps it at two, entering Mr. Dutcharme's name, the type of car and its number. At 3:58 he completes his task, stamps his card, denoting that the work was finished at that time. He also stamps the card bearing Dr. Wilkinson's name at 3:58 and resumes work on that job, leaving Mr. Dutcharme's card in the rack. At the completion of the day's work at six o'clock the card is again stamped and left in the rack for the bookkeeper, entered on the day book and replaced on the clock.

How It Works Out.

The reverse side of the time card is utilized for entering the stock and material used, the prices of these being carried out and added up by the bookkeeper, and entered in the day book or ledger. The total time is figured easily, as well as that of the workman. Upon completion of the work the card is taken into the office, entered and filed away for reference. But, as a separate card is utilized for each job, whether it be 15 minutes or several days, the customer is assured that some other owner's car is not being repaired at his expense. In the event of a workman requiring the aid of another for an hour or fraction thereof, the time card will show the double time and how utilized. Should the customer desire an itemized bill of the labor, it is made up easily. One time card could be employed for a job taking several days, or a separate one utilized each day, if desired. The system could be made to fulfill a number of requirements, and to make it successful it would only be necessary to insist that each workman use a card in connection with the clock upon starting and completing each job, as well as for his working hours.

GENERAL NEWS OF THE MANUFACTURERS.

The Bosch Magneto Company, New York City, has added to its already long list the following supply stations: Pollard Auto Company, Nashua, N. H.; Weeks Garage, Patchogue, N. Y.; Harnell Garage, Babylon, N. Y.; Reilly Bros. & Raub, Lancaster, Penn.; LeJeal Cycle & Mobile Works, Erie, Penn.; S. H. Heginbottom & Son, Saginaw, Mich.; Eric J. Gustafson, Rockford, Ill.; Lawrenceville Auto Company, Lawrenceville, Ill.; Cadillac Motor Car Company, Mobile, Ala.; Gibbes Machinery Company, Columbia, S. C.; J. F. Charley Auto Company, Evansville, Ind.; C. A. Gossard Auto Company, Washington Court House, O.; N. J. Auto & Supply Company, Camden, N. J.; Central Auto & Supply Company, Jackson, Mich; Shrive Incorporated, Yonkers, N. Y.; Mattoon Motor Car Company, Mattoon, Ill.; Ward's Vulcanizing Works, Concord, N. H.; W. A. Hanford, South Norwalk, Conn.; Rippowan Garage, Stamford, Conn.

The Automobile Body & Repair Company, St. Louis, designer and builder of automobile bodies, has opened quarters at 3444 Lindell boulevard. Oliver A. Morood and Frank J. Cafferata are the owners.

The Harley-Davidson Motor Company, Milwaukee, Wis., recently installed a large gasoline still for refining gasoline used for cleaning purposes. By this method the gasoline is used over and over, with a resultant saving of 90 per cent.

The Haynes Automobile Company, Kokomo, Ind., has established an office at Louisville, Ky., at Fourth avenue and York street. D. Williams is the factory representative in charge.

The Hood Rubber Company, Boston, Mass., has filed its financial statement with the Massachusetts secretary of state. The assets of the company increased by more than $750,000 during the past year. The figure for 1912 was $5,526,530, and for 1913 it was $6,237,478.

The Fedders Manufacturing Company, Buffalo, N. Y., is manufacturing 200 radiators a day and expects to increase its production to 60,000 this year. It built 4000 radiators in 1913.

The Houk Manufacturing Company, Buffalo, N. Y., manufactures 1000 wire wheels a day of 10 hours, but its facilities for manufacturing inner hubs are not equal to this capacity. Hub making is one of the slowest processes of wire wheel production.

The Dyneto Electric Company, Syracuse, N. Y., has confined its activities to manufacturing the Dyneto motor-generator, built to the Entz principles, for Franklin cars. A. E. Doman, vice president and engineer of the company, has completed the development and testing of three new combined motor-generators for motor car use. These machines are entirely different from the present Dyneto construction and weigh but one-half as much.

The Ford Motor Company, Detroit, has been authorized by a government decree of March 18 to establish a branch or agency in the Argentine Republic.

The B. F. Goodrich Company, Akron, O., is producing an average of 10,000 tires a day, which is at the rate of 3,000,000 a year. The plant is running night and day.

The Standard Aluminum Company, Two Rivers, Wis., is installing another annealing oven. A rolling mill was recently completed.

The Maxwell Manufacturing Company, Indianapolis, is to improve its plant by the installation of mechanical equipment to cost $120,000 and addition of a building 60 by 100 feet. This property was acquired by Walter E. Flanders of Detroit and associates more than a year ago, and is now devoted to the manufacture of automobile parts and repairs. W. B. Jameson is in charge.

The Pierce-Arrow Motor Car Company, Buffalo, N. Y., in announcing its 1915 production, states that there will be no change in prices and that as before there will be three models. The bodies of the new cars are of entirely new design.

The Marathon Tire & Rubber Company, Cuyahoga Falls, O., plans to erect new buildings which will increase the capacity of the plant 100 per cent. Doubling the output of Marathon tires was most urgent. Twice previously the Marathon plant has been doubled in its production department.

The Hail Cyclecar Manufacturing Company, Waco, Tex., will erect a new building and equip it with new machinery to produce the machines now ordered.

The Ingram Hatch Motor Corporation, New York City, has leased a one-story factory building at Risebank, S. I.

The Middletown Car Company, Middletown, Penn., is to make improvements to its plant at a cost of $500,000. When these are completed the company will employ 700 additional men.

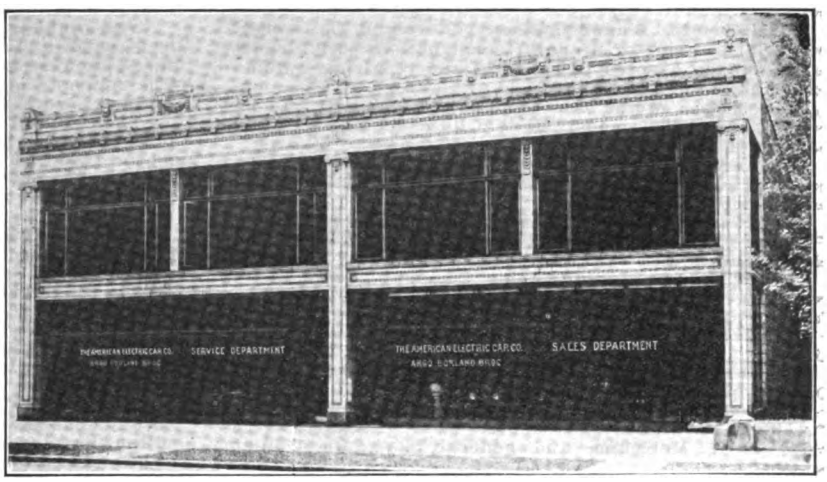
The Studebaker Corporation, Detroit, Mich., has added to its factories the big structure formerly occupied by the American Harrow Company. This building will be known as Plant No. 2 and will be used as a parts repository and a receiving station.

The General Motors Truck Company, Pontiac, Mich., announces through its sales manager, W. H. Chilcott, that the company has broken all records for April, May and June in selling motor vehicles. He says that the unfilled orders on hand for July delivery were 34 per cent. greater than the total sales in July, 1913.

The United States Tire Company, New York City, a subsidiary of the United States Rubber Company, has filed with the Massachusetts secretary of state a financial statement required by law. The assets of the tire company totalled $11,759,462, as compared with $13,919,655 of last year. The reserve fund in 1914 was $100,484, as compared with $494,143 last year.

The Driggs-Seabury Ordnance Corporation, Sharon, Penn., is 400 per cent. ahead on orders at the present time as compared with last year, according to Secretary S. B. Pratt. The plant shows an increase of 20 per cent. both in the monthly pay roll and in the number of hands employed. The company now has contracts for 4000 light, two-passenger cyclecars.

The Westinghouse Electric & Manufacturing Company, Pittsburg, Penn., announces that the Standard Steel Car Company of Butler, Penn., and the Dorris Motor Car Company, St. Louis, Mo., will use Westinghouse electric equipment on their 1915 cars. The former company will use the starting and lighting equipment, while the Dorris cars will have the Westinghouse electric starting, lighting and ignition devices.



New Sales and Service Branch of American Electric Car Company at Chicago.

The Lozier Motor Company, Detroit, Mich., which this year worked to full capacity a month longer than usual, is of the opinion that the fall activities will be begun earlier than ever. Lozier salesmen are making many contracts with dealers for the 1915 season. According to President Gilbert, 1200 cars have been marketed since March.

The American Electric Car Company, Detroit, Mich., has opened a large and well appointed sales and service station at 2634-2636 Michigan avenue, Chicago. The front portion of the north half of the building is devoted to the display of electric vehicles. The general office, and that of the manager, are at the rear of the salesroom.

The Grant Motor Company, Findlay, O., is now building cars in tents erected near its factory. Plans are making to add to the plant and building will shortly commence. The factory has been producing 35 cars daily and it is believed possible to increase this output to 45 cars a day.

The Patterson Rubber Company, Lowell, Mass., has passed to a new company headed by Walter N. Macdonald and John L. Morse, formerly with the company, the former as factory manager and the latter as treasurer. The company manufactures automobile tires and tubes exclusively. The plant is working full time, with an output of 200 tires a day.

The Rochester Motors Company, Inc., Rochester, N. Y., now has ready for the market a twin-cylinder cyclecar motor, either air or water-cooled. The cylinders are at an angle of 45 degrees with bore of 3⅜ and stroke of four inches. Efficient cooling in the air-cooled model is insured by a two-blade fan operated by belt from the crankshaft. In another type there is an enclosed case and a flywheel exhaust fan.

The American Electric Starter Company, Detroit, a new corporation, has taken over the former Disco Starter Company. At present the company is turning out a double-deck device which is used by three car manufacturers, and it is said the company has received an order for 1000 front-of-the-car starters for Packard cars. Thirty starters a day are now produced.

The G. A. Shaler Company, Waupun, Wis., maker of Shaler vulcanizers, received an order recently for a stock of Shaler vulcanizers for every branch of the Goodyear Tire & Rubber Company in the United States. The Goodyear Company decided that a car owner could obtain the best possible service from his tires only by taking care that the small cuts are sealed before sand, dirt and water can disintegrate the fabric.

The Cricket Cyclecar Company, Detroit, Mich., is in its new plant at the corner of Walker and Woodbridge streets and production of cars is under way.

The B. F. Goodrich Company, Akron, O., in its "Safety First" campaign, has required in its factories the use of a drinking cup which is collapsible and fits in a metal case. On the cover are the words "Safety First" and the Goodrich trade mark.

The Columbus Buggy Company, Columbus, O., recently purchased by Charles A. Finnegan and Eugene D. Hofeller of Buffalo, N. Y., is now operated with a fairly large force of men. The company is manufacturing both electric and gasoline automobiles, as well as all kinds of horse drawn vehicles.

The Waverley Company, Indianapolis, Ind., announces model 109 for the coming season. The main changes will be found in the interior and exterior body design.

The Victor Auto Parts Company, Cincinnati, O., is erecting a factory building 60 by 158 feet, of reinforced concrete construction and four stories high.

The Standard Motor Car Company, Warren, O., is making an addition to its plant at a cost of $15,000. The company manufactures the Standard motor trucks.

The Schaefer Wagon Company, Cleveland, O., is erecting a large plant of fireproof construction. One department will be devoted to painting and repairing automobiles and motor trucks.

The Enger Motor Car Company, Cincinnati, O., has completed its 1915 model. It is a light six car, with six-passenger streamline body.

The Ford Motor Company, Detroit, Mich., has commenced work on its assembling plant at Atlanta, Ga., which will cost approximately $300,000.

The Carburetor Manufacturing Company, Livingston, Ill., has finished its factory, installed a number of machines and is now ready for business.

Xenia Rubber Manufacturing Company, Xenia, O. recently incorporated with capital of $40,000, is to erect a factory at Dayton, O. The company manufactures mechanical rubber goods, but will later make automobile tires.

The National Tire & Rubber Company, East Liverpool, O., is now located in its new plant. The building is of reinforced concrete. The officers of the company are: President, C. J. Davis; treasurer, R. F. Taggart; secretary, T. R. McKenna, and general manager, William Smith.

The Reo Motor Car Company, Lansing, Mich., is to increase its factory so that it can produce 12,000 cars for 1915. The company built 8000 cars for 1913-1914.

The Ford Motor Company, Detroit, Mich., announces that the automobile factory in which a machine can be constructed in 38 minutes is to be doubled in size, at an approximate cost of $5,000,000. Seven new buildings, 60 by 900 feet, of six stories, costing $500,000 each, and a power plant 150 by 240 feet, which will house the largest gas engine in the world and will cost about $1,500,000, will be constructed. When the additions are completed the plant will cover 85 acres. In the busy season the works now employ 20,000, but with the improvements that number will be doubled.

The F. B. Stearns Company, Cleveland, maker of the Stearns-Knight cars, will soon add to its factory an addition of approximately 250,000 square feet. It is intended to erect a five-story fireproof brick building with the most advanced methods of lighting, heating and ventilating.

The Reo Motor Car Company, Lansing, Mich., the Paige-Detroit Motor Company, the Fisher Body Company and the Metal Products Company, all of Detroit, Mich., contributed $250 each to the fund for the construction of a Michigan building at the Panama Exposition. These were the first large contributions received.

The New Departure Manufacturing Company, Bristol, Conn., now has a well-equipped fire brigade of its own. The apparatus is housed in the company's old office building.

The Richard Automobile Company, Cleveland, O., is erecting a factory which will be enclosed in glass. It is on property owned by F. M. Brady, who is associated with Francois Richard, a French motor car engineer.

The Stevens-Duryea Company, Chicopee Falls, Mass., is equipping its cars with an attractive and durable top combined with a handsome type of body, so built that the body completely conceals the top when not in use. The top is supported by rigid joints, which cause it to follow always a certain path when in folding into and when being withdrawn from the body. The top is self-supporting and when raised requires no braces of any kind, being rigidly fastened in front to the windshield supports. When the top is folded the compartment containing it is completely covered by upholstery.

The Verges Manufacturing Company, Milwaukee, Wis., is manufacturing a pneumatic clutch for automobiles patented by Henry A. Verges. The device, which is claimed to be fool proof, is operated by an air cock mounted on the steering wheel. The clutch proper is a leather-faced cone, not unlike the ordinary clutch in appearance. Engagement is made by emptying, and disengagement by filling an air chamber.

The Kennen Motor Truck Company, Los Angeles, Cal., manufacturer of gasoline and distillate motor trucks, is building a plant at Broadway and Water street, Long Beach, which will cost approximately $15,000.

Dodge Bros., Detroit, is having completed an 876-foot car assembling building. In the factory machinery is being overhauled, furnaces renovated and new tools and dies made. The sales organization is being rapidly shaped by Sales Manager Philp.

The National Acme Manufacturing Company, Montreal, Can., is to take over the manufacture of the Bigsby spark plug in Canada. The Bigsby plug is made by the Bigsby Manufacturing Company of Cleveland, O. P. F. Mellinger is the manager of the new Canadian plant.

The Mianus Manufacturing Company, Cos Cob, Conn., manufacturer of carriage and automobile robes, etc., will establish a branch factory at Norwalk, Conn., in the old Bishop mills.

Prather Bros., Georgetown, Ky., is planning the establishment of a factory in that city or Cincinnati, O., to manufacture a demountable wheel for use on Ford automobiles.

The W. S. Seaman Company, Milwaukee, Wis., builder of automobile bodies, has added departments for repainting and refinishing cars, and for building special closed bodies to order.

The Oldberg Manufacturing Company, Detroit, Mich., is to move to a new plant on Forest avenue, a fireproof, three-story structure, covering an area of 60 by 120 feet. The company manufactures mufflers, and now has orders for more work than at this time last year.

The Moline Automobile Company, East Moline, Ill., is to build Knight sleeve-valve motors for sale to the motor trade. The company will continue the manufacture of cars. The motor department of the company has built gasoline engines for many years and last season marketed over 18,000 of different types.

The Sphinx Motor Car Company, York, Penn., is considering the erection of a new plant. The company manufactures the Sphinx cars.

The Firestone Tire & Rubber Company, Akron, O., recently installed an industrial library in its plant. If any person employed by the company is interested in any line of instructive reading, the chief librarian, when informed, will provide the best books, articles or digests on the subject. Books are loaned to employees for home reading as in the regular public library systems, and correspondence courses are open for the benefit of ambitious employees.

The Chevrolet Motor Company, Flint, Mich., has purchased the old Maxwell-Briscoe factory at Tarrytown, N. Y. The buildings, most of which are brick, afford a floor space of 205,000 square feet. The plant will be in operation at an early date, with a daily capacity of 50 cars.

The Detroit Auto Specialty Company, Detroit, has completed a large addition to its factory and has also added large special presses for making crown fenders and seamless fuel tanks.

The Santo Rubber Company, Pittsburg, Penn., has plans for the erection of a building at Niagara Falls, N. Y., to cost $60,000, for manufacturing automobile tires.

The Goodyear Tire & Rubber Company, Akron, O., for the first four months of 1914 produced 699,342 pneumatic shoes for automobiles and motorcycles. In April the company reached the highest mark, producing 186,491 automobile casings and 29,565 motorcycle covers.

The Ward Motor Vehicle Company will erect a factory on South Fulton avenue, Mount Vernon, N. Y. The company is now located in the Bronx, New York City.

The Carter Carburetor Company, St. Louis, Mo., has purchased a three-story building in North Spring avenue, that city.

The American Manufacturing Company, Ecorse, Mich., has moved to the plant formerly occupied by the Staver Buggy Company, Chicago, Ill. The company manufactures automobile parts.

The Briscoe Motor Company, Jackson, Mich., has been elected a member of the National Automobile Chamber of Commerce. The company makes the Briscoe car.

The Ford Motor Company will open its Dallas, Tex., assembly plant next month. The new building has every convenience, with rest and reading rooms on the second floor. The plant will have capacity of 10,000 cars yearly. The building has a total floor space of 140,000 square feet and will cost about $225,000.

The Nordyke & Marmon Company, Indianapolis, Ind., is establishing at 16-24 West 61st street, New York City, one of the best service departments in the Metropolis. It will include a fully equipped machine shop. Frank G. Carrie is manager.

NEW CONCERNS AND BUSINESS CHANGES.

GARAGES AND REPAIR SHOPS.

Lee Forest, Great Falls, Mont., conducts a first-class garage and repair shop. On entering the building to the right is the vulcanizing department, and on the left is

Garage and Repair Shop Conducted by Lee Forest at Great Falls, Mont.

the office and accessory room. The stockroom is directly beneath the office and entrance must be gained by going through it. Parts and tires are kept in this room. In the rear is the workroom, where all cars are repaired. The company specializes in the storage of cars and handles the Ford exclusively.

C. J. Kraus, Hoboken, N. J., has opened an up-to-date garage and repair shop at 813 John street.

A. D. Burt and H. E. Coman, Jr., Worcester, Mass., have opened an up-to-date garage.

Harris A. Zeim, Charlotte, N. C., has opened an up-to-date repair shop at 203 South Church street.

Biggs Bros., Wakefield, Mass., has opened a first-class repair shop at 5 Byron street.

Tucker & Berkley, St. Louis, has opened a repair shop and garage at 4384 Olive street.

Louis Enarson, Villisca, Ia., has purchased the interest of H. E. Hendrickson in the Marrick & Hendrickson Garage Company.

H. Schmidt, St. Louis, has opened a garage at 1045 North Grand avenue. He is general manager of the Olive Cycle Company.

Frank Schemerhorn, Grand Rapids, Mich., has leased a new building on Division avenue and will conduct a garage. The two-story structure is of brick and concrete. Special provision has been made for the storage of automobiles and trucks.

Myer Bros. has opened a garage and repair shop at 8-10 Harkness street, Providence, R. I., and an accompanying illustration shows a section of the repair shop. Although this is a young concern, it is building up a nice clientele, and is constantly adding to its corps of expert workmen. The company carries a complete line of oils, grease, supplies and accessories. The machine shop is unusually well equipped, including as it does lathes, drill presses, grinders, etc., and the latest labor and time saving devices are utilized. James Myer was formerly in charge of the service department of Pugh Bros., Providence, and is one of the pioneer automobile repairmen of Providence. He has also had an extensive factory experience.

Walter Baker and Matt Hannan, Kanawa, Ia., have formed a partnership and opened a garage.

Fred D. Vandervoort, Marion, Mich., has opened a garage. It is modern throughout.

Ewald & Oliver, Washington, D. C., has opened a general automobile repair shop at 1111 10th street, rear.

B. Y. Hill, Amarillo, Tex., has opened a garage and repair shop at 1345-1347 Broad street. He has installed new machinery and a compressed air system.

McLeod & Company, Blytheville, Ark., has established a garage. The company will stock all kinds of repair machinery, specializing in repair work on automobiles and other vehicles.

R. E. Valentine and H. L. Wilson, Cumberland, Md., have formed a partnership to operate a garage and repair shop. The company is located on George street.

The Sarns-Snyder Company, Mt. Clemens, Mich., has engaged in the general machine shop business, specializing in repairing automobiles and motor boats.

The Moon Motor Sales Company, Springfield, Mass., is to open a new garage about Sept. 1.

Paul Condit, Champagne, Ill., has opened a garage in the Knox building.

H. Coleman & Company, Andover, Mass., has opened a garage on Main street.

The Bakeman Motor & Supply Company, Holdingford, Minn., has opened an automobile repair shop.

Harry Seeman, Darien, Conn., has opened a garage on Center street. He was formerly with the Darien Garage Company.

The Sears Auto Repair Shop, Indianapolis, has opened for business in a new modern fireproof garage at 2132 East Washington street. The company handles the Westcott cars.

W. F. Boyle and Sid Purdy, Grand Rapids, Mich., have opened a garage and repair shop at 1206 Front avenue. It is modern throughout.

The Satterlee Motor Company, Minneapolis, Minn., has established a repair shop at a cost of $7500. John Nilsson is in charge.

Walter Howard and Simon J. Kohl, Waterloo, Ind., have formed a partnership and will conduct a garage and repair shop. The company purposes to erect a cement garage building.

GARAGE TRANSFERS.

William Coughlin, Cambridge, Mass., former owner of the Prospect Garage Company, has sold his interest in the business to Warren Allen. The garage is to be remodelled.

The Topton Garage Company, Topton, Penn., has been dissolved. Ira Desch, a member of the company, will now take charge of the business and operate it personally.

The Square Deal Garage & Welding Company, Youngstown, O., has taken over the business of the Barclay Street Garage. The new company will also handle the Rit cyclecar.

The Queen City Automobile Company, Rochester, Minn., has purchased the garage operated by C. D. Brown. G. E. Cavanaugh is manager.

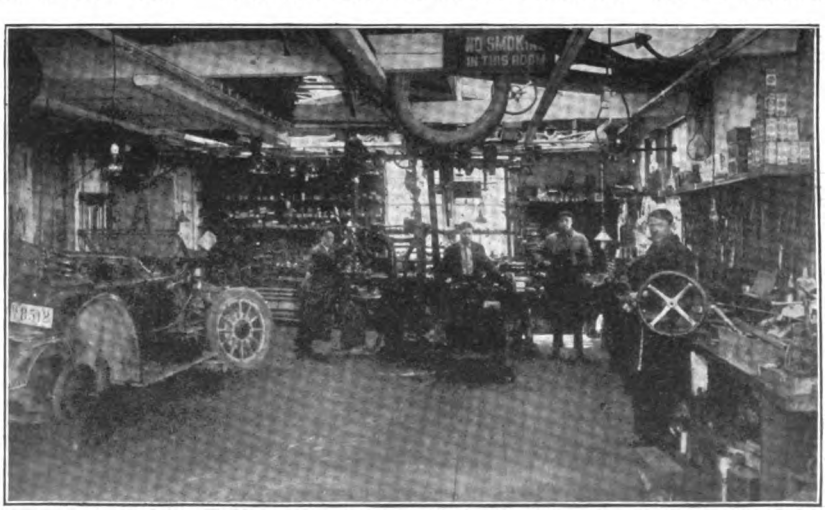
The Frank P. Oswald Company, Grand Rapids, Mich., has succeeded to the motor car business of the Oswald-Hess Company, 21 Campau avenue.

Moore & Pauline, Victoria, B. C., has been sold and will hereafter be known as the Pauline Motor Sales Company. F. C. Pauline is manager.

F. W. Williams, Iron River, Mich., has purchased the interest of Mr. Singler in the garage and repair shop of Thonin & Singler.

Herbert Johnson, Webster, Mass., has purchased the Joslin House Garage and will operate it.

The Livingston Garage, Bayonne, N. J., has purchased the Bayonne Garage & Equipment Company at the Boulevard and 30th street. Hupmobile cars are handled.



Section of Repair Shop of Myer Bros., Providence, R. I.—It Contains the Most Modern Machinery and Tool Equipment.

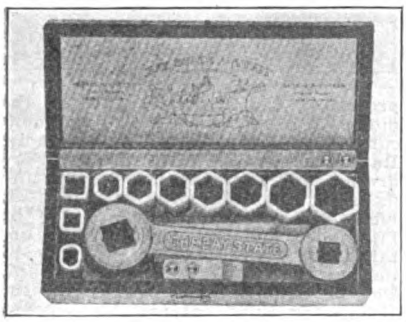
ACCESSORIES, SUPPLIES AND FITTINGS.

BAY STATE AUTOKIT NO. 3.

Complete Wrench Set for the Model T Ford Automobile.

George A. Cutter, sales agent, Taunton, Mass., maker of the well known Bay State autokits, is placing



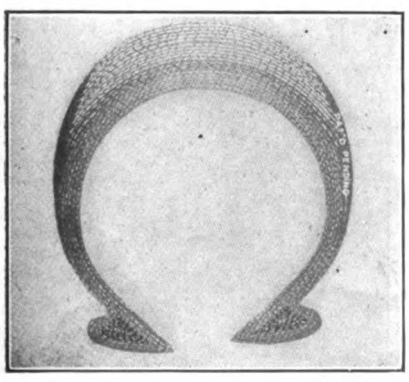
on the market the Bay State autokit No. 3, which is a special set for for the model T Ford machine. It is a high-grade socket wrench set, and includes a quick acting, double-ended ratchet wrench and 11 heavy gauge pressed steel sockets, case-hardened and nickel plated. A heavy screw driver and a seven-inch extension steel shank are also furnished. The sockets include a special long one for removing the spark plugs and a design for removing and replacing nuts on the crankshaft bearing. The set is packed in a substantial box with heavy outside hinges. Trade discounts will be supplied upon request.

CANVAS TREAD TIRE.

Is Constructed of Layers of Cotton Duck and Rubber.

A tire that is stated to be puncture proof and non-skidding is the Canvas Tread, manufactured by the Canvas Tread Tire Company, Woolworth building, New York City. As may be noted by the accompanying illustration, the tread differs from conventional design in that it is of canvas, and the maker states that it is practically impossible for a nail, tack, or similar object to penetrate to the inner tube. It is also claimed that the material is so tough that blisters, stone bruises, etc., are prevented.

The Canvas Tread casing is constructed of layers of pure Para rubber and long fibre Sea Island cotton duck. The duck is woven of 11-ply yarn, 23 by 23 both ways, and is stated to have a tensile strength of 420 pounds to the inch either way. Between each layer of duck is a cushion of rubber which is forced into the fabric in such manner as to rigidly secure the plies. From 12 to 20 layers of fabric are utilized.

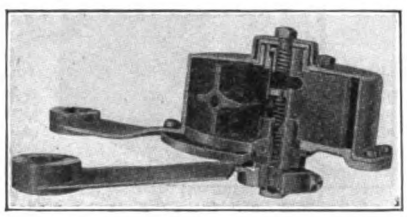


The surface of the tread formed by the little squares of mesh like webbing picks up sand, grit and dirt, which the maker states imbeds itself in such a way as to form a glazed surface, preventing wear as well as providing traction. It is stated that non-skidding devices are not required with the Canvas Tread shoe, which is guaranteed for 3500 miles. It is also claimed that the casing will not rim-cut, as the bead is constructed of fabric. Prices will be supplied upon request.

PETELER SHOCK ABSORBER.

Operates on Hydraulic Principle and Is Adjustable.

The Peteler hydraulic shock absorber, manufactured by the Peteler Shock Absorber Corporation, 1997 Broadway, New York City, operates on the hydraulic principle and is adjustable to the requirements of the car by turning an indicator on a dial. The cup shaped member, shown in the accompanying cross sectional

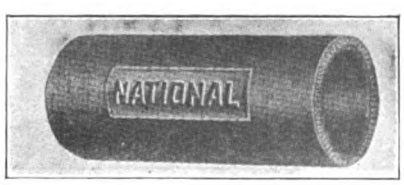


view, is filled with oil and is divided into four chambers by two fixed abutments and the two wings of the spindle. On the downward motion of the car body, the ports are open, and the oil flows freely from chamber to chamber. On the rebound, however, two of the ports are closed to a greater or less extent by an adjusting device which regulates the resistance. The Peteler is adaptable to the front and rear springs of the car. It retails for $75 the set.

NATIONAL RADIATOR HOSE.

Made Especially for Circulation System of Motor Car.

One of the most common causes of a motor heating is due to impeded

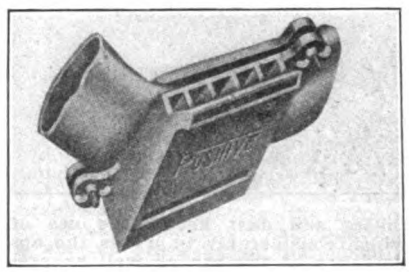


circulation. Rubber tubing or hose is utilized to connect the radiator with the cylinders, etc., and unless constructed especially for the work the layers of fabric separate and restrict the flow of the cooling fluid. The Staybestos Manufacturing Company, Lena and Armat streets, Germantown, Philadelphia, is marketing the National radiator hose which is guaranteed for durability and quality. The tube, cover and friction are of tested compounds, made especially to withstand the action of oil, hot or cold water, anti-freezing solutions, heat, etc. The interior of the tube is seamless and perfectly smooth. The National is made in different sizes, two and three-ply, and is guaranteed not to crack, harden, soften or collapse. The National radiator hose is made regularly in 50-foot lengths, but shorter will be furnished, in multiples of five feet, on order.

NEW STEAM VULCANIZER.

Positive Supply Company Manufacturing Small Portable Vulcanizers.

The Positive Supply Company, Davenport, Iowa, manufacturer of portable steam vulcanizers and kero-



sene garage heaters, is producing a steam tire tube vulcanizer for use in private garages and small repair shops. It is stated that this equipment is the only one made expressly for repairing tire tubes that utilizes steam for vulcanizing.

The maker states that the outfit can be carried in the tool box of an automobile. It consists of a metal body, with one compartment for water and another for fuel. The water section is between the tube and the flame, where it equalizes the heat generated. A tube is vulcanized, says the manufacturer, so that the patch becomes a part of the tube, without danger of burning or scorching. It can be mounted on any bench or post. The weight is three pounds. A surface of 12 square inches can be vulcanized with one setting. Prices will be forwarded upon request.

DAY TIRE VALVE.

Atlas Auto Supply Company Adds Springless Valve to Its Product.

The Atlas Auto Supply Company, Chicago, Ill., manufacturer of Tire-Doh and Tire-Doh products, is marketing a new tire accessory known as the Day tire valve. This valve consists of three parts only, and no springs are used.

The Day valve is made of brass. It is screwed into the tube valve stem after the old valve has been removed. It is stated that the absence of springs gives longer life to the valve. Another quality is that tires can be pumped with greatly reduced effort, and fewer number of strokes, because there is no back pressure caused by spring resistance. This, of course, is due to the fact that the valve has no springs, and to the greater size of the passage for air. In the accompanying diagram the figure at the left shows the valve open, and in the other it is in a closed position. Day valves are supplied in sets of five, this number being sufficient to equip the four tires in use and also providing a spare tube.

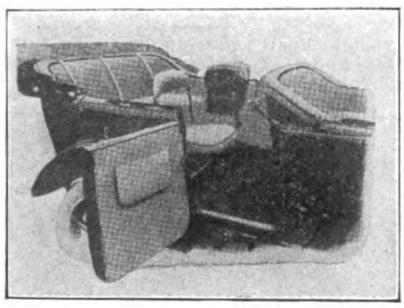
CAMPBELL SEAT OVERS.

Come Complete with Material Necessary for Application.

The Perkins-Campbell Company, 603 Broadway, Cincinnati, O., is marketing the Campbell water proof seat



covers and dust hoods, the use of which considerably improves the appearance of the car as well as preserves the upholstery. The seat covers are made of the best material, neatly bound with muleskin and are reinforced on the arms with the same material.

It is stated by the maker that the binding will not crack in cold weather or blister. The covers are secured with glove fasteners. Each set comes complete with all material necessary for applying, and full instructions. All colors are guaranteed fast and the workmanship is first-class in every respect. Samples of material and prices supplied upon request.

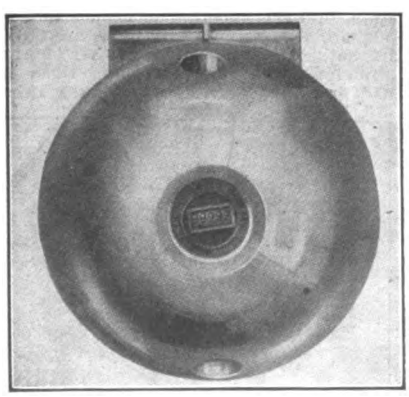
THE TRANSIMETER.

Records Mileage of Car and Is Made in Several Types.

A record of the mileage of the motor vehicle is of value when having adjustments made on tires, computing operating costs, etc. The Transimeters Company, New York City, for which the American Taximeter Company, 735 Seventh avenue, New York City, is selling agent, is marketing the Transimeter, which is made for pleasure and commercial motor vehicles.

One of the qualities of the device which replaces the usual hub cap is that the recording mechanism is protected from injury by a special, substantial casing. That utilized for commercial cars is constructed to withstand severe usage.

The recording mechanism is the product of experience in counting appliances and is not affected by vibration. It registers by tenths up to 10,000 miles and repeats, and every turn of the wheel, backward or forward, is recorded. The maker states that the Transimeter can be quickly and accurately read as the figures are always right side up and visible through a central window. Special attention is called to the coupling utilized. It is a hardened pin fitting a hole in the axle and is pressed outward by a non-corrodible spring



which automatically drops into a slotted plate at the back of the counter. The counter is thus held against turning with the wheel. The Transimeter is dust and weather proof, cannot be tampered with, and is held to be unusually durable and accurate.

NO-SPILL BATTERY.

Electrolyte Is Stated to Be Non-Freezing and Non-Spilling.

The Premier Electric Company, 4031 Ravenswood avenue, Chicago, maker of the Hi-Lo horn for the Ford car, is introducing a storage battery which may be utilized for ignition, lighting, operating a horn, etc.

The electrolyte is stated to be non-freezing, as well as non-spilling, special emphasis being laid upon this feature, which makes for convenience when handling the cell and cleanliness of the battery compartment. The efficiency of the battery is stated to be equal to conventional types.

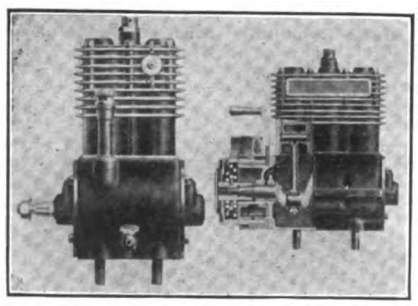
The case containing the cells is

finished with rubberoid paint and is supplied with antimony binding posts, which are held to be non-corroding. The Non-Spill storage battery comes in six-volt, 60 ampere-hour and 80 ampere-hour capacities and is moderately priced.

THE AERO PUMP.

Several Types Marketed by Advance Machinery Company.

The Advance Machinery Company, Toledo, O., is producing the Aero



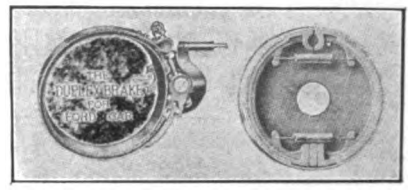
pump, in one, two and three cylinder models, which are motor driven. These are designed for regular and special equipment of new cars, and for installation in motor cars already in service. One feature of Aero pumps is the automatic blow-off valve. This can be set for any pressure desired and automatically exhausts when it is reached. In the illustration the two-cylinder pump without gear shift is shown at the left, and the three cylinder pump with eccentric gear shift is at the right. The cylinder and crankcase parts are gray iron castings, sand-blasted, double-coated with baked black enamel. The trimmings are nickel finished. The crankshaft and connecting rods are drop forged. The bore of the cylinder is 1⅜ inches and the stroke is 1⅝ inches.

The intake valves of Aero pumps are carefully screened to keep out foreign matter.

DUPLEX FORD BRAKES.

External and Internal Designs Faced with Raybestos Material.

The Royal Equipment Company, Bridgeport, Conn., maker of the well known Raybestos brake lining, is



producing the Duplex brake for the model T Ford car. The equipment consists of two contracting members, Raybestos lined, which fit the Ford drums, and includes two supporting fixtures, pull rods, clips, etc. The dimensions of the brakes are 8¼ by 1¼ inches, and the braking effect obtained is such that the car may be instantly stopped on a steep grade. The company is also marketing the Raybestos lined internal cam brake which is installed in place of the original members. One of the qualities of the Raybestos friction material is that it does not disintegrate under the action of oil, gasoline or water. It is constructed of carefully selected long fibre asbestos and is backed by a substantial guarantee.

The external type retails for $10, the internal for $2.

SENRAB CARBURETOR.

Uses Kerosene as a Fuel and Is of Novel Construction.

The Senrab carburetor, manufactured by the Senrab Carburetor Company, Inc., Sea Cliff, Long Island, N. Y., is constructed to utilize kerosene and is so arranged that the adjustment of the fuel supply, primary and auxiliary air is obtained by a single member. A venturi tube is used as a passage for the main air supply. It has a central moving member carrying a tubular fuel supply with radial orifices through which the heated fuel passes under the control of a taper needle.

To provide for atmospheric conditions, the auxiliary valve may be adjusted by revolving the centre stem, and the needle may be independently adjusted for varying qualities of fuel. The control lever is on the top of the carburetor and is adjustable to a number of positions.

The heat of the exhaust is utilized to raise the temperature of the fuel, the gases by-passing through a jacketed float chamber, and acting upon a small quantity of the fuel in the form of a film between the heated wall of the float chamber and the float. Means for starting with gasoline are provided, and it is stated that the supply may be cut off and kerosene utilized in a very short time. The prices vary according to sizes.

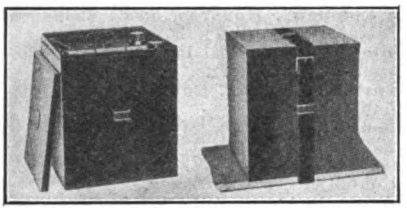
DOVER TOURIST KIT.

Steel Container with Two Cans for Oil and Gasoline.

The Dover Stamping & Manufacturing Company, Cambridge, Mass., is producing the Dover tourist oil and



gasoline kit, a patented construction for carrying oil and fuel when touring. One of the qualities of the device is that it is dust proof. It is compact, quickly attached and removed, and is retained by a strap. Two views are shown herewith, that at the left depicting the container open while that at the right shows it strapped to the running board of the car.

The outside box is of extra heavy steel and the bottom is double seamed.

The cover is heavily wired and all strap lugs are riveted. It retails for $4. The inside cans have double seamed bottoms and rest upon heavy felt pads, preventing chafing and rattling. The outside case is enamelled.

BETHLEHEM SPARK PLUG.

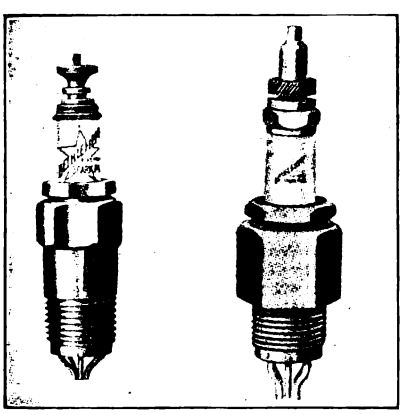
Four of the Five Points Employed for Sparking.

The Silvex Company, 60 Wall street, New York City, is marketing the Bethlehem spark plug which presents interesting as well as practical features. It differs radically from the conventional design in that multiple sparking points are provided, a construction that is held by the maker to prevent short circuiting by soot or carbon.

The Bethlehem is termed a five-point plug and its electrodes extend from the shell or base as may be noted by the accompanying illustrations which show two types. These electrodes encircle the centre member, and as the gap of each is the same, four sparks are simultaneously obtained. This is practically equivalent to four plugs. If, for any reason, one of the gaps becomes sooted, the high-tension current will bridge the other gaps.

The maker lays great stress upon the efficiency of the multiple electrodes, stating that, being extended below the plug chamber, a powerful cleaning and scavenging effect is obtained by the action of the piston.

The Bethlehem plugs are constructed of a high-grade, glazed porcelain insulator which is subjected to heat tests, the temperature of which is greatly in excess of that met with

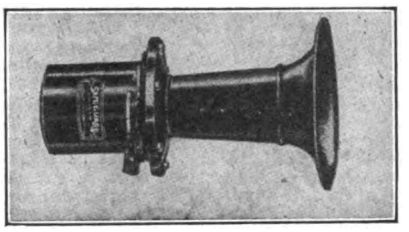


in service. The shell of the plug is of steel which is heat treated, and the maker states that it prevents it warping and cracking the porcelains. The Silvex Company manufactures a wide variety of plugs to meet the requirements of all motors and produces a special design for the model T Ford motor. This plug has a long base, facilitating its removal and replacement. The company issues a booklet on spark plugs which will be mailed free upon request. The Bethlehem plugs retail for $1.25.

MOTOR DRIVEN AUTO HORN.

New Construction of Ball and Rotor Said to Eliminate Friction.

The Duplex Electric Manufacturing Company, Pittsburg, Penn., is marketing the Safeguard motor driven auto horn, which it is maintained, causes extremely light wear on the



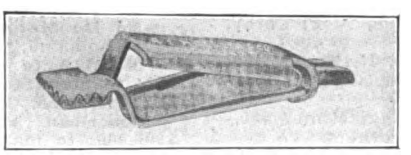
motor bearing. The Safeguard horn is a ball and rotor construction, and it is claimed that it is economical of current and that friction is entirely eliminated.

The horn is made in two models, A and B, both identical, save that the latter is three inches longer and sounds a deeper and more powerful tone. A smaller horn to be driven by three dry cells is made for use on motorcycles. The makers state the Safeguard horn was tested for nearly two years before it was placed on the market, and they have types that are efficient and durable. The Safeguard motor driven horn comes complete for attachment and is guaranteed. Trade prices will be supplied upon request.

UNIVERSAL TEST CLIP.

Makes Possible Rapid and Positive Electrical Connections.

R. S. Mueller & Co., 425 High avenue, Cleveland, O., is manufacturing the Universal test clip, which is constructed plain and with an insula-



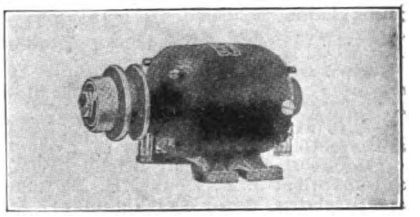
ting nipple. It is adaptable to electrical apparatus and is especially suited for testing ignition systems, connecting batteries, etc., and where quick and positive connections are desired.

It is constructed of cold rolled steel or a special hard alloy copper, and the tension of the steel spring utilized is such that the bite of the jaws is positive. The maker states that it can be attached quickly, that it will not sag and that the contact is positive. The teeth of the jaws mesh both at front and on the sides, and the clip is provided with means for attaching the wire or cable. The insulated design comes with black and red covers for indicating polarity when charging batteries. The Universal clips are inexpensive and come in lots of 10 or 100. Single members are marketed. R. S. Mueller & Co. will supply details and prices on request.

JACKSON DYNAMO.

Adaptable to Standard Cars and System Comes Complete.

The Charles A. Jackson Company, Motor Mart, Park square, Boston, is marketing an electric lighting sys-



tem for motor vehicles and motor boats. The complete outfit includes the Jackson generator, governor, automatic cut-out, ammeter and storage battery. The maker can supply brackets for mounting the dynamo on standard makes of cars and lists a special bracket for the model T Ford car for which the system is particularly adapted.

The generator charges a battery and has an output of eight amperes at normal speed. Six-volt lamps are employed, and the maker states that the output is sufficient to meet all requirements. The dynamo is very compact, all parts are enclosed in a dust proof casing, and the gross weight is but 9½ pounds. The normal speed is 1800 revolutions a minute.

The governor utilized to control the output is a special design, and it is stated that the output may be varied instantly by turning a nut. This governor is supplied in place of a grooved pulley if desired, as where the speed of the engine is constant. The automatic cut-out is an electrical type and is provided with double contacts. It automatically connects and disconnects the generator to the battery. It is mounted on the dash and is dust proof. An ammeter indicates the proper operations of the dynamo.

S. & B. TUBE.

Novel Device for Storing License and Certificate.

The S. & B. Manufacturng Company, Worcester, Mass., is marketing the S. & B. tube, an ingenious device for carrying the operator's license and registration certificate. It comprises a compact, hollow cylinder, about the same length and weight as an ordinary key, and it is attached to the key ring. The capacity of the tube is such that it will accommodate the license and certificate which are rolled up.

The device will appeal to motorists who frequently change their clothes and who might neglect to place their certificates in the new apparel. Being attached to the key ring, it is pointed out that one is less liable to forget it when changing. The S. & B. tube retails for 25 cents.

NEW CONCERNS RECENTLY INCORPORATED.

CAR MANUFACTURERS.

Interstate Sales Company of Philadelphia, Philadelphia, Penn.; $25,000; to manufacture automobiles, motorcycles, power boats, etc.; W. C. Arnold, H. C. Lansinger, J. M. Satterfield.

Stockwell Motors, Ltd., Montreal, Can.; $100,000; to manufacture motor trucks; F. B. Stockwell, E. E. Leger, H. E. Walker.

J. C. Stoops, New York City; $15,000; to manufacture automobiles; J. M. Palmer, L. C. Goetting, J. C. Stoops.

Dodge Bros., Detroit, Mich., $5,000,000; to manufacture automobiles; J. F. Dodge, H. E. Dodge, A. McMeans.

Pittsburg Motor Car Company, Dover, Del.; $100,000; to manufacture automobiles; J. M. Frere, H. J. Davis, G. Shearer.

Aetna Motor Truck Company, Lansing, Mich.; $100,000; to manufacture trucks.

Detroit Tractor Company, Lafayette, Ind.; $100,000; to manufacture machinery and tractors; George J. Baker, Frank E. Baker, Cecil G. Fowler and others.

Vulcan Carriage Company, Painesville, O.; $1,000,000; to manufacture and deal in motor vehicles; E. D. Heartwell, E. E. Lawrence, F. H. Murray, H. E. Hammar, J.

AUTOMOBILE DEALERS.

Atlantic Motors Company, Savannah, Ga.; $5000; R. H. Richards, A. G. Benfield, John E. Finney.

Palace Automobile Company, Alexandria, Va.; $15,000; to deal in automobiles; John S. Goodrich, Milton S. Fairfax.

Motor Car Sales Company, Chicago, Ill.; $50,000; to deal in automobiles and motor trucks; E. O. Best, L. E. Bowen, R. M. Cornell.

Halleman Motor Livery Company, Chicago, Ill.; to deal in automobiles; G. W. Halleman, Joseph Dulson, Harry De Coudres and others.

Tesseyman Automobile Company, Columbus, O.; $20,000; to deal in automobiles; J. E. Tesseyman, I. A. Tesseyman, F. N. Boyd, J. F. Galloway, Matilda Heinrich.

Trenton Motor Sales Company, Cleveland, O.; $5000; to deal in automobiles and supplies; W. K. Stanley, J. R. Jewett, P. C. Stoller, Samuel Horwitz, I. A. Skinner.

Overland Motor Company, Richmond, Va.; $20,000; O. G. Granger.

Fort Wayne Overland Automobile Company, Fort Wayne, Ind.; $15,000; to deal in automobiles.

Rockland County Sales Company, Nyack, N. Y.; $5000; R. J. Heisler, T. A. S. Beatty, W. Beattie.

Chalmers Motor Company of Massachusetts, Boston, Mass.; $100,000; John J. Murray, Joseph L. Hermanson, Emma Leitiger.

The Oulford Company, Boston, Mass.; $50,000; Walter Stafford, Daniel I. Oulford, Sylvanus T. LeBaron.

Mohawk Motor Car Company, Boston, Mass.; $40,000; to deal in automobiles; C. E. Bosworth, H. E. Fullman.

George Grow Automobile Company, Boston, Mass.; $50,000; to deal in automobiles; George Grow, Samuel Grow, Ralph Grow.

Sanders-Wilson-Barnaby Company, Eddysville, N. Y.; $25,000; to deal in automobiles; K. T. Barnaby and others.

Whitefield Motor Car Company, New York City; $175,000; to deal in automobiles; M. J. O'Brien, A. J. Corey, D. Dilworth.

High Rock Motor Company, Philmont, N. Y.; $25,000; to deal in automobiles; William H. Oliver, Orle R. Morer, Lewis F. Harder.

Range Motor Service Company, Gibbing, Minn.; $50,000; motor car business; S. R. Kirby and others.

Middle West Automobile Company, Chicago, Ill.; $1000; to deal in automobiles ;William H. Oliver, Orle R. Morril, August Beltzner.

United Auto Brokers, Springfield, Ill.; $2000; C. G. Blankenship, Frank Carbon, James Bundo.

Hudson-Oliver Motor Company, Buffalo, N. Y.; $15,000; to deal in automobiles; E. G. Oliver, George B. Welsey, Charles W. Pooley.

Motor Credit Company, New York City; $1000; to deal in automobiles; Arthur Enock, Adolph Morris, David Grinberg.

Ontario Motor Car Company, Oswego, N. Y.; $5000; to deal in automobiles; Arthur P. Wolever, Frank C. Wolever, Charles A. Peterson.

Moville Auto Mart, Sioux City, Ia.; $10,000; F. E. Carrington, S. R. France, E. M. Armstrong, W. H. Rawson, E. E. Metcalf, Glenn Metcalf.

Hale Auto Corporation, Waterville, N. Y.; $500; J. Charles Hale, Augusta M. Hale, Charles Hale.

The Grady Motor Company, Salt Lake City, Utah; $25,000; G. Q. Smith, E. M. Grady.

Reliance Motor Car Company, Ellensburg, Wash.; $2000; F. G. Prater, H. Haworth.

Overland-Connecticut Company of Hartford, Hartford, Conn.; $20,000; to deal in automobiles; Albert C. Hine, Henry C. Hine, Ernest N. Humphrey.

Swinehart Sales Agency, Newark, N. J.; $10,000; to deal in automobiles; Charles H. Kingsbury, Edward H. Coley.

Overland-Houston Company, Houston, Tex.; $5000; G. W. Graham, Hugh Petter, Wallace Tyler.

National Automobile Company, Fall River, Mass.; $20,000; to deal in automobiles; H. Laurens.

W. & L. Manufacturing Company, Buffalo, N. Y.; $50,000; to deal in automobiles.

Princess Motor Company, Detroit, Mich.; $100,000; to deal in automobiles; C. D. Smith.

Smith-Trew Motor Company, Washington, D. C.; $3000; to deal in automobiles; W. W. Trew.

M. C. Motor Company, Bedford, Ind.; $10,000; to deal in automobiles; W. M. Mathews, L. Cobb, E. L. Morris.

Kuhn-Adler Company, Buffalo, N. Y.; $5000; E. E. Denniston, E. E. Adler, E. G. Kuhn.

Patterson Auto Carriage Company, Cleveland, O.; $10,000; to deal in automobiles; E. M. Patterson, L. M. Westropp, R. J. Moriarity, C. O. McMobon, H. C. Patterson.

Kalmer Southworth Company, Jersey City, N. J.; $100,000; E. A. Kalmer, A. R. Southworth, A. E. Letts.

Smildsin Automobile Company, New York City; $5000; to deal in automobiles; G. Smildsin, S. L. Wise, B. Naumberg.

Hudson Motor Car Company, Cleveland, O.; $1000; E. S. Steese, S. S. Toback, W. W. Griffith.

Fuller-Ashley Company, Syracuse, N. Y.; $1500; to conduct a general automobile business; W. A. Ashley, Arthur A. Sweeney.

Aetna Motor Truck Sales Company, Detroit, Mich.; $5000; to deal in motor trucks.

United States Motor Truck Company, Chicago, Ill.; $250,000; to deal in motor trucks; R. C. Stewart, B. Bramlage, M. H. McLean.

Simplex Distributing Company, Cleveland, O.; $10,000; F. S. McGowan and others.

Overland-South Bend Company, South Bend, Ind.; $5000; to deal in automobiles; Ernest A. Bennett, Walter Stewart, James E. Kepperly.

Waterloo Overland Company, Waterloo, Ia.; $10,000; to deal in automobiles; J. D. Hadley, John Hanson and others.

Brownell Auto Company, Birmingham, Ala.; $10,000; to deal in automobiles; E. W. Brownell, C. W. Richardson, Blaine Brownell.

Regal Motor Car Company, Minneapolis, Minn.; $25,000; to deal in automobiles; R. C. Smith, A. P. Heaney, L. E. Smith, J. Costella.

PARTS AND FITTINGS.

Rupp-Skeldon Motor Company, Toledo, O.: $50,000; to manufacture all kinds of motors; Robert G. Young, James Nye, James Greenwald, Bess Young, B. W. Johnson.

Cooper Flexible Transmission Company, Brooklyn, N. Y.; $160,000; to manufacture transmission appliances; B. C. Holt, M. Howe, S. C. Yeomans.

The Braun-Hoff Electric Company, Canal Dover, O.; $18,000; to manufacture electric motors.

P. F. Henn Company, Cleveland, O.; $10,000; to deal in motors; P. F. Henn, A. D. Henn, R. W. Bond, A. C. Bond, A. S. Mann.

No Ro Motor Works Company, Boston, Mass.; $10,000; Thomas J. Colbert and others.

Metal Auto Parts Company, Indianapolis, Ind.: $50,000; to manufacture automobile parts; B. E. Thompson, W. B. Austed, George H. Scott.

American Aut-Tractor Company, Wilmington, Del.; $300,000; to manufacture automobile engines, motor ve-

International Wheel Company, Nashville, Tenn.; $100,000; to manufacture and deal in wheels for vehicles of all kinds; J. E. Fisher, Thomas A. Andrews.

Summers Bros., Glasgow, Ky.: to manufacture hydraulic transmissions for automobiles; Otto Summers, E. A. Summers and others.

Carney Axle Valve Company, New York City; $500,000; A. L. Marilley, T. J. Curran, C. S. Woodman.

Macnish Electric Company, Augusta, Me.; $500,000; to manufacture ignition systems for automobiles, motor boats, etc.; E. M. Leavitt and others.

Adrian Carburetor Company, Adrian, Mich.; $50,000.

Rieba Ball Bearing Company, New York City; $20,000; to manufacture ball bearings; J. Hover, E. M. Lowy, L. I. Lowy.

Ellis-Ward Company, Boston, Mass.; $100,000; W. A. Ellis, E. G. Moorehead, C. S. Ward.

International Motor Wheel Company, Wilmington, Del.; $1,000,000; to manufacture wheels for automobiles and motor trucks; H. E. Latter, W. J. Mahoney, O. J. Reichard.

Wallace Shock Absorber Company, Detroit, Mich.; $5000; John E. Wallace, William J. Wallace, George C. McDonald.

General Machine Company, Indianapolis, Ind.; $3000;

Digitized by Google

to manufacture automobile parts; Harry F. Smenner, C. W. Shane, Dick M. Vesey.

Simplex Engine Company, Detroit, Mich.; $40,000; H. Fraser, William G. Taylor, F. Smallridge.

The Dunkirk Corporation, Dunkirk, N. Y.; $30,000; to manufacture mufflers, motors, etc.; E. De H. Caldwell, E. K. Buttolph, R. J. Gross.

The East Wheel Automobile Company, Duluth, Minn.; $100,000; N. J. Upham and others.

American Motors Utilities Company, New York City; $500,000.

Over-All Roller Bearing Company, Los Angeles, Cal.; $500,000; to manufacture roller bearings; T. W. Starr and others.

Haines Transmission Gear Company, New York City; $5000; to manufacture transmissions; G. F. Haines, A. Bergen, G. H. Bruce.

P. F. Henri Company, Cleveland, O.; $10,000; to manufacture motors.

Auto Sprinkler Equipment Company, Pittsburg, Penn.; $25,000; H. A. Logue, H. C. Fry, Jr., J. E. Stone.

GARAGES AND REPAIR SHOPS.

Porter Station Garage, Cambridge, Mass.; $15,000; to conduct a garage and service station; C. G. Pimer, William J. Beglin, G. A. Jule.

Jumel Garage Corporation, New York City; $10,000; to conduct a garage; W. P. Powell, J. J. Jansen, Jr., T. S. Buckingham.

Buick Auto Repair Company, New York City; $5000; to conduct a repair shop; William F. Fane, G. Macpherson, J. D. Kelly.

Howard Garage & Repair Shop, San Francisco, Cal.; $125,000; garage and repair shop; F. H. Howard and others.

Sweeney Storage & Truck Company, Lima, O.; $10,000; Robert E. Sweeney, Franklin C. Lyon, Lillian F. Sweeney.

Deicher & Arndt Company, Plymouth, Wis.; $50,000; to conduct a garage and automobile business; Adam Deicher, C. C. Arndt, W. A. Herr, Edwin Blanke.

J. Dolton & Company, New York City; $900; to conduct a repair shop; J. Dolton, J. C. Dolton, W. N. Plein.

Avon Garage, Avon, N. Y.; $6000; to conduct a garage; F. W. Isham, A. Russell, L. P. Tabor.

L. K. Hausen's Sons Garage, Brooklyn, N. Y.; $5000; to conduct a garage; H. J. David, J. Hausen, R. Hausen.

Kimbaugh Auto Company, Greenwood, Miss.; $50,000; to operate a garage and repair shop.

Windemere-Euclid Garage Company, Cleveland, O.; $10,000; to conduct a garage; V. M. Harris.

William S. Campbell Garage Company, Brooklyn, N. Y.; $1000; to conduct a garage; William S. Campbell, H. Hyams, Jr., P. H. Sheridan.

Emmert Machine & Auto Company, Houston, Tex.; $5000; C. G. Watson and others.

Allen Garage, Greenwich, Conn.; $50,000; garage and automobile business; Frederick H. Allen, Harold W. Allen, Frank J. Holmes.

National Garage Company, Chicago, Ill.; $5000; garage and automobile business; H. P. Keller, Paul T. Diener, Edward A. Fairbrother, Harry Bierma.

Grand Concourse Garage Company, New York City; $5000; garage; John M. Ireland, Mary A. Ireland, Caroline Haffen.

Classon Garage, Brooklyn, N. Y.; $3000; garage; P. H. Mulrear, E. H. Mulrear, A. W. Mulrear.

Kruger Bros., Brooklyn, N. Y.; $4000; repair shop; J. Kruger, J. C. Kruger.

Capital Motor Car Company, Columbus, O.; $10,000; garage; E. P. Kelly, C. A. Hayes, I. P. Madden, R. P. Atkinson, W. H. Eberst.

S. S. Garage Company, New York City; $5000; garage; Charles Evans, J. F. Staiber, H. B. Stowell.

Fourteenth Street Garage, Indianapolis, Ind.; $2000; garage; H. R. Littman, W. T. Clore, Arthur Littman.

Wilmette Garage, Wilmette, Ill.; $2500; garage; George C. Orr, Girard A. Ellington, Edith Tufty.

Electric Garage Company, Louisville, Ky.; $25,000; garage; G. Bader, F. S. Ouerbacker, J. W. Button.

Hollywood Garage Company, New York City; $30,000; garage; J. J. Pheelan, G. A. Grant, M. Frieder.

ACCESSORIES AND SUPPLIES.

Lamb Manufacturing Company, Winsted, Conn.; to manufacture automobile supplies. J. P. Lamb.

Uneeda Tire Filler Company of New York, New York City; $100,000; to manufacture automobile accessories; M. E. Rosenthal, J. Golden, T. Bligh.

Puncture Seal Company, New York City; $5000; to manufacture compounds for mending inner tubes; Henry D. Bahn, Frank S. Murray, Frank Eber.

Sanbo Starter Company, Rock Island, Ill.; $10,000; to manufacture engine starters; H. W. Denniman, A. G. Arp, A. I. Sanbo.

Harris Tire Company, Savannah, Ga.; $40,000; to manufacture automobile tires; S. N. Harris, H. M. Garmany, C. S. Eichardson, L. B. Rith, M. B. Brabham, J. E. Mosher, E. DeLoach, J. L. Sellers.

Fred S. Phinney, Brooklyn, N. Y.; $5000; to deal in automobile accessories; A. S. Phinney, F. S. Phinney, A. N. Phinney.

Otto Gutzmann, New York City; $12,000; to deal in accessories; R. Gutzmann, P. Gutzmann, M. Beickert.

Windshield Clear Company, Akron, O.; to manufacture liquid for keeping glass clear; William J. Boer and others.

Lawndale Tire & Vulcanizing Company, Springfield, Ill.; $2500; P. F. Dreffein and others.

League Tire Company, South Bend, Ind.; $250,000; to manufacture automobile accessories; William P. Turey, Ross J. Miller, M. Brunk.

Crown Tire & Supply Company, Philadelphia, Penn.; $100,000; to manufacture automobiles and accessories; F. W. Thompson, B. S. Edwards, J. M. Frere.

H. L. Haden Company, Milwaukee, Wis.; $15,000; to deal in motor car accessories and supplies; E. G. Haden, N. M. Kent, E. J. Kappleman, H. L. Haden.

Kinton & Company, Rochester, N. Y.; $10,000; to deal in rubber articles; F. C. Kinton, W. E. Kinney, C. E. Graves.

Thomas Motive Power Company, Westchester, Penn.; $125,000; to manufacture a single stage air compressor for automobiles; Theodore Pennock, J. H. Thomas and others.

American Carbon & Battery Company, Chicago, Ill.; $250,000; to manufacture carbon products; H. Wrape, H. J. Wrape, W. C. Schramm.

Advance Tire Sales Company, New York City; $5000; Grace A. Burnette, George L. Lewis, Charles H. Stanton.

Napa Tire & Rubber Company, Dover, Del.; $100,000; to deal in automobile tires, etc.; M. L. Hirschbein, A. Hirschbein, W. I. N. Lofland.

Bart S. Adams Tire Company, St. Louis, Mo.; $50,000; to conduct an automobile accessory business; Bart S. Adams, Webster Groves, W. T. Flynn, E. M. Dierker, H. P. Lindley, W. S. Grant, J. P. Henry.

The Delaware Tire & Supply Company, Wilmington, Del.; $25,000; to manufacture and deal in tires.

Danville Auto Supply Company, Danville, Ill.; $2000; to deal in automobiles, supplies, etc.; F. A. Baumgart, E. W. Seanwright, Ira Molt, Pierce Burroughs.

Twaits Manufacturing Company, Worcester, Mass.; $10,000; to deal in lubricating specialties for automobiles; Daniel E. Twaits and others.

Seneca Motor Supplies Company, Chicago, Ill.; $10,000; to deal in automobile supplies; A. W. Senz, J. C. Garriott, Jr., H. M. King.

The Simons Sales Company, Saginaw, Mich.; $30,000; G. O. Simons, H. A. Faust, F. O. Van Doren.

Columbia Tire Company, Los Angeles, Cal.; $500,000; to deal in automobile tires; Edward Troan, W. B. Lee, H. W. Griswold, P. L. Huse.

Lacelde Automobile & Supply Company, St. Louis, Mo.; $50,000; to deal in automobiles and supplies; C. S. Chickiner, L. F. Curtin, J. J. Miltenberger.

Vehicle Safeguard Instrument Company, New York City; $25,000; J. J. Howe, F. G. Howe, J. A. Howe.

Justus & Parker Company, Columbus, O.; $15,000; to deal in automobile supplies and accessories; E. E. Parker, C. E. Justus, H. M. Parker, Bernard Smith, J. A. Justus.

King Tire Protector Company, Augusta, Me.; $500,000; to manufacture tire protectors; F. L. Farrington, M. L. Stoke.

Lighthouse Tire Company, New York City; $5000; to manufacture and deal in rubber tires; J. McLaren, F. B. Knowlton, S. V. Dowling.

Motor Fuel & Lubricating Company, Portsmouth, O.; $5000; to deal in accessories and supplies.

Filts Auto Supply Company, Los Angeles, Cal.; $5000; J. Crick, August Scheiffele, Sr., H. C. Hansen, Jr.

Rogers Manufacturing Company, Chicago, Ill.; $1500; to manufacture automobile accessories; William Harold Fox and others.

Universal Automobile Equipment Company, Brooklyn, N. Y.; $1000; E. Birkle, Jr., A. Moeller, P. Moeller.

Davis Automobile Accessories Company, Chicago, Ill.; $25,000; to deal in accessories and supplies; E. M. Gilbert, A. S. Kedzie, H. Garrett.

Cuyahoga Tire & Supply Company, Cleveland, O.; $10,000; to deal in tires and supplies; L. Abrams, M. M. Gleichman, M. Abrams, M. Eckstein, N. B. Gordon.

Seaton Pneumatic & Cushion Tire Company, Nashville, Tenn.; $25,000; R. B. Lees and others.

Auto Supplies Sales Company, Wilkesbarre, Penn.; $25,000; to manufacture automobiles and supplies; J. W. Williams, W. H. Turrell, M. E. Dean.

Indestructible Tire Company, Wilmington, Del.; $1,000,000; to manufacture automobile and other tires; J. McLarin, F. B. Knowleton, S. V. Dowling.

MISCELLANEOUS.

New York Central Transportation Company, New York City; $45,000; J. S. Sherman, L. M. Mestaniz, J. Mover.

Universal Advertising Autocar Company, New York City; $25,000; A. DeGiorgio, G. J. Lusardi, G. Manara.

PERSONAL NEWS OF THE INDUSTRY.

Joseph Fields, formerly a western branch manager for the Chalmers Motor Company, Detroit, has been made assistant sales manager of that concern.

F. D. Norman, Chicago, previously in charge of the Bosch Magneto Company's Toronto office, has become manager of the branch in the former city.

James Couzens, of the Ford Motor Company, Detroit, makes a specialty of dairying as an avocation. He is erecting a barn, which when completed will represent a large fortune. It will be a model dairy and for completeness and size it will be one of the most modern in the country. The exterior will be of stucco and it is of English design.

H. P. Sigwalt, formerly of the Geuder, Paeschke & Frey Co., Milwaukee, Wis., and the Fort Wayne Corrugated Paper Company, Fort Wayne, Ind., has entered the sales and advertising departments of the Federal Motor Truck Company, Detroit.

J. H. Ficken, New York City, has been appointed sales representative for the Kelly-Springfield Tire Company. He was formerly connected with the United States Tire Company in the same capacity.

A. H. D. Altree, New York City, former branch manager of the Bosch Magneto Company at Chicago, has been appointed to the office of vice president and will be located at the main offices of that company in New York City.

Charles A. Paine, Providence, R. I., has been made manager of the automobile department of Belcher & Loomis Hardware Company, succeeding Henry Paquin, resigned.

J. B. Coy, Milwaukee, has been appointed salesman for the local branch of the Buick Motor Company. He formerly travelled for the International Harvester Company.

W. C. Sille, Boston, has been appointed sales manager of the Chevrolet Motor Car Company. His headquarters will be in New York City.

Frank Laster, Minneapolis, has been made sales agent for the W. A. Paterson Company, Flint, Mich. His territory will consist of Minnesota, North and South Dakota, Montana, Nebraska, Wyoming, Idaho and Iowa.

G. O. Wildhack, Indianapolis, for four years manager of the branch of the Oakland Motor Car Company, has been appointed general travelling representative for that company.

George Edwards, Jr., Detroit, has become identified with Dodge Bros., well known automobile manufacturer of that city.

E. L. Baker, Syracuse, N. Y., has been appointed head of the service department of the H. H. Franklin Manufacturing Company of that city. He succeeds Ralph Murphy, who is now chief engineer. Mr. Baker has been identified with the Franklin engineering department for several years.

Woodrow Reese, Philadelphia, has been appointed manager of the Goodyear Tire & Rubber Company in that city.

H. J. Vogler, Philadelphia, has become associated with the Maxwell Motor Company, Detroit, Mich.

W. Robinson, Detroit, a former Canadian newspaper man has been appointed sales manager with the Wagenhals Motor Car Company.

L. I. Barnes, Detroit, has joined the sales force of the Federal Motor Truck Company, and will have charge of sales development in the South.

R. C. Hook, Trenton, N. J., has become identified with the Mercer Automobile Company.

Capt. W. H. Gray, Portland, Ore., who has been manager of the Northwest Automobile Company for the past two years, has resigned.

William Bloomfield has been appointed special representative for the states of Alabama, Louisiana and Mississippi by the Monarch Motor Car Company, Detroit. His headquarters will be at Birmingham, Ala.

Julian Case, Detroit, is now with the advertising department of the Paige-Detroit Motor Car Company of that city. He was formerly associated with the Regal Motor Car Company and the Abbott Motor Company.

George N. Jordan, Boston, has accepted a position as assistant manager of the wholesale branch of the Studebaker Corporation under Henry Myers. Mr. Jordan will travel the New England states.

C. B. Voorhis, Pontiac, Mich., has become assistant sales manager of the Oakland Motor Car Company of that city. He was formerly connected with the Kingman Plow Company of Peoria, Ill.

W. R. Chandler, New York City, has been appointed factory representative of the A. & J. Manufacturing Company, with offices in the United States Tire building.

Hoover Holton, Detroit, has been appointed general sales manager of the Monarch Motor Car Company. He was formerly connected with the Empire Automobile Company and the American Motors Company of Indianapolis.

E. A. Moore, Beloit, Wis., has been appointed general manager of the gas engine department of the Fairbanks-Morse Manufacturing Company, to succeed F. E. Greene, who resigned recently.

R. K. Roberts, San Francisco, Cal., has been appointed assistant general sales manager of the Oakland Motor Car Company of Pontiac, Mich. He will have entire charge of the company's interests on the Pacific coast, including the Hawaiian Islands.

C. R. Jones, Dallas, Tex., has been appointed district representative of the Lippard-Stewart Motor Car Company of Buffalo, N. Y.

D. E. Evans, Detroit, has become identified with the Goodyear Tire & Rubber Company. He was formerly connected with the General Motors Truck Company of St. Louis.

Frederick E. Hole, St. Louis, has been appointed manager of the local branch of the Wilcox Motor Car Company. He succeeds J. P. Gertsen, who resigned on account of ill health.

F. A. Greene, Des Moines, Ia., has become manager of the Cole Motor Car Company in that city. He succeeds Frank Weldon.

J. W. Burke and W. S. Porter, Boston, are two recent additions to the sales staff of the New England branch of the Locomobile Company.

A. I. Butler, New York City, has become identified with the Batavia Rubber Company as special representative. He will look after northern New York territory.

Roy E. Marcotte, Detroit, for the past two years manager of the advertising department of the Canadian branch of the Studebaker Corporation, is now located at the company's headquarters in Detroit and will continue to take care of the Canadian publicity from that office.

N. E. McKenney, Detroit, is now with the Federal Motor Truck Company. He was formerly connected with the American Steel & Wire Company and a number of other prominent firms.

F. J. Mooney, Detroit, advertising expert of the Hupp Motor Car Company, has been appointed sales manager in addition to his position as head of the advertising department.

Dave Williams, Kokomo, Ind., has been appointed manager of the newly made agency of the Haynes Automobile Company at Fourth avenue and York street.

R. Ward Macey, Jr., has severed his connection with the Premier Motor Manufacturing Company, Indianapolis, but retains his interest in the company as a stockholder.

R. H. Spear, Detroit, has been appointed general manager of the Scripps-Booth Company, maker of the Scripps-Booth cyclecar.

Dr. Norman R. New, Chicago, who was sales manager of the branch of the Mitchell Automobile Company in Milwaukee, Wis., has become identified with the home office in the former city. He took care of the Milwaukee interests for over two years.

F. G. Sudrow has been appointed southern district sales manager by the King Motor Car Company, Detroit. He was formerly connected with the Stoddard-Dayton Motor Car Company and the Marion Motor Car Company.

R. C. Smith, Minneapolis, is now president of the newly formed Regal Motor Car Company of that city. A. P. Heaney is general sales manager.

Clarence O. Sacks, Boston, who recently became connected with Gray & Davis, Inc., has been appointed to the board of directors.

George Toole, Detroit, has succeeded I. D. Rocap as superintendent of the Lincoln Motor Car Company.

H. H. Howe, Detroit, has been made district efficiency manager of the Maxwell Motor Company of that city. He was formerly district manager for that company at Indianapolis.

E. E. Hazelgrove, Richmond, Va., has become associated with the Alsop Motor Company as travelling salesman. He was formerly connected with the Eastern Motor Sales Corporation.

J. B. Childe, Canton, O., has been appointed general manager of the Cleveland Axle Manufacturing Company and the Cleveland-Canton Spring Company.

Professor Benjamin F. Bailey, Detroit, has joined the engineering staff of the American Electric Starter Company. He was formerly professor of engineering at the University of Michigan. Professor Bailey will devote his time at present to perfecting an electric starter for cyclecars.

Frank Welch, Pontiac, Mich., has become associated with the Pontiac Motor Supply Company. He will have entire charge of its vulcanizing and repair departments. He was formerly connected with the Detroit Tire Repair Company.

Albert E. Reblin, Lansing, Mich., for more than 12 years purchasing agent of the Olds Motor Works, died recently after a long illness.

W. C. Du Comb, New York City, has become a part of the organization of Barthel & Daly, sole importer of Schafer ball bearings. He will act in the capacity of mechanical engineer.

L. S. Sheup, Indianapolis, has been appointed sales manager of the Oakland Motor Car Company in that city.

Z. C. Elkin, Chicago, has been appointed manager of the local branch of the General Motors Truck Company of Pontiac, Mich.

T. E. Byrne, Indianapolis, has joined the sales force of the Premier Motor Manufacturing Company. Formerly he was connected with the Cole Motor Car Company.

A. F. Masury, New York City, has been made chief engineer of the International Motor Company. He was formerly service manager for that company.

L. B. Moore, Cleveland, has been appointed manager of the Sixth City Motor Company. He was formerly district salesman for the Moon Motor Car Company.

Herbert Higginbottom, Indianapolis, has become identified with the Nordyke & Marmon Company of that city. He was formerly connected with the Abbott Motor Company.

Frank L. Brown, New Haven, Conn., now has charge of the distribution of Stutz cars in that territory. He was formerly with the Alvan T. Fuller Company, Boston.

F. G. Benson, New York City, has been appointed wholesale manager of Partridge, Clark & Kerrigan, Inc. He has been identified with the automobile industry for the past nine years and is well known to the trade.

F. C. Kent, Cincinnati, is now with the Shipley Machine Tool Company as works manager. He was formerly connected with the Pierce-Arrow Motor Car Company, Buffalo, N. Y.

W. S. Reed, Chicago, has accepted a position with the Cowles-MacDowel Engineering Company as chief engineer. He was formerly connected with the Norwalk Motor Car Company, Martinsburg, W. Va., in the same capacity.

K. R. Montgomery, Detroit, has become manager of the local branch of the Krit Motor Car Company, located at 1225 Woodward avenue.

John Primrose, Flint, Mich., well known in motor car manufacturing centres and formerly factory manager of the Marion Motor Car Company, died recently.

James S. McNally, Waltham, Mass., publicity manager of the Metz Automobile Company, recently dropped dead at his home in Dorchester.

Burton Parker, Jackson, Mich., has been appointed assistant to Benjamin Briscoe of the Briscoe Motor Company. He was formerly advertising manager of the Overland Motor Car Company, Toledo, O.

E. B. Center, Wichita, Kan., has accepted a position as electrician with the Wichita Automobile Company. George H. Schollenberger of that company states that his firm is recognized by the battery and electrical equipment manufacturers as being the best equipped station in the southwest.

Jacob Alpert, Detroit, has accepted a position with the Maxwell Motor Company.

Donald Anthony, Baltimore, has been appointed local resident manager of branch maintained on West Mount Royal avenue by the Locomobile Company of America, Bridgeport, Conn. He succeeds T. W. Wilson, Jr., resigned.

John J. Ryan, Detroit, who was formerly manager of the local branch of the Wheeler & Schebler Company, Indianapolis, is now travelling in the interests of the Hupp Motor Car Company.

L. A. Van Patten, New York City, who is the representative of the Saxon Motor Car Company, has been given additional territory, including five of the northern counties of New Jersey.

A. E. Hart, Lansing, Mich., who is the representative of the Olds Motor Works, is touring in Illinois with A. M. Zerweck, president of the De Luxe Automobile Company. He is appointing agents throughout that state.

R. E. Campbell, manager of the St. Louis automobile accessories department of the H. W. Johns-Manville Company, has received word from Edward A. Cassidy, New York manager of the company, that his branch has sold more Carter carburetors than any other of the company's branches. The Carter carburetor is made in St. Louis.

George Tandy, St. Louis, has joined the sales force of the Cyclecar Sales Company.

Charles S. Henshaw, Boston, who represents the Packard Motor Car Company, is confined to the Corey Hill hospital. He underwent an operation for appendicitis. Mr. Henshaw expects to return to his desk within the next month.

Homer F. Himes, Dayton, has accepted a position as tool designer with the Dayton Engineering Laboratories Company, maker of the well known Delco lighting and starting system.

H. A. Rasely has sailed for Australia in the interests of the General Motors Company, Detroit. His headquarters will be Sydney, N. S. W., as service manager, and he will have charge of all service and repair work both in the Commonwealth of Australia and the Dominion of New Zealand.

Allen L. McCormick, Louisville, Ky., formerly vice president of the Southern Motors Company, has invented a new windshield device which prevents rain from entering between the two panes of glass. It is a weatherstrip and may be easily removed or left in position as suits the driver. The vision is not interfered with in the least, as the strip is less than an inch wide.

OPPORTUNITIES FOR THE DEALER AND GARAGE.

TREMO HORN.

Operated by Exhaust Gases and Is Made for Ford and All Makes of Gasoline Cars.

The D. Henry Bonner Company, Cambridge, Mass., is manufacturing the Tremo horn, which is operated by the exhaust gases of the motor. It is a perfect signal at all speeds of the motor, is easy to attach and will not clog. One of its features is the clamp utilized in the Ford design, it slipping over the tail or end of the muffler pipe. The Ford type retails for $4 and is guaranteed. The Tremo horn is also made in four other sizes, the Nos. 1, 2, 3 and 4, being adaptable for motors of horsepower ranging from 16 to 50. Special discounts are offered the trade and these will be supplied upon writing.

BALL CARBON REMOVER.

Displaces Carbon from Cylinders Without Dismantling the Motor—Comes in Tablet Form.

The Bowling Green Sales Company, 42 Broadway, New York City, is marketing the Ball carbon remover, a chemical compound, which comes in convenient tablet form. It is stated by the maker that these tablets will quickly destroy the carbon in cylinders and provide a film of lubricant on the walls. Teritorial rights are open. Particulars will be supplied by addressing Dept. A.

MORGANBRITE.

A Brass and Metal Polish Free from Deposits Placed in Practical and Economical Container.

The Morgan Manufacturing Company, Newport, R. I., maker of specialties, tools, etc., is marketing MorganBrite, a brass and metal polish which is stated to be free from elements that leave a deposit on the work. It is also stated that the lustre imparted is very lasting. MorganBrite comes in cans of the "Polisaver" type, a container making for economy of the polish. The screw cap is retained to the body of the can by a chain and a swivel. All cans are sealed at the factory. The company has a profitable dealers' proposition, the details of which will be supplied upon request.

MILLER'S TOP DRESSING.

Is Adaptable for Tops of Mohair, Pantasote and Similar Material, and Obtains a Velvety, Soft Surface.

The Frank Miller Company, 351 West 26th street, New York City, is manufacturing the Miller top dressing, which is especially adaptable to tops of mohair, pantasote and similar material. One of the desirable qualities of the dressing is that it imparts a new velvety finish without hardening the surface. The dressing is guaranteed and is inexpensive.

BOSTON STARTER OFFER.

Automatic Appliance Company Has Attractive Proposition for Dealers in Ford Territory.

The Automatic Appliance Company, 172 Columbus avenue, has an attractive selling plan for dealers, the details of which will be forwarded upon request. The company produces the well known Boston starter for the model T Ford car, and the practicability and efficiency of this starter is demonstrated by the large number in service. The Boston starter is easily attached and the discount given to the trade is an attractive one.

FORD DELIVERY BODIES.

The practicability of the model T Ford for commercial purposes has been demonstrated. It is being used for a variety of work, and "Lew" Fales, Providence, R. I., carries a large number of these in stock and is prepared to supply the trade at short notice. He issues a circular giving dimensions, styles, prices, etc., which will be sent free upon request.

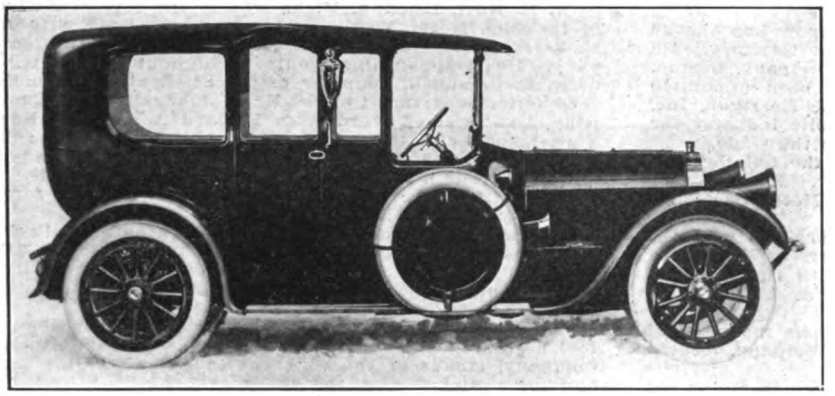
ALL 1915 MAKERS ADOPT STREAMLINE BODY.

PIERCE-ARROW MODELS.

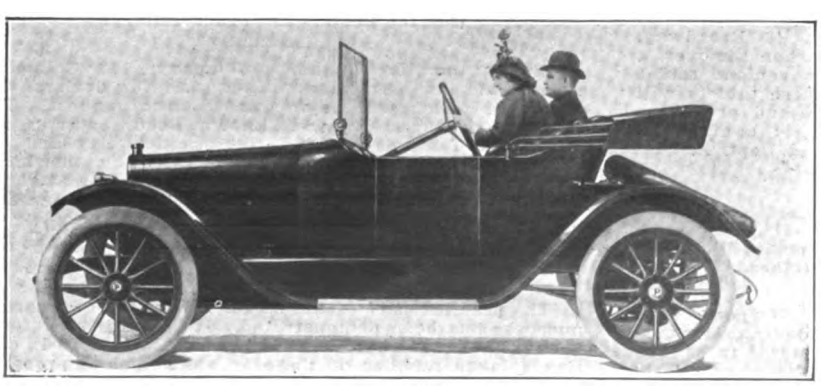
Series Three Cars Are Radically Different in Appearance.

The 1915 product of the Pierce-Arrow Motor Car Company, Buffalo, N. Y., is known as the Series Three cars, which will sell at the same prices as the former Series Two. The new line is built in three sizes. The price of the 66-horsepower chassis, known as the 66 A-3, will be $5850 for the two-passenger runabout and the four-passenger touring car; $6000 for seven-passenger touring car; $7100 for suburban and landau; $7300 for vestibule suburban and vestibule landau; $6800 for the brougham and landaulet; $7000 for the vestibule brougham and the vestibule landaulet. The 48-horsepower model will be designated as the 48 B-3, and the price of the two-passenger roadster and four-passenger touring car will be $4850, and all other prices for the various types of the 48 will be exactly $1000 less than the 66, as quoted above. The last model, the 38-horsepower, will be called the 38 C-3, and the touring, torpedo and roadster will cost $4300; the coupe $5000, limousine $5300, landaulet $5400 and the Berline limousine $5500.



One of the New Types of Enclosed Bodies, Having Simple Lines.

In general appearance the new series differ radically from the former models. Without reducing the road clearance it has been found possible to lower the bodies and running boards of all models by increasing the drop of the central portion of the frame. This change has made it necessary to abandon the gravity fuel feed to the engine and to substitute a pressure feed with the gasoline tank at rear of chassis. This has made it possible to place the carburetor higher, thereby increasing its accessibility. All three engines are six-cylinder, four-cycle, water-cooled units. The bore and stroke of the motors are as follows 66 A-3, five-inch bore, seven-inch stroke; 48 B-3, 4½-inch bore, 5½-inch stroke; 38 C-3, four-inch bore, 5½-inch stroke.



The Partin-Palmer "20", Showing the Streamline Body.

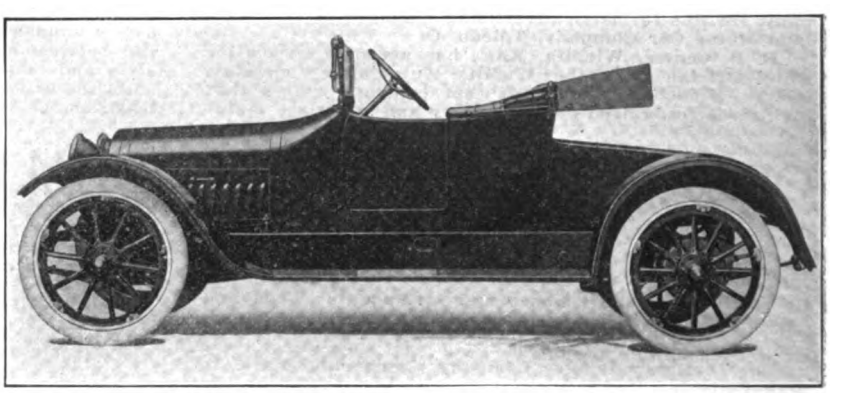
REGAL CUTS PRICE.

Underslung Type of Construction Is Abandoned in 1915 Designs.

For 1915 the Regal Motor Car Company, Detroit, Mich., will adopt a single-chassis model, which supersedes models T and C of last season. This new model eliminates the underslung effect, and the price of the touring car or roadster will be $1085 with complete appointments, as against $1125 for last season's underslung model and $1350 for the overhung type.

The new type, which is designated as model D when fitted with a touring body, and as model R as a roadster, has the conventional suspension, with frame over axles, as had the model C cars of last year. The touring car, with a five-passenger body, has a sloping cowl and hood, domed fenders and wide doors, and streamline effect, with long, graceful body curves, is shown.

The motor is block cast, with detachable cylinder head. The valves are on the left side in conventional L head form, and the manifolds are of simple construction. The bore of 3¾ inches is the same as last year's model, but the stroke has been increased from four to five inches, and the motor weighs 151 pounds less. The lubrication system is force feed and splash. The ignition is by the Atwater Kent system, automatic advance, which does away with a spark lever.



Regal Two-Passenger Roadster, Noticeable for Many Refinements.

One of the unique refinements is the removal of the radiator filler cap from the outside of the radiator.

PARTIN-PALMER 20.

Latest Light Car Is Equipped with Electric Lighting System.

The Partin-Palmer Manufacturing Company, Chicago, Ill., is presenting the Partin-Palmer 20, which is designed to sell at $495. The features of this car include a streamline body, full equipment, with the Gray & Davis electric lighting system, standard tread and 96-inch wheelbase, Atwater Kent ignition, irreversible steering gear, rear axle gearset, full floating rear axle, three-quarter elliptic rear springs, and sliding gear transmission.

An L head, block cast, four-cylinder motor with bore of 2¾ inches and a stroke of four inches, with a single casting combining the intake and exhaust manifolds, is mounted on a three-point suspension. The machine has a honeycomb radiator, provided with a water tank at the top, because of the thermo-syphon water circulation. The valves are on the left side, and their stems are fully enclosed. Lubrication is by splash in connection with a mechanical plunger pump.

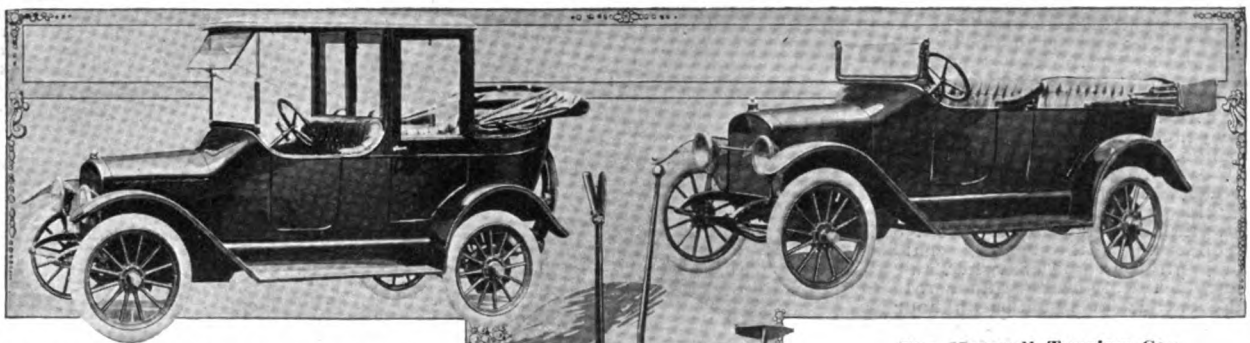
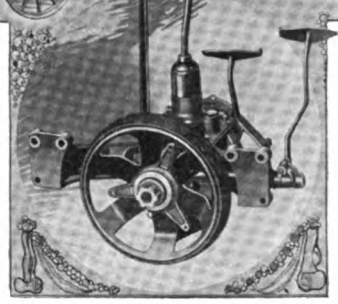
MAXWELL PRICE REDUCED.

Many New Refinements Added and Streamline Body Adopted.

Entering its second year with a streamline body and many additional refinements, the Maxwell 25, made by the Maxwell Motor Company, Detroit, Mich., has kept



Three-Quarter View of the Town Car.



Details of Centre Control.

The Maxwell Touring Car.

pace with the general trend of automobile construction. Likewise the price of the 1915 Maxwell has been reduced $50 on all types, the touring car now being $695, the roadster $670, the town car $920, and the cabriolet $840. These prices include the Prest-O-Lite gas tank for headlights. Gray & Davis two-unit cranking and lighting system and storage battery are made optional and cost, for any of the cars, $55 extra. Consequently, when completely equipped electrically, any of the body models cost exactly the same as they did last year without the electrical features.

Mechanically the chassis is the same as the 1914 model, although several refinements are added, including the replacing of the semi-elliptic rear springs, which connected the spring horns at their rear ends.

1915 HUDSON LIGHT SIX.

With 31 Additional Refinements Price of Car is Cut.

The Hudson Motor Car Company, Detroit, Mich., announces the 1915 light Hudson Six-40, price $1550, a reduction of $200. There are 31 additional refinements em-

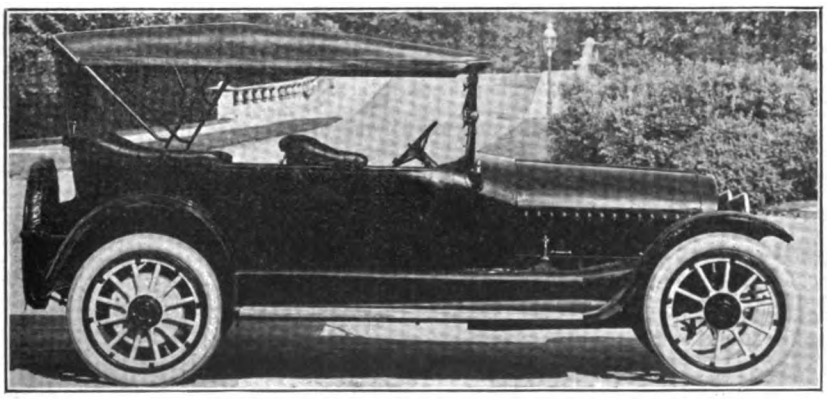
bodied in the new model. The Hudson-Delco electric starting and lighting system has been simplified, the wiring is run in rust proof tubes, the headlights are furnished with dimmers for city work, and the side lights are eliminated entirely. The extra tire is carried on the left side, forward, and is clear of the fore door, giving access to either side of the car; the gasoline tank is in the cowl dash; the streamline body has flush sides and concealed hinges, and there are no angles at the dash. The wheelbase is 123 inches and the tires are 34x4 inches.

The motor, six cylinders, is cast en bloc, and has a bore of 3½ inches and a stroke of five inches. The new Six-40 is supplied with phaeton, coupe, limousine, roadster or convertible roadster bodies, and the larger type, known as Six-54, is built with phaeton or limousine body.

MARMON CONTINUES LINE.

Little Six Is First Car to Adopt Complete Bosch Output.

The sheet steel body of the 1915 Marmon Six has a streamline effect with sloping hood, crowned fenders and rounded radiator. This car, made by the Nordyke & Marmon Company, Indianapolis, Ind., carries a full Bosch outfit, magneto, starter and generator, all in separate



Model 41 Marmon Six, with Streamline Body.

units, and in addition all the switches, wiring, lamps, bulbs, etc., have been bought from the same concern. In previous models the Marmon starter installation was by means of a chain drive contained in a separate housing in the rear of the motor.

The car has a six-cylinder L head motor, the cylinders cast three en bloc, and has a bore of 4¼ inches and a stroke of 5½ inches. The gasoline tank is of seamless steel having 25 gallons capacity. Price of seven-passenger is $3850, and of the other models, $3250.

OAKLAND SIX COSTS LESS.

One Chassis Model Discontinued, and Price of Larger Cut.

The 1915 announcement of the Oakland Motor Car Company, Pontiac, Mich., shows that it has cut its line down to two chassis models, a four and a six, discontinuing the larger four, and has reduced the price of the six to $1685, a decrease of $100. The price of the four remains unchanged, $1200.

The six remains practically unchanged, but the four is a much-altered continuation of the 1914 small four. Both machines carry full equipment, which includes the Delco electric lighting and starting system, top with cover and curtains, rain-vision ventilating windshield, electric horn, tools, jack and pump. The motor, a Northway, four or six cylinders, is an L head, cast en bloc, with a bore of 3½ inches and a stroke of five inches. The L head cylinders have a detachable one-piece head, and the valves, of a tungsten alloy, are completely enclosed in the usual way. The timing gears are spirally cut.

A change has been made in the gasoline feed system, the vacuum system being used this year to carry the fuel from low-down rearward gasoline tank to carburetor, instead of last season's pressure system. What amounts to a complete redesigning has brought about considerable improvement in the smaller model, not only in appearance, but also in its running capabilities. While retaining its original dimensions, the motor of the four has a marked increase of speed and power, so that the engine now belongs to the high-speed class, running up to 2500 or 2600 revolutions a minute. The lightening of the reciprocating parts, the increasing of the valve diameters and the redesigning and freeing of the gas passages are chief among the improvements noted.

Digitized by Google

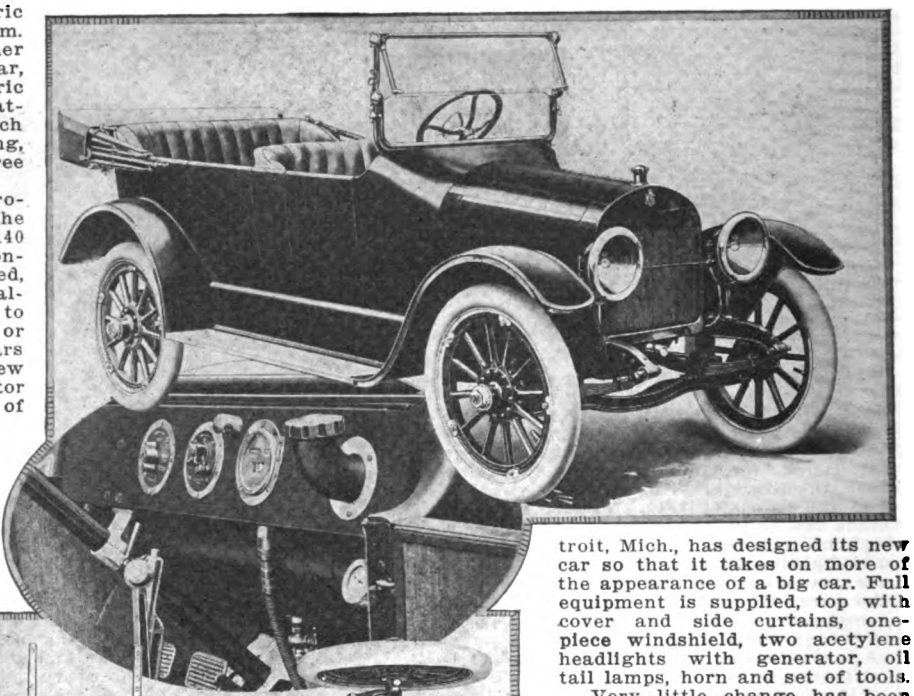
KING SHADES PRICE.

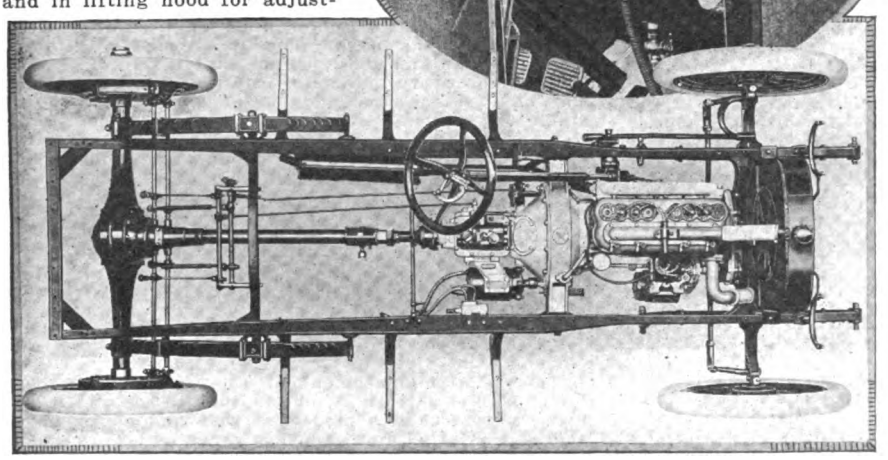
Decrease of $20 Is Made on the Car as Compared with 1914.

Numerous refinements have been made to the 1915 King, model C, made by the King Motor Car Company, Detroit, Mich. The price of the touring car and the roadster is $1075, with an additional cost of $90 for the Ward Leonard electric starting and generating system. This compares with $1095 for either the touring or roadster last year, and $100 extra for the electric equipment. The motor of the latest King, together with the clutch and transmission, is in one housing, suspended from the frame at three points.

A more powerful motor is provided which is designed to turn the engine over up to a rate of 140 revolutions a minute. A patent controller keeps the battery charged, prevents too rapid charging, and allows a full 10 ampere-hour rate to the battery at 10 miles an hour or over. One set of reduction gears has been eliminated through a new arrangement of the electric motor in connection with the flywheel of the engine.

A perfect streamline body effect is secured through the placing of the 12-gallon gasoline tank in the cowl. This allows the carburetor to be placed high on the intake manifold, with a view to insuring greater efficiency in its action, and in lifting hood for adjustment, or repair, the carburetor is in full sight. The motor, four cylinders, is cast en bloc, and has bore of 3 15/16 inches and a stroke of five inches.





Upper Illustration Is a Three-Quarter View of King Car; Centre Insert Shows the Instrument Board, and Lower Is a Top Plan View of Stripped Chassis.

1915 SAXON CHANGES.

Price Is Not Increased and Many Refinements Have Been Added.

The price of the new Saxon model remains at $395, despite the many improvements and refinements that have been added. The Saxon Motor Car Company, De-troit, Mich., has designed its new car so that it takes on more of the appearance of a big car. Full equipment is supplied, top with cover and side curtains, one-piece windshield, two acetylene headlights with generator, oil tail lamps, horn and set of tools.

Very little change has been made in the motor, which is a Continental, four-cylinder L head type, cast en bloc, with a bore of 2⅝ inches and a stroke of four inches. The crankshaft runs on two babbitt lined bronze bearings; the camshaft, which has integral cams, is one inch in diameter and is operated by helical timing gears. The valves have steel stems and cast iron heads.

Lubrication is effected by vacuum feed, which maintains a constant level. The Atwater Kent ignition system takes current from a six-cell dry battery. Cooling is by thermo-syphon with tubular radiator and fan. The Mayer carburetor has its air and gasoline adjustments on the dash board and fuel is fed to it by gravity from a six-gallon tank under the cowl; the filler cap projects through the top of the cowl. The propeller shaft runs in a steel torque and has a single universal joint, and the steering gear is bevel with sector and pinion constructed of improved material.

NEW METZ FEATURES.

Latest Model Has Streamline Semi-Enclosed Body Design.

The 1915 model of the Metz "22", built by the Metz Company, Waltham, Mass., has a streamline body with a sloping bonnet and cowl dash, the gasoline tank being carried under the cowl. The price of the car, complete, is $495. The body design of the 1915 Metz is semi-enclosed, and is a modification of the fore door type. It is claimed for this arrangement that protection is furnished the passengers and at the same time the trouble of opening and closing the doors is eliminated.

The motor is a water-cooled, four-cylinder, L head, block cast type, rated at 22½ horsepower, the cylinders having 3¾-inch bore and four-inch stroke. The upper section of the crank case is cast with the cylinder block, and the cylinder heads are detachable. An automatic float feed carburetor, high-tension magneto ignition and a mechanical feed constant level lubricating system are included in the power plant. It has the friction type of transmission, which affords any number of speeds.

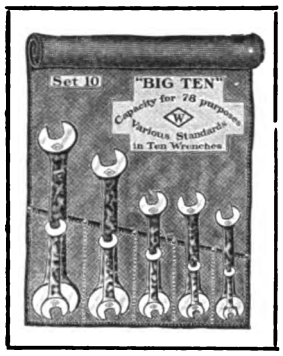
NEW MACHINERY AND TOOLS.

THE Williams "Big Ten" set, shown in the illustration, is the product of J. H. Williams & Co., Brooklyn, N. Y. It has a capacity for 78 sizes of most prominent nut, screw and set screw sizes in United States and other standard millings, and was designed to provide the maximum of service in the machine shop, etc. It is particularly adaptable to the garage and repair shop, as the wrenches fit A. L. A. M. and S. A. E. standard nuts and cap screws. The milled openings vary from .3125 inch to 1.4375 inches. The wrenches are constructed of the best material, and the roll shown comes at slightly extra cost.



"Big Ten" Wrench Set.

ARMSTRONG RATCHET DRILL.

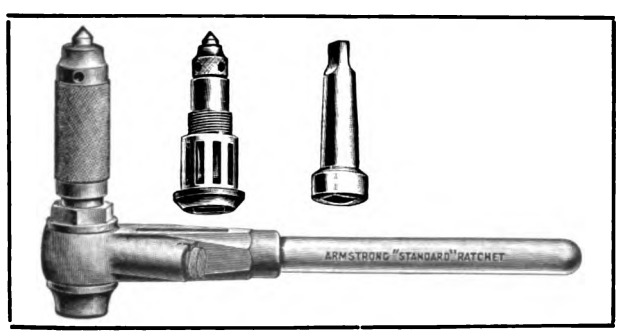
The Armstrong Bros. Tool Company, 357 North Francisco avenue, Chicago, Ill., is marketing a line of ratchet drills, one of which, the Standard combination, is shown in an accompanying illustration. The tool is designed for general service and for drilling or countersinking holes in material not easily accessible with ordinary tools.

The combination includes a sleeve ratchet for Morse taper shank drills, a square taper socket to fit the same and a short spindle with feed screw by which the ratchet can be converted to use square taper shank drills.

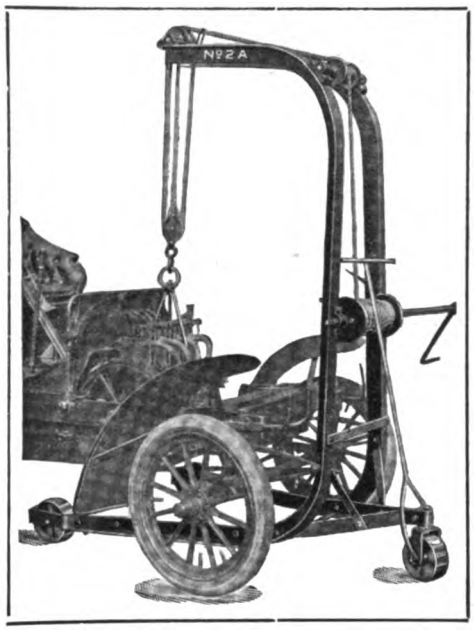
A quality of the Armstrong ratchets is that all parts are hardened. The Standard ratchet combination is made in five styles. The lengths are from nine to 22 inches. The company issues a complete catalogue, giving details and prices of its product, which will be supplied free upon request.

HERCULES PORTABLE CRANE.

William Shelton Nicholls, Hoosick Falls, N. Y., is manufacturing the Hercules portable crane hoist shown in the accompanying illustration and it is designed for service in the factory, garage and repair shop. It may be utilized in repairing and for a number of other purposes, saving time and labor. A feature of the Hercules is that it is constructed of steel throughout and has solid frame pieces, top to bottom. The base or bed is low, permitting of its use from all sides of the automobile. As will be noted by the illustration, an extra length overhang brings the centre of lift or hoist directly over the motor. The wheels have a wide face and are mounted on roller bearings of ample size. An extension piece for the crank handles, extending these out beyond the mud guards, is standard equipment. The Hercules is made in 1000, 2000 and 3000 pounds capacity and is moved easily about the building. The height overall is eight feet and the hoist has a capacity of six feet, 10 inches, sufficient to meet varied requirements.



Armstrong Standard Combination Ratchet Drill.



Hercules Portable Crane, Having Extra Length Over-hang and Extension for Handles.

WIZARD AUTOMOBILE WASHER.

A device which insures effective cleaning of the surface of the automobile and saves time in the work without requiring hardly any attention from the operator, is in the Wizard washer, made by the Century Foundry Company, Inc., 1624 North Salina street, Syracuse, N. Y. Wizard washers are simple, but are ruggedly constructed and consist of a nozzle which contains a turbine motor, one conical and one straight-sided brush and a 12-inch extension for reaching beneath the car. The rotating brush which is driven by and flooded with water, serves to thoroughly cleanse the car, without marring the finish. Each outfit is guaranteed to give absolute satisfaction.

The Nicholson File Company, Providence, R. I., well known to the automobile industry as maker of high-grade files, has compiled a book entitled "File Filosophy". It contains a wealth of information on the care, maintenance and use of files for motor car work. It is free for asking.

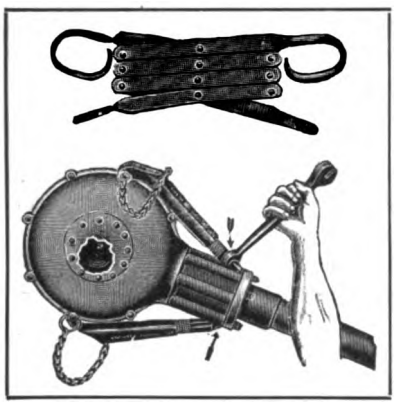
FORD HOUSING PULLER.

The Universal Manufacturing Company, Racine, Wis., is marketing a practical tool for garages and repair shops handling Ford cars. As may be noted in the accompanying illustration, the tool is designed to remove the propeller shaft housing from the differential. One of the qualities of the tool is that the housing can be removed without injuring its flanges. It is also stated that the device saves considerable time over the usual method of driving with a hammer. The Universal Ford housing puller is sold in sets of two and for a moderate price.



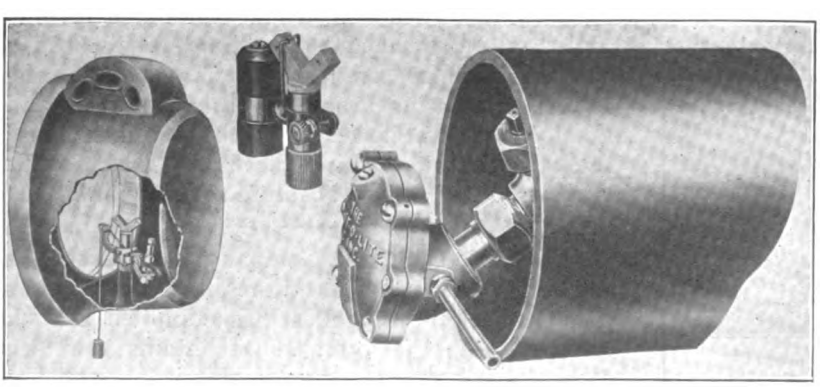
Universal Ford Housing Puller and Pliers.

The company also markets extension pliers for reaching and removing nuts, bolts, etc., from places not easily accessible by the hands or with ordinary tools. With the Universal pliers the workman can reach into the pan, transmission, etc. The pliers can be extended 21 inches, and when folded as shown in the illustration is seven inches long and about three inches wide. The maker states that this tool will save its cost in a brief period of service. It is also practical for the motorist who maintains his own car.

NEW PREST-O-LITE VALVE.

The Prest-O-Lite Company, Inc., Indianapolis, Ind., is now producing an automatic reducing valve for use with its motorcycle Prest-O-Lite gas tank. The construction is similar to that of the larger tanks in that there is automatic control of the gas pressure, which is maintained at two ounces even when nearly empty. The flame may be increased or diminished as desired.

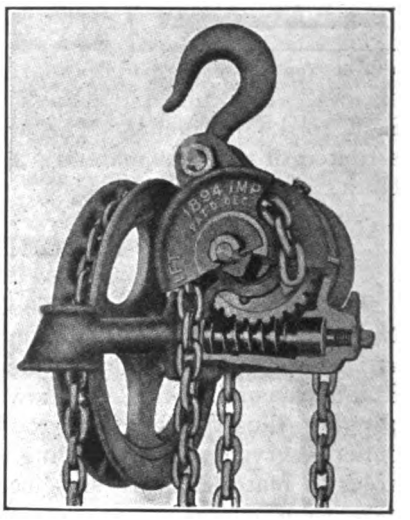
The maker states that the control makes for convenience, especially when the gas is ignited by an electric spark, as the rider can light the headlamp without dismounting. The company is marketing an insulating attachment for burners so that the rider may utilize the current from the magneto or a spark plug for igniting the gas. A friction lighter, shown in the accompanying illustration, which may also be fitted to a lamp, is being marketed. By pulling a pendant a spark is created at the lamp burner outlet.



Prest-O-Lite Automatic Reducing Valve for Motorcycle Gas Tanks, Maintaining Correct Pressure, and Friction Lighter.

HARRINGTON SCREW HOIST.

Hand operated chain hoists, because of the ease of operation and general utility, are standard equipment in large repair shops and service stations. Edwin Harrington, Son & Co., Inc., 17th and Callowhill streets, Philadelphia, manufactures a wide variety of chain hoists one of which, the improved screw hoist, is shown in an accompanying illustration.



Harrington Improved Screw Hoist.

It is designed to withstand severe service, and each component is subjected to rigid inspection before assembly. Each link of the chain is carefully tested. The maker states that it has been adopted by the United States government and is in use in a large number of industrial plants.

Features of Design.

The worm gear, formerly of iron, is now made of bronze with square hubs, and is driven by a steel worm. The load wheels have square holes fitting squared hubs on the worm gear instead of clutches, increasing the strength and avoiding the liability of breaking. They are also reversible.

The load is carried on two distinct chains, either of which is capable of lifting a load up to full rated capacity of hoist, thereby reducing opportunity of accident to minimum. A new hand chain guard is so placed that the operator can stand clear of load without wasting time in dragging the chain in the guard. The hoists are made in capacities ranging from 500 to 30,000 pounds, and having lifts of from eight to 12 feet, respectively. The company issues a most complete illustrated catalogue on its product, which will be mailed free upon request.

NEW AND ATTRACTIVE LINES.

COXAJUSTO ABSORBERS.

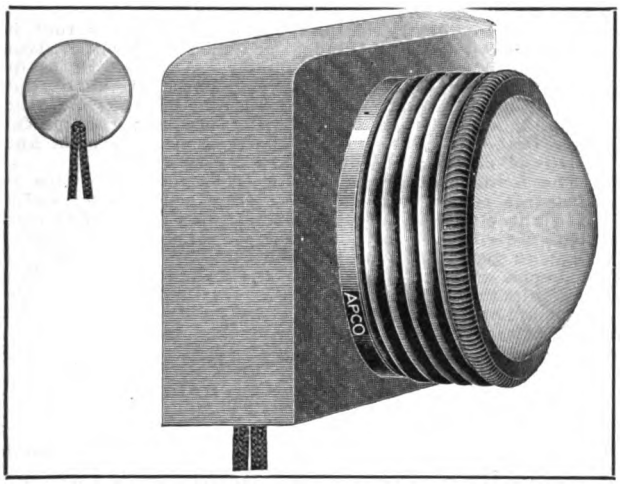
Are Adjustable to Any Load, Have Tapered Helical Spring and Are Easy to Attach.

The Cox Brass Manufacturing Company, Albany, N. Y., is marketing the Coxadjusto shock absorbers, which the maker states is the only spring type made, having an adjustment feature. The Coxadjusto absorbers are strong and durable, and have a tapered helical spring, made of the best imported Swedish steel. Other parts are of manganese bronze. One of the qualities of the Coxadjusto absorbers is that they are easy to attach. The company will mail free a folder describing their merits and application.

APCO LIGHTING OUTFIT.

Auto Parts Company Marketing Practical, Inexpensive Battery Lighting Equipment.

The Auto Parts Company, Providence, R. I., whose trade name "Apco" is well known, is manufacturing a battery lighting outfit which will appeal to owners of Ford cars using electric headlights. When the magneto current is used for the headlights this source of supply is not available when the motor is inoperative. This compels lighting the oil side lamps. The Apco battery lighting outfit consists of two lamps, one of which is shown in an accompanying illustration. They are operated in multiple with two dry cells and the maker states that the batteries will give 24 hours continuous service, sufficient to meet ordinary requirements. The lamps are neat and compact, and are easily installed by boring two small holes in the dash. They are practically of the flush type and, with the elimination of the usual oil lamps, add to the appearance of the car. The lamps come with red, green or frosted lenses, and the outfit includes two nickel plated members, two bulbs, switch and wire. They retail for $2.



Apco Battery Lighting Equipment, Comprising Two Dash Lamps, Bulbs, Wiring and Switch.

ELY SHOCK ABSORBER.

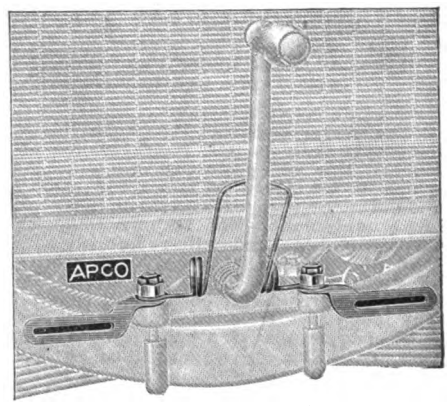
Specially Designed for Ford Cars, Is Easily Fitted and Guaranteed for One Year.

The Donnelly Motor Equipment Company, 1785 Broadway, New York City, is marketing the Ely shock absorbers for the model T Ford car and the design is held to be highly efficient and durable. They come in sets of two and four, retail for $7 and $12.50 respectively, and are guaranteed for one year. Dealers are invited to write for the particulars of a special proposition and discounts.

APCO CRANK HOLDER.

Auto Parts Brings Out Automatic Starting Crank Holder for Model T Ford Cars.

Among the new specialties for the model T Ford car is an automatic starting crank holder. The Auto Parts Company Providence, R. I., manufacturer of Apco specialties, has been experimenting for some time with holders for the starting handle of the Ford machine, and has perfected one that it is claimed does not interfere with the spinning of the handle, holds the crank out of the mud and prevents rattling. As may be noted from the accompanying illustration, the Apco design is made of a one-piece spring and, being positive in action, increases its efficiency. It is easily attached by removing the two nuts from the spring clips and fitting as shown in the illustration. After the motor is started the crank is lifted as shown, remaining in place. The Apco starting crank holder retails for 25 cents. The number plate holder shown can be used in combination with the starting crank device and retails for 25 cents.



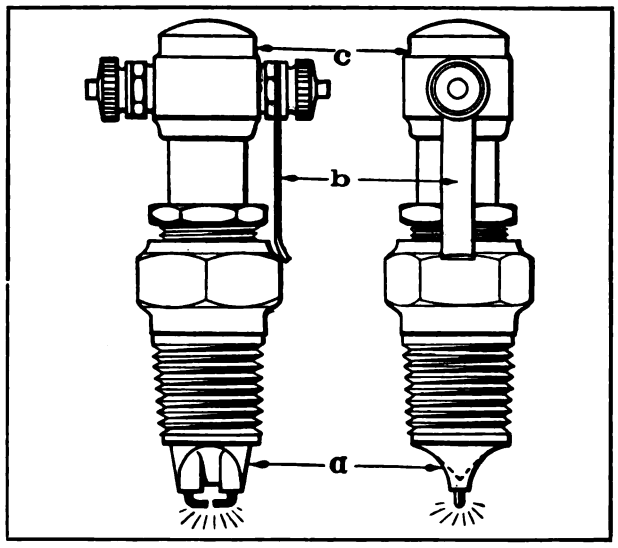
New Apco Automatic Starting Crank Holder.

DOUBLE IGNITION PLUG.

Provides Two Synchronized Sparks, and Electrodes and Points Are a Unit Construction.

The Power & Efficiency Company, 137 East State street, Trenton, N. J., is introducing the Double Ignition spark plug. One of its features is the nose or point A, which extends into the chamber of the cylinder. The insulation is shaped to form a double V, having concave sides, while the smaller V located in the centre terminates in a sharp point just above the spark gap. It is claimed that this construction is non-carbonizing, etc., as foreign elements are thrown off by contacting with the concave sides. It is also stated that each explosion of the mixture cleans the points.

The insulation is carried to a point very near the gap to prevent short circuits. The new plug is a two-pole type, the current entering by one side or terminal, and after bridging the gap passes out on the opposite side to ground. When a two-point ignition is desired the design is wired to a single plug. The top cap C is constructed of a special insulating material that is maintained to be heat and weather proof. The electrodes and sparking points are a unit and are of a high-grade imported meteor wire. The porcelain is fully guaranteed. The plugs will be sold for $1 each for a limited time. Trade prices will be supplied on request.



Double Ignition Spark Plug.

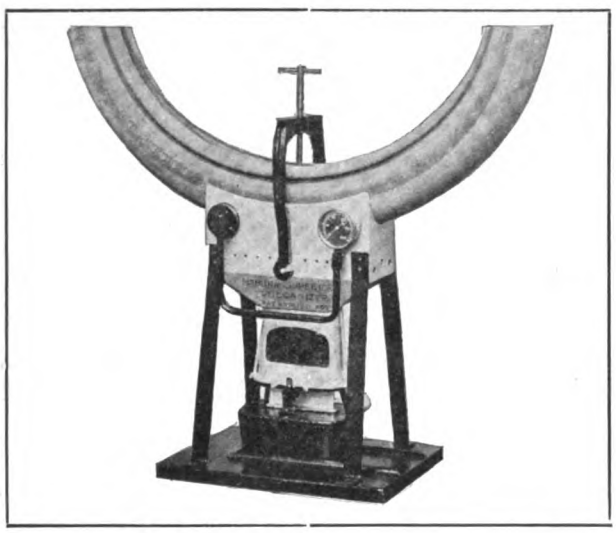
NEW GARAGE EQUIPMENT.

MABURN STEAM VULCANIZER.

Will Repair Tires Under Four Inches, Including Motorcycle Types, and Is Moderately Priced.

The Mapes & Burns Manufacturing Company, 19 Fulton avenue, Rochester, N. Y., maker of the well known Maburn line of specialties, announces a new vulcanizer which is especially adapted for the garage and repair shop, the owners of which do not care to invest in a large equipment. The Maburn Superior vulcanizer is of the steam type and will repair all kinds of tires under four inches, also motorcycle tires. It is adaptable to all vulcanizing from a stone bruise to a blow-out nine inches long, and can be used to repair tubes as well. As may be noted from the accompanying illustration, the vulcanizer is neat and compact. It is 24 inches over all, and provides a heating surface 10 inches long and six in diameter, ample for all kinds of work. The main casting is a combined steam boiler with a neat, reliable steam gauge and a vulcanizing mold. The side edges of the mold are so shaped as to permit repairs to be made easily to the bead.

Heat for making steam is supplied by a removable one-burner kerosene stove which is fitted into the bottom of the main casting, resting on the base of the machine. With this source of heat an even steam pressure is assured, as the size of the flame can be controlled. No air bags, etc., are utilized, there being substituted a bag of specially treated granulated silicon. This substance, when heated, radiates the heat evenly, forcing it downward, and cures efficiently. The Maburn bag is so constructed that, when pressure is applied by the screw clamp, it is evenly distributed. Light or heavy pressure is, therefore, obtainable. Each machine comes equipped with a clamp, pressure plate, two bags, a box of soapstone, one-half pint cement, one-half pound raw rubber, one 10-inch blow-out patch and one-quarter pound semi-cured rubber. Extra parts and raw material can be supplied. The price complete is $15. The maker invites correspondence from the trade on this vulcanizer, as well as the complete line.



Maburn Superior Steam Vulcanizer, an Efficient, Moderately Priced Equipment Capable of a Wide Variety of Work.

MOSSBERG WRENCHES.

Wide Variety of These and Other Tools Especially Adapted for Work on the Model T Ford Car.

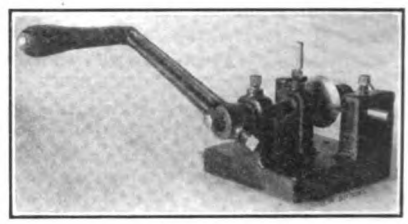
Those who have overhauled the model T Ford car, realize that considerable time and trouble can be saved by using tools adapted to the work. The Frank Mossberg Co., Attleboro, Mass., is manufacturing a line of wrenches which meet the requirements of tool efficiency. These fit instantly and exactly, saving time and parts, are made to endure service and the sockets are of the heaviest pressed steel, thoroughly hardened.

The Ford socket wrench set No. 17 is particularly useful in the tool box or on the shop bench. The Mossberg socket wrench set No. 15 A is ideal for garage or shop uses, and is a full utility kit. It will positively fit all adjustments on all Ford automobiles. Other specialties include the Ford valve grinders, cylinder head and housing wrenches. The catalogue issued is free for the asking.

BROOKS VALVE TOOLS.

Are of the Adjustable Type, Have Several Blades and Pilot Stems, and Are Time Savers.

Dealers looking for a desirable line, one that will appeal strongly to the garageman and repairman, will do well to investigate the merits of the Economic adjustable valve seating and refacing tools produced by the J. W. Brooks Manufacturing Company, Stamford, Conn. A practical valve reseating and facing tool is a necessity in the garage and repair shop and must be adapted to various types and sizes or motors.



Economic Valve Refacer.

One of the desirable qualities of the Brooks tool is that the four sets of blades provided will cut valves from 1⅛ to 2⅜ inches in diameter. Any size of blade will be furnished to specification. There are also four sizes of pilot stems. The Brooks tool can be operated by hand, a bit brace or a drill press, and the maker states that the blades can be changed in 30 seconds and sharpened perfectly. This makes for economy.

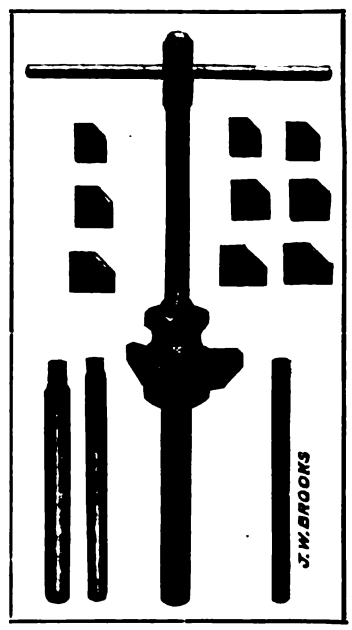
The Economic valve refacing tool shown herewith is adjustable to any size of valve stem and to any valve up to three inches in diameter. It has a double-ended cutter for either 45 or 60-degree valves. Valves refaced will come perfectly true and the tool can be retained by the bench vise or screwed to the bench or wall. The Economic tools are made of the best material and the workmanship is high grade. Descriptive matter and trade prices will be supplied upon request.

CANTON CRANES AND HOISTS.

Are of the Portable Type, Enabling One Man to Perform the Work of Several.

A portable floor crane and hoist is indispensible in the repair shop and garage, as with it one man can perform work usually requiring from three to six men. It enables a workman to remove a motor, transmission, etc., from the chassis, to remove bodies and to perform a wide variety of repairs.

The Canton Foundry & Machine Company, Canton, O., specializes in portable floor cranes and hoists, and produces a variety to meet the varying requirements of different shops. The Canton is built to endure, as the base casting, projecting arms and gears are of a mixture of the best cast iron and steel, a tough and strong combination. The housings are reinforced with a heavy wrought iron band, and the chain is guaranteed to be hand forged from the best of material. The hook, block, axle forks and yoke are all drop forgings. The wheels are tested roller bearings. The base is well reinforced. The Canton Foundry & Machine Company issues free a catalogue giving detailed information of its products.



Economic Valve Reseating Tools.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired.. All correspondence will be treated as confidential. No charge will be made for the service rendered.

GASOLINE PLEASURE CAR AGENCIES.

3010—Maryland Dealer wishes to secure an agency for pleasure cars selling from $350 to $400.

3013—California House is in the market to represent a line of pleasure cars selling from $500 up.

ELECTRIC PLEASURE CAR AGENCIES.

514—California House is in the market to secure the agency for electric pleasure cars selling from $1000 up.

COMMERCIAL CAR AGENCIES.

6124—California Firm wishes to hear from a line of reliable electric trucks ranging in price from $1000 up; also gasoline commercial vehicles selling from $500 up.

CYCLECAR AGENCIES.

1785—North Carolina Dealer wants information relative to cyclecars selling from $350 to $450.

1788—Montana House wants to hear from cyclecar manufacturers whose product sells from $300 to $500.

MOTORCYCLE AGENCIES.

112—North Carolina House is desirous of securing the agency for motorcycles selling from $150 to $350.

ACCESSORIES, EQUIPMENT AND SUPPLIES.

491—Washington Dealer wants to acquire about $250 worth of Ford car parts. He is also interested in cylinder machines, platinum, carbon removers and shock absorbers. The goods are to be used for resale.

492—Nebraska House wants air pumps, autogenous welding equipment, belts, carburetors, coils, graphite, hoists, ignition, jacks, lathes, magnetos, reflectors and wrenches.

496—Massachusetts Dealer is in the market for air pumps, emblems, hoists, polishes, carbon removers, shims, soaps, steps, storage systems, strainers, tools, vises, vulcanizers and wrenches. The above products to be used in a garage and service station.

499—Iowa Concern wants information relative to air compressors, air pumps, anvils, batteries, bolts, cans, charging apparatus, drills, polishes, pumps, ratchet drills, tanks, tire accessories, tires, tools, vises and wrenches.

503—Maryland House is in the market for air pumps, asbestos, autogenous welding equipment, batteries, bearings, belts, bodies, bumpers, carbide, clips, dimmers, drills, engines, fire extinguishers, frames, gasoline, gears, graphite, headlights, horns, ignition, lamps, lathes, machinery, magnetos, mechanical starters, motors, pulleys, radiators, ratchet drills, reamers, shafting, springs, starters, steel, steering wheels, tire accessories, tires, tops and parts, tubing, vulcanizers, waste and windshields.

506—Illinois Company is anxious to secure air compressors, air pumps, anti-rattlers, batteries, belts, bodies, bolts, brushes, bulbs, bumpers, burners, cable, cans, carbide, carburetors, cases, celluloid, cements, chains, charging apparatus, chemical tanks, cloth, coils, commutators, connectors, controllers, cups, curtains, dimmers, doors, dynamometers, dynamos, fenders, gasoline, gauges, generators, glass, goggles, headlights, heaters, horns, hose, hydrometers, ignition, indicators, jacks, lamps, leather, locks, magnetos, maps, mechanical starters, meters (measuring instruments), motor controllers, motors, nuts, paints, patches, plugs, polishes, primers, pumps, purifiers, rectifiers, reflectors, regulators, carbon removers, rheostats, rubber, screws, seats, shock absorbers, solder, speedometers, springs, starters, steering wheels, storage systems, switches, terminals, testers, timers, tire accessories, tires, tools, tops and parts, vises, voltmeters, vulcanizers, waste, whistles and wrenches.

508—Michigan Dealer wants information pertaining to air compressors, batteries, bearings, bulbs, connectors, dimmers, gaskets, gauges, generators, goggles, headlights, horns, jacks, lamps, mechanical starters, plugs, searchlights, shock absorbers, starters, testers, tire accessories, tools, trunks, turntables and wheels. The above goods are to be used for general supply and garage equipment.

511—North Carolina Company is interested in air compressors, anti-rattlers, asbestos, axles, batteries, bodies, bolts, bumpers, cable, camshafts, carburetors, cements, chains, charging apparatus, clutches, coils, commutators, cranes, cylinder machines, cylinders, dimmers, discs, drills, drums, dynamos, elevators, engines, forgings, frames, gaskets, gauges, gear cutting machines, generators, gears, glass, grinders, headlights, hoists, horns, bulbs, ignition, jigs, lamps, lathes, machinery, magnetos, mechanical starters, packing, paints, patches, pinions, pins, pistons, platinum, plugs, purifiers, races, radiators, ratchet drills, reamers, carbon removers, rims, rods, rubber, scrapers, searchlights, seats, shafting, shapers, shims, shock absorbers, speedometers, springs, starters, steel, steering wheels, storage systems, timers, tire accessories, tools, tops and parts, transmissions, valves, vulcanizers, wheels, windshields and wrenches. The goods are to be used in a garage equipment and for stock.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

No. 13,392. Motors for Automobiles—A report from an American consul states that an automobile manufacturer who says that he is in a position to furnish the best references desires to obtain offers from American manufacturers of light motors for automobiles. Correspondence should be in English.

No. 13,487. Automobile Tires, Cushions and Accessories—An American consul reports that the largest firm of automobile dealers in his district desires to receive catalogue and price lists, in Spanish or French, from makers of automobile tires, cushions, curtains and accessories.

No. 13,394. Cyclecars—An American consul believes it is possible to introduce the new cyclecars into his consular district and desires catalogues, price lists and the necessary literature to study this machine. It is unknown at present. Communications should also be sent to a local business man, who desires to take the agency for the machine if, after having seen the catalogues, he believes he can sell the car.

No. 13,475. Motor Omnibuses—A company is experimenting a Canadian city with a motor omnibus service for the suburban districts and will put three 'busses in service in the near future. An American consul writes that if this experiment proves successful other motor omnibuses will be ordered for suburban districts and for parts of a city not well supplied by the present electric car lines. The name of the company referred to accompanied the report.

No. 13,483. Motor Cars and Trucks—A business man in Russia informs an American consulate that he desires to obtain an agency for American motor cars of the cheaper class, listed at $1000 to $2000, also motor trucks. He requests that catalogues with prices, discounts, shipping weights and measurements, and freight rates from American seaboard to Vladivostok be sent to him. Correspondence should be in Russian, if possible, but German is preferable to English.

No. 13,418. Motorcycles—A report from an American consular officer states that an officer in a European country is in the market for a high-grade motorcycle of American manufacture. Catalogues and printed matter, in German or French, should be forwarded directly to the officer in question. It is intended to use the machine in motorcycle contests, so that the prospects for additional sales would seem to be promising.

SPEDOLENE.

Gear Lubricant for Pleasure and Commercial Cars Not Affected by Heat or Cold.

Spedolene, manufactured by the Continental Asbestos Corporation, Worcester, Mass., is the invention of Alexander Warrell, originator of asbestos lubricants. It is a high-grade and efficient lubricant for transmissions, differentials, timing gears, universal joints, bearings, etc., and embodies in lubricant form the heat, cold and friction resisting properties of asbestos; in fact, Spedolene is asbestos rendered into a semi-liquid condition.

It is stated that Spedolene is permanent in its lubricating qualities, that it will not thin or congeal, and is especially adaptable to worn and noisy gears, obtaining quiet operation. One of the qualities of the lubricant emphasized is that it will not pack away. It completely covers the parts subject to friction. Spedolene is unaffected by climatic changes, and is impregnable to heat, cold, water or steam. It will not gum and contains no acid or other ingredients injurious to the finest metal. It comes in an original package, in five, 10, 25 and 50-pound cans. Prices, etc., will be supplied upon request.

LEAK-PROOF PISTON RINGS.

McQuay-Norris Manufacturing Company Producing a Variety of Sizes to Meet Requirements.

Garagemen and repairmen, whose customers complain of a lack of compression in their motors or oil working past the rings, will be interested to learn that these and other troubles can be cured by the use of the Leak-Proof piston rings, made by the McQuay-Norris Manufacturing Company, St. Louis, Mo. The construction of these rings is such that the gas cannot escape from the combustion chamber, and they are especially adaptable to worn motors. The company issues a booklet on the subject of piston rings, motors, etc., and the data are of value both to the novice and experienced repairman. The book will be mailed free upon addressing Dept. D.

BRUNNER COMPRESSORS.

Are Produced in a Variety of Forms to Cover the Needs of the Smallest to the Largest Garage.

Plenty of compressed air, always available in the garage, is appreciated by the customers. The Brunner Manufacturing Company, Utica, N. Y., has specialized in compressors for years and is producing a variety of types to meet requirements. The line is so complete as to cover the needs of the smallest to the largest garage, from a motor driven portable outfit to a large stationary automatic equipment. Reliability, durability and efficiency are emphasized in the Brunner compressors. Particulars and catalogue will be supplied free upon request.

VELOS PORTABLE COMPRESSOR.

A Complete Electric Equipment Mounted on Three-Wheel Base and Having Long Hose and Connections.

The Philadelphia Timer & Machine Company, 51st street and Lancaster avenue, Philadelphia, is manufacturing the Velos portable garage compressor, which is a complete electrical equipment mounted on a three-wheel metal base. The maker states that the compressor will pump a three-inch tire from flat to the maximum pressure in three minutes. The equipment includes a long length of hose, connections, pressure and safety gauge. The catalogue illustrating and describing the products of the company will be mailed free upon request.

GREENERD ARBOR PRESSES.

Are Utilized by Scores of Practical Mechanics and Are Adaptable to a Variety of Work.

Edwin E. Bartlett, 326 A street, Boston, manufacturer of the noted Greenerd arbor presses, is the recipient of a number of unsolicited testimonials from users of this practical equipment. The No. 15 arbor press is particularly adapted to motor car work and, to obtain efficiency, the repair shop press should be up to date. The Greenerd product is constructed especially to endure, and complete details of its efficiency and adaptability, as well as prices, will be submitted by the maker upon the receipt of a postal card or letter.

SEAMLESS STEEL TUBING.

Edgar T. Ward's Sons Produces Tubing of Any Quality to Meet Individual Requirements.

Edgar T. Ward's Sons, 25 Purchase street, Boston, carries one of the largest, if not the largest, stocks of cold drawn seamless tubing of any concern in the country, having over 1500 sizes and 1,000,000 feet on hand. This enables the company to fill any and all orders promptly. A special analysis tubing is made for parts, jigs, bushings, dies, etc., where extreme durability and hardness is required. A trial piece will be mailed free upon request.

AUTOMOBILE DIRECTORY.

Contains List of Owners, Dealers, Garages, Etc., in Colorado, and Is a Valuable Mailing List.

The List Publishing Company, 615 Denham building, Denver, Col., is publishing the Colorado Automobile Directory, which contains a complete list of the owners of machines in that state, also of dealers, garages, repair shops, etc. It is a classified directory of the automobile trade of the state and is a reliable mailing list for direct advertising. The book is bound with a cloth cover, is nicely printed and moderately priced. A sample page will be mailed free upon request by addressing Dept. 2.

PANHARD OILS.

George A. Haws Has an Interesting Agency Proposition Open to Garages, Dealers, Etc.

The high-grade quality of Panhard oil as a lubricant is well known. Its quality means guaranteed satisfaction from a standard established by continued use in all conditions. George A. Haws, manufacturer, 148 Front street, New York City, has a new agency proposition, the details of which will be forwarded upon request.

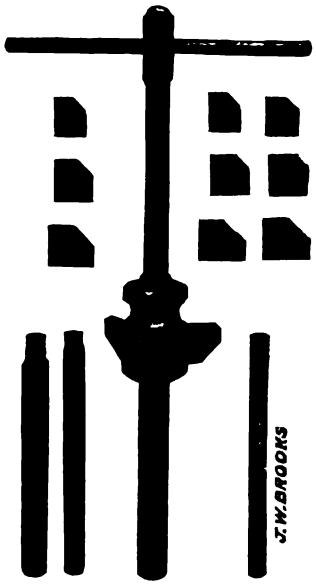
Adjustable Valve Seating and Facing Tools

Save 75 Per Cent. Time and Labor



Patent Applied For.
Economic Valve Seating Tool
Price of Set, $8.00

THE ECONOMIC VALVE SEATING TOOL, the Acme of Simplicity, can be operated by anyone and produce perfect work. Is the most used tool in a garage or repair shop. Will serve for years and save its cost on two jobs. The tool includes four sets of blades, will cut valves from 1 1-8 to 2 3-8 inches diameter. Any size blades will be furnished to specifications. There are four sizes of pilot stems. The tool can be operated by hand, a bit brace or a drill press. Blades can be changed in a half minute and sharpened perfectly. Equally practical for every make of motor.

THE ECONOMIC VALVE REFACING TOOL, is adjustable to any size valve stem and to any valve up to three inches diameter, has a double-ended cutter for either 45 or 60 degree valves. Valves refaced come positively true. Can be operated by anyone. Can be held by bench vise or screwed to bench or wall. Will do better and quicker work than any lathe. Strongly built of best materials and will last a lifetime. Order direct or through your dealer.

Jobbers, Dealers and Road Salesmen: Ask for discounts and details of our selling policy. We can interest you. Write today.

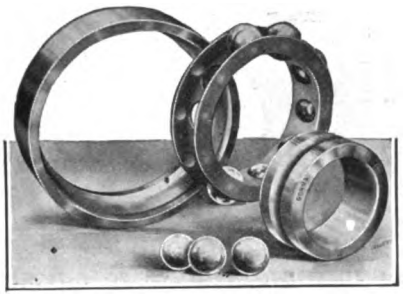
"NORMA"

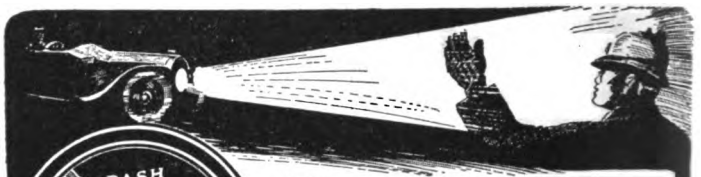
Ball Bearings



The fact that "NORMA" equipped magnetos have won most of the great automobile races of the past few years is the most conclusive proof of the superiority of "NORMA" Bearings for magnetos, lighting generators and starting motors for any sort of service. Don't experiment. Accept the judgment of the big makers of high-speed machines who use "NORMA" Bearings.

THE NORMA COMPANY
OF AMERICA
1790 Broadway NEW YORK

"NORMA" Ball, Roller, Thrust and Combination Bearings



Stop the Blinding Headlight Glare!

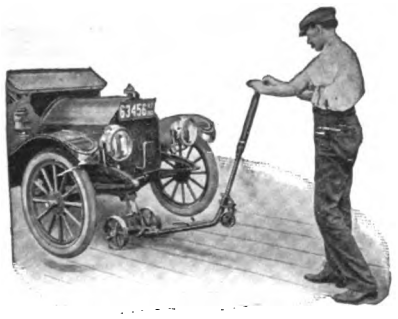
The law says it must be done —blinding glare is a menace to public safety. Screens simply interpose an obstacle between the light and the street —the user pays for the full power of his headlights and gets half power. The logical solution of the problem is the

Chaney Automobile Headlight Dimmer

It enables the driver to graduate the intensity of the light. It can be changed from high to low as you would turn down an oil lamp. Installed on the dash and operated by moving the dimmer handle, it gives complete control of the headlights from the seat. In city driving the light is kept low with small current consumption—in the country where full power is needed a touch of the handle brings back the full searchlight efficiency.

This device is practical, dependable and efficient, costs little to buy and is readily installed on the dash of any car. The average car owner can do it himself in ten minutes. It can be operated by a slight kick of the foot, while both hands are on the wheel.

THE L. F. CHANEY CO., SPRINGFIELD, OHIO



THE AUTO TURN JACK

A GARAGE NECESSITY

"Better than a Turn Table"

Patented March 3, 1914

Weighs 100 lbs. Lifts the Largest Cars. Instant adjustment for all heights of axles. Length of handle, 5 ft. Height of wheels, 10 inches. It is almost a turn table, and a car can be moved around with it almost as quickly as we can tell it to you. By tipping up the Jack handle, it tips back and lowers the lifting post, ready to run under the axle. Then raise the adjustment up against the axle by one move of the small lever and pull down the long 5 ft. handle. The car is then ready to place in any position.

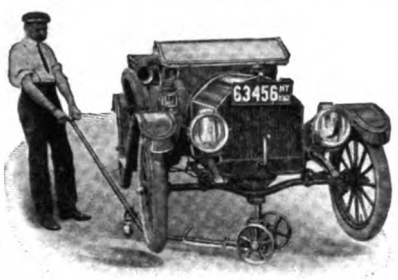
"Great little *profit-maker* for *Garages*"

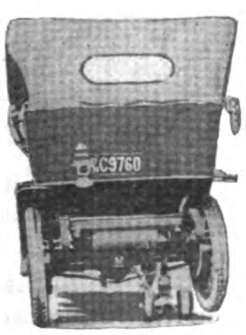
See It Work

Lift up the handle, push the jack under the front axle and pull down. LIFTS the whole front of the car two inches (Note the great leverage).

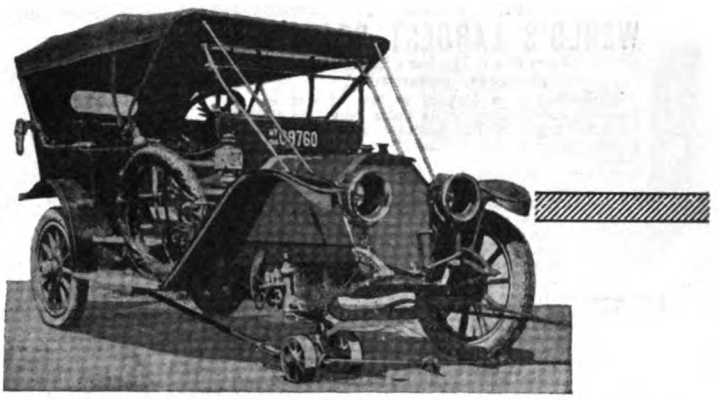


You are now ready to pull the car forward, right or left; in or out of the tightest places (See how handle passes under either wheel).

You can put it under the rear axle just as easy as the front. See how easily the whole car can be lifted, turned and handled.—"Better than a turntable"!



Combination Jack Clamped to rear axle of an extra large and heavy car. Note plenty of clearance between wheels and housing, and that brace rods do not interfere. See telescopic handle extended and rigidly braced to front axle.



HERE'S the best-paying, handiest garage device ever—not merely a wonderful time and labor-saver *in* the garage but, best of all, an actual business getter and profit producer for towing wrecks. It will pay for itself on the first few towing jobs, to say nothing of the repair work you'll get for extra profit. It is so genuinely good that 1700 are already in daily use all over the country.

THE COMBINATION

Auto Towing & Turn Jack

is a strong, compact device that will stand the rough pounding of concrete floors, cobblestone pavements and rutty country roads without failure. It runs surprisingly easy; the wheels have a 3-inch face and Hyatt Roller Bearings running on a case-hardened removable steel axle. Two interchangeable handles are furnished; the regular for inside work and the extra heavy telescopic for towing.

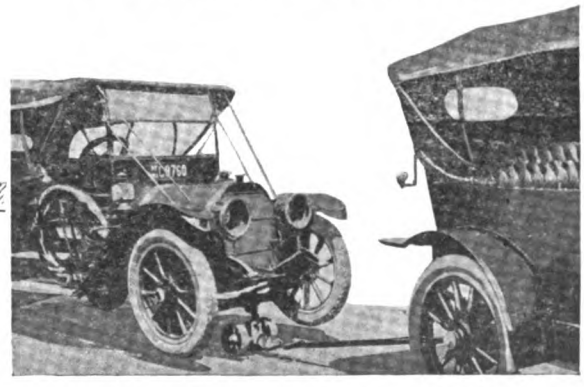
Inside the Garage: Powerful enough so that *one* man, with a single, simple motion, can raise and move about the heaviest cars as fast as we can tell you here. Gets them in and out of the tightest places —"better than a turntable".

For Towing: The most flexible towing jack you can imagine. Clamps anywhere on either axle of any make or size of car. Adaptable to any condition and will carry wrecks impossible to move in any other way.

"Gets the Money" is the title of a brief, pointed description of what this Combination Jack will mean for you in usefulness, in time and labor saved *and in business with profits.* It will show you new opportunities—a postcard request brings it free, together with full description of the complete device. Write NOW.

Rub-On Manufacturing Co., Inc.

93 Brayton Street, Buffalo, N. Y.



A wrecked car with the Auto Towing and Turn Jack clamped to the front axle with telescopic handle attached ready to be towed in for repairs. Here's a $5 or a $10 bill and the chance for enough profit on the repair job to pay for the Jack on the first job.

HAVOLINE OIL

A Smiling Trade—Your Best Advertisement

MOTORISTS KNOW that Havoline Oil greatly decreases frictional losses and enables the motor to generate its maximum power. The lubricating "cushion" which Havoline forms between the moving metals of the cylinders, has won the hearts of all automobile owners, because of its purity, uniformity, and clean burning qualities.

WE HELP YOU SELL Havoline Oil by means of our advertising "helps," including sales literature for distribution among your customers. Our House Organ "The Sales Oiler" explains them in detail. It's free to you if you want it.

Note: Our new Price-Scale policy enables you to make "Customers" where heretofore you had only "Sales." Ask us *How!* Write for the "Lubrican" a booklet on lubrication to give to your trade.

It takes **two** competitive equipments to do what Johnsons do.

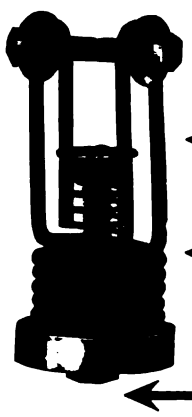
Big Profts and Fast Sales

IF JOHNSON SHOCK ABSORBERS ARE NOT SOLD OR REPRESENTED IN YOUR CITY WRITE **AT ONCE** FOR DISTRIBUTORS' PROPOSITION AND TERRITORY. WE ARE CLOSING NOW FOR 1915.

A shock absorber designed and manufactured by spring specialists of years' experience, who know from first hand the failure of leaf springs to give maximum ease of riding under all load and road conditions.

The **only** spring shock absorber with a **positive** recoil check, and which adjusts itself to load changes. Has the only **sure** adjustment for extreme load and road conditions without detracting from the results of the absorber.

Saves 25 to 50% in tire bills, minimizes spring breakage and prolongs the life of the car.



Two massive intercoiled spiral springs of the finest tempered alloy steel which carry the load and absorb the severest shocks.

Inside of these is a slightly lighter coil which takes the lighter shocks and eliminates the recoil.

At the bottom of the case is a nut by which an adjustment covering a radius of 1000 lbs. can be made in thirty seconds by two or three turns with a wrench or pliers.

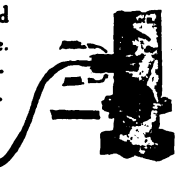
Saunders' Gasoline Saver

has proven positively that it will save from 25% to 50% gasoline —increase power and speed proportionately— give absolute control of fuel mixture under all conditions without readjusting carburetor.

Other good features described in booklet. Easy to operate. Consumes nothing but air Never gets out of order

Only one size. Fits any car.



Think Twice before you pass this by—it's a Money Maker—a Satisfaction Builder!

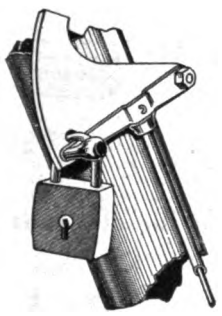
Every car owner in your community—every touring customer—is a logical buyer of this simple, practical device; and **every buyer is a booster** of the—

Saunders Gasoline Saver

the one gas saver that is **not** an experiment. Saunders Saver is a proven success—**thousands in use**—a sure seller and sure "repeater" (to enthusiastic car owners' friends) wherever shown.

A $5.00 device that will save $5.00 a month or more, to every car owner that does much driving. **25 per cent. to 50 per cent. More Mileage per Gallon**—enables the user to travel farther on his original supply and **come back to you for his gasoline!**

Easy to attach—a few minutes work and no special tools required. Adds a modest charge for putting on, to your liberal sales profit!



A Secure Motor Lock

Not the least bit complicated—vital feature is the **patented valve principle. Scientifically correct**—no substitute or make-shift will do the work.

Operates by lever just under steering wheel—**action positive**—a touch of the finger does it!

Wonderful in many other ways besides fuel economy. Our **Free Booklet** explains.

Push this remarkable device and ADD SEVERAL HUNDRED DOLLARS TO YOUR SEASON'S PROFITS!

TRADE APCO MARK

ANTI-RATTLING SPINDLE ARM BOLTS

There has always been a demand for a device that would eliminate the up-and-down play of the Ford Steering Arm Connecting Rod and this is where half the rattle originates.

The original bolts that come on the car are soft and will last but a short time and when they wear slightly the rattle starts and it is impossible to eliminate it except by installing new bolts and bushings.

The APCO bolts are made from the highest grade steel obtainable, carefully machined, then hardened and ground. They are made 1-16 of an inch shorter from shoulder to under side of head as shown in cut, so that when wear does come, it can be adjusted by tightening bolt and locking with regular nut.

DEALERS

Every Ford owner who keeps his car with you will buy a set of these bolts and also the **BUSHINGS** which list at 10c each, and besides this, there is the labor of installing that also represents a profit.

Price 20c each. Bushings 10c each.
(Discount 25 Per Cent. to Dealers)

Send this "ad." with first order and deduct an extra discount of 10%, making the discount 25% and 10%. Overhauling time is coming, so send in your stock order now.

HERE'S A BRUNNER
IT SOLVES THAT "AIR" PROBLEM

No. 52 PORTABLE COMPRESSOR
(Motor Driven)

Here's the machine with the maximum of service and quality right in it—not merely promised. It delivers the goods—always. It is not a makeshift—not a sideline product.

Skillfully built by specialists, for uninterrupted service—and it does it. Over 15,000 Brunners in use show an average repair cost record of less than 2c a year each, for a period of over 6½ years.

This is our No. 52 for larger garages and service stations. Tank, seamless drawn steel, 40-gallon capacity. Safe at 150 pounds pressure, but tested to 300 pounds. Motor ½ H. P. Air pump, twin cylinders—true as rifle barrels.

The whole machine is staunch and reliable and convenient. Attaches to any light socket.

There are many styles and sizes of "Brunners" for public or private garages. Write us for particulars and your jobber's name.

Raybestos

The PRODUCT of BRAKE SPECIALISTS

No other concern in this country making brake linings has ever designed or manufactured brakes or brake mechanisms.

Just read that statement again, and let it sink in.

Our career as manufacturers of automobile brakes and brake linings has been one of CREATION—not IMITATION.

There has not been one single advance in the science of making brake linings which has not been conceived, developed and produced in our laboratory or shops.

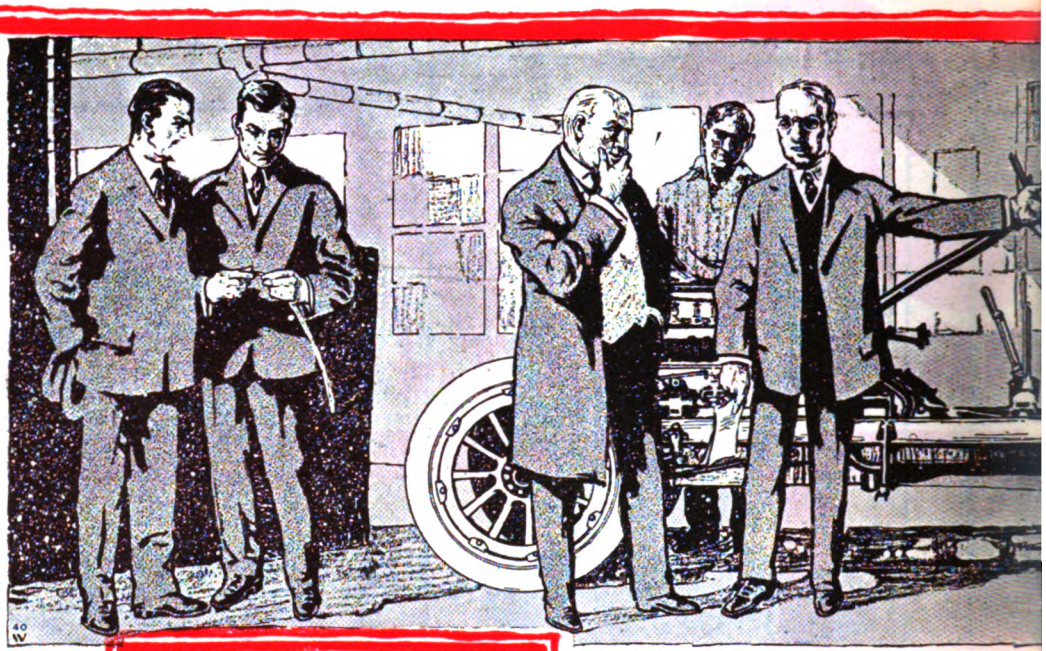
To such an extent has the development of Raybestos from its earliest conception to its present perfection influenced brake lining manufacture that we feel like joining the Lancia Company in quoting—

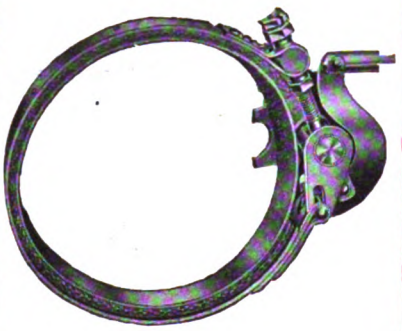
"They followed me and they copied me, but they couldn't copy my mind,
And I left them gasping and floundering, a year and a half behind."

TRADE MARK Raybestos REG. U.S. PAT. OFF.

THE PRODUCT OF BRAKE SPECIALISTS

Digitized by Google





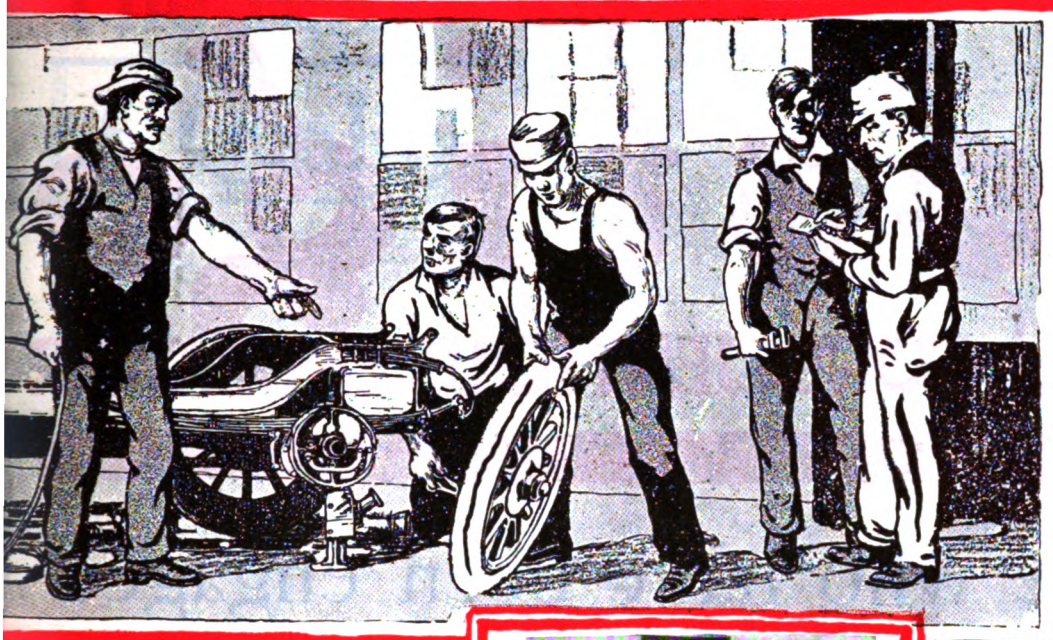
Unless a man possesses an intimate knowledge of the fundamentals of a mechanical problem he undertakes to solve, how can he hope to accomplish it successfully?

BRAKES and BRAKE LININGS have been our specialty for years—BRAKES as well as BRAKE LININGS.

Our first activity as manufacturers was in the production of BRAKES for pleasure cars and it was not long before DUPLEX EXTERNAL BRAKES had won a most enviable reputation for excellence in design and performance.

As BRAKE specialists we have kept pace with the progress of automobile design and the development of DUPLEX EXTERNAL BRAKES has evidenced a most intimate knowledge on our part of automobile BRAKE design and construction. In a great many cases where DUPLEX EXTERNAL BRAKES are not exactly adaptable for certain cars or trucks, we manufacture BRAKE equipment for them according to the design and specifications of our engineers.

Digitized by Google



There have been many cases where we have made suggestions to automobile engineers—sometimes regarding design, sometimes regarding construction. In some cases these suggestions effect a saving in cost, and quite as often they effect an improvement in mechanical details.

Right here we want to make a point—and this point outlines our policy: when we are asked to manufacture a Brake equipment which we know to be faulty, and the suggestions we make as to its correction are turned down or overruled, we refuse the business. We find that it is preferable to lose a contract occasionally than to sacrifice our reputation.

Business is business but reputation is something we refuse to pawn.

Think of this when you select the Brake Lining for the cars you overhaul, refit or repair.

Digitized by Google

Prestige

The RESULT of CONSCIENTIOUS ENDEAVOR

All of those who have been engaged in the Automobile Industry for some time will remember that Raybestos was the first real criterion of BRAKE LINING quality, service and far-sighted economy. Since its inception, Raybestos BRAKE LINING has been required to sustain the prestige we have built up as BRAKE specialists and we believe that our experience has been broad enough to cover every phase of automobile BRAKE and BRAKE LINING knowledge.

Practical experience in the manufacture of BRAKES and our close application to automobile BRAKING problems has given us an intimate engineering foundation for the development of a better BRAKE LINING than is possible for any other manufacturer to possess.

No other concern in this country making BRAKE LININGS has ever designed or manufactured BRAKES or BRAKE mechanisms.

Think of this when you select the BRAKE LINING for the cars you overhaul, refit or repair.

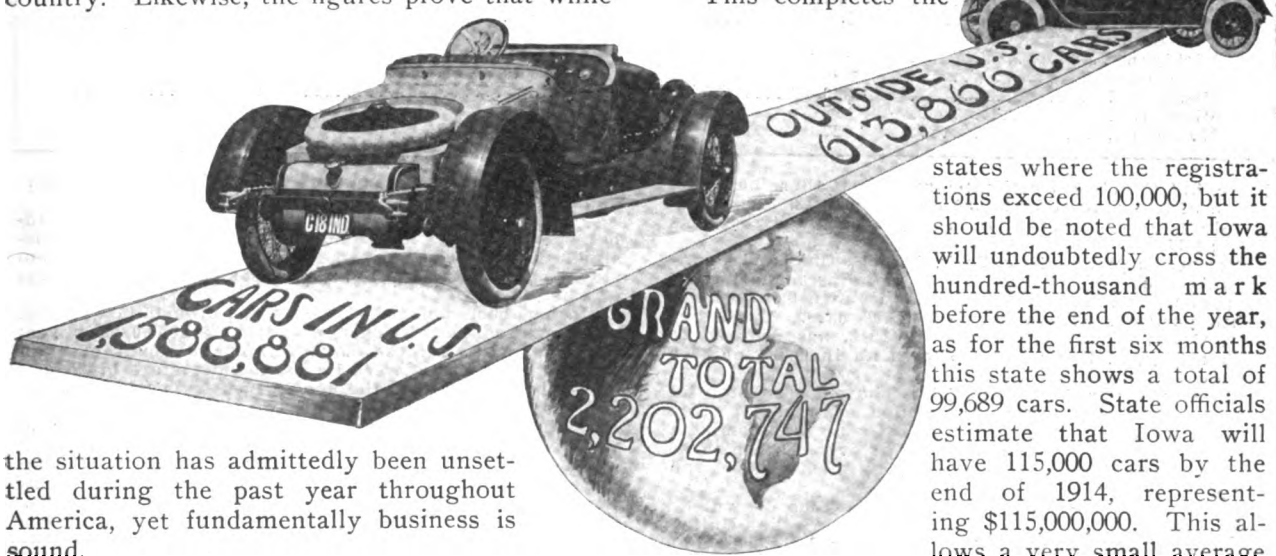
VOL. IV. PAWTUCKET, R. I., SEPTEMBER, 1914. No. 5

UNITED STATES REGISTERS 1,588,881 CARS.

All Records Are Broken for First Half of 1914—Show Wonderful Prosperity of the Automobile Industry—States Collect $8,183,830.

FOR the first half of 1914 all previous automobile records in the United States were broken when 1,588,881 cars were registered. In dollars and cents this means $8,183,830 was turned into the various state treasury departments.

These facts emphasize the wonderful prosperity of the automobile industry, and show that business conditions in the United States are as sound as they ever were in the history of the country. Likewise, the figures prove that while the situation has admittedly been unsettled during the past year throughout America, yet fundamentally business is sound.



Perhaps one of the most startling facts brought out in the new figures is that America has nearly three times as many cars as the rest of the world combined. There are 2,202,747 cars in the world, of which this country has 1,588,881, and the balance of the world, 613,866.

Owing to the fact that so many erroneous statements were being made regarding the number of cars in the United States, the Accessory and Garage Journal communicated with the various secretaries of state asking for automobile registration figures. The replies received are set forth herewith, and give the first accurate account of the number of cars registered from Jan. 1 to July 1, 1914.

As heretofore, New York leads, the figures this year being 147,186 cars. Illinois claims second honors with 120,740; Ohio third, with 109,887; California fourth, with 107,221, and Pennsylvania fifth, with 101,002.

This completes the states where the registrations exceed 100,000, but it should be noted that Iowa will undoubtedly cross the hundred-thousand mark before the end of the year, as for the first six months this state shows a total of 99,689 cars. State officials estimate that Iowa will have 115,000 cars by the end of 1914, representing $115,000,000. This allows a very small average of $1000 a car. Taking this same average, the total invested in automobiles in this country today is $1,588,881,000. However, this amount falls far short of the mark, as there would be many other things to be considered in arriving at an adequate estimate of the great amount invested in cars in the entire country.

The most encouraging sign in the statistics printed herewith is the substantial increase in the number of cars registered for the first six months of the current

Digitized by Google

year over the full year of 1913, this increase amounting to 324,996 cars. The increase of 1913 over 1912 was 243,372, and the increase in registrations for the first six months of 1914 over the full year of 1911 is 1,111,881, there being only 677,000 registered that year.

The figures given in the accompanying tabulation do not exclude duplicate registration. It is impossible to figure accurately on such items, but an allowance of approximately 2000 would fully cover this in New York, and proportionately smaller figures should be allowed for other states. These duplications are inconsequential in figuring the totals of states, and do not in any way change the standings of these states. A brief summary showing the states having more than 50,000 automobiles and the figures of 1913, is shown elsewhere.

As can be seen from these figures, there have been some very large gains during the past year. The most notable increases are those of California and Texas, the former jumping from seventh place in 1913 to fourth place this year. In the case of California this big advance is not due so much to the number of new cars as to the fact that a new automobile law went into effect on Jan. 1 last, requiring registration of all cars. Heretofore California laws have called for one license only; i. e., the owner was only compelled to take out a single license, which remained good for all time. The new act requires that a license for each car be taken out every year.

It is impossible to give the amount of money turned into the California treasury since the first of the year as the result of automobile licenses, but the total paid over by California motorists to date is $1,250,000.

Texas registrations are made with the various county clerks and it is impossible to get an absolutely accurate figure, but the closest estimates state that there has been a gain of approximately 20,000 cars over 1913. This may be taken to be conservative, and places Texas registrations at 75,000.

Needless to state, New York, Illinois, Ohio and Pennsylvania continue to show the even gains made during the past few years. Michigan holds its own by retaining eighth position, with a gain of 12,000 cars. Massachusetts, which was in sixth place in 1913, has dropped to ninth this year, having only shown an increase of 3000 cars.

Minnesota, now in 10th position, showed a substantial increase of nearly 25,000 cars, which advanced it from 14th place. Indiana, Nebraska and New Jersey complete the list of states having 50,000 cars or over. These three states increased their registration by 13,000, 9000 and 3000 respectively.

Some very interesting conclusions may be drawn, by comparing the number of automobiles in the United States with the rest of world. For instance, it is seen that there are more cars in the states of New York, Illinois, Ohio, California, Pennsylvania and Iowa, than in the whole world outside of the United States. To be more definite, there are 685,725 cars in these states as against 613,866 cars in the world, exclusive of America.

With the single exception of Great Britain, which has 245,912 cars, there are more automobiles in any one of the above mentioned states than in any foreign country. Next to England, France ranks highest in number of cars in use, having 90,000 machines. This figure, however, is overshadowed by Iowa's 99,689, and more than outnumbered by any of the states having 100,000 cars or more. There are 11 states in America that have more cars individually than Germany, which, with 57,341 cars, follows France in third position among foreign nations. Canada stands fourth with 46,604 automobiles, and this is the last country in the world which now has more than 15,000 machines.

While the growth of the automobile industry is distancing any other business in the country in volume, yet the fact is to be deplored that it is harassed by conflicting laws and antiquated and inadequate acts to a greater extent than any other business. There are numerous plans afoot to secure uniform laws. The automobile long has been and still remains legally the most abused member of the country's industrial family.

Some effort has been made during the year to secure better conditions. California and Kentucky now have new laws in effect. Kentucky's automobile laws went in force on June 16 last. The Kentucky act is modelled generally after the motor laws in force in most states, but the registration fees have been classified, so that the charge for automobiles of 25 horsepower or under is $6, for cars of 25 to 50 horsepower, $11, and for all machines of greater power, $20. Non-resident owners are not required to take out a license.

The situation in Michigan has become more complicated than ever, owing to the fact that the automobile law in that state has been declared unconstitutional by the supreme court. Massachusetts and several other states are considering amendments to their present acts that may or may not help to straighten the situation out. However, until some concerted action is taken and some simple plan adopted in regard to fairly uniform laws in all states, a chaotic condition will be inevitable.

The District of Columbia began to register automobiles on July 1, 1907. The registrations run consecutively. Up to the close of last June 17,446 cars had been registered, but it is impossible to say whether or not they all exist at the present time. This method of continuous, or perennial, registration is not practised in many states today. In addition to the District of Columbia, Florida and Texas are still adhering to the perennial system.

In order to show additional variety, Minnesota adheres to its policy of triennial registration, and Mississippi, South Carolina and Louisiana are still without state registration, the individual counties having charge of this.

It has been pointed out by the Automobile Chamber of Commerce that funds aggregating $130,000,000 a year could be raised for the construction and repair of highways if all vehicles were licensed under state laws on a basis proportionate to the use derived from the wear and tear done to the roads. This, of course, provides that horse drawn vehicles pay their share for road upkeep as well as automobiles.

Of the total of $130,000,000 so provided, the 1,588,881 motor vehicles registered at fees from $10 to $25 would produce approximately $19,000,000; the estimated 14,600,000 horse drawn vehicles at $5 to $20 would produce $108,000,000, and the estimated 2,800,000 bicycles and motorcycles in use at $1 and $3, respectively, would bring $3,400,000.

GENERAL MATERIAL MARKET QUOTATIONS.

During the past month the general commodities market adjusted itself somewhat to the conditions brought on by the European war. Fine up-river Para rubber declined from $1.20, its price on Aug. 15, to 68 cents on Sept. 15. No quotations are available on silk from Italy, as this supply has been cut off entirely by the existing conditions abroad. Prices of iron, steel, copper, etc., are normal again, but fluctuations are likely.

The New York Stock exchange, the Consolidated exchange and other exchanges still remain closed, being obliged to take this action on July 31, owing to the heavy liquidation forced by Europe. The tabulation given below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period, i. e., Aug. 15 and Sept. 15:

	Aug. 17		Aug. 24		Aug. 31		Sept. 7			
	High	Low	High	Low	High	Low	High	Low	Aug. 15	Sept. 15

FORD LIGHTING SYSTEM.

Charles A. Jackson Company Producing Electric Generator and Fittings for the Trade.

The Charles A. Jackson Company, Motor Mart, Park square, Boston, has brought out a new electric lighting equipment for the Ford motor which is moderately priced. The Jackson generator is a very compact, efficient dynamo, and with it comes a governor, cut-out and ammeter; in fact, everything required for installation. The generator has an output of eight amperes, and a desirable quality is a quick adjustment. The company makes a special fitting for the Ford car, which is easily and quickly attached. Installation equipment is carried in stock for nearly all standard types of cars. The Jackson lighting outfit is stated to be a good seller and the maker has an interesting proposition for the dealer.

VELOS COMPRESSOR.

A Complete Portable Electric Equipment Particularly Adapted for the Garage.

The Philadelphia Timer & Machine Company, 51st street and Lancaster avenue, Philadelphia, is manufacturing the Velos portable compressor, which was designed especially for the garage requiring a high-grade, efficient equipment at a moderate price.

The Velos is operated by electricity and the outfit includes an electric motor, compressor, pressure gauge, safety valve, long line of hose, socket, etc. The apparatus is mounted on a three-wheel metal base with convenient handle, and the maker calls attention to the efficiency of the pump, stating that it will inflate a three-inch tire from flat to the maximum in less than three minutes. Details and prices are given in the new catalogue issued by the company.

MONOGRAM OIL AGENCY.

New York Lubricating Oil Company Has Interesting Sales Proposition for the Dealer.

The New York Lubricating Oil Company, 116 Broad street, New York City, has a sales proposition that will interest every dealer. The Monogram oil selling policy is to meet the demand in every city and town, and the company solicits correspondence from the trade. Complete details will be supplied upon writing.

THE ACCESSORY AND GARAGE JOURNAL

VOL. IV. SEPTEMBER, 1914. NO. 5.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

SALES AND PROFITS.

The selection of a line of accessories and supplies requires careful consideration upon the part of the head of the purchasing department. Those who have made a success and move their goods rapidly from the stockroom and shelves, appreciate the selling value of quality goods. The day is past when the experienced customer will accept a substitute because it is cheaper, or can be influenced by the persuasive talk of the salesman. While it may be a comparatively easy matter for the garageman to sell an inferior article to an inexperienced customer, and to derive a large profit thereby, such a sale generally results in the loss of the motorist's subsequent custom. The stocking of quality, trade marked goods, means assured and continued profits.

OUTLOOK FOR 1915.

Particular attention is called to the leading article in this issue, and the statistics supplied by the automobile industry indicate that the year 1915 will be one of the most prosperous ever enjoyed by the trade. Despite unsettled business conditions, the registration figures show that over 300,000 more cars were registered for the first six months of this year than during the entire 12 months of 1913. Reports from the leading centres of the industry show that many concerns have been obliged to augment their equipment to meet the increasing demand, while other makers are planning additions. The garageman, repairman, dealer, and the trade generally, will share in the coming era of prosperity.

CURB FUEL STANDS.

The Detroit, Mich., commissioner of public works has notified all owners of gasoline stands or stations which have curb or sidewalk stands, that they will have to be removed by Oct. 16. The garage interests carried the case to the Supreme court, which decided in favor of the commissioner. Proprietors of garages in other cities contemplating the use of similar fuel distribution will do well to investigate the ordinances covering the subject of gasoline before installing a system. Over 100 of the curb and sidewalk stands were in service in Detroit.

THE BOSTON SHOW.

The Light Car, Cyclecar, Small Delivery Car and Accessory show to be held in Horticultural hall, Boston, Oct. 10-17, will afford the trade an excellent opportunity to inspect many machines which will be shown for the first time in public. The display of accessories will be of particular value to the dealer, while the repairman will find much to interest him in the mechanical details of this latest addition to the motor vehicle industry.

STOCKING FOR FALL TRADE.

Now is the time for the progressive dealer and garageman to give consideration to stocking for the fall and winter trade. Priming devices, heaters, robes, etc., will soon be in demand, and live supply and accessory concerns will anticipate the wants of their customers.

THE FAIR AND THE DEALER.

This is the season of the agricultural fair, and it is interesting to note that the dealers and their sub-agents are taking advantage of this opportunity to display motor vehicles. The reports indicate many sales, as well as numerous prospects.

REACHING THE TRADE.

No manufacturer can expect to successfully exploit his goods without advertising. Publicity attracts attention to his products, and consistent advertising is productive of results.

PRACTICAL GARAGE ACCOUNTING.

System Utilized by the Fifth Avenue Garage of New York City to Prevent Losses and to Insure Efficiency of Employees.

CAN the garage be made to pay an equitable return upon the money invested, and why is it that some concerns are prosperous, while

others just about pay the proprietor day's wages? Why is it that some entirely familiar with motor vehicles fail to make a success in conducting a garage? Eliminating, for the time being, the factor of suitable location, and dealing with the first question, it will generally be found that, when the garage is only paying a small return upon the investment, it is conducted without regard to the small details that involve losses. The proprietor may be thoroughly conversant with the requirements of his customers, his service may be all that could be desired, and his judgment in stocking excellent. But if he relies upon his ability to attend personally to the numerous details involved in the operation of a garage, he will most likely find that his accounts do not balance, that certain supplies and departments show very small returns when they should be profitable. Lack of system has and will be responsible for the failure of the garage to make good, and many establishments in the day's wages class can be made to pay a good return upon the investment by the adoption of a practical system and its enforcement.

The responsibility of the proprietor does not end with the adoption of a practical system. He may select one that is particularly adapted to his requirements but if, after spending a considerable sum for the tags, cards, indexes, etc., he fails to enforce a strict observance, compelling each and every employee to conform to the system, the benefits will be minimized. The adoption of a system requires careful consideration, and it may be that slight changes in a standard system will improve its efficiency.

A system that is held to eliminate losses prevalent with garages, and one that enables the proprietors to maintain an accurate check upon the time and labor of the employees, as well as stock and supplies, is that employed by the Fifth Avenue Garage, New York City, located at 57 East 88th street. This concern does not conduct a repair shop in connection with the garage, as it utilizes its entire space for storing, washing and polishing, and for providing those conveniences appreciated by owners and chauffeurs. The company supplies gasoline, oils, greases, etc., and the method utilized for accounting for sales and stock is one of the features of the system employed.

In constructing the building, careful consideration was given to the problem of storing a large number of vehicles without the use of elevators or other equipment, which would tend to result in a loss of time when a hurried call is received for a machine. The building is a one-story structure, well ventilated, lighted and heated. Large skylights provide ample light, as may be noted from the illustration at Fig. 3, which also depicts the wide aisles and spaces utilized for storage. The capacity of the building is 114 cars, and the space for each is indicated by numbers. The desirable quality of the spacing is the ease with which a machine can be swung into position, and practically no time is lost when its services are required.

The operation of the system is best explained by the progressive steps following the application

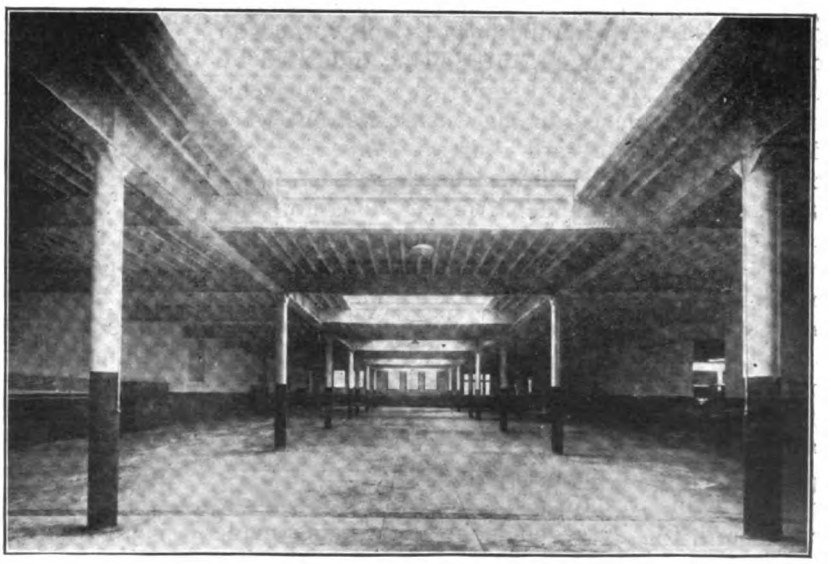

Fig. 3—Interior View of Fifth Avenue Garage, New York City, Showing Ample Storage Capacity, and Method of Lighting by Day.

Digitized by Google

of an owner for space. When the new customer contracts for storage, the registry card, shown at Figs. 1 and 2, is utilized. It is of white manila cardboard, three by five inches, and on the side shown at Fig. 1 is inscribed the name of the owner of the machine, his business and home address, where the bills are to be sent, the number and make of machine, rate to be charged, space to be occupied, chauffeur's name and address and the number of the locker assigned him. In the upper right hand corner of this card is written the number of the brass tag, which corresponds with that of the space. This brass tag is affixed to the rear license bracket of the machine and all charges are made against this number, a simple method, one eliminating clerical labor in the office, as well as in the garage proper.

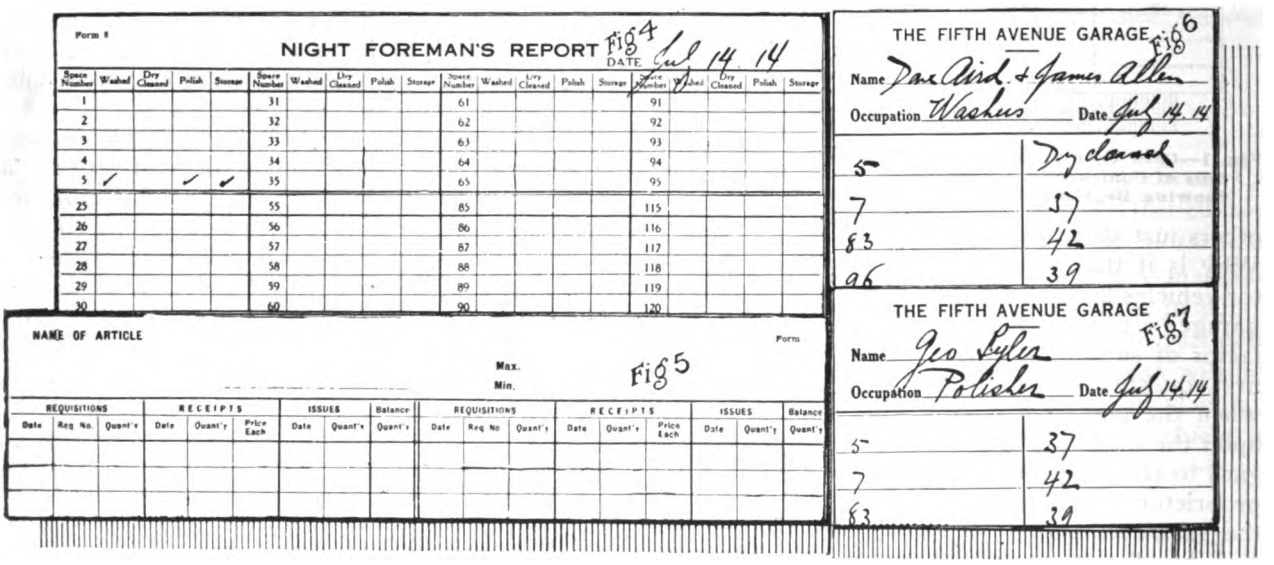
The reverse side of the card, shown at Fig. 2, enables the bookkeeper to note at a glance when the contract for storage began and ended, also to distinguish between live and dead storage.

Cards are utilized by the washers and polishers and the simplicity of the method is shown at Figs. 6 and 7. Fig. 6 shows that the employees, Dave Aird and James Allen, worked on certain cars on July 14, these being indicated by the numbers. It is also shown that certain vehicles were not placed on the washstand, but were dry cleaned. The card illustrated at Fig. 7 is the polisher's, and it shows the cars given attention on July 14 in his department. This not only enables the company to obtain data as to the capacity of the employees, but in the event a customer complains of the quality of the work, it is an easy matter to locate the fault. These cards, which are turned in to the office, are manila cardboard, seven by four inches. Their use economizes in time, as figures are utilized by the workmen.

The night foreman is obliged to turn in a report and this is shown at Fig. 4. It is a manila cardboard, 6½ by seven inches and, being made out each morning, is a complete report of the machines washed, dry cleaned, polished and stored. It also provides a check on each vehicle insofar as storage and work are concerned, and the number method, is, of course, utilized.

Of particular interest is the system for keeping accurate account of the supplies, especially the fuel, which generally is difficult to check up where employees are careless or where customers are allowed access to it. Although it would appear to be drawing a very fine line to refuse to allow an employee to draw enough gasoline for a customer who wishes to clean his hands, yet it is these practises that in the course of a year result in decided loss to the company.

The method of maintaining a record of the fuel, oil and kerosene is shown at Fig. 9. Heavy white paper, ruled as shown, is utilized for the gasoline record and the report is made daily. It enables the company to note at a glance the record of the fuel. The supply of gasoline is indicated in the first section, which shows that for the 24 hours ending at 9 in the morning on May 10, the dip indicated 1149 gallons. The fuel supply is measured by a graduated stick at the hour indicated.



Details of the System Used by the Fifth Avenue Garage: Fig. 4 Is the Night Foreman's Report; Fig. 5, Method of Maintaining Supplies, Etc.; Fig. 6, Washers' Card; Fig. 7, Polisher's Record.

The third column is utilized for the receipts, and a similar space is used for the oil and kerosene record, indicating the supply received by the garage from the wholesaler. The fourth column shows the total. For example: On May 11 the dip showed 796 gallons of fuel and the receipts 540, a total supply of 1336 gallons. The dip for the next day was 1071 gallons, a difference of 265 gallons, as indicated in the fifth column. Of this amount one-half a gallon was a cash sale, as shown, and 270 charged to customers. The last column of the card is used for differences, loss and gain. In the instance referred to a gain of 5½ gallons was made, which would not occur in practise unless a mistake was made in the supply received. If, however, the difference is a loss, it is investigated. The oil and kerosene record is maintained in a similar manner. The company also keeps a record of empty barrels, and this prevents any employee benefiting from a per-

Fig. 8—Illustrating Itemized Bill Rendered Customer at Completion of Each Month.

sonal sale. The completion of the report requires but little time and is the means of preventing a continuance of leaks when once discovered.

The summary of the charges to the customer is indicated at Fig. 8. It will be seen that the dates and material are itemized and that the total number of gallons of fuel can be conveniently added. These charges are taken daily from the cards turned in at the office, and the bookkeeping is simplified.

The maintenance of the supplies is an important factor in the management of any garage, and it requires careful insight into the business, as well as familiarity with details. Standard supplies must be maintained, while other lines should not be overstocked.

The Fifth Avenue Garage utilizes a card five by eight inches, which is ruled and divided as shown at Fig. 5. On the left hand upper corner is printed "Name of Article", and at the right the sale price. Under this are the words "Max." and "Min."—maximum and minimum—which indicates to the employee in charge the quantity to be maintained and maximum to be stocked.

Under the head of "Requisitions" is the date, regular number and quantity, indicating when the goods were received, their number and quantity. The next section of the card, that marked "Receipts", is divided into three spaces, which are used for the supplies. The next section is reserved for issues recording the date the goods were sold, quantity and balance of supply on hand. This enables the company to maintain its stock, as well as know the rapidity with which certain lines are depleted.

Provision is made for the chauffeur who wishes to work on his car, and he is also given the use of a commodious locker for storing his clothing and personal effects. The company employs a barber and a bootblack, and the chauffeurs are given free service. Entertainment is provided in the form of a pool room with comfortable furnishings.

BRAKE EQUIPMENT.

Advantages Obtained by Use of Duplex Brakes, Raybestos Brake Lining, Etc.

The selection of brake equipment and friction facing requires careful consideration, for the customer judges from the results obtained in service. As the average motorist relies wholly upon the salesman, it is good business policy on the part of the trade to recommend the product of a concern established in the industry.

The Royal Equipment Company, Bridgeport, Conn., whose trade mark, Raybestos, is known throughout the automobile industry, has built up an enviable reputation as a specialist in brake equipment, lining and friction material, and its engineering department is frequently consulted by the car makers. This department is available to the trade and is prepared to solve brake problems at short notice, as well as to design special equipment.

The company calls attention to the fact that it manufactures but one quality, the best, and attributes its success in developing Raybestos to the adherence to this principle. The attention of the trade is called to the advertisement appearing elsewhere in this issue, as it contains pertinent facts on brake equipment. The company issues a booklet which should be in the hands of every garageman and repairman, as it gives valuable information on the fitting, care and adjustment of brakes, as well as practical knowledge on this important subject. The booklet will be mailed free to those interested by addressing Department 1380, the Royal Equipment Company, Bridgeport, Conn.

GENERAL NEWS OF THE MANUFACTURERS.

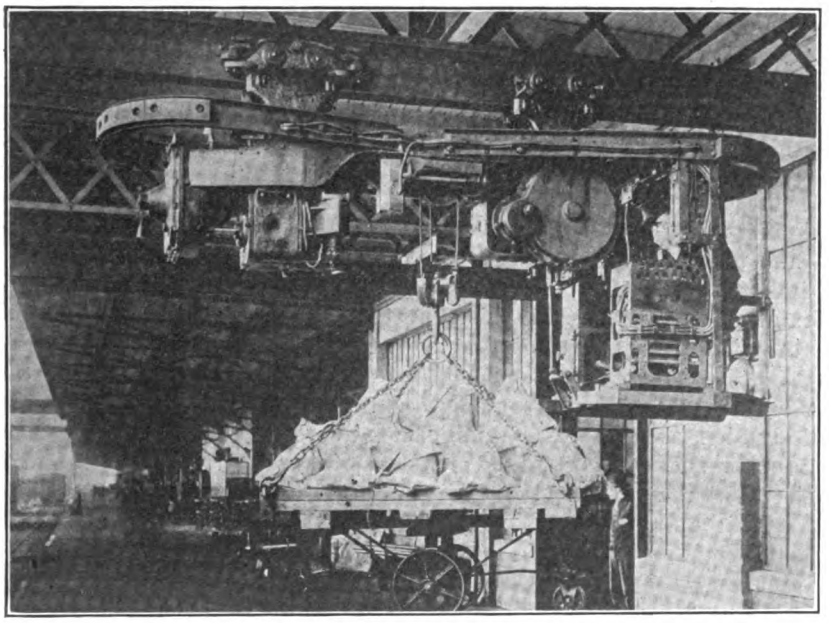
H. J. Koehler S. G. Company, New York City, announces that the following agencies have been placed: S. E. Kinent, Austin, Tex.; W. T. Keaton, Dallas, Tex.; Harry Searls, Belvidere, N. J., and C. H. Dean, San Antonio, Tex.

The Sphinx Motor Car Company, York, Penn., has purchased the building formerly owned and occupied by the Hart-Kraft Motor Car Company, and is manufacturing cars. Deliveries will be made Oct. 1. The style of the car will be a light touring, fully equipped, including electric lighting and starting systems. Herbert R. Averill and Ernest T. Gilliard will have the management of the factory.

The Benz Automobile Corporation, New York City, will handle KisselKars and KisselKar trucks in that city, and has taken over the salesrooms of the Kissel Motor Car Company, at 1696 Broadway. C. H. McCausland, who has conducted the Kissel retail, as well as the eastern wholesale business from that address, will continue as sales manager.

W. A. Sellon, manager of the Chevrolet Motor Company, Brooklyn, N. Y., has just completed his sales organization for 1915. He has selected men whose experience is of the highest value, and who have been connected with other Brooklyn companies. Mr. Sellon contemplates buying the building which he now leases and adding another story to it.

The Lamb Manufacturing Company, Inc., Winsted, Conn., which will make automobile accessories, has leased one-half of the factory building of the B. J. Harrison Son Company, and will begin manufacturing about Oct. 1.



Monorail Conveyor in the Dodge Brothers, Detroit, Mich., Plant.

The Chalmers Motor Company, Detroit, Mich., in a financial statement recently issued, showed assets of $8,147,958 as of June 30 last, compared with $7,514,146 for the previous year. The cash on hand amounts to $1,039,491, against $404,691 in 1913. Notes and accounts receivable are $939,703, compared to $693,617, and merchandise is valued at $3,473,162, in comparison with $3,938,674 previously. Current merchandise accounts of $560,860 are reported against $481,215, and a final surplus of $941,229, as compared with $379,820 the preceding year.

The Paul M. Marko Company, Brooklyn, N. Y., manufacturer of the Marko storage batteries, has leased the three-story building at 220 Clifton place, in that city, for use as a new battery factory. An additional floor has been added to the service station at 1191 Dedford avenue.

The New Process Gear Corporation, Syracuse, N. Y., when additions to the factory and machinery are completed, expects to be in a position to manufacture over 1,000,000 spur, spiral and bevel metal gears a year. Although the plant was doubled in capacity less than two years ago, an additional building is now being erected and the capacity of the case hardening and heat treating departments is again being doubled. A large order for additional equipment is being placed for fall delivery.

The Combination Rubber Manufacturing Company, Bloomfield, N. J., has taken over the Keeton Tire & Rubber Company.

The Covert Motor Vehicle Company, Lockport, N. Y., is planning for the erection of an addition to its plant to cost approximately $50,000. This, however, will depend on the action of the common council of Lockport, as this body has been petitioned to permit the Covert concern to have a railroad switch leading to its property. Without the switch, the company states, the new addition would not be as efficient as it desires.

The Blodgett Rubber Company, Warren, O., manufacturer of a non-puncture tire, will move to St. Joseph, Mich.

The Denby Motor Truck Company, Detroit, Mich., now has its entire organization located at the company's plant, Dubois and Franklin streets. The general offices were, up to the present time, in the Dime Bank building.

The Ford Tire Company is being organized in Toledo, O., to manufacture tires and tubes exclusively for Ford cars. It is said that the company will be financed on the co-operative plan by Ford owners.

The Hess-Bright Manufacturing Company, Philadelphia, Penn., announces that it will build an addition to its plant at Front street and Erie avenue. This is due to the fact that the war has rendered necessary an increased production of ball bearings in this country. It is said that plans have been made for the necessary addition and work will begin immediately. Automatic machinery will be employed to the largest extent possible.

Dodge Brothers, Detroit, Mich., is installing monorail conveyors in its big plant, and this is one of the many mechanical features being adopted by this concern. These monorail cars run on an overhead track, quickly moving heavily loaded trucks, from distant sections of the factory to the loading platforms. In the accompanying illustration the monorail is shown transporting one of these loaded trucks. Each car does the work of from 10 to 20 men.

The Robie Motor Car Company, which had temporary quarters with the Massnick-Phipps Manufacturing Company, Detroit, Mich., has moved to York, Penn., where it will manufacture a light car.

The Ford Motor Company, Detroit, Mich., has 9031 men of foreign birth employed in its factory. These include 22 nationalities, as follows: Poles, 2677; Russians, 2016; Roumanians, 750; Italians, 690; Germans, 606; Austrians, 388; English, 380; Syrians, 330; Hungarians, 269; Canadians, 226; Servians, 210; Irish, 148; Scotch, 133; Lithuanians, 73; French, 55; Hollanders or Dutch, 26; Danes, 21; Croatians, 13; Turks, 8; Belgians, 6; Japanese, 3; Australians, 3.

The No-Carbon Oil Company has been organized in Detroit, Mich., to manufacture No-Carbon and other lubricants used in gasoline, kerosene and gas motors. The capital stock is $100,000, of which $5000 has been subscribed and paid in in cash. Philip Coffrey and Albert L. Boston are the principal stockholders.

Dodge Brothers, Detroit, Mich., has appointed the Mandery Motor Car Company agent in Rochester, N. Y., A. C. Burton & Co., in Houston, Tex., and the Hutchinson Motor Car Company in Hutchinson, Kan.

The Flint Sheet Metal Company, Flint, Mich., has been formed to supply local automobile factories with sheet metal specialties. R. S. Gott, A. S. Allen and E. J. Vining comprise the company.

The United States Motor Truck Company has been incorporated under the laws of Kentucky, with a capitalization of $25,000, for the purpose of taking over the United States Truck Company of Detroit, Mich. The new company has located in Covington, Ky., where it is turning out United States trucks in two, three and four-ton sizes. A new 1½-ton model will be announced shortly.

The Bergdoll Automobile Company, Philadelphia, Penn., which recently secured a large plant at Trenton, N. J., will soon begin manufacturing a low-priced car, according to report.

Dodge Brothers, Detroit, Mich., has added Robert P. Lay to its staff. Mr. Lay was formerly assistant chief engineer of the H. H. Franklin Manufacturing Company, and resigned that position on Sept. 1.

The Hickman-Lauson-Diener Company, Milwaukee, Wis., state agent for the Ford Motor Company since the Detroit manufacturer brought out his popular-priced car, will discontinue business Oct. 1, and the Ford representation will be in the hands of the factory.

The Hupp Motor Car Company, Detroit, Mich., has started work on enlarging its general offices. When completed the present floor space will be doubled. One of the features will be a new and larger dining room, which the officials of the company find the greatest aid in effecting close co-operation among its employees.

The Toledo Tire & Supply Company, Toledo, will handle the Chaney headlight dimmers and Velvet shock absorbers for that territory.

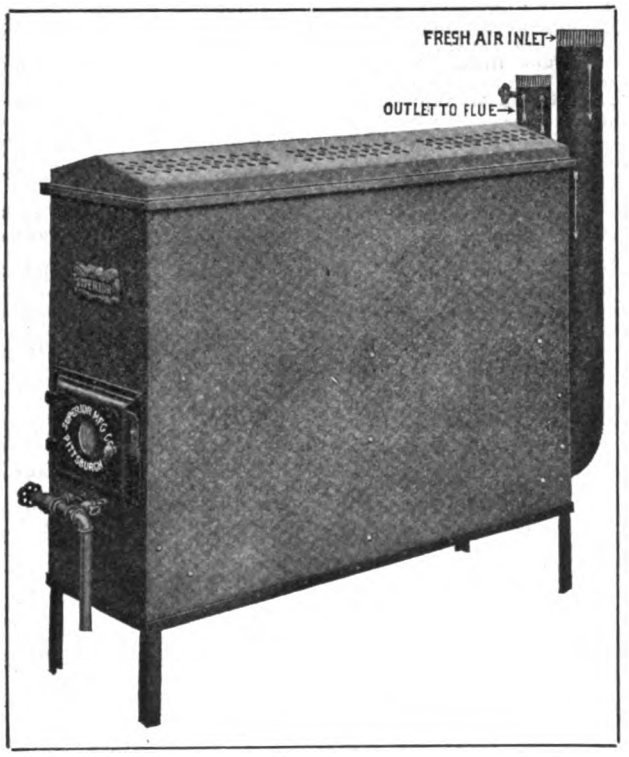
SUPERIOR GARAGE HEATER.

Is Easily Installed and Generates Sufficient Heat to Maintain Comfortable Temperature in Building.

The Superior Manufacturing Company, Pittsburg, Penn., is producing a heater for the garage which should appeal to small repair shops, etc., not equipped with heating apparatus, as well as to the trade dealing with motorists storing their machines in unheated buildings.

One of the desirable qualities of the Superior heater is the safety feature. No gases, such as gasoline vapor or air in the building, can possibly enter the heater, as it is equipped with a safety locking, gas proof door, which requires opening but once during the cold season to light the pilot. Also all air consumed is conveyed to the heater through an intake pipe from outside of the building. Control of the temperature is by a handle and an adjustable spud regulates the flame and gas pressure so that the heater will not require attention for a considerable period.

The heater is a small furnace, consisting of a combustion chamber and tubular radiator contained within a heavy metal casing. The dimensions are: Length, 40 inches; height, 33, and width, 12. The combustion chamber contains one of the Superior single-piece cast iron burners, a basket of patent English artificial fuel and a small pilot light. Perfect combustion occurs inside this chamber and every unit of heat is liberated before the products of combustion escape by the exit pipe. The



The Superior Garage Heater, Adaptable to the Private as Well as Public Garage, the Economy of Which in Operation Is Emphasized.

Superior heater retails, complete, for $25. The company issues an interesting circular explaining the operation of its product, and will forward the same upon request.

OPPORTUNITY FOR DEALERS.

Ten Body Types Offered with Koehler One-Ton Truck Retailing for $750.

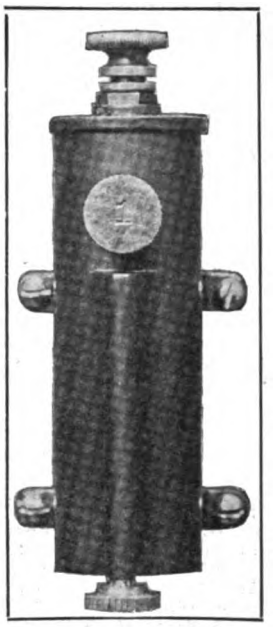
Featuring 10 different body types, these being adapted for a large number of uses, the one-ton truck marketed by the H. J. Koehler S. G. Company, 1709 Broadway, New York City, offers excellent opportunities for the dealer contemplating an agency for a commercial vehicle. The Koehler vehicle sells for $750, and is stated to be the lowest priced motor vehicle of its capacity on the market.

The mechanical construction involves principles indorsed by sound engineering practise, and the material and workmanship are first-class in every respect. The Koehler truck is being demonstrated by representatives of the company all over the country aiding in the selling campaign inaugurated, the details of which, as well as a catalogue, will be mailed upon request.

W. & L. PROTECTOR.

Safeguards Electrical Equipment of Car Against Damage Created by Short Circuits.

A novel as well as ingenious device, termed the W. & L. Protector, is being marketed by the W. & L. Manufacturing Company, Inc., Buffalo, N. Y. It will appeal to the owners of a motor vehicle, as it insures any ignition system against damage due to short circuits, thereby effecting economy. It retails for $4.



W. & L. Protector.

The device is shown in an accompanying illustration and is very compact and neatly designed. It is placed on the dash and the wiring is so simple that the most inexperienced may install it correctly. The protector is so constructed that the heating of a resistance coil will melt a sealing compound at the spring, so that the last-named member separates from the adjusting screw, breaking the circuit. The protector may be used indefinitely, as the sealing composition hardens automatically. The manufacturer has an interesting sales proposition for the trade, offers liberal discounts and will award territory.

The company is also marketing the W. & L. magnetic lifter and valve grinder. It consists of a case serving as a handle from which a steel extension projects. This extension is drilled and threaded for the coupling of either one or two sections, the middle member being utilized to reach places difficult of access with ordinary tools.

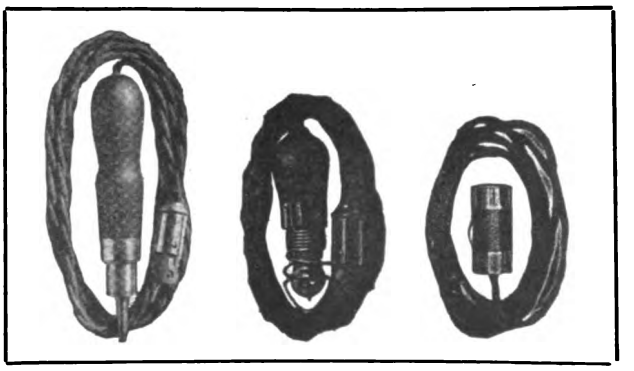
The tool can be employed successfully as a screw driver, for grinding valves, etc., and, when connected with a battery, the extension and shank becomes strongly magnetized. Used as a magnet it makes possible removing nuts, bolts, cotter pins, etc., from places not accessible to the hands or tools. This tool retails for $3. The dealers' proposition is very liberal, and full information will be sent upon request.

MABEY'S ELECTRIC GOODS.

Include Patching Tool for Vulcanizing Tires, Complet Trouble Lamp, Cigar Lighter, Etc.

Mabey's Electric & Manufacturing Company, 940 North Pennsylvania avenue, Indianapolis, Ind., is marketing a line of electrically operated accessories and equipment for the motor vehicle, and some of the line are shown in an accompanying illustration. A new and ingenious device is the electric patching tool, which can be stored easily in the tool box and utilized to repair cuts and holes in the tires while on the road, as the tool can be operated with the current of the lighting system. This device retails for $1.75 and is guaranteed.

The trouble lamp comes complete with socket, ample length of high-grade flexible cord, and the bulb is well protected from possible injury. It retails for $1.25. The cigar lighter is very neat and efficient, comes with ample length of cord and retails for $1. Mabey's Electric Manufacturing Company markets a large number of electrical devices and will forward, free, descriptions and illustrations, upon the receipt of a letter or postal card.



Mabey's Electric Specialties, Including Patching Tool, Trouble Lamp and Cigar Lighter.

The Auto Sales Company, Wheeling, W. Va., has completed remodelling its building on 16th street. The company has the exclusive agency for Overland cars.

The Morse Garage, Hardwick, Vt., is having extensive improvements made.

J. G. Schaal, Chambersburg, Penn., is having extensive improvements made to his garage at 146 North Main street. An addition of one story is being made which will be 65 by 165 feet. M. R. Rhoades has the contract.

The Queen City Vulcanizing Company, Poughkeepsie, N. Y., has installed an automobile repair department at its plant. The company also has the handling of the Portage, Kelly-Springfield and Diamond brands of tires.

William McGeorge, Cynwid, Penn., is having alterations and additions made to his garage.

The Gripp Auto Company, Afton, Ia., has taken over the business of the Afton Garage.

D. C. Powell, Portland, Ore., is having improvements made to his garage.

The Marshall Tire Company, Fall River, Mass., has installed a modern vulcanizing plant at 202 Bank street.

Walter Rose, Wickford, R. I., is erecting an addition to his garage and repair shop.

C. Swan's Garage, Main street, Norwich, Conn., is undergoing extensive improvements.

P. McGarrigle, Philadelphia, is having improvements made to his garage at 5338 Germantown avenue at a cost of $5000.

NEW CONCERNS AND BUSINESS CHANGES.

GARAGES AND REPAIR SHOPS.

A. Pitman, Cadillac, Mich., has opened an up-to-date garage and repair shop at 604 North Mitchell street.

Edward Lockwood, Three Rivers, Mich., has opened a first-class garage.

Case & Hatcher, Wayzata, Minn., has opened an up-to-date garage.

E. Woodmansee, Palmer, Mass., has opened a garage on Thorndike street. It is modern throughout.

G. S. Holden, Palmer, Mass., has opened a first-class garage on Central street.

Frank A. Storer, Cambridge, Mass., has opened a modern garage.

G. C. Deen, Austin, Tenn., has opened a first-class garage and supply house at the old stand of the Texas Garage, 214 East Sixth street.

O. F. Anderson, Ceresco, Neb., has opened an up-to-date garage. He handles the Buick car.

The Central Garage Company, Salt Lake City, Utah, has opened an up-to-date garage on South First street. The company will handle all makes of tires and accessories.

The Diamond Garage, Philadelphia, was opened recently at 2027-2029 North 29th street. A full line of automobile supplies and a special line of Ford accessories are in stock. Bernard Cohen and son are the owners.

Steele & Son, Palmer, Mass., has opened a garage on Squire street.

The Johnson Garage, Martins Ferry, O., was opened recently at 33rd street. The garage handles the Ford car.

The Auto Hospital, Toledo, O., is the name of a new repair shop which has been opened at 205 10th street. O. L. McCormick is manager.

Harry Seaman, Darien, Conn., has opened a garage on Center street.

Coman & Burt, Newbury, Mass., has opened an up-to-date garage.

W. J. Benseon, San Jose, Cal., agent for the Maxwell car, has opened a first-class garage at North First street.

Edward Faust, Marion, Ind., has opened a garage and has taken the agency for Buick cars.

The Broadway Garage, Edwardsville, Ill., was recently opened at 109 West Vandalia street. Earl Herrin and George J. Dunstender are the proprietors.

E. F. Monje, White Plains, N. J., has opened a garage at 9 South Lexington avenue. A complete line of automobile accessories will be carried.

E. J. Taylor and H. B. Murdock, Minneapolis, have opened a motorcycle repair shop at 115 North Main street. A stock of supplies for automobiles will be carried.

The Buckeye Automobile Company, Columbus, O., has opened a garage and repair shop at 1082 North High street. Harvey W. Smith and J. J. Aldrich are interested.

The Fulton Garage, Fulton, Mo., has been opened by H. Bangs on the state highway between St. Louis and Kansas City, Mo.

The West End Garage Company, Baltimore, Md., has opened a garage and repair shop at 3178 Wilkens avenue. It is under the management of Thomas A. Pietsch, who is an expert mechanic. The garage is kept open all night to accommodate tourists. A full line of supplies is carried.

The D. & J. Machine Shop, Grand Rapids, Mich., has been organized recently. The company purchased the shop formerly occupied by Pomeroy & Wright on Hall street. A general repair shop will be conducted by the new company.

The Ford Garage, Macomb, Ill., has been opened at 129-131 West Jackson street by R. P. Phillips.

Johnson & Co., Bellaire, O., has opened an up-to-date garage. The firm represents the Ford cars.

The Newbury Garage, Worcester, Mass., has opened for business. It is located on Newbury and Pleasant streets.

Peter J. McCormick, Hagerstown, Md., has opened a garage and oxy-acetylene welding plant in a new building erected especially for that purpose. It is located on South Prospect street. The Stanley steamer and Carter-cars are handled.

E. L. Rathburn, Battle Creek, Mich., has opened a garage and repair shop at 38 West State street. It is up-to-date throughout.

C. A. Searles, Merton, Wis., has opened a garage. A full line of supplies will also be carried.

The Piper Garage, Shenandoah, Ia., has completed its large garage, which is one of the most complete in the state. It has accommodations for 80 cars and includes a workroom, 30 by 100 feet. The company handles the Apperson, Maxwell and Reo cars.

W. A. McAuley and Gustave Malley, Leominster, Mass., have formed a company and have opened a garage and repair shop at 112 Union street. They were formerly with the Leominster Garage & Auto Company.

The Graves Garage, Wolverine, Mich., has been opened by George A. Graves, who handles the Ford cars. A repair shop is also maintained.

The Indiana Electric Service Company, Indianapolis, is the name of a new concern located at 421 North Capitol avenue. The company will specialize in expert repair service of electric equipment on motor cars.

The Roanoke Motor Car Company, Roanoke, Va., has now entirely recovered from the fire of June 16. The garage has been thoroughly remodelled and much new equipment added. An expert mechanic is employed in the repair shop.

The Modern Electric Motor Repair Company, Hoboken, N. J., is making a specialty of motor and machine repairs. The company is located at 712 Trapahagen street.

AGENCIES AND DEALERS.

Edwin More, St. Louis, has purchased the assets of the Missouri Car Company, distributor of Marmon cars, and will continue the business in his name until such time as a new company can be organized. He is president of the More-Jones Brass & Metal Company.

The San Bernardino Motor Power Company, San Bernardino, Cal., is a new company that has taken over the agency for Studebaker cars, formerly held by the Brandenburg-Pearson Company. The salesrooms are located at 715 Third street.

The Paige-Toledo Company of Toledo, O. which was organized recently, has opened showrooms at 1002 Madison avenue and a service station at 307-309 10th street. C. L. Sturtevant, Fred Hofer and H. D. Davis are interested.

The President Motor Supply Company, Philadelphia, has opened a store at 515 North Broad street. The company will carry Miller tires, Red Devil horns and a complete line of accessories and supplies. Herman Schreiner, Jr., is president.

The Automobile Brokerage, Wilmington, Del., recently organized, is located in the DuPont building and will handle all makes of cars.

Allen & Spurlin, Union, Ia., has purchased the Union Auto & Supply Company. The new firm will operate a general auto service station.

The Continental Auto Supply Company, St. Louis, has been established and opened for business at 5837 Delmar boulevard. Frank A. Cyr is manager.

Bunker & Reepell, Springfield, Mass., has dissolved partnership, Mr. Reepell having purchased Mr. Bunker's interest. The business will be conducted by the former and Chevrolet cars will be handled.

The Capitol Tire Company, Lincoln, Neb., has the agency for the Michelin and Goodyear tires. The company is located at 235 South 11th street.

The Blain Auto Company, Aberdeen, S. D., has been purchased by the Van Brunt Overland Company of Sioux City. The latter company will continue the business at 215 South Lincoln street and will handle the Overland car and carry accessories.

The Beaumont Auto Supply Company, Beaumont, Tex., has opened an automobile supply house at 175 Pearl street.

E. E. McFarland, Hubbard, Ia., has purchased Emery Whitney's half interest in the Hubbard Motor Company.

The Tire Sales Company, Pittsburg, Penn., has opened a store at 917 Liberty avenue.

Lutheran Vanlandingham, Medicine Lake, Tex., has opened an automobile supply station.

The Stockton Auto Supply Company, Stockton, Cal., has opened an automobile supply store at 208 Eldorado street.

The Auto Exchange, St. Louis, has been opened by Frank Ebbeler at 2330 Olive street. The company will also conduct a repair shop.

The Hubmark Rubber Company, Milwaukee, distributor for the G. & J. tires, has been appointed Wisconsin distributor for Presto demountable rims for Ford cars.

G. W. Decker, Erie, Penn., has purchased the automobile tire business formerly conducted by Arthur L. Stone at Eighth street. He will conduct the business under the name of the Decker Rubber Company.

A. J. Anderson, Wichita, Kan., has opened an automobile supply store at 117 North Lawrence avenue and will handle the Republic and Staggard tread tires.

The Direct Lubricant Company, Galveston, Tex., recently located in that city, at 2411 Strand. A full line of automobile accessories and supplies is carried.

The Vehicle Top & Supply Company, St. Louis, has secured the agency for the Stromberg carburetors.

The Thompson Motor Sales Company, Youngstown, O., is a new concern doing an automobile business. The company handles the Maxwell and Premier cars.

Walter W. Cameron, Hanford, Cal., has opened a tire depot in the Rehoefer building.

B. E. Griffey of the Griffey Motor Supply Company, Indianapolis, has obtained the state agency for the Newton horn, manufactured by the Auto Supply Company. The company is located at 340 North Delaware street.

Digitized by Google

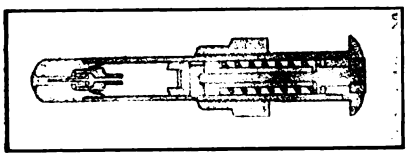
ACCESSORIES, SUPPLIES AND FITTINGS.

(Always Mention the Accessory and Garage Journal When Writing for Prices, Etc.)

GEM SAFETY TIRE SIGNAL.

Explodes Percussion Cap When Pressure Falls Below Normal.

The Safety Tire Signal Company, 655 Twelfth street, Boulder, Col., is marketing the Gem Safety tire sig-



nal, a device which warns the operator of the car when the pressure in the tire falls 20 pounds below normal. It is approximately the same size as the conventional tube valve and it is stated that it may be installed easily. It is also water and dust proof.

When the pressure in the casing falls from 80 to 60 pounds, for example, the device fires a percussion cap in the head of the construction, and it is stated that the signal is sufficiently loud to attract the attention of the driver. It does not allow the air to escape, however, as there is no connection between the signal and the tube, except that the inner tube lies over the end of the device, keeping it locked until the pressure falls. The Gem Safety Tire Signal comes in sets of four for solid rims and with one extra member for the demountable types.

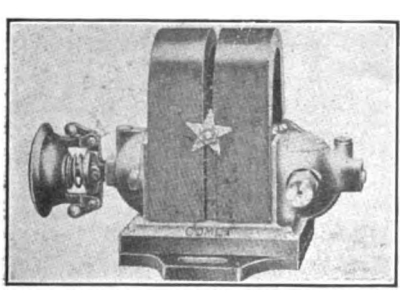
COMET MAGNETO.

Adaptable to the Used Car, Is Efficient and Moderately Priced.

Motorists whose machines are not equipped with magnetos and who desire an efficient, moderately-priced mechanical generator, will be interested in the Comet magneto, manufactured by the Henricks Novelty Company, Indianapolis, Ind. The magneto represents the results of 15 years' experience in building magnetos, is made in four types and is very compact. The one illustrated is four by 5½ inches by nine inches and weighs 10 pounds.

The Comet provides an inexhaustible supply of electricity and can be driven by belt or by friction. It does not, however, time the spark, as is generally the case with conventional magnetos, this being performed by the other components of the ignition system. The instrument is equipped with a governor and is made for varying motor speeds.

One of the qualities of the Comet is that it gives a uniform spark at all times, resulting in engine efficiency. The magnets are of the best imported tungsten steel, and the armature is of the laminated core, drum type. All lead wires are carefully connected and covered; in fact, the magneto is dust and water proof. The Comet governor insures a constant speed, regardless of that of the engine or its flywheel, and the maker states that its output is sufficient to ignite the mixture at low motor speeds. The Comet retails for $10.



THERMOID BRAKE LINING.

Fulfills All Requirements of Friction Material and Is Durable.

Safety first requires the use of a dependable brake lining, one that will not fail in emergencies. The Thermoid brake lining, manufactured by the Thermoid Rubber Company, Trenton, N. J., fulfills all the requirements of a brake lining, as it is constructed of pure Canadian asbestos, interwoven with solid brass wire. It is treated with a secret friction compound, which is forced into every pore of the material by giant heated rolls. After this operation, Thermoid is compressed and cured at 2000 pounds pressure, for one hour, at intense heat. Because of these pro-

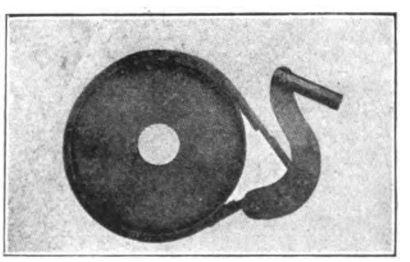
cesses, Thermoid is called the hydraulic compressed brake lining.

One of its qualities is that it will retain its gripping power until worn paper thin. It is not affected by the action of oils, water, gasoline, dirt or heat, and has a high co-efficient of friction.

ROYAL CYCLECAR BRAKE.

An External Device Lined with Raybestos Being Made for Small Cars.

An external brake for cyclecars is being manufactured by the Royal Equipment Company, Bridgeport, Conn. This brake is patterned after the same design as the company's well known Duplex external brake, which is made for larger automobiles



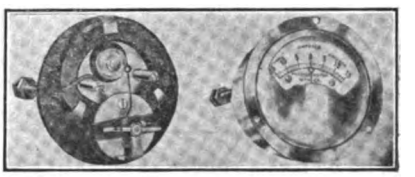
and trucks. As seen in the illustration, this operates on the "wrapping" or "winding" principle. One end of the band is fixed, while the operating force is applied to the other end in the direction of rotation of drum.

The brake effect is stated to be equally powerful whether the drum is rotating backward or forward. By automatic control, either end of the brake becomes the fixed end in proper relation to the movement of the drum. The car may be brought to a gradual or immediate stop, at the will of the driver, by varying the pressure on the brake lever. This brake, like all made by this company, is lined with Raybestos, as it is claimed that no matter how Raybestos is cut, drilled, bent or twisted, if it is properly attached to a metal base the fabric cannot fray, ravel or disintegrate in service.

AUTO IMP VOLT-AMMETER.

Has Self-Contained Tamper Proof Lamp Illuminating Feature.

The Roller-Smith Company, 203 Broadway, New York City, is marketing the Auto Imp volt-ammeter, de-



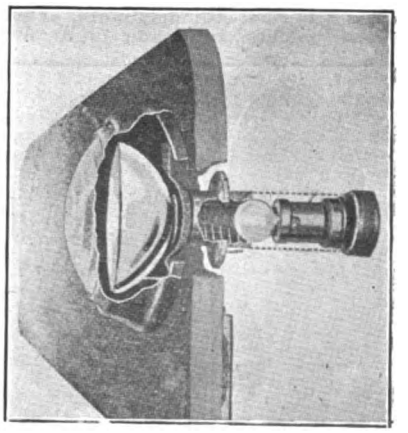
signed particularly for electric lighting systems. It embodies the results of years of experience in the manufacture of current indicating devices and is accurate and durable. The magnets are of the best tungsten steel, and the bearings are polished hardened steel in high-grade jewels. The cases are a solid drawn, single piece with window cemented, and are dust and moisture proof. One of the desirable qualities of the instrument is the self-contained illuminating lamp feature, which does not add to the bulk, has no projecting parts, and is proof against tampering. This lamp feature is shown at the left in the accompanying illustration. The Auto Imp volt-ammeter indicates amperes, volts, discharge and charge.

CAMPBELL CELLO LIGHTS.

Complete Set of Four Lamps to Operate on a Six-Volt System.

The A. S. Campbell Company, Boston, Mass., is marketing a complete set of four Cello lights, two side, dash and tail lights, to operate in series on a six-volt system. These are for Ford and other small cars. By wiring in a series, the maker states the operator will always be made aware of the fact when any lights are out, by a glance at the tell-tale dash light. This wiring, it is claimed, can only be made on a six-volt system by using 1½ volts to each lamp.

The Cello tail light is of the same construction as the bracket side lamp, except that it has the regulation red lens and white glass for number light. These lights are fitted with 1½-volt, ½ C. P. tungsten bulbs and Ediswan base. If desired six-volt bulbs can be supplied. The side lamp and tail light are held by the same bracket as shown on the side lights, and all are furnished in polished brass, bright nickel or black finish. It is the claim of the manufacturers that lighting bill expense can be reduced one-fourth. A complete set of the Cello lights retails for $9.50.

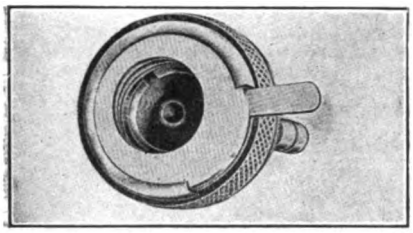


Digitized by Google

BELL HOSE CLAMP.

Locks to Valve Member and Prevents Leakage When Pumping.

The Bell Pump Company, 78 First street, East Detroit, is marketing the Bell hose clamp, a connection for tire



pumps, which the maker states is very efficient. It not only has a rubber socket, but in addition a threaded internal eccentric, which operates internally upon the threaded part of the tire valve tube.

The rubber socket is engaged with the valve member in the usual manner, and a pressure of the finger actuates the eccentric lever and threaded eccentric inside the clamp, engaging the threads of the valve much in the same manner as a nut. This construction, shown in the accompanying illustration, prevents the clamp working loose. The device is quickly detached by moving the lever member and displacing it from the valve.

POLSON TIRE BOOTS.

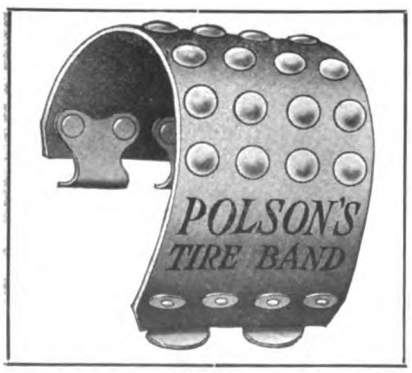
Steel Studded Bands of Rubber or Leather for Use as Patches.

Designed to cover cuts in tires or small blow-outs, the Polson Bros. Manufacturing Company, Kansas City, Mo., is manufacturing a tire band three inches wide, designed to go on the outside of the shoe. This band is made of steel studded chrome leather and has two flat hooks on either side of the patch. To preserve a tire and keep a small rent from ruining an otherwise good shoe, this patch slips over the tire and the hooks, as shown in the accompanying illustration, fit under the steel rims.

It is simple to attach, and the manufacturer says it will wear a long time and protect the tire to the fullest extent. These patches are made for three, 3½, four, 4½ and five-inch tires. Four-inch retails for 60 cents.

The Polson Company also makes a steel studded rubber hook-on boot of the same design, and 6½ to 8½ inches long. The size is optional. A steel studded leather boot of the same dimensions is made.

An extra heavy inside blow-out patch is manufactured by this concern. This patch is made of red rubber and is as heavy as the tire itself. This has strong double flaps, which are clamped under the rims and cut off, as is the ordinary inner patch. These patches are made to fit five sizes of tires and the lengths range from nine to 13 inches.

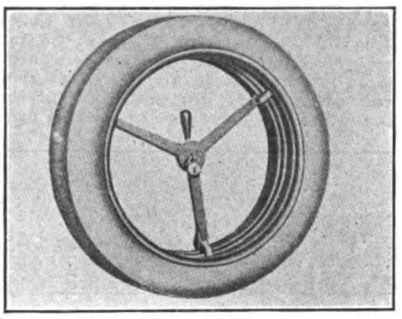


RIMOLOX TIRE CARRIER.

Consists of Three-Arm Bracket and Is Provided with a Lock.

The Rimolox tire carrier, manufactured by the Rimolox Tire Carrier Company, Evansville, Ind., is a new construction for carrying and supporting tires attached to demountable rims. As may be noted by the accompanying illustration, it is provided with a three-arm bracket. The ends of these arms are equipped with cup shaped members, which grip the entire inner surface of the rim.

The Rimolox eliminates straps, and one of its desirable qualities is that it is provided with a locking device, preventing theft or loss of the shoes. By unlocking the padlock in the centre the tire can be easily removed.

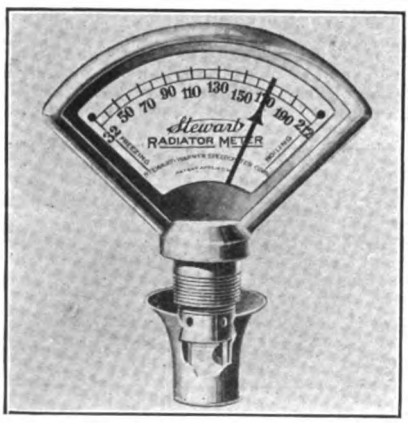


The Rimolox can be used at the side or rear of the car, as is convenient.

STEWART RADIATOR METER.

New Model Tells Temperature of Water in the Radiator.

The Stewart-Warner Speedometer Corporation, Chicago, Ill., has made a number of improvements in the Stewart Radiator meter, shown in the ac-



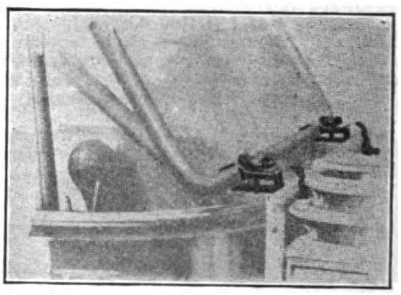
companying illustration. While similar to the usual type in construction internally, it is fitted with a small cup which appears like a telephone mouthpiece. This cup is attached to the meter from underneath the filler cap of the radiator, and when the radiator is filled with water and the engine started, the water accumulates in this cup and the temperature of the cooling fluid is registered.

The cup water has the same temperature as the radiator water, and consequently the condition of the water system can be told at a glance. Should the level drop to the danger point and the cup become dry, the meter will register accordingly. The reverse side of the meter is fitted with special name plates of the different makes of cars.

ROPER WEDGELOCK.

Windshield Device for Ford Cars That Is Easily Operated.

C. F. Roper & Company, Hopedale, Mass., is marketing a wedgelock device fitted to the windshield on Ford



cars. This wedgelock, as seen in the photograph printed herewith, works with a wing nut, and locks the windshield tight in either the regular position on top of the dash, or in the open ventilating position.

This arrangement permits the motorist to open or close his windshield without leaving the seat. The shield opens at the bottom, permitting the air currents to enter the car and keep the driver's section clear from all hot air from the engine. The Roper wedgelock sells for $1.50 the pair.

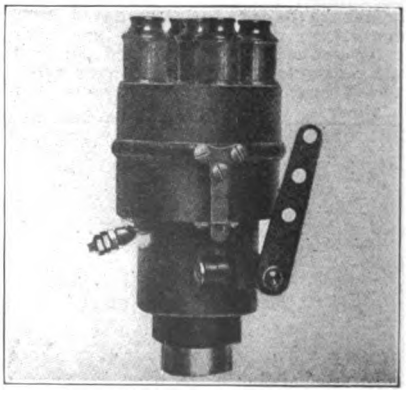
AMPCO DISTRIBUTOR.

Eliminates Moving Wires and Is Applicable to All Motors.

The American Motor Parts Company, 52nd street and Baltimore avenue, Philadelphia, is manufacturing the Ampco distributor, which replaces the conventional timer and multiple-unit coils where the ignition system employs a battery or dry cells as a source of current supply. The Ampco is adaptable for service with any internal combustion engine, regardless of speed and type.

One of the qualities of the distributor is that moving wires are eliminated, preventing ignition troubles due to short circuits and caused by frayed or loose connections. The maker lays great stress upon its construction, stating that all screws and springs, being off centre, it is impossible for the parts to be reassembled other than correctly.

The distributor is made of Bakelite, one of the best known materials for service where high-tension currents are utilized, and New Departure ball bearings are employed throughout. All moving parts are constructed of the best tool steel, tempered and ground. The break of the primary current is positive and the maker claims that mechanical and electrical lag are eliminated by the construction, assuring a high degree of efficiency, as well as synchronization of the spark.

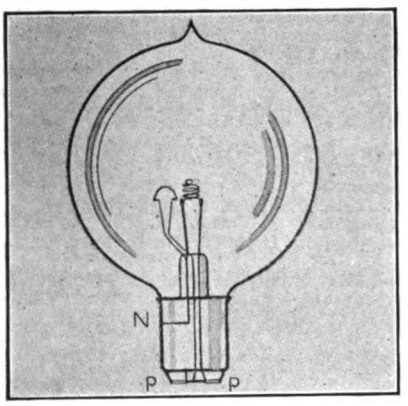


Digitized by Google

TULITE AUTO BULB.

Combines Two Filaments and Eliminates Need of Side Lamps.

The Tulite Auto Bulb Company, Detroit, is manufacturing the Tulite bulb, shown herewith, and which



provides a soft, diffused, wide range light for city driving, and a powerful illumination for country roads. These desirable features are obtained by the peculiar construction of the filaments, that in the centre being utilized when maximum illumination is desired, while the offset filament is employed when a dim light is required. The construction eliminates the usual side lights, and the wiring arrangement is such that the leads from the usual side members are connected to the offset filament. A complete set of bulbs and the Tulite bulb chest retails for $3.

SPEDOLENE LUBRICANTS.

Have the Heat Resisting Qualities of Asbestos.

Spedolene, manufactured by the Continental Asbestos Corporation, Worcester, Mass., is the invention of Alexander Warrell, the originator of asbestos lubricants, which include Journolene and Asbestolene. Spedolene is a high-grade lubricant and is asbestos rendered into a semi-liquid condition. The heat and friction resisting qualities of asbestos are well known. It can be subjected to a temperature, ranging from 2000 to 3000 degrees, without being affected, and resists the action of acids and alkalies.

Spedolene includes these qualities and is a practical and efficient lubricant for transmissions, differentials, timing gears, universal joints, bearings, etc. The maker states that it will not disintegrate or pack away, and that it will completely cover the bearings and gears even when they are rotating at high speeds, thereby preventing friction and consequently heat.

It is particularly adaptable to the differential where cushioning qualities, combined with the maximum of flow, are necessary in order that the best service may be obtained from the mechanism. It is stated that Spedolene will not leak out through the axle housings and thereby impair

the efficiency of the brakes. It is made in three grades, and comes in five, 10, 25 and 50-pound cans.

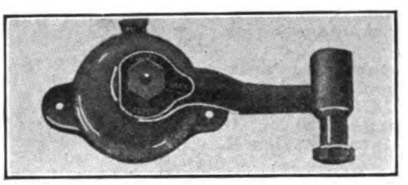
HOUDAILLE SHOCK ABSORBER.

Compresses Castor Oil Through By-Passes, and Is Adjustable.

The Houdaille compensating shock absorber, manufactured in Leualois, Paris, France, is distributed in this country by the Benz Automobile Sales Corporation, 1700 Broadway, New York City. This shock absorber is popular abroad and is used by a large number of racing cars.

The Houdaille is not dependent upon frictional discs, springs, air compression, etc., its compensating suspension being made positive by a rotary paddle piston compression, compressing castor oil and forcing it through by-passes provided for the purpose. The oil, being forced by abnormal pressure through these by-passes, automatically deadens the jar. Recoil is eliminated by the action of the oil returning from the compensating reservoir, this being performed by suction.

One of the qualities of the Houdaille is the simplicity of the adjustment for varying sized cars, etc. The braking power of the suspension is



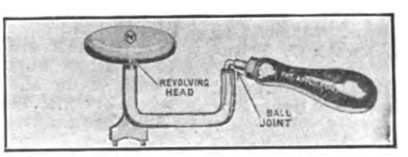
effected by the passage of liquid through the apertures and, by opening or closing these, the desired results are obtained.

It is stated that the shock absorbers require attention but once or twice a year, the work involving the removal of a filler cap and replenishing the supply of liquid. The Houdaille comes in sets of two or four and the maker states they can be easily applied to all types of motor vehicles. A set of four retails for $90.

NELSON VALVE GRINDER.

Designed for Ford Motor and Is Operated by Push and Pull.

A. Nelson Manufacturing Company, Chicago, is manufacturing a valve grinder for the model T Ford motor which presents interesting, as well as practical, features. The maker states that it eliminates the usual wrist and elbow motion utilized in



that it is operated by a direct pull and push motion, a ball joint taking care of all upward, downward or side movements. This, it is claimed, permits the hand to be moved in a natural manner. The revolving brace grip or head is stated to be sufficiently high to prevent striking the fingers against the handle, and is low enough to allow grinding the No. 8 or last valve of the motor, which is not easily accessible with ordinary tools. The grinder is constructed of steel,

Ed. Note—The Accessory and Garage Journal wishes to acknowledge the receipt of several line cuts which are too large for use in this department. Illustrations should not be over 2 1/16 inches wide to insure their use.

JOHNSTONE AUTO LOCK.

Keyless Combination Type for Locking the Ignition.

The Johnstone keyless auto lock, manufactured by the Factory Sales Company, 716 Williamson building,

Cleveland, O., differs from the conventional devices utilized to prevent operation of the car by others than intended in that no keys are required.

The lock is circular in shape and very compact and the maker states that being constructed of metal it cannot be destroyed in an attempt to steal the machine. The device operates on the same principle as a combination lock, and as may be noted by the accompanying illustration is provided with a dial.

The Johnstone locks the ignition and is made in three types to meet the requirements of different systems. One design is for low-tension ignition systems which require breaking of the circuit to prevent starting and operation of the motor. Another is for high-tension magnetos which require grounding of the primary current to prevent the instrument supplying current to the cylinders. The third design is termed the universal, a special construction for large and expensive machines.

The lock may be installed on the dash or other convenient place, and but three connections are made, these being the wires from the kick switch of the lock, battery and magneto. The ignition is locked by turning the knob on the dial which may be set for one, two, four or six numbers. The maker states that no two combinations are alike, and that the owner can change the setting at any time desired.

VELVET SHOCK ABSORBERS.

Utilize Sensitive Coils and Are Simple and Durable.

The Blackledge Velvet shock absorbing springs, made by the John W. Blackledge Manufacturing Company, 2110 Michigan avenue, Chicago, are suitable for all cars having three-quarter, scroll end or platform springs in the rear, and for all machines excepting those having a cross bar at the rear. The Velvet springs give and adjust themselves to the load of the car, and equalize its variations. The coils utilized vibrate eight times as fast as it is possible for the car springs to work, obtaining Velvet riding qualities on cobblestones and rough roads. These coils are sensitive and, when attached, become a part of the car springs.

NEW CONCERNS RECENTLY INCORPORATED.

CAR MANUFACTURERS.

Finson Electric Motor Manufacturing Company, Rochester, N. Y.; $10,000; H. R. Howard and others.

The Hudson-Stuyvesant Motor Company, Cleveland, O.; $25,000; to manufacture automobiles and supplies; F. E. Stuyvesant, Richard L. Kreesen, B. J. Guthrey, R. E. Williams, H. M. Hodet.

Upton Automobile Company, Bristol, Ind.; $25,000; to manufacture automobiles and springs.

Knotts Taxicab Company, Wilmington, Del.; $25,000; to manufacture automobiles, cyclecars, etc.; E. Krause, J. W. Brady, J. T. Knotts.

Remington Long Island Cyclecar Agency, New York City; $25,000; to manufacture automobiles, cyclecars, etc.; G. A. Weintgetz, F. R. Weintgetz, A. Hobart.

Hendee Manufacturing Sales Company, Springfield, Mass.; $50,000; to manufacture automobiles, motorcycles, etc.; George M. Hendee, Frank J. Weschler, C. A. Earl.

The St. Charles Motor Truck Company, St. Charles, Mo.; $150,000; to manufacture automobiles and trucks; William F. Breedlove, C. E. Tillman.

Dart Motor Truck Company, Waterloo, Ia.; $600,000; C. W. Hellen, W. Galloway, C. C. Wolf.

Dashiell Motor Company, Chicago, Ill.; $25,000; to manufacture automobiles; C. R. Dashiell, Emil C. Wetten, Charles H. Pegler.

Eagle Cyclecar Company, Chicago, Ill.; $200,000; to manufacture automobiles; U. B. Curtis and others.

Boston Motor Manufacturing Company, Boston, Mass.; $200,000; to manufacture automobiles and motorcycles.

Scranton Automobile Company, Scranton, Penn.; $100,000; to manufacture automobiles, engines, accessories, etc.; H. R. Shaw, Leslie G. Stark.

American Standard Automobile Company, Edwardsville, Ill.; $100,000; to manufacture automobiles and farm machinery; P. Berhardt, C. H. Gerling, L. Kirsch.

Pope-Hartford Company, Hartford, Conn.; $200,000; to manufacture automobiles; Wilbur C. Walker, Charles E. Walker, Ralph A. Barkman.

American Wheel Company, Dover, Del.; $200,000; to manufacture commercial cars; W. F. Cook, Walter P. Carrow.

AUTOMOBILE DEALERS.

Bernville Motor Company, Reading, Penn.; $10,000; to deal in automobiles.

Lincoln Motor League, Chicago, Ill.; $2500; to deal in automobiles; A. H. Maurer, C. E. Hall, W. A. McGivern.

Garrett Auto Service Company, New York City; $10,000; to conduct a general automobile business; H. G. Commons, R. D. Whiting, W. G. Stahlnecker.

Vermont Machine & Auto Company, Fairhaven, Vt.; $5000; Philip Pelkey, Mary E. Pelkey, George W. Draper.

The L-Arrow Auto Livery Company, Milwaukee, Wis.; $10,000; Charles H. Ewe, William F. Albers, Charles W. Modersolm.

The Oakland Automobile Company, El Paso, Tex.; $15,000; to deal in automobiles; A. H. Elmore, W. Prosser, L. Rust.

Hudson Auto Company, Greensboro, N. C.; $10,000; to conduct a general automobile business; J. H. Weatherspoon, J. Shaw, C. D. Tassler, C. D. Benbor, Jr., and others.

Reo Sales Company, Syracuse, N. Y.; $15,000; to deal in automobiles; C. H. Norris, G. H. Norris, Harold N. Dewitt.

Colonial Auto Company, Hartford, Conn.; $20,000; to deal in automobiles; David A. Trunbull, Hazel O. Trunbull, William M. Trunbull.

Postles Automobile Brokerage Company, Wilmington, Del.; $50,000; to conduct a general automobile business; Grantley P. Postles, Lorenzo A. Bradley.

Renton Motor Car Company, Haverhill, Mass.; to deal in automobiles; Lester T. Wolff, Ralph W. Renton, Francis W. Johnson.

Meinhard Auto Service Specialties Sundries Supply Company, Buffalo, N. Y.; $10,000; to deal in automobiles and supplies; Charles J. Staples, C. H. Meinhard, T. P. Meinhard.

Ford Auto Company of Passaic, Passaic, N. J.; $10,000; to conduct a general automobile business; Trina Peter, Nicholas Nornstra.

Foster Motor Sales Company, Yonkers, N. Y.; $3000; George B. Foster, Mary E. Foster, J. Bertram Foster.

Roswell Auto Company, Roswell, N. M.; $50,000; to conduct a general automobile business; C. M. Farnsworth, C. C. Cagle, C. M. Sheperd.

Service Motor Supply Company, Chicago, Ill.; $5000; to deal in automobiles; Arthur J. Welsh, Gus C. Aucutt, Samuel H. Silverman, H. F. Walbaum.

Passaic Auto Company, Passaic, N. J.; $5000; to deal in automobiles and supplies; Chester R. Bates, M. K. Raymond, Chester L. Holloway.

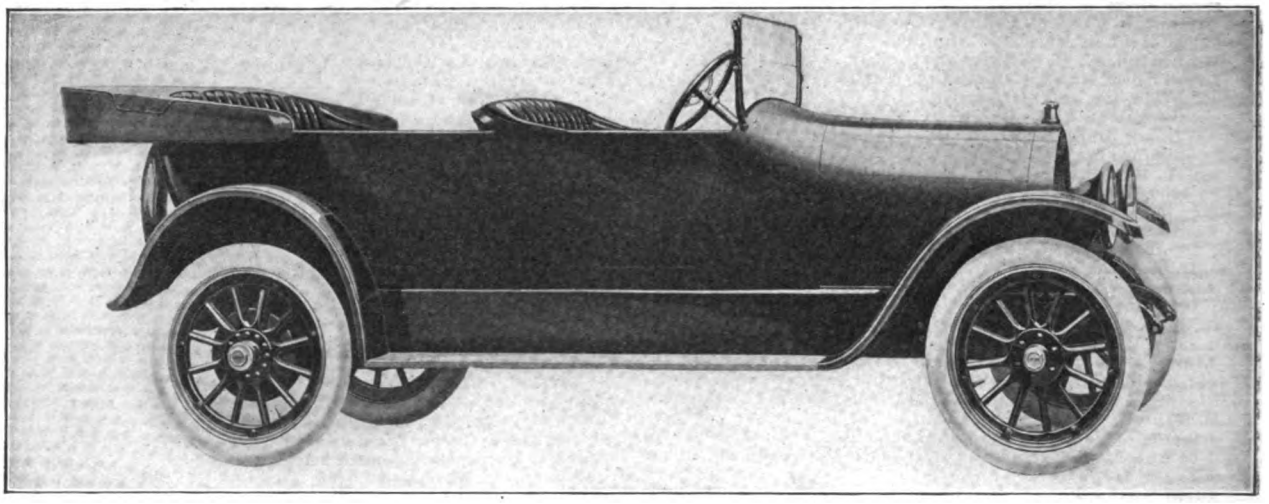
JEFFERY HAS WORM DRIVE.

Chesterfield Six Has Many New Features for 1915.

A worm drive axle, small bore, long stroke, cantilever rear springs, Bijur cranking and lighting system, vacuum fuel feed and a pure European streamline body,



The 1915 Jeffery Chesterfield Six, Worm Drive, Showing Full French Streamline Body.

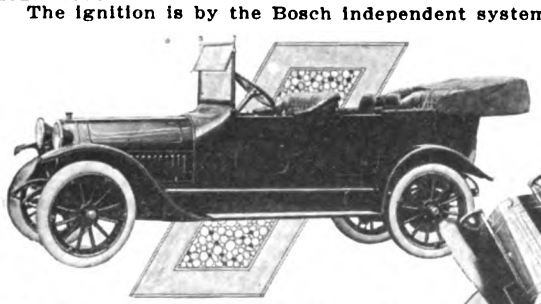
are a few of the 1915 features of the Chesterfield Six, made by the Thomas B. Jeffery Company, Kenosha, Wis.

The two older Jeffery models, a Six and a Four, will continue practically unchanged, except for numerous refinements. Five-passenger touring and two-passenger roadster bodies are offered with the new Six. Both of these are $1650, and a two-passenger all-weather car sells for $1950. The chassis alone is $1350. The five-passenger touring car weighs 2850 pounds, which may be considered an exceptionally low weight for a six-cylinder car.

The motor is of the L head, block type, with a bore of three inches and a stroke of five inches. This motor has developed a speed of 2900 revolutions a minute, according to the factory engineers. For the worm drive rear axle it is claimed that it not only produces a quieter running car, but a much more economical one, as it is stated that a far greater mileage can be obtained from a gallon of gasoline.

Likewise the worm drive gives a continuous smooth gear contact, thereby eliminating all jerks incident to starting. For the drive it can be emphatically stated that it is a most durable form of construction, and the most efficient results are shown when driving at high speed. The worm is of the overhung type, which affords maximum road clearance, and is reached through a large opening at the rear of the axle housing, which has the usual cover.

The ignition is by the Bosch independent system, and



Side View of Studebaker Six—Pressed Steel Has Been Substituted for Wood in the Body.

the equipment includes Bosch spark plugs and cable. A Rayfield carburetor is employed, as in the previous model, and the fuel is delivered to the carburetor by the Stewart vacuum feed, from a seamless, cylindrical tank carried in the rear.

Lubrication is by the combined splash and gravity system, in which the oil supply is carried in a reservoir, under the crank case. The starting and lighting system is the Bijur, which has been so successfully employed by the Packard Motor Car Company.

STUDEBAKER SELLS FOR LESS.

Also Two New Body Types Are Offered This Year.

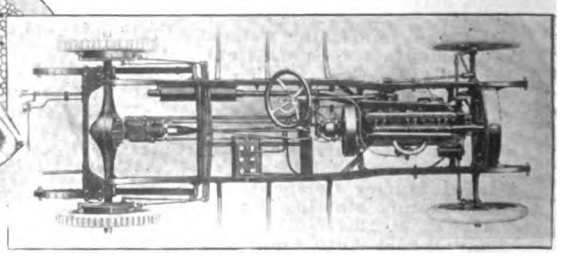
The feature of the Studebaker announcement is a reduction in the price of both the Four and Six, and a great number of refinements added to both lines. These cars,

made by the Studebaker Corporation, Detroit, Mich., are now $985 for the Four, a reduction of $65, and the Six has been decreased $190, the price being $1385 for the five-passenger and $1450 for the seven-passenger body.

No radical changes have been made in either model, and as in 1914, the line consists of two chassis. The Six carries two bodies, a five and seven-passenger, and the Four is built as a touring car and a three-passenger roadster. The driver's section of the seat in the roadster is carried forward four inches, which adds to the comfort of all concerned and gives the driver free play. The equipment is complete, including a one-man top, with side curtains and cover, Wagner electric lighting and starting system, headlight dimmers, Stewart-Warner speedometer, gasoline gauge, electric horn under the hood and an extra demountable rim, jack, pump and tools.

While there has been no increase in the engine dimensions, it is claimed that the power has been increased some 15 per cent. This has been brought about by reducing the weight of the reciprocating parts and improving the design of the manifolds. The motor, four or six cylinders, is cast en bloc, and has a bore of 3½ inches and a stroke of five inches. Both cars have three-speed selective gear sets, controlled by centrally located levers. No change has been made in the clutch, which is a leather-faced cone, but the leverage on the operating mechanism has been increased in the Six. In both cars flat springs are placed under the clutch leathers and a single main spring is employed. The cones are of pressed steel. Brake drums have been increased in diameter, and both brakes are now lined with an asbestos fabric; on the 1914 model the contact was metal to metal. Both brakes are fitted with equalizers. Wheelbase on the Four is 108 and on the Six 122 inches, and tires are 34x4 inches on both models. Rear axle is full floating, and as in the previous model the gasoline tank is placed in the cowl, and a streamline effect is given the body.

Cooling in the Six is by means of a honeycomb radiator, and by a vertical tube radiator with an auxiliary tank in the Four. The problem of cooling has been simplified in the Four by use of a larger exhaust pipe, which carries away hot gases more rapidly than before. Both cars use the centrifugal pump.



In the Centre, a Top View of the Studebaker Six, Denoting the Seating Arrangement—At the Right Is the Chassis of the Six Model.

IT CAN'T BE DONE!

How Substitution of *Just As Good* Oils Effects the Garageman

Monogram Is the Quality Oil

There is but one brand of oil that will meet the requirements of the motoring public, and that is the BEST THAT CAN BE PRODUCED. Substitution of "Just as Good" oil will do more to destroy the dealers' business than any other one factor.

The service and life of a motor car must depend upon the quality of the lubricants used. Oils that do not give entire satisfaction are shunned by owners, as are the dealers who sell such oils.

There is a certain loss selling unknown oils. The experienced motorist is not gambling with lubricants. The dependable dealer recommends and sells the best oil.

MONOGRAM Oils and Greases are known because of satisfactory use for years in all classes of motor cars. MONOGRAM Oils are sold in sealed containers that give the same protection to dealers and consumers. They are known wherever automobiles are used, and are sold by the trade with an absolute guarantee.

The MONOGRAM selling policy is so broad and liberal that no dealer can afford to sell "Just as Good" lubricants

MONOGRAM Oils make business and are a constant source of profit. Trade is already established when a dealer sells MONOGRAM Oils.

Correspondence relative to agencies is invited.

What Counts

The Accessory and Garage Journal

Is the one trade paper that accords the same sterling value to the small user of space as it does the largest advertiser.

It has a known clientele, it is better than any Trade Directory, has all features of a regular magazine and is more reliable than any Trade Mailing List.

It reaches all trade interests, it has no owners' clientele and every feature claimed for it is backed by an iron clad guarantee—Both distribution and service.

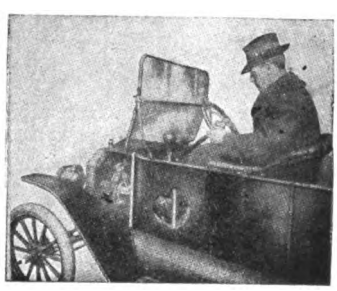
GARAGE JOURNAL
September 1914 Vol 49

CENTURY
MECHANICAL
FORD STARTER

Is the cheapest practical equipment that can be placed on any Ford car. From a pleasure viewpoint it is just as necessary as a top, the lamps, the speedometer, the magneto or the shock absorbers. From a business viewpoint it saves labor, time and fuel. A child can operate it by a push with the foot. It is mechanical in operation and so constructed that it may be changed from one car to another. It will last a lifetime. It can be installed by any man with ordinary mechanical knowledge.



A Sure Motor Starter

IT SELLS AT SIGHT AT A RIGHT PRICE, AND IS A SOURCE OF BIG PROFIT TO LIVE DEALERS

The Century Ford Starter
The Wizard Washer

For $15.00 You Can Give One or 50 Cars a DAILY BATH

WIZARD WASHERS

Are the most practical time and labor and money saving equipment ever installed in a garage. *They obviate the use of finish-destroying soaps and sponges.* A woman or child can use them. Delivered ready for use. They are practically indestructible. Jobbers and dealers recommend the Wizard Washers. *Sold with a guarantee of complete satisfaction.*

at the minimum cost. Long service—economical

"REMINGTON"

SPECIFICATIONS:

MOTOR—Unit power plant—four cylinders cast enbloc, bore 2¾", stroke 4½", water cooled, main frame 3 point suspension, valves enclosed. LUBRICATION—Constant level splash feed. Very economical and efficient. CARBURETOR—Float feed. TRANSMISSION—Selective sliding gear, three speeds forward and reverse. Operated by Hollister Automatic Gear Shift. FRONT AXLE—Drop forged I beam section. REAR AXLE—¾ floating with bevel pinion and differential of special steel. STEERING GEAR—Worm and sector irreversible and adjustable for wear. 15" wheel. BRAKES—Service on rear axle, differential contained in rear axle housing free from dirt. Adjustable from outside. Extremely efficient. Hand emergency on rear wheels. SPRINGS—Chrome vanadium steel. Front semi-elliptic. Rear three-quarter elliptic. WHEELS—Wire, 28"x3". FRAME—Pressed steel channel section with cross members and large gussets. WHEELBASE—100". BEARINGS—All annular ball, extremely large. EQUIPMENT—Top windshield, speedometer, electric horn, electric lights with dimmer on headlights, automatic gear shift, electric starter. AUTOMATIC GEAR SHIFT—The Hollister Automatic Gear Shift is a feature found only on Remington cars. A wonderful contrivance new to the automobile improvements. Simple and the most effective automatic gear shift invented.

DEALERS—YOUR OPPORTUNITY

The Remington Roadster is not an experiment—"Remington" would not put on the market a car that would in any way prove below a standard of Remington reputation. The purchaser is not asked to take our car and work out the "bugs"—Remington has seen to that, and the purchaser receives his car with that confidence and pride of knowledge that comes to one who knows that he has the best obtainable—an elegant, dependable, satisfying car—a car that will fulfill his requirements to the utmost—a car of power, speed, comfort and reliability. When a Remington product goes into the hands of the user, he knows that he will receive that fullness of service to be found in a quantity production.

THE INTEREST OF
LE DEALER and OWNER

In 1816, Eliphalet Remington forged the first gun made in America and lived to see his name famous in the United States and abroad.

His sons added fame to their name by creating the Standard of the Typewriting Machine.

His grandson now offers a roadster that is of Type and Quality eminently fit to bear the Remington Seal—"All that a light car should be."

EANS PRECISION IN MECHANISM

a GUN—what it signifies in the Typewriter World—Now it GUARAN-anism—correctly applied scientific principles, to give the utmost efficiency keep and operation and an absolute guarantee of satisfaction.

ANY

Since 1816, when Eliphalet Remington forged the first gun barrel, the name Remington in things mechanical has been a guarantee of perfection. The Civil War created a demand for arms and "Remingtons" were the choice as the best that were then produced. Since then they have been a standard and today the world owes to the "Father of American Gun Making" the honor of progress in arms. The typewriter that bears the Remington seal has won the recognition as the standard and has stood the most severe test of service.

The prestige that Remington enjoys in the world for quality, in the history of war, in peaceful commercial history of business, is about to be enhanced in the world of automobiles.

Don't Pass This Offer

The kind of knowledge contained in these books when applied to your business and work will be a money making and time saving asset.

For Every Garageman, Repairman, Accessory Man and Operator

For Every Owner, Student, Mechanic and Engineer

The investment once made is good for a life time. Do not drag along the old ruts when you can have at command just the actual, practical, mechanical information that you must have and are called upon to use constantly.

LIST OF BOOKS

TITLES		11 BOOKS
Engine .	35c	All indexed
Magneto .	35c	All complete
Carburetor	35c	No theory
Battery . .	35c	All revised
Tires . .	25c	Up to date
Chassis . .	25c	900 pages of text
Lighting .	50c	1800 illustrations
Operation .	50c	Including many
Overhauling	50c	page charts and
Motorcycle .	35c	working diagrams.
Truck Operation	$1	

Be a Leader. Stop Being a Follower.

Improve your knowledge. It will mean success and increased profits for the business man and improved position and increased salary for all others.

A wonderful set of books, written by men who knew their business and what was needed.

THAT'S THE RESULT

When Gearset and Differential Cases Are Filled with Ordinary Oils or Greases.

SPEDOLENE

Will Solve All Lubricating Problems with Your Motor Car.

IT

Will not gum
Will not run out
Will not change chemically
Will not cause erosion or rust
Will not change with temperature variations.

SPEDOLENE

Is nearer 100 per cent. efficiency in lubricating quality, for gearsets, universal joints, differential gears, timing gears and worm gears than any other known oil or grease.

SPEDOLENE

Is the lubricant that kills heat. It is a combination of highest grade refined mineral oil and asbestos. It is the WONDER WORKER OF LUBRICANTS. It forms an enduring film between all contacting surfaces, it will penetrate any bearing and will not pack or harden.

Packed in 5, 10, 25, and 50 Pound Cans and Half Barrels and Barrels, and Shipped Under Seal.

Distributing Agencies Wanted In All Unassigned Territory.

PERSONAL NEWS OF THE INDUSTRY.

F. W. Pilling, Detroit, has accepted a position as eastern sales manager of the Briggs-Detroiter Company. He has been connected with the automobile industry for 10 years, and for the past four years has been associated with the Krit Motor Car Company.

F. W. Pilling, Eastern Sales Manager of the Briggs-Detroiter Company.

E. A. Gilmore, Boston, Mass., for years an agent for the Hudson car, and more recently partner in the Whitten-Gilmore Company, after a visit to the L-P-C Motor Company's factory at Racine, Wis., has taken the agency for the Lewis VI for eastern Massachusetts.

Marshal E. Lebon, New York City, has been appointed district representative for that territory by the Thomas B. Jeffery Company, Kenosha, Wis. He has been with the Jeffery organization since 1908 covering the wholesale end of the Boston branch.

George L. Willman, Detroit, formerly business manager of the Detroit Board of Commerce and assistant advertising manager of the Studebaker Corporation, has been appointed advertising manager of that firm.

C. H. Clement, Detroit, has resigned as chief engineer and sales manager of the Metal Products Company.

A. E. Landman, Los Angeles, Cal., has been appointed sales manager for the Don Lee Company, distributor of Cadillac cars in that territory.

A. W. Gilpin, Minneapolis, Minn., until recently manager of the Ford branch at Chicago, has been transferred back to his old position.

William C. Brackett, traffic manager of the Motor Car Dealers' Association of San Francisco, Los Angeles, Portland and Spokane, died recently.

S. H. Stern, East Orange, N. J., has been appointed Marmon sales manager for New Jersey, with headquarters at 494 Main street.

Louis E. Wagner, Detroit, has accepted a position as general sales manager for the Century Electric Car Company. He will tour the country to observe business conditions.

J. Herbert Teal, Chicago, resigned his position with the Uno Manufacturing Company, Inc., and is now specialty sales and advertising manager of Valentine & Co.

Joseph Kerrigan, New York City, has disposed of his interest in Partridge, Clark & Kerrigan, representative of several makes of cars in the Metropolis. His interests were purchased by Partridge, Clark and M. J. Swetland.

Herbert Chase, New York City, for the past five years laboratory engineer of the Automobile Club of America, has been promoted to the newly created post of chief engineer. Ferdinand Jehle has succeeded him in his former position.

E. A. Travis, Bridgeport, Conn., has been promoted to the position of assistant sales manager of the Locomobile Company of America, with headquarters at the factory. He was formerly branch manager for the Locomobile company at Boston, Mass. A. P. Hawes has succeeded Mr. Travis at the latter city.

Rene M. Petard, chief engineer of the L-P-C Motor Company, Racine, Wis., who has been trying one of the Lewis VI's in the Alps, has been ordered to report for duty as captain in the Reserve Engineering Corps of the French army. The car that he was testing was commandeered for the use of the colonel of the regiment.

Horace Dodge, Hugh Chalmers, Walter Briggs and Eugene Lewis, all prominent automobile men, are on the board of directors of the new Merchants National bank, which started business recently in Detroit.

L. C. Pickering, Des Moines, Ia., has been appointed manager of the Grant Distributing Company.

W. W. Tackerbury, Detroit, has become assistant general manager of the Puritan Manufacturing Company. He was formerly of the Metal Products Company.

H. R. Patterson, Muncie, Ind., has been appointed inspector for the Inter-State Motor Company. For some years past he had been foreman of the technical department of the Twyman Motor Car Company, Columbus, O.

C. A. Freeman, Detroit, has been appointed purchasing agent of the J. C. Wilson Company.

D. S. Dyer, Indianapolis, has become associated with the Nordyke & Marmon Company. He was formerly connected with the Moon Motor Car Company, St. Louis.

J. A. Charlton, Houston, Tex., has joined the sales force of the Overland Houston Company. He was formerly connected with the local branch of the Ford Motor Company.

W. A. Zimmerman, Buffalo, N. Y., has been appointed general sales manager of the Buffalo Electric Vehicle Company. He was formerly connected with the Mercury Motor Truck Company, Chicago.

R. G. Hargreaves, Detroit, has been appointed traffic engineer for the Federal Motor Truck Company.

E. R. Bronner, San Leandro, Cal., has been appointed superintendent and engineer of the Sequoia Motor Car Company.

Leslie H. Curtis, Crisfield, Md., has been appointed district manager for the Philadelphia territory by the Crow Motor Car Company, Elkhart, Ind.

H. S. Smith, Detroit, is now superintendent of the body division for the Packard Motor Car Company. He was formerly associated with the Dayton Motor Car Company.

Henry B. Joy, Detroit, president of the Packard Motor Car Company, has been appointed to a class "B" directorship of the federal reserve bank of Chicago.

J. M. Donohue, New York City, has resigned as sales manager of the American Voiturette Company, representative of the Keeton and Car-Nation cars in that section.

Bud Winter, Detroit, has opened an office at 605 Bamlet building and will represent the Perpetual Gas Saver Company of Riverside, Cal. He was formerly associated with the Universal Motor Truck Company.

J. A. Handin, Chicago, has been appointed manager of the new retail branch established by the Ford Motor Company, Detroit.

Harold T. Birnie, New York City, has joined the sales staff of the Simplex Motor Car Company. He succeeds Frank Bowen, who recently resigned.

A. T. Mosher, Indianapolis, has been appointed state representative for the Chalmers Motor Company. He was formerly associated with the sales department of the Nordyke & Marmon Company.

J. A. Martin, Vancouver, B. C., has been appointed Canadian sales manager of the Russell Motor Car Company. He was for the past four years manager of the local branch.

Charles Ferguson, Rhinelander, Wis., inventor of a new type of electric cranking device for automobiles, has been granted patents and is now arranging with local capital to manufacture and market the starter.

A. L. Turner, Boston, Mass., who has been with the Whitten-Gilmore company since 1908, has joined the sales force of the Nettleton-Crittenden company.

C. W. Howard, Detroit, has been appointed assistant sales manager of the Hupp Motor Car Company. He was formerly a member of the travelling staff.

John H. Campbell, Detroit, who, it was stated in these columns recently, was to have charge of the Birmingham, Ala., branch of the Paige-Detroit Motor Car Company, is not to be so engaged, as the company does not operate or have any connection with any branches.

W. C. Howard, Assistant Sales Manager of the Hupp Motor Car Company.

R. P. Dowse has been appointed sales representative of the Kelly-Springfield Tire Company, New York City. He was formerly identified with the Goodyear Tire & Rubber Company, Akron, O.

C. Roy Clough, Columbus, O., has accepted a position as sales manager of the Broad Oak Automobile Company.

D. B. Webster, Indianapolis, has accepted a position as assistant mechanical engineer of the National Motor Vehicle Company. He was formerly experimental engineer of the Hudson Motor Car Company, Detroit.

NEW AND ATTRACTIVE LINES.

MAKES DESIRABLE LINE.

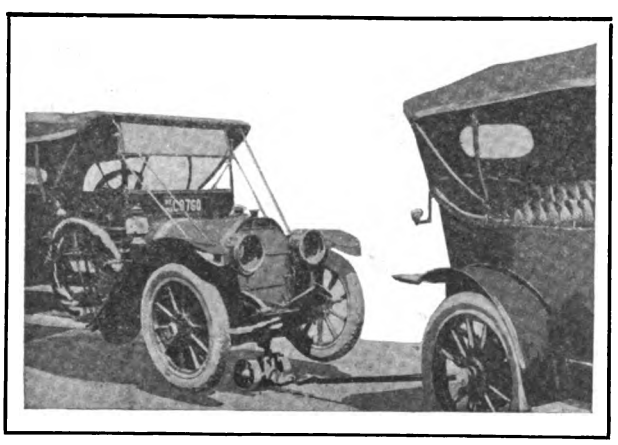
Rub-On Manufacturing Company Marketing Products in Demand the Entire Year, Also Auto Turn Jack.

The Rub-On Manufacturing Company, Buffalo, N. Y., is marketing a line which is in demand the entire year, one that is easily stocked and yields good returns upon the investment. Among the standard articles produced by this company are a radiator mending preparation, lamp enamels, body, top and upholstery dressings and renewers, leather dyes, body finish, etc. These products are put up in attractive containers, and to obtain results for the garage, dealer and repairman handling the line the company is making a special offer of a cabinet for displaying the goods. These cabinets are neatly made, are mission finished, trimmed with brass and have neat glass doors. Locks are provided, by means of which the contents can be secured.

Auto Turn Jack Under Rear Axle.

One of the leaders of the line is a combination auto towing and turn jack, which is a practical and handy device for the garage, as by it cars may be moved about the building, eliminating the need of a turntable, and wrecks may be towed in. The jack is sturdily constructed and will stand all of the stresses produced by cobblestone pavements, rutty country roads, etc., and runs remarkably easy. The wheels have a three-inch face and Hyatt roller bearings are fitted on a case-hardened removable steel axle. Two interchangeable handles are supplied, the regular type being utilized in the garage and the telescopic member for towing.

Accompanying illustrations show the practicability of the jack. That at the top depicts the jack supporting



Towing a Wrecked Car with Auto Towing and Turn Jack Clamped to Front Axle.

the rear axle of a machine in the garage, enabling the operator to move it in cramped quarters. The second view shows the combination jack clamped to the front axle of a heavy machine which requires towing. As may be noted, there is ample clearance between the wheels and housing and the brace rods do not interfere. The telescopic handle is extended and rigidly braced to the front axle. The jack is as serviceable for suspending the front axle. A postcard will bring descriptive matter, including data showing the profits made by handling the Rub-On Manufacturing Company's line.

NEW FORD ACCESSORIES.

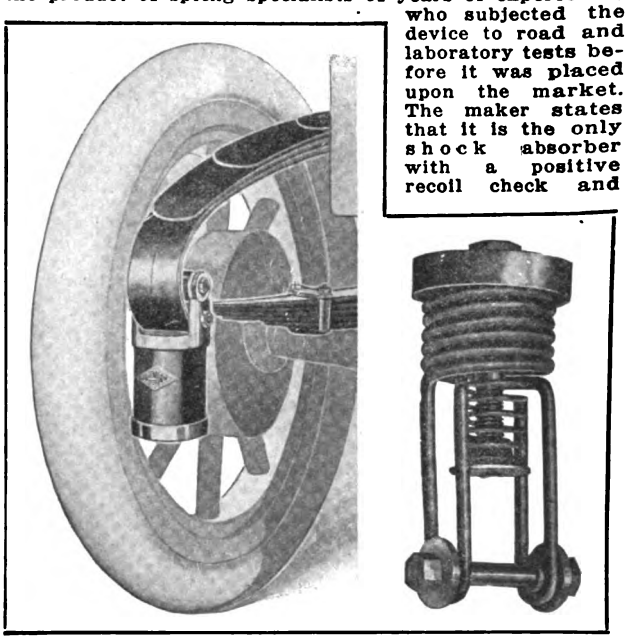
Perkins-Campbell Company Issuing Catalogue of Equipment for Ford and Other Vehicles.

The Perkins-Campbell Company, 603 Broadway, Cincinnati, O., manufacturer of high-grade motor car accessories and equipment, including the Campbell water proof seat covers for all pleasure vehicles, is issuing a new catalogue containing details and illustrations of a large number of new specialties. The company is marketing a new type of carburetor for the Ford motor, which is held to make starting easy, as well as to add considerably to its power. The catalogue will be forwarded free upon request.

JOHNSON SHOCK ABSORBER.

Has a Positive Recoil Check, Which Adjusts Itself to Load Changes and Adjustment Is Provided.

The Johnson shock absorber, marketed by the Triple Action Spring Company, 58 East 28th street, Chicago, is the product of spring specialists of years of experience, who subjected the device to road and laboratory tests before it was placed upon the market. The maker states that it is the only shock absorber with a positive recoil check and



Johnson Shock Absorber.

which adjusts itself to load changes. It has an adjustment for extreme load and road conditions, which may be easily and quickly operated.

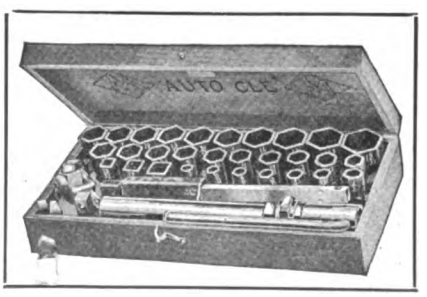
Two views of the Johnson shock absorber are shown herewith. One depicts the device attached to the rear springs of a car and the other illustrates its construction. As may be noted, there are two massive intercoiled spiral springs, which carry the load and absorb the shocks. These springs are constructed of the finest tempered alloy steel. Inside of the springs is a slightly lighter coil, which takes the lighter shocks and eliminates the recoil effect.

The maker calls attention to the large profits and quick sales possible with his product and has a dealers' and distributors' proposition open for a large amount of territory for 1915. Particulars will be forwarded upon the receipt of a letter or a postal card.

MOSSBERG AUTO CLE.

A Standard Tool with Sockets That Is Backed by the Well Known Mossberg Guarantee.

The Frank Mossberg Company, Attleboro, Mass., is issuing a new catalogue, 16 A, which describes and illustrates all types of wrenches used in the garage and repair shop, as well as those in demand among owners. A popular type of wrench with the repairman and the trade is the Mossberg Auto Cle set, shown in the accompanying illustration. The maker lays great emphasis on the efficiency of this tool,



Mossberg Auto Cle.

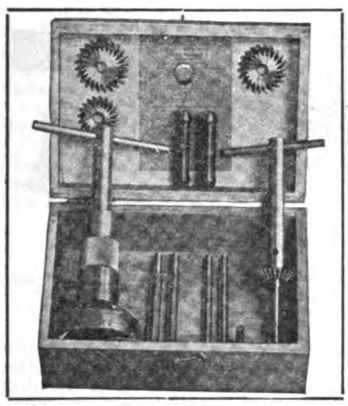
Digitized by Google

stating that no adjustment is impossible to make with it. Having a large number of hardened pressed steel sockets, the equipment is a great time and labor saver when working on the motor vehicle. The Mossberg catalogue will be mailed free for the asking.

IMPROVED VALVE RESEATER.

Changes in the Well Known Fosnacht Tool, Which Is Adaptable to All Types of Motors.

The Fosnacht valve reseater, one of the oldest tools on the market and standard equipment in a large number of repair shops and service stations, has been improved in several ways and is now being offered to the trade with the same guarantee that covered the earlier design. Formerly it consisted of five standard chucks, but these have been replaced by two universal members, which permit a wide variety of work in that they will accommodate valve stems from 5/16 to ½-inch diameter, inclusive.



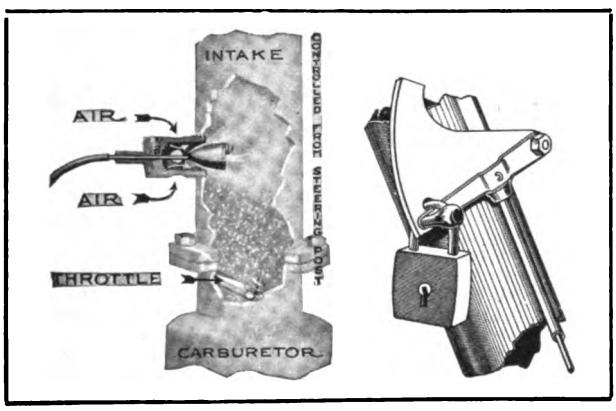
New Fosnacht Valve Reseater.

The reamers have been improved and with the Fosnacht equipment valves from 1½ to 2⅝ inches may be reseated accurately with a minimum of labor and time. The tools are built accurately and are designed to withstand severe service. Their practicability is indorsed by hundreds of users, and garages and repair shops will do well to investigate the merits of the Fosnacht, which is marketed by H. G. Paro, 30 North Michigan boulevard, Chicago.

SAUNDERS GASOLINE SAVER.

Is Operated by a Lever on Steering Column and Includes Locking Device, Preventing Use of Car.

The Powers Sales Company, 122 South Michigan avenue, Chicago, is marketing the Saunders gasoline saver, shown herewith, a device that retails for $5 and which the maker states is one of the best sellers of the season. From 25 to 50 per cent. fuel economy is claimed for the Saunders, which is operated by a lever under the steering wheel convenient to the driver. It provides control of the mixture when the motor is operating and eliminates the need of readjusting the carburetor to meet climatic changes, etc. The Saunders is easily attached, and



Saunders Gasoline Saver and Motor Lock.

the equipment provides for locking it in such manner that the motor cannot be operated. Complete details and prices will be supplied upon request.

A TRADE OPPORTUNITY.

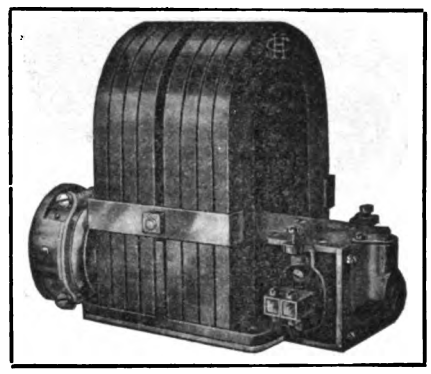
Territory Open for Ball Carbon Remover Made by the Bowling Green Sales Company.

Announcement is made by the Bowling Green Sales Company that territorial rights are open for Ball carbon remover, the preparation that is held to remove carbon and other deposits in the cylinders without dismantling the motor and in record time. The material is a chemical compound put up in tablet form, and not only is it stated that the carbon is displaced, but a film of lubricating deposit is left in the cylinders, etc. The maker has a large number of testimonials from users of its product. Its offer and territory proposition will be made clear by addressing department A of the Bowling Green Sales Company, 42 Broadway, New York City.

MAGNETO GENERATOR.

The Holtzer-Cabot Electric Company Marketing a Moderately Priced Electric Lighting Equipment.

To meet the demand for a moderately priced electric lighting equipment, the Holtzer-Cabot Electric Company, Brookline, Mass., is producing the Holtzer-Cabot magneto generator, which is not only a very compact instrument, but one that is particularly adaptable to the used car. One of the desirable qualities of the generator is that it can supply current direct for lighting purposes, as well as maintain a storage battery in a fully charged condition. The cells are charged through a cut-out, and a feature of the generator is that it can be operated in either direction. The wiring plan is simple and the magneto requires but little power to operate. The design is particularly adaptable to the Ford and small cars, as well as medium sized machines. The company issues a booklet, A-1807, which contains a complete description of the system, as well as valuable information on lighting the used car by electricity.

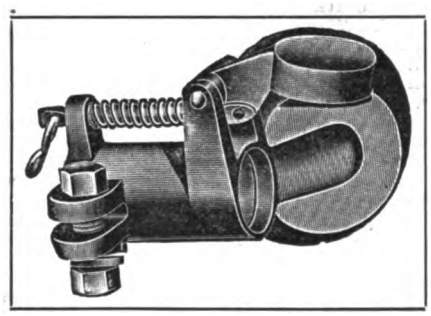


Holtzer-Cabot Magneto Generator.

TREMO HORN FOR FORDS.

The D. Henry Bonner Company Offers an Attractive Proposition in an Exhaust Type of Signal.

The D. Henry Bonner Company, manufacturer of the Tremo horn, is offering a special discount to the trade, the details of which will be supplied upon request. The Tremo horn is operated by the exhaust of the motor and one of its desirable qualities is that it can be attached easily and without any alteration or machining whatever. As may be noted by the accompanying illustration, the Tremo comes equipped with a special clamp for attaching to the exhaust pipe of the muffler. The design shown is for the Ford car. The Tremo is made for all types of gasoline motor vehicles and a perfect signal is obtained at all motor speeds. The maker guarantees his product against clogging.



Tremo Horn for Ford Cars.

BLUE RIBBON GOODS.

International Metal Polish Company Has Attractive Line for Dealer, Jobber and the Trade.

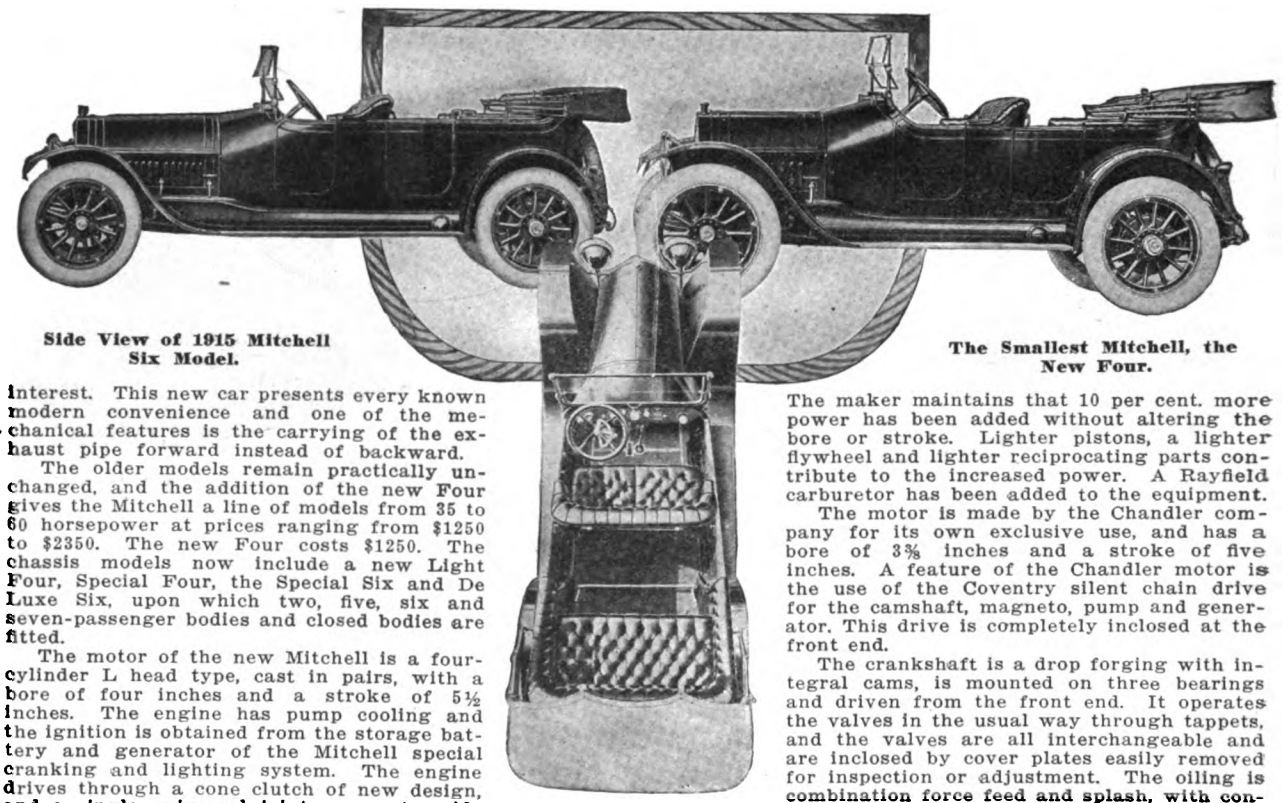
Blue Ribbon goods are strictly high class and fully guaranteed by their maker, the International Metal Polish Company, Indianapolis, Ind., for which W. A. Blackburn, 335 Broadway, New York City, is eastern distributor. Among the Blue Ribbon specialties are: Metal polish, nickel polish, auto body gloss and radiator leak proof cement. The company calls especial attention to the last named preparation in view of the approach of cold weather, when the radiator must needs be leak proof if an anti-freezing solution is to be used.

Digitized by Google

MITCHELL BRINGS OUT FOUR.

Light 1915 Model Is Introduced to Sell For $1250.

Featured by a new four-cylinder, 35-horsepower model, the 1915 announcement of the Mitchell-Lewis Motor Company, Racine, Wis., created more than the usual interest. This new car presents every known modern convenience and one of the mechanical features is the carrying of the exhaust pipe forward instead of backward.



Side View of 1915 Mitchell Six Model.

The Smallest Mitchell, the New Four.

Showing Seating Arrangement of the New Four.

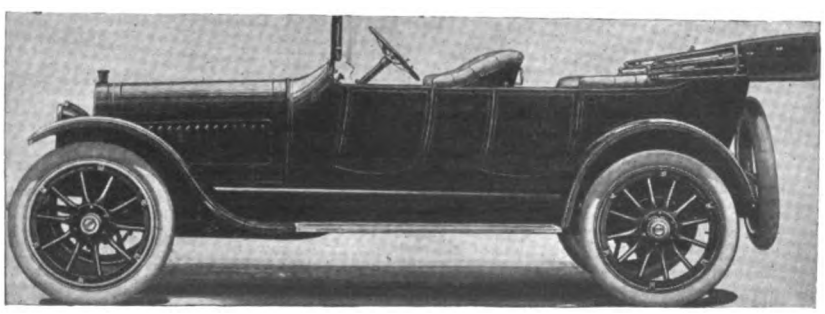
The older models remain practically unchanged, and the addition of the new Four gives the Mitchell a line of models from 35 to 60 horsepower at prices ranging from $1250 to $2350. The new Four costs $1250. The chassis models now include a new Light Four, Special Four, the Special Six and De Luxe Six, upon which two, five, six and seven-passenger bodies and closed bodies are fitted.

The motor of the new Mitchell is a four-cylinder L head type, cast in pairs, with a bore of four inches and a stroke of 5½ inches. The engine has pump cooling and the ignition is obtained from the storage battery and generator of the Mitchell special cranking and lighting system. The engine drives through a cone clutch of new design, and a single universal joint gear set amidships gives three speeds forward and a reverse selectively. The drive is on the left and the control is centred.

The starting, lighting and ignition are taken care of by the Mitchell special generator electric system. A single-unit motor generator is carried on the right side of the crank case and driven by a silent chain completely inclosed in the cast distribution gear case. The motor generator is hung from the trunnions at either end and can be easily lifted out of its cradle when desired. It is geared at a low driving ratio, only 2.7 turns of the starting motor to one of the crank shaft.

Cooling is by a finned tubular radiator, and the connection to the water jackets on the cylinders is by a two-outlet, tapered manifold, with heat proof steam hose between engine and radiator. The radiator is braced by a short rod paralleling the hose to the motor. This is an innovation that adds simplicity to the mechanism and, by eliminating the top bar from the radiator to the dash, greatly improves accessibility when the engine bonnet is removed.

The keynote of the body design is its clean lines. The running boards are long and wide. They are covered with linoleum, which is edged with aluminum. The gear and emergency brake levers are in the centre of the car at the driver's right, and far enough forward to permit the occupant of the front seats to leave or enter easily from either side. All of the indicating devices and instruments are mounted on the cowl board.



Chandler Five-Passenger Six.

NEW 1915 CHANDLER SIX.

Company Makes but Few Changes from Its Previous Product.

Entering the third year of its existence, the Chandler Six, made by the Chandler Motor Car Company, Cleveland, O., shows but few changes in the new 1915 model.

The maker maintains that 10 per cent. more power has been added without altering the bore or stroke. Lighter pistons, a lighter flywheel and lighter reciprocating parts contribute to the increased power. A Rayfield carburetor has been added to the equipment.

The motor is made by the Chandler company for its own exclusive use, and has a bore of 3⅜ inches and a stroke of five inches. A feature of the Chandler motor is the use of the Coventry silent chain drive for the camshaft, magneto, pump and generator. This drive is completely inclosed at the front end.

The crankshaft is a drop forging with integral cams, is mounted on three bearings and driven from the front end. It operates the valves in the usual way through tappets, and the valves are all interchangeable and are inclosed by cover plates easily removed for inspection or adjustment. The oiling is combination force feed and splash, with constant level maintained under each connecting rod. A stream of oil is forced by the oil pump to each of the three main bearings, and another lead takes a supply to the chains at the front. All exterior oil piping has been eliminated by locating the pump in the oil base. An accessible filling tube for oil is placed in the left side, back of the magneto.

FRANKLIN LOWERS PRICE.

Touring Car Has Been Reduced $150 and the Coupe $350.

The H. H. Franklin Manufacturing Company, Syracuse, N. Y., announces a general reduction of prices for the 1915 Franklin series. The 1914 price for the touring car and roadster has been reduced $150, now being $2150; the coupe has been cut from $2950 to $2600, the sedan from $3200 to $3000, and the berline from $3400 to $3200.

The seats in the touring car and roadster this year are higher and the body larger. A shutter effect in front of the sloping hood has been adopted instead of the grill type window used in previous models. The Dyneto cranking and lighting system supplants that used in 1914, but the general features of the new system are the same as in the older.

Another important change is the adoption of the skew bevel, or worm bevel, as it is sometimes called. This takes the place of the bevel gear rear axle used last year. It is claimed to be quieter and is a much desired drive, especially on inclosed cars where the hum of the bevel gears reaches the passenger compartments.

The motor is a six-cylinder, the cylinders being separately cast, and it has a bore of 3⅝ and a stroke of four inches. With the exception of the manifold changes, which are redesigned throughout, the air-cooled motor is substantially the same as before.

NEW MACHINERY AND EQUIPMENT.

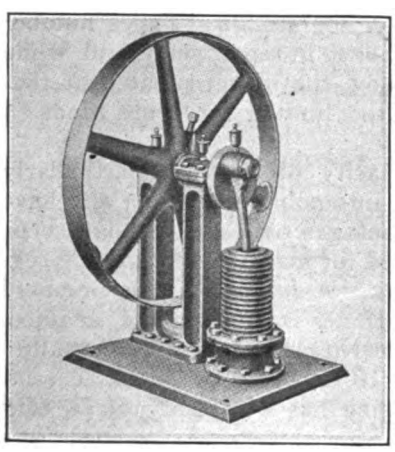
DIAMOND Saw & Stamping Works, Buffalo, N. Y., specialist in hacksaw blades and frames, is manufacturing a variety of power hacksaw machines to meet the requirements of motor car repairing. These are made under the trade name of Sterling and that shown in the accompany illustration is the No. 1.

Sterling Power Hacksaw.

The machine combines a number of practical features, the most noticeable of which is that it is driven by milled gears, permitting use of a narrow belt. Another feature is the automatic shut-off, the saw being stopped on the backward stroke, which throws the belt from a tight to a loose pulley. Gravity feed is utilized, minimizing buckling or breaking of the saw, and the weight can be adjusted to obtain the best results on the work. The swivel vise, cutting any angle up to 45 degrees, is interchangeable.

THE PHILADELPHIA COMPRESSOR.

The Philadelphia Timer & Machine Company, 51st street and Lancaster avenue, Philadelphia, is manufacturing a number of compressors for garages, etc. That shown in the accompanying illustration is a single-cylinder, straight belt driven stationary compressor, and is known as the type C.



Philadelphia Compressor.

The compressor is air-cooled, has a bore of 2½ inches and stroke of three inches, and a capacity of 1.6 free air at 200 revolutions a minute.

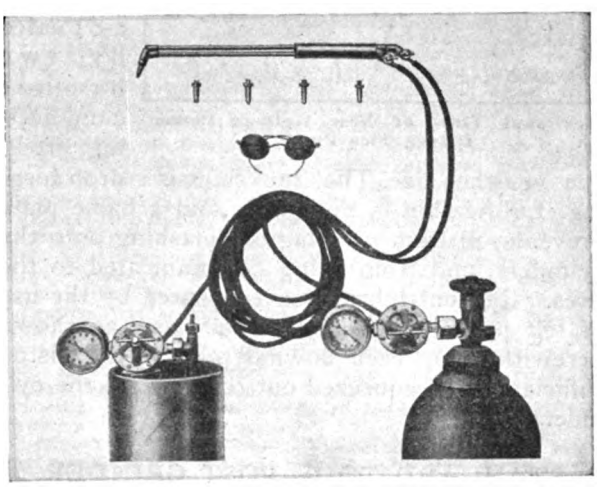
APCO SPINDLE ARM BOLT.

The Auto Parts Company, Providence, R. I., maker of the Apco line of specialties, is manufacturing an anti-rattling spindle arm bolt for the Ford car. The bolts come with a bushing and are constructed of a high-grade steel, hardened and ground.

WATERHOUSE WELDING OUTFIT.

The Waterhouse Welding Company, Pelham street, Boston, Mass., which has been producing welding equipments, etc., since 1907, is manufacturing a number of outfits for the garage and repair shop, one of which, a moderately priced equipment, is shown herewith. This outfit was designed especially for the small garage, is sold on a two weeks' trial, and is constructed with the same care and high-grade material characteristic of the products of the company.

The Waterhouse torch is stated to be constructed upon an entirely different principle from any other marketed, and among the advantages claimed for it are: Better combustion, economy, wider range in the number of tips, safety, and ease of operation. The principle involved is covered by patents.



Waterhouse Welding and Decarbonizing Equipment, a Scientifically Constructed Apparatus Economically Operated.

The equipment includes one B welding torch with five tips, one oxygen reducing valve with 50-pound line pressure gauge, acetylene reducing valve, one set of special welding hose, one pair Complete details and prices will be supplied upon request.

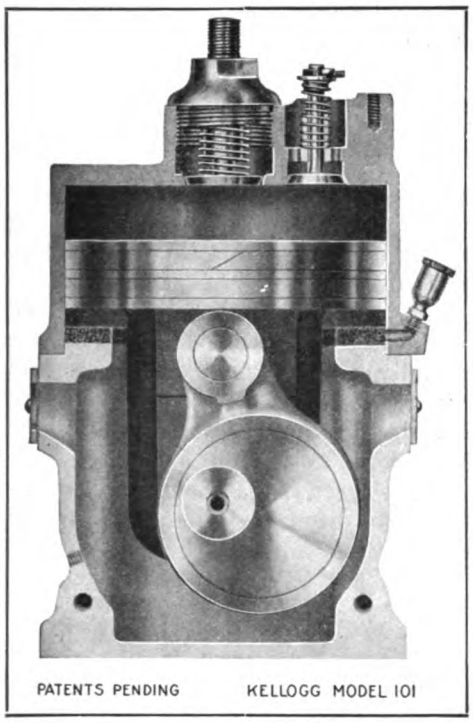
NEW KELLOGG POWER PUMP.

An announcement is made by the Kellogg Manufacturing Company of Rochester, N. Y., of a new type of power driven tire pump. As may be noted by the accompanying illustration, cooling by air has been eliminated and the poppet type of valves is utilized for the intake and exhaust. These features are shown in the sectional view.

The Kellogg pump involves the general principles of a gasoline motor, having a piston with

Digitized by Google

rings, connecting rods, etc. One of the qualities claimed for the construction is that it will not heat up even when operating under heavy loads.



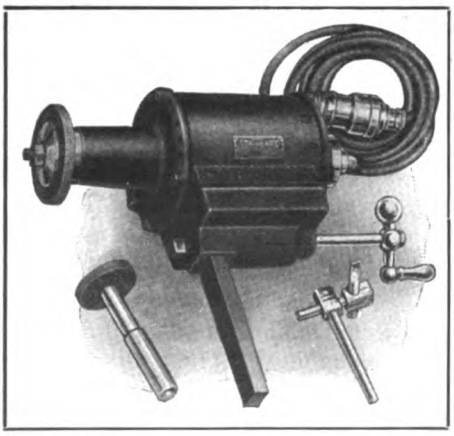
Sectional View of New Kellogg Power Driven Tire Pump.

The entrance of dirt or other foreign elements is prevented by screening the intake.

The cylinder and piston are of gray iron and the latter is fitted with two rings. The piston is actuated by two bronze connecting rods, one on either side. The crankshaft is a drop forging. Lubrication is by splash, and a baffle plate prevents oil from working or splashing onto the cylinders, and from being communicated to the tires. Efficient lubrication is assured by the use of felt packing attached to the case, as shown herewith. On each down stroke of the piston sufficient oil is squeezed out to lubricate the cylinder wall.

STANDARD TOOL POST GRINDER.

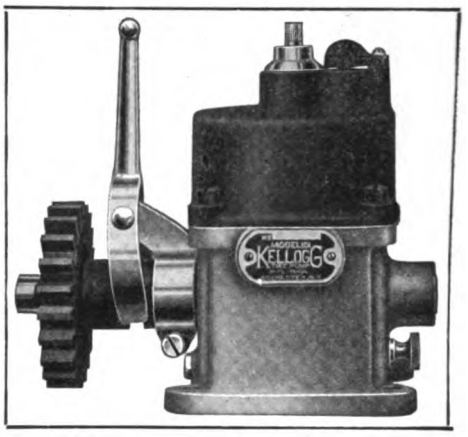
The Standard Electric Company, Cincinnati, O., is manufacturing a variety of portable electric tools adaptable to the garage and repair shop, one of which, a tool post grinder, is shown herewith. The machine is built as light as possible, consistent with the power developed, and is constructed with a view to giving efficient and economical service.



Standard Electric Tool Post Grinder.

The motors are compound wound, insulated and impregnated throughout by a special process. The armature poles are built of soft steel laminations, and are carefully and uniformly insulated. Imported ball bearings are used throughout and each member is mounted in a dust proof chamber. Cooling is by means of a fan mounted on the armature shaft. The fan expels warm air which is replaced by cool. The direction of circulation is from the commutator to the wheel end.

The grinder is made to operate on both direct and alternating current of 60 cycles or less. It is wound for 110 or 220 volts, and has a lamp socket connection. The grinder is produced in two types, 2 Tu and 4 Tu, both having a speed of 6000 revolutions a minute. The first named design is fitted with an emery wheel 3½ inches in diameter with a ⅜-inch face, while type 4 Tu has a four-inch diameter wheel and ¾-inch face. Complete details and prices will be supplied upon request by the maker, the Standard Electric Company, Cincinnati, O.



Kellogg Tire Pump in Which Cooling Flanges Are Eliminated.

GREENERD ARBOR PRESSES.

Edwin E. Bartlett, 326 A street, Boston, maker of the well known Greenerd arbor presses, is producing standard types for the automobile repair shop and service station. Types number 3, 3½ and 4 are utilized in repair shops and, while they are very handy, the maker points out that their capacity is too limited for some kinds of work.

The extra capacity presses are particularly adaptable for the automobile machinist and have a number of advantages over the standard type which was designed for machine shops doing regular machine work. A feature of the Greenerd extra capacity machines is the pressure obtained. One man with the No. 15 machine can obtain a pressure equal to 10 tons and two men, 16 tons. The No. 17 machine has a capacity of 20 tons with one man and 30 with two.

With a modern, efficient arbor press the garage and repair shop is enabled to complete a wide variety of work which ordinarily requires the services of a large machine shop. The Greenerd is particularly adaptable to motor vehicle repair work and is not only a time saver, but cuts the cost of labor to the minimum. Edwin E. Bartlett, the maker of these presses, on receipt of a letter or postal card, will supply interesting information upon the practicability of the Greenerd in automobile work.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

GASOLINE PLEASURE CAR AGENCIES.

3014—Ohio Firm wishes to secure an agency for the very cheapest roadster on the market.

3017—Florida Concern is in the market to secure the agency for pleasure cars selling from $500 to $1500.

3020—Michigan Dealer is in the market to represent a line of pleasure cars selling up to $1200.

3023—Iowa House wishes to secure an agency for pleasure cars selling from $500 to $3500.

3026—Iowa Dealer is in the market to secure the agency for pleasure cars selling from $695 to $1975.

CYCLECAR AGENCIES.

1791—California House wants information relative to cyclecars selling from $250 to $350.

1794—Florida House wishes to hear from a line of reliable cyclecars selling from $275 to $400.

1797—Iowa Dealer is in the market to represent a line of cyclecars selling from $250 to $500.

1799—Rhode Island dealer wants information relative to cyclecars selling from $250 up.

ELECTRIC PLEASURE CAR AGENCIES.

518—Georgia House is in the market to secure the agency for electric pleasure cars selling up to $1000.

MOTORCYCLE AGENCIES.

115—Florida Firm is desirous of securing the agency for motorcycles selling from $200 to $300.

COMMERCIAL CAR AGENCIES.

6131—Florida Company wishes to hear from a line of reliable gasoline trucks ranging in price from $750 to $2000.

ACCESSORIES, EQUIPMENT AND SUPPLIES.

513—Illinois House wants anti-rattlers, autogenous welding equipment, axles, batteries, burners, cable, carburetors, chains, chemical tanks, coils, engines, gaskets, ignition, lathes, machinery, magnetos, patches, plugs, radiators, reamers, carbon removers, rims, shims, shock absorbers, speedometers, tire accessories, tires and valves.

516—Rhode Island Firm is in the market for anti-rattlers, carbide, charging apparatus, shock absorbers and gasoline storage systems.

517—Iowa House is anxious to secure bolts, bulbs, bumpers, cable, chains, charging apparatus, dimmers, furnaces, gasoline, glass, heaters, horns, hose, ignition, nuts, platinum, pumps, solder, springs, storage systems, tire accessories, tires, tops and parts, valves, vulcanizers, wearing apparel, whistles and windshields.

521—Missouri Company is in the market for anti-rattlers, batteries, bearings, belts, brushes, bulbs, burners, cable, caps, carbide, carburetors, celluloid, cements, chains, cloth, coils, commutators, couplings, cups, curtains, drills, emblems, fire extinguishers, gaskets, gauges, goggles, graphite, grinders, guns, hammers, headlights, heaters, holders, horns, hose, hydrometers, ignition, indicators, jacks, lamps, leather, locks, lubricators, maps, meters (measuring instruments), mufflers, nuts, odometers, packing, paints, patches, pedals, pins, plugs, primers, pumps, punches, racks, radiators, rectifiers, reflectors, carbon removers, rubber, scrapers, screws, searchlights, seats, shackers, shims, soaps, sockets, solder, speedometers, steps, tanks, tape, terminals, testers, timers, tire accessories, tires, tools, tops and parts, tubing, upholstery, ventilators, vises, voltmeters, vulcanizers, waste and wrenches.

524—Iowa Concern is interested in arbor presses, batteries, bodies, bulbs, cabinets, cable, carburetors, coils, doors, engines, fenders, gaskets, gasoline, generators, graphite, horns, hose, hydrometers, ignition, lamps, lathes, magnetos, mechanical starters, meters (measuring instruments), motors, packing, platinum, pumps, radiators, rectifiers, shock absorbers, speedometers, starters, steel, storage systems, tanks, testers, tire accessories, tires, tool, vises, voltmeters and windshields. Interested especially in charging apparatus. The above goods to be used for stock and equipment.

527—Michigan Firm wants information relative to batteries, bearings, bodies, bulbs, bumpers, burners, carbide, carburetors, coils, cones, connectors, dimmers, gaskets, gauges, generators, goggles, headlights, horns, ignition, jacks, lamps, magnetos, patches, platinum, reflectors, rims, searchlights, shock absorbers, sockets, speedometers, springs, starters, switches, tape, terminals, testers, timers, tire accessories, tires, tools, tops and parts, vulcanizers, washers, washstands, wearing apparel and windshields. The goods to be used for wholesale and retail selling.

531—Michigan Dealer is in the market for a full line of automobile accessories and supplies, to be sold to the trade.

534—South Dakota House wants information relative to generators, mechanical starters, patches, plugs, shock absorbers, speedometers, tire accessories, tires, tools, wearing apparel and wrenches. The above products to be used for Maxwell and Saxon cars.

537—Florida Dealer wants air compressors, air pumps, anti-rattlers, anvils, arbor presses, asbestos, autogenous welding equipment, batteries, bearings, belts, bolts, brakes, brushes, bulbs, bumpers, burners, cable, carbide, carburetors, castings, cements, chains, charging apparatus, clamps, commutators, connectors, curtains, cylinder machines, dimmers, drills, fire extinguishers, forgings, furnaces, gaskets, goggles, graphite, grinders, hammers, hose, hubs, hydrometers, ignition, indicators, injectors, lathes, magnetos, maps, mechanical starters, nuts, packing, paints, platinum, plugs, polishes, presses, pullers, punches, reamers, shapers, shock absorbers, solder, springs, stampings, steel, tape, testers, tire accessories, tires, tools, valves, vises, vulcanizers, waste and wearing apparel. The goods to be used for stock, garage and machine shop.

539—New York Firm is interested in charging apparatus, fire extinguishers, lathes, pans and waste. The above goods to be used by a garage.

542—Georgia House is interested in axles, batteries, bodies, brakes, carburetors, castings, emblems, headlights, horns, ignition, magnetos, mechanical starters, motors, mufflers, radiators, shock absorbers, speedometers, springs, starters, steering wheels, tanks, tires, tops and parts, transmissions, wheels and windshields.

545—Arkansas Dealer wants information relative to air compressors, starters and tanks.

FOREIGN TRADE OPPORTUNITIES.

No. 13,461. Motor Trucks—A resident of a South American country is interested in establishing a motor truck service between the various sugar and rice plantations of the region and the railroad, to operate as a feeder to the railroad. He is now financing a company for that purpose and expects to begin the service with two two-ton machines. American manufacturers should communicate directly with this person in Spanish. Illustrated catalogues, prices, terms, etc., are desired.

No. 13,511. Electrical Apparatus, Motors, Dynamos, Etc.—A European business house handling electrical apparatus, ventilators, electric motors, dynamos, etc., would like to receive catalogues and prices from American manufacturers of such articles. The consul who submitted the report states copies of American publications on electricity are also desired.

No. 13,547. Motor Cars—An American consular officer in France reports that one of the most important motor sales and garage companies in one of the largest French cities is desirous of securing the agency of the best American automobile that can be retailed at $1158 and leave a fair profit to the dealer. Direct relations are preferred. Prices c. i. f. Bordeaux with catalogues, preferably in French, should be communicated either through the consulate or directly to the company in question.

NEW CONCERNS AND BUSINESS CHANGES.

The Delaware Tire & Supply Company, Wilmington, Del., is now located at 218 West 10th street. The company carries a complete line of accessories and supplies.

Smith & Trew, Washington, D. C., has moved into new quarters at 829 14th street. The company represents the Reo car.

The Birmingham Motor Car Company, Goshen, N. Y., has taken possession of the premises at 57-59 North avenue and will do a general garage business. Buick, Oakland, Oldsmobile, Federal, Standard, Menominee and Vim cars and trucks will be handled. W. G. Faatz is the proprietor.

H. C. Briggs, St. Louis, and L. Morse are occupying their new garage and repair shop at 3908 Washington avenue. A complete line of accessories will be carried.

The Peterson-Keyes Auto Company, Indianapolis, is now located in its new salesrooms on Vermont street. The company handles the Regal cars.

The Auto Devices Company, St. Louis, Mo., has established itself at 3027 Locust street. Edward McGuigan is manager.

E. H. Labadie Company, San Antonio, Tex., has rented the service station at 510 River avenue. The company is agent for Chalmers cars.

The June Motor Car Company, Binghamton, N. Y., has moved into larger quarters at 184 Water street. The company carries the Chalmers car.

The Henderson-Rowe Auto Company, Washington, D. C., is located at 1012 14th street, N. W. The company handles the Chevrolet cars.

The Phoenix Auto Supply Company, St. Louis, has moved to larger quarters at 3325 Locust street.

A. E. Staacke Auto Company, San Antonio, Tex., has removed from Commerce street to Avenue D, where larger quarters were obtained.

Levi O. Sawyer, Fitchburg, Mass., has moved from Pritchard street to 9 Elm street. The company does a vulcanizing business and carries automobile supplies.

Thorwald Hanson, Worcester, Mass., has moved to 711 Main street. Cole pleasure cars and Selden commercial vehicles are handled.

The W. & H. Auto Repair Company, Indianapolis, is located in its new building at 2019 Madison avenue. The company will enlarge its painting and rebuilding business.

The Creston Repair Shop, Creston, Ia., is now located at 110 North Elm street.

The Fuller Ashley Company, Syracuse, N. Y., has leased a portion of the Chalmers-Syracuse company's building and will conduct a general repair shop and furnish maintenance service to owners of Chalmers cars.

The Sidney B. Bowman Company, New York City, has leased the building at 1710 Broadway and will occupy it. Oakland cars are handled.

The Leghorn Sales Company, Boston, Mass., is now occupying its new salesrooms at 793 Boylston street. The rooms are finished throughout in mahogany and a unique decorative and lighting scheme is employed.

The Halsey Automobile Company, St. Louis, has moved into its new four-story building at 2201 Locust street. Packard cars are handled.

The Pearson Motor Car Company, San Francisco, has opened new quarters at Van Ness avenue. The company handles the Maxwell cars.

McQuigg Brothers, San Diego, Cal., local distributor for the Oldsmobile line of cars, is now located at its display room and service department at Fifth and A streets.

The Wolcott Motor Car Company, Elmira, N. Y., is now located at 106 West Church street. W. F. Cassidy is manager.

The Christensen Motor Car Company, San Francisco, is now located in its new home on Van Ness avenue.

The Reick Automobile Company, Newburg, N. Y., is now located in its new modern quarters at 105 Broadway. The company operates a taxicab service.

The Buckeye Motor Truck Company, Cleveland, will occupy the new garage which is to be built exclusively for the storage and sale of motor trucks. The structure will be 75 by 570 feet and of steel and concrete fireproof construction. It will cost approximately $125,000. Hall Brothers, Taylor's, the May Company and the Lincoln Moving Company, all large local firms using motor trucks, will also occupy it.

The Columbia Automobile Exchange, Atlanta, Ga., has leased from W. T. Healey the building at 320 Edgewood avenue and will move there.

The Webster Supply House, Bakersfield, Cal., has been purchased by E. D. Wilson, who was formerly connected with the Savage Tire Company. He will conduct the business.

The Southern Arizona Company, Tucson, Ariz., has taken over the vulcanizing business of D. Moore and will move the property to its new building.

The Alabama Tire Repairing Company, Birmingham, Ala., has taken the agency for the Kelly-Springfield tires. The company is located at 521 South 20th street.

The Sawyer Ford Automobile Supply & Accessory Depot, Philadelphia, has been opened at 2729 North Broad street.

The Service Tire & Vulcanizing Company, Chicago, is the name of a company that has begun business at 2307 Indiana avenue. The company has a capital stock of $30,000.

W. C. Stroud, Eugene, Ore., has purchased the interest of C. M. Triplett in the Independent Auto Repair Shop & Garage at 70 Seventh avenue.

The Imperial Motor Company, St. Louis, has established showrooms at 1045 North Grand avenue.

The Cleveland Auto Tire & Repair Company, Cleveland, has secured the agency for Mohawk tires. The company is located at East 107th street and Euclid avenue.

The Automobile Tire Company, Indianapolis, is a new concern located at 34 Jackson place.

The Collins-Clem Auto Company, San Antonio, Tex., has been organized and will handle the Studebaker cars. Showrooms have been opened at 736 East Houston street. Mr. Clem will also retain his interest in the San Antonio Auto Supply Company.

Phillips Machine Shop, Jackson, Mich., recently organized, is located at the corner of North Jackson and Van Buren streets.

The Congdon & Carpenter Company, Providence, R. I., has taken the agency for Swinehart tires.

The Texas Motor Car & Supply Company, Yoakum, Tex., has been purchased by F. F. Klohs of the Universal Motor Car & Supply Company. He will continue the business.

The American Tire Sales Company, St. Louis, has opened salesrooms at 604 South Seventh street.

The Ford Motor Car Company, Newark, N. J., has opened retail salesrooms and a repair department at Central and Halsey streets. Edwin Baskett is in charge.

Charles E. Miller, Hartford, Conn., has opened salesrooms at 382 Trumbull street.

Buchanan Lyon Company, Inc., Campbellsville, Ky., agent for Hudson cars, operates a first-class garage and carries a complete line of accessories.

The Central Iowa Motors Company, Des Moines, Ia., Iowa distributor of Hupmobiles, has been purchased by Walter S. Adams, Frank E. Card and H. R. Brown. The new organization is composed of experienced automobile men. The business will be conducted under the same name.

The Hanson Auto Repair Shop, Worcester, Mass., has taken the agency for the Gaulois tires.

S. S. Marx, San Diego, Cal., of the Eastern Radiator & Lamp Shop, has bought out his partner's interest and is conducting the business alone.

O. O. Spotts, Battle Creek, Ia., has sold his interest in the automobile and repair business to James Warneck, Jr.

Central Iowa Motor Company, Des Moines, Ia., has sold its business to Walter S. Adams and associates.

The Holly Auto Company, Omaha, Neb., is a new concern which has established a business of equipping automobiles with tops and other trimmings at 2318 Harney street. A. R. Hollenberger is interested.

GARAGE TRANSFERS.

Powell & Whitman, Pittsfield, Me., has dissolved partnership, Mr. Powell taking over the business. A first-class garage is maintained.

The John Schelldorf Garage, Des Moines, Ia., has been purchased by Harm Kruse, Sr.

Peter Apland, Sac City, Ia., has sold his garage to Serral Munsen and T. T. Omrig.

The Beatty Garage Company, Lockhart, Tex., has been sold to T. A. Allen. A new building is to be erected for the company.

The Calumet Garage Company, Brillon, Wis., has been purchased by Edward Colyar of Manitowoc and Adolph Valesky of Collins, Wis. The new firm will be known as the Brillon Garage and will handle the Overland cars in that territory.

W. L. Peeler, Corona, Cal., has purchased the interests of his partners in the Crown Garage & Machine Works. Studebaker cars are handled.

The Knight Rubber Company, Toledo, O., has dissolved partnership, Thomas J. Harris having purchased the interests of his partner, Orrie E. Starr. Mr. Harris is now the sole owner of the concern. The company is located at 810 Madison avenue.

The Service Garage, Grand Rapids, Mich., has purchased the Dowling Garage at 206 Ionia avenue and will operate it as a general garage and accessory, retail and wholesale business. R. E. Sproat is manager.

S. P. Widman, Schenectady, N. Y., has purchased the Sterling Garage Company, located on Yates street.

The Harper Overland Company, Washington, D. C., successor to the Overland Washington Motor Company, has taken possession of the garage at 1022 Connecticut avenue.

The Schaefer Garage, Grundy Center, Ia., has been purchased by W. K. Laybourn.

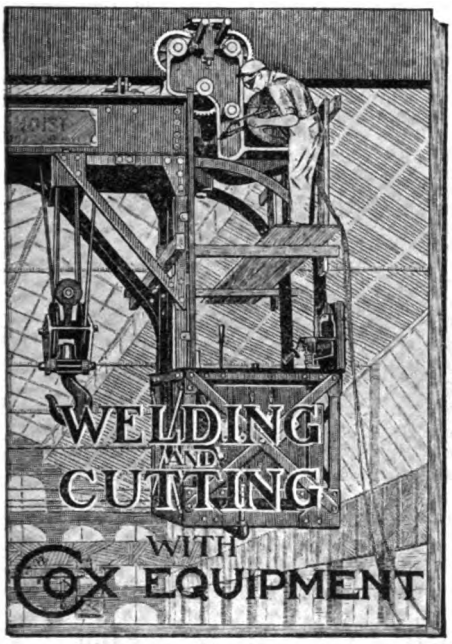
WELDING AND CUTTING EQUIPMENT.

Cox Brass Manufacturing Company Producing an Efficient Outfit Designed to Meet All Requirements.

The value of the welding and cutting equipment in the garage, repair shop, service station and machine shop is demonstrated by the increasing number in service. The utilization of time and labor-saving equipment is essential in these days of keen competition and there is another factor to be considered, the profits.



Illustrating Cover of Cox Catalogue.

Formerly it was the general practise for the garage and repair shop to send broken crank cases, frames, axles, etc., to a welding concern, but improved manufacturing methods and large quantity production has enabled the maker of welding, cutting and decarbonizing outfits to market a first-class outfit at a moderate price.

The Cox Brass Manufacturing Company, Albany, N. Y., is issuing a new and attractive catalogue covering the welding, cutting and decarbonizing equipment. An accompanying illustration shows the cover to the booklet, which is complete in every detail and which gives in a concise and interesting manner a thorough description of the apparatus, as well as the uses to which it is adapted.

The book teems with information valuable to garagemen, blacksmiths, machinists, contractors and manufacturers, as it describes welding and cutting by the oxy-acetylene method, also the simplicity of the equipment and its advantages. Among the illustrations is one showing the work daily performed by the average garage. The Cox Brass Manufacturing Company states that it is cheaper to own a welding equipment than to depend upon outside labor, and that the company furnishes without charge complete instructions and special tuition. The book will be sent free upon request.

NEW SPLITDORF MAGNETO.

Instrument for Ford Motor Now Provided with Movable Circuit Breaker Housing.

There is an increasing demand among owners of the model T Ford automobile for a true high-tension magneto, the advantages of which when properly fitted to the Ford motor are well known. Not only does the instrument make for easy starting because of the intensity of the spark, but absolute synchronization is also obtained.

Because the Ford motor is a high-speed engine, the magneto drive utilized must not only be sturdy, but the bearings and gears must be well lubricated. It is also essential that the drive be quiet, all components accessible and the installation made easily and without alterations.

The Splitdorf Electrical Company, Newark, N. J., has been experimenting for a considerable period with a magneto installation for the Ford motor, and it is stated that the new equipment meets all of the above requirements. The new Splitdorf magneto, the EU4, is constructed with a movable circuit breaker housing, providing variable advance of the time of the spark, as there is a variance in the Ford motor as well as a demand among owners for this form of ignition. The circuit breaker housing can be shifted to an extent of 23 degrees, sufficient for all purposes.

The adoption of a magneto with a variable time of the spark required a slight change in the equipment manufactured by the company when the fixed type of magneto was marketed. The alteration consists of the fitting of a bell crank arrangement, so that the lever arm of the circuit breaker housing can be actuated by the usual spark lever on the steering column. One of the desirable qualities of the Splitdorf design is that the rod connecting the timing arm with the Ford lead or advance rod is made adjustable, so that slight alterations may be made in timing without disturbing the setting of the magneto. These features are shown in the accompanying illustration, which depicts the simplicity of the design.

The Splitdorf EU4 magneto is a true high-tension instrument and its output is sufficient for motors having a considerably larger piston displacement than the Ford. As with all true high-tension magnetos, coils are not necessary, as the motor may be started easily on a quarter turn of the starting crank. One of the qualities of the Splitdorf magneto is that it is water, dust and oil proof. The breaker box is easily displaced if desired and, being linked to the housing, cannot be lost when making adjustments to the platinum contact points or when cleaning the circuit breaker housing. The distributor cover is accurately fitted, has an indicating window, making it a simple matter to correctly time the magneto, and is retained by three block thumb nuts.

The Splitdorf magneto ignition for the Ford car can be installed by the owner, and the work involves no alterations or machining whatever. The Splitdorf Electrical Company, Newark, N. J., is issuing a new booklet on its latest system, which will be mailed free upon request, as will trade prices. The booklet contains many pertinent facts on ignition.

BARGAINS IN WHEELS.

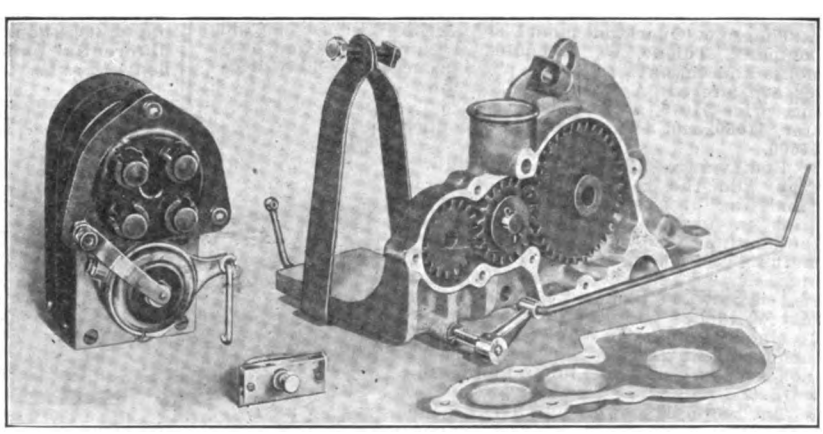
Metalwood Manufacturing Company Offers Variety of Steering Wheels, Also Rims and Spiders.

Those in need of a steering wheel, rim or spider, will do well to write the Metalwood Manufacturing Company, Leib and Wright streets, Detroit. This concern is offering bargains in hard maple, bent steering wheels, with screwed on type of spider in brass and aluminum. The company also has genuine mahogany and black walnut wheels with concealed continuous rim and inserted spider, both plain and corrugated. Details and prices will be supplied upon request.

NORMA BALL BEARINGS.

Complete Line for All Kinds of Motor Vehicle Service Carried in Stock.

Announcement is made by the Norma Company of America, 1790 Broadway, New York City, that it is prepared to supply at short notice all types of Norma ball bearings to the trade. The line includes Norma ball, roller, thrust and combination bearings. The Norma product is well and favorably known to the automobile industry and Norma equipped magnetos have played an important part in the big racing events for several years. The company specializes in bearings for magnetos, lighting generators, starting motors, etc., and will supply data in regard to its complete line, upon request.



Splitdorf Magneto, Base, Gears and Gear Housing, Advance Rod and Switch, Comprising the Ignition Equipment for Ford Cars—The Magneto Is Now Supplied with Variable Advance and Retard of the Spark.

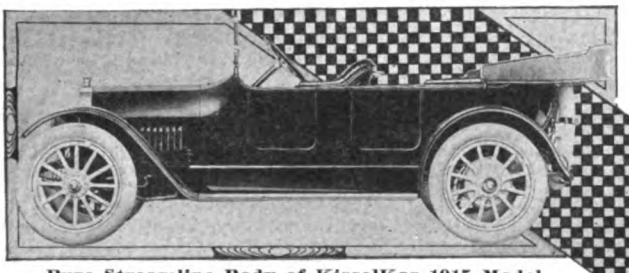
KISSELKAR'S NEW FEATURES.

Latest Four Has a Detachable Sedan Top for Winter.

The Kissel Motor Car Company, Hartford, Wis., has made two announcements for 1915. The first described the KisselKar 48 Six, and the latest, just made, is of the



Pure Streamline Body of KisselKar 1915 Model.

36, a four-cylinder model, made with a new two-door design. The price of the latter is $1450.

One of the striking points of the new Four is an innovation in the way of a detachable sedan top for winter use. The top fits snugly over the touring body, and is so simple in construction that two inexpert men can make the change.

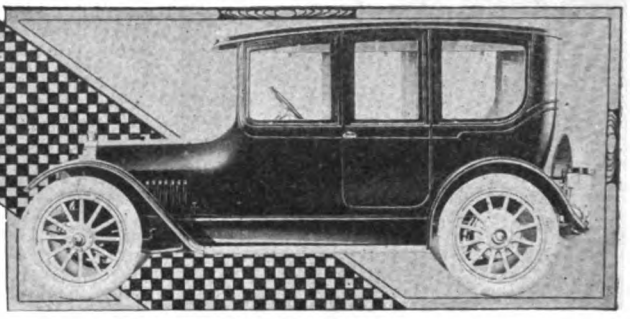
The motor is a Kissel-built engine, L head, cast en bloc, with a bore of 4¼ inches and a 5¼-inch stroke. The 1914 model had a bore of 4⅛ inches and a stroke of 5¼ inches, cast in pairs. The new 36 has a set of three helical gears, instead of the chain timing drive employed in the 1914 model.

A specially designed radiator of the Mercedes honeycomb type is used. Carburetion is obtained by a special type Stromberg carburetor, which is connected directly to the cylinder, thus doing away with the intake pipes.

power, according to the rating by company's engineers.

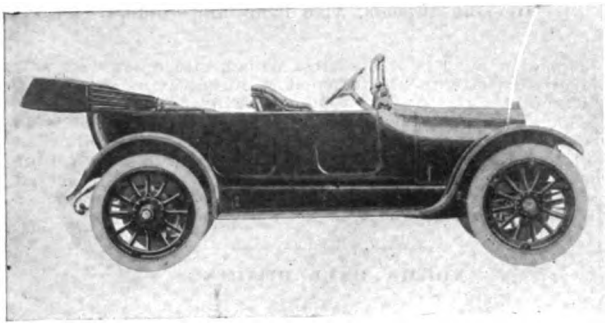
Current for ignition is supplied by the Bosch magneto, mounted on a bracket at the right of the forward end of the motor. The drive is through a leather coupling and the leads are carried in fibre blocks, which are secured to the water intake and outlet pipes. At the speed at which the motor cranks the engine there is no need of an auxiliary starting system, and consequently the Bosch single ignition has been adopted.

Cooling is by thermo-syphon system and the water jackets, together with the water intakes and outlets, have been kept large, with a minimum amount of curvature to meet the requirements of this system. A six-blade fan driven by a belt is a further aid to cooling. Lubrication is by the constant level splash system, in which the oil is circulated by a pump. The gasoline system is by gravity, and on the touring cars the capacity of the tanks is 15 gallons and on the roadster 30 gallons.



KisselKar with Two Doors and Removable Sedan Top.

The carburetor is the latest design of Schebler model R, this being provided with a double heated air intake, which takes care of both the primary and auxiliary air supplies.



Overland Model 80, a Five-Passenger Touring Car, Having Left Hand Control and Attractive Streamline Body.

1915 OVERLAND MODEL 80.

Very Few Changes in Latest Car Compared with 1914.

The new Overland model 80 of the Willys-Overland Company, Toledo, O., embodies a number of improvements and changes from the previous model. Three bodies are offered: A five-passenger touring, price $1075, a two-passenger roadster, $1050, and a four-passenger coupe, $1600.

Bodies are all of the streamline type and the radiator, with a shell consisting of a single steel stamping, joins its curve to the graceful slope of the engine hood. The wheelbase remains 114 inches, but the body offers more leg and elbow room. The rear seat is now 49 inches wide, the front seat 40 inches wide and the backs are 21 inches high in the rear and 19 inches in the front. The seats are 20 inches deep, with cushions sloping toward the rear.

The motor is a four-cylinder, L head type, the cylinders being cast singly, the latter being set 9/16 inch off centre. The bore is 4⅛ inches and the stroke 4½ inches, developing 35 horse-

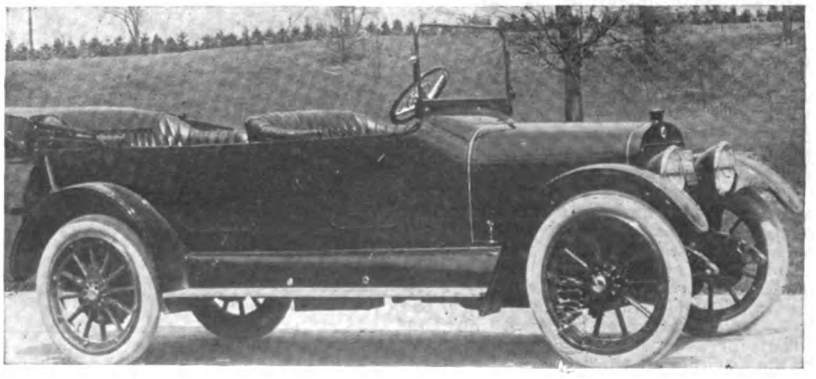
PREMIER CUTS PRICE $400.

New Roadster to Be Offered for the Coming Season.

Selling for $2385, a reduction of $400 compared with the previous model, the 1915 series of Premiers has been announced by the Premier Motor Manufacturing Company, Indianapolis, Ind. This price applies to the five-passenger touring car. The seven-passenger car costs $2460. The new roadster is the same price as the five-passenger touring.

These are mounted on a single chassis model, known as 6-49, and the only change is the substitution of semi-elliptic rear springs for the three-quarters type formerly employed. The new 6-49 Premier has a unit power plant, consisting of a T head, six-cylinder engine, cast in threes, with a bore of four inches and a stroke of 5½ inches. The clutch is a multiple-disc type, enclosed in a tight case with a large plate opening at the top.

Electric starting and lighting are provided by a six-volt Remy system. Lubrication is by a circulating system with a constant level splash maintained by a gear driven pump. There is a sight feed glass on the dash. The front axle is of special design, a single-piece I beam drop forging without welds, with spring seats integral, roller bearings in the wheels and imported load carrying bearings in the steering knuckles. The rear axle is a non-truss type, a Premier patent, and may be called a three-quarter floating design, as it does not carry the load, but at the same time the shafts cannot be pulled out of the housing without being disconnected from the differential pinions. The makers call this a 90 per cent. floating axle. All body lines are of the streamline type.



Premier 6-49 Touring, Showing Body Lines.

"NORMA" *Ball, Roller, Thrust and Combination Bearings*

Stop the Blinding Headlight Glare!

The law says it must be done —blinding glare is a menace to public safety. Screens simply interpose an obstacle between the light and the street —the user pays for the full power of his headlights and gets half power. The logical solution of the problem is the

Chaney Automobile Headlight Dimmer

It enables the driver to graduate the intensity of the light. It can be changed from high to low as you would turn down an oil lamp. Installed on the dash and operated by moving the dimmer handle, it gives complete control of the headlights from the seat. In city driving the light is kept low with small current consumption—in the country where full power is needed a touch of the handle brings back the full searchlight efficiency.

This device is practical, dependable and efficient, costs little to buy and is readily installed on the dash of any car. The average car owner can do it himself in ten minutes. It can be operated by a slight kick of the foot, while both hands are on the wheel.

DEALERS How about your city or town—is it Koehlerized, or waiting for some one to reap a harvest from sales? Will it be you, or one of your competitors who will make it hard for anyone else to sell any other make of truck? The Koehler is a great money-maker for dealers, being the lowest priced ton truck and giving greatest value at any price.

Our Traveling Representatives Are Now Covering the Entire Country

and each has a truck with him. Notify us at once if you are interested as a representative may now be in your section. You do not want to miss a chance to see this truck.

Our complete catalogue and selling plan should be in your hands—send for these.

H. J. KOEHLER S. G. CO., 1709 Broadway, New York

ONE TON TRUCK $750

KOEHLER ONE TON TRUCK $750

CARBON REMOVED IN A FLASH! WITHOUT INJURING OR TAKING DOWN THE ENGINE

Ball Carbon Remover

A chemical compound in convenient tablet form, which destroys carbon in a flash, and automatically deposits a film of lubricant in the cylinders. Its use insures a ***smooth running engine*** and a ***saving in gasoline.***

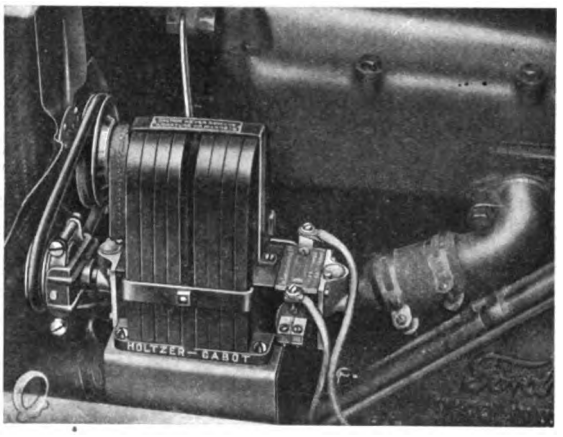
"H-C" Magneto Lighting Generators

FOR FORD CARS



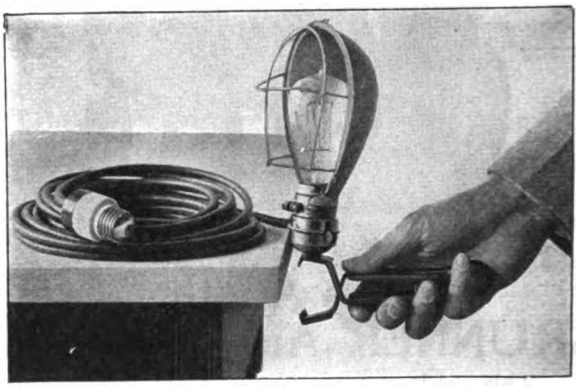
Some Reasons For Their Success

Battery charged through cut-out—Can supply current for lighting direct—No field coils—No failure to generate—Run in either direction—Wiring is simple—Low power consumption.

For FORDS, and other small and medium cars they are unsurpassed. ***Send for Booklet A-1807.***

THE HOLTZER-CABOT ELECTRIC CO.
BROOKLINE, MASS.
6161-65 SO. STATE ST. CHICAGO — 101 PARK AVENUE, NEW YORK — 1003 UNION TRUST BLDG. BALTIMORE

THE CLAMP LAMP



Press on the handle. This opens the jaws.

Apply the jaws to bench, rod, spoke, fender—any old place—to hold the light where you want it.

Rotate the reflector to throw the light on your work and shade your eyes.

Then go to it with both hands free.

For use in public and private garages, in mills and factories, in stock rooms and on shipping floors.

The complete outfit, including clamp, socket, reflector with wire guard, 20 feet of slicked portable cord and a two-piece separable plug, is sold at retail for $3.00, postage prepaid. Liberal discount to the trade.

WEED Anti-Skid CHAINS

The Magnet

that draws profitable trade.

DISPLAY WEED CHAINS IN YOUR WINDOWS AND SALES ROOMS AND YOU DISPLAY GOOD SOUND BUSINESS JUDGMENT AS WELL.

You will attract all types of cars to your doors—they all must use Weed Chains for safety's sake.

Post mortems are never held over Weed Chains—they never make dead stock. Even when roads and pavements are dry the experienced motorist will buy—*"In time of sunshine he prepares for rains, stops at his dealer's and buys Weed Chains."*

Don't forget to order a stock of Weed Cross Chains, too. We will send you an attractive board on which you can display our Cross Chains to the best advantage if you will but write for it. Now's the time. Write for it now.

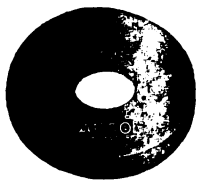
FORD DEALERS AND REPAIRMEN

Do you know that the APCO Line of Repair Parts for Ford Cars consists of more than fifty of the best selling articles on the list and our prices represent a saving of 25 per cent. over the factory prices? The goods are absolutely guaranteed in every way and by insisting on APCO you are absolutely protected against inferior substitutes.

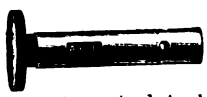


REAR AXLE FELT WASHERS No. 2510-B

Made of high grade felt and if these won't keep the grease in the axle housing, nothing will.

5c Each

APCO PUSH ROD



These rods are made from the highest grade steel obtainable, finely machined, hardened and accurately ground to the thousandth part of an inch. Guaranteed to be satisfactory in every respect.

Price 20c Each

APCO PISTON RINGS

These rings are made from the very best close grained gray iron and each ring is cast individually instead of being cut from a pipe shaped casting. They are carefully machined and accurately ground to size and are superior in every way to the ring you are familiar with at the same price.

Price 17c Each

APCO No. 2705-6.

Right and left Adjusting cone. For outside bearing of fron wheel.

Each 20c

APCO SPINDLE BODY BOLT

This is to take the place of Ford part number 2710. It is made from high grade steel and is ground after hardening. This is a very important feature as each bolt must be perfectly true and straight, while those that are hardened after grinding are inclined to be distorted in the hardening process. You can see the quality at a glance.

Price 40c Each

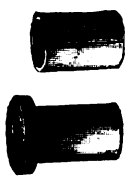
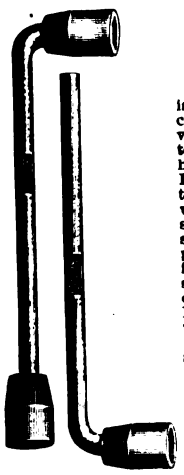
AUTO PARTS CO., Providence, R. I.

APCO STEERING GEAR BUSHINGS



Consisting of four large bushings and two small as shown in cut. Ford Repair Catalog No. 2713-2714. They are both turned from the highest grade bearing bronze obtainable and we are sure a set will outlast three sets of the ordinary soft brass that you are familiar with.

Price 10c Each



APCO SOCKET WRENCHES

On the Model T" Ford it is necessary to remove the cylinder head to grind the valves and to do this the sixteen bolts in the cylinder head have to be removed. It is impossible to remove these without a special wrench and we have designed our No. 1 and No. 2 socket wrenches for this purpose. They are made from high grade hardened steel throughout and will outlast two or three cars. Both sockets on the double wrench are the same, but the bolt is loosened with one end and spun out with the other.

PRICE

No. 1, Double End 50c
No. 2, Single End 40c

APCO ADJUSTABLE SPINDLE ARM BOLT

These bolts are made to take the place of Ford part No. 2718, but they are hardened and ground and will outwear ten of the soft ones you are familiar with. As shown in the cut they are 1-16 inch shorter than the regular bolt and are made this way so as to provide an adjustment, which, heretofore, has been impossible. Tightening down on bolt closes up the yoke on steering arm and prevents rattle from this source. This adjustment is easily made and it will be appreciated by Ford owners.

Price 20c Each

EMERGENCY BRAKE SHOES

These are furnished in Iron and Manganese Bronze. Price is for complete set.

Iron 80c **Bronze $2.50**

APCO FORD LOCK WASHERS

To be used under nuts instead of using cotter pins. Size 3-8 inch.

5c Dozen

No. 2811 Small Ball, 3-8 in. **4c Each**
No. 2810 Large Ball, 1-2 in. **5c Each**

APCO HOSE CLAMPS

These clamps are the famous "Thompson" same as used on the Ford car. They represent the highest development of hose clamps and are very easily adjusted and removed. They are twice as heavy as the regular clamp and will last twice as long. We are able to quote the same price as on the cheap kind, owing to the large quantity we use.

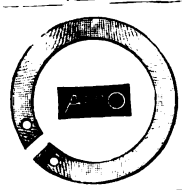
5c Each

Large Hose Connections 25c Each
Small Hose Connections 25c Each

No. 2704

Inner Stationary Cone for inside bearing of front wheel.

Each 30c



No. 2807
LARGE RETAINER
Each 5c

No. 2808

VOL. IV. PAWTUCKET, R. I., OCTOBER, 1914. N

PANHARD OIL

PANHARD OIL AGENCIES

Begin business fully established.

Panhard Oils and Panhard Quality are known to motorists.

Panhard Oils are guaranteed by the manufacturer and sold in sealed checkerboard containers that protect the trade and the consumer alike.

Panhard Oils are advertised the world over and have been standards of lubricants for 11 years. Their sale is supported by extensive and intensive advertising.

Panhard Oils satisfy customers, and the influence of these customers constantly develops patronage that is in turn productive of more enduring business and increased profits.

Public knowledge of quality creates demand, and known quality must be established by experience. Unknown lubricants may have merit, but the public must learn this. Educating the public is costly.

One who sells Panhard Oils is benefiting, both for the present and the future, with every sale. The agent who develops business is working for his own interests. The agent who sells unknown oils is at best striving alone to promote another's business at the expense of his own.

There's Big Profits in a Panhard Oil Agency. Let us submit our selling proposition.

METZ

The Quality Car

A SPLENDID PROPOSITION FOR DEALERS

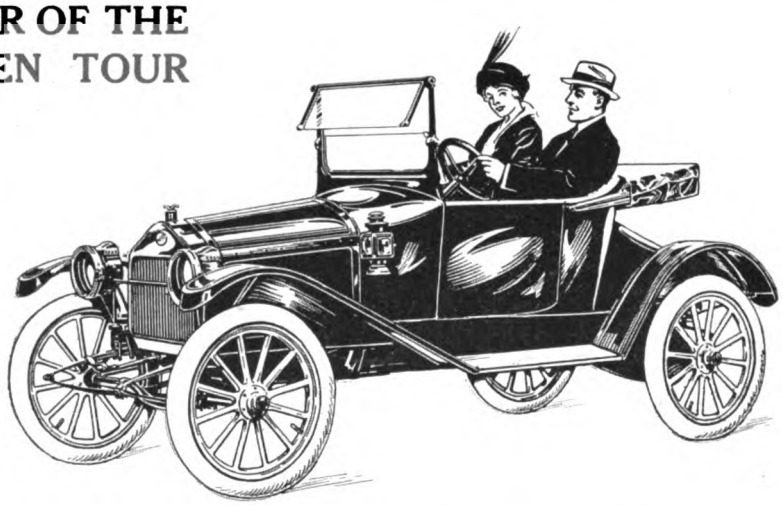
YOU know, Mr. Dealer, that the public is looking for a combination of **Quality** and **Low Price,** and this is exactly what you can guarantee a customer when you sell him a METZ.

The new Fore-Door model of the METZ is the classiest car in the roadster class. Its graceful lines win instant approval, and as you go on and explain its simplicity of construction and its economy in operation, and then mention the official records of its many sensational wins in endurance, hill-climbing and track events, the favorable first impression of your prospective customer becomes a conviction.

You don't have to **argue** a man into buying a METZ. All you have to do is to make him **acquainted** with it—and your sale is made.

The METZ fully meets the popular idea of a low-priced strictly high grade car.

WINNER OF THE GLIDDEN TOUR



$495 Equipped Complete

New Fore-Door Model

Stream line body, plate glass rain-vision wind shield, extra wide fore doors, Prest-O-Lite tank carried in closed compartment in rear, leaving running boards free.

Left-hand drive, center control and gearless transmission—which does away entirely with gear trouble.

Wide, comfortable seat, luxuriously upholstered, and deep cushions. Full elliptic springs all around. This new METZ model is remarkable for its easy-riding qualities.

Four-cylinder water cooled motor, Bosch high tension magneto, artillery wheels, best quality Goodrich clincher tires, extension top, five lamps, and complete equipment.

Makes 40 to 50 miles per hour, and for reliable road performance and hill-climbing ability it has no superior at any price. The METZ is pre-eminently the high class car in the low price class.

Raybestos

The PRODUCT of BRAKE SPECIALISTS

A brake lining made by a brake manufacturer, developed by experiment and experience to meet engineering requirements, and proven by practice with thousands of pleasure cars and trucks.

The use of Raybestos by most of the leading manufacturers, who have no other purpose than obtaining the best, whose conclusions are based on their own careful engineering and service knowledge, is a recognition of Raybestos as the standard of brake lining.

ENDURANCE

There can be no exact measure of mileage, for operating conditions are extremely variable, but Raybestos is guaranteed to endure for a year on all pleasure cars and light trucks, no limitation being placed on miles driven or the character of service. In event the guarantee is not realized the brake lining is replaced without cost.

SERVICE

In 57 cities of the United States are nearly 100 distributors of Raybestos, all having full stocks, who can supply any order, who can be quickly reached by mail, wire or 'phone, and who can afford attention equal to that given by our own highly efficient factory organization, which is also at your command.

Specify Raybestos when you overhaul, refit or repair a vehicle.

At request we will supply the name of the Raybestos distributor for the section in which any inquirer is located—an information that may be extremely useful.

When we can serve you write, wire or make a personal visit to our distributors, or to

THE ROYAL EQUIPMENT CO.

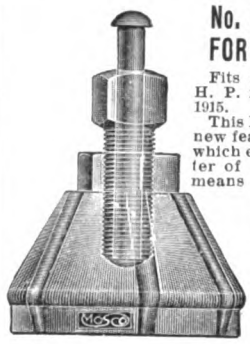
FRONT REAR

SHOCK ABSORBERS FOR THE FORD—FRONT AND REAR

Each absorber has two torsion springs of vanadium steel—one on each side of the shackle. Springs and moving parts enclosed in housing. Look like part of the car when installed. Only 5½ inches high. They make the Ford ride like a Pullman coach.

Set of 4, $10.00; Set of 2, $6.00



No. 3 WHEEL PULLER FOR OVERLAND CARS

Fits all Overland 30 and 35 H. P. models of 1913, 1914 and 1915.

This Puller has an absolutely new feature in the loose plunger which extends through the center of the screw, affording a means of starting off a wheel which is stuck or "frozen" to the axle. A sharp blow with a hammer against the end of plunger is a wonderful help.

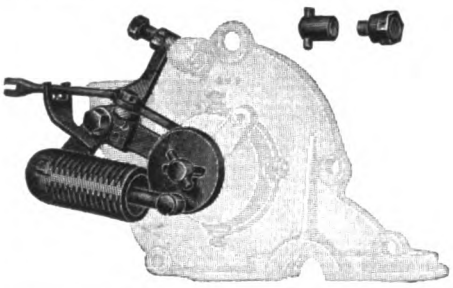
$1.25 Each

(Patent applied for)

BRAKE SHOES FOR FORD REAR WHEELS

Made in one piece of best quality grey iron casting and covered with asbestos lining. These shoes grip the drums much more securely than the plain iron shoes and yet permit a more gradual application of the hand brake because of the lining. They are positive money savers as the lining may be replaced for only a few cents.

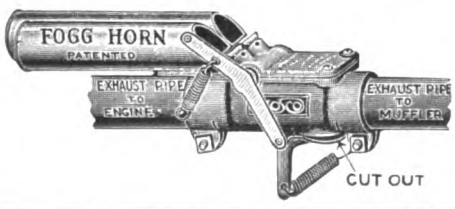
Price per pair $1.50



MOSCO POWER TIRE PUMP mounted on front cover of Ford timing gear case

This is the first practical and substantial power pump ever put on the market for inflating tires on the Ford car. It is driven by an extension of the time shaft and therefore runs at half engine speed. When mounted in the position shown it becomes like a part of the power plant. Equipped with a clutch device so that it may be stopped or started by one movement of a shifting lever.

Price, with 15 feet hose and 150 lb. gauge, $7.50



"FOGG" EXHAUST HORN

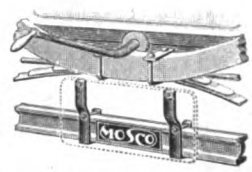
Generally admitted to be the best signal ever produced for Ford or Metz cars. Located between the engine and the muffler, it delivers a full, mellow signal at low engine speeds. A new model for 1915 has cut-out in the body of the horn so that in buying the Fogg you get two fittings in one—a signal and a cut-out.

Price with cut-out $5.00 Price without cut out $4.50

Our line of MOSCO specialties includes also Muffler Cut-Outs, Radius Rod and Steering Rod Anti-Rattlers, Brake Rod Guides, Anti-Rattling Door Checks for the Ford Doors, Gas Savers, Stabilizers, Timers, etc. A late addition is a line of Anti-Rattlers fitted with grease cups. Descriptive matter on application.

MOTOR SPECIALTIES COMPANY

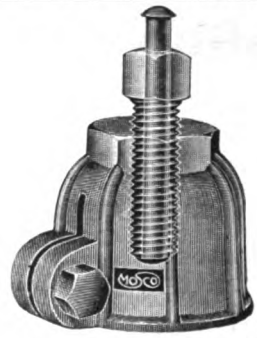
WALTHAM MANUFACTURERS MASSACHUSETTS



FRONT NUMBER PLATE HOLDERS

attached to the front axle of the Ford in two minutes. No holes to drill. Made of rust-proof steel. Hold the plate above the mud and do not permit it to shake or rattle.

Price per set of 2, 25 cents



No. 2 Wheel Puller for the Ford Car

This model has our new loose plunger feature as used in our No. 3 model. It also has an adjusting screw to provide for the variation in hub threads often found in the Ford car. No stripping of threads is possible with this puller. Made of malleable iron casting with steel fittings. (Patent applied for.)

Price $1.00

FAN BELT GUIDE FOR THE FORD CAR

A safeguard against the familiar trouble of belt slipping on greasy fan pulleys. Made of semi-steel. Readily attached to side of timer gear housing without extra hole or bolt. There is no excuse for any Ford owner suffering from belt trouble when this little device can be bought at slight expense.

Price 50 Cents

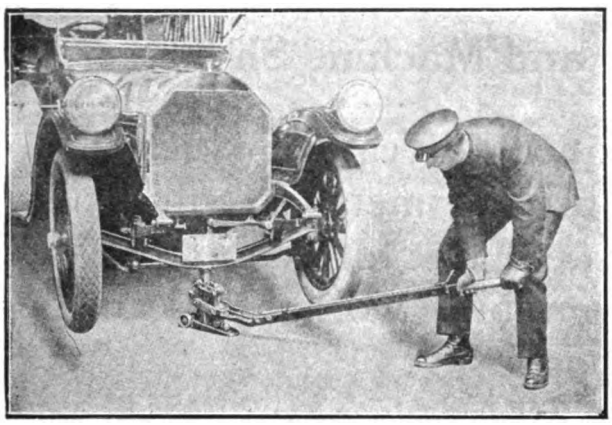
$16 IT'S THE EXCEL AUTO JACK $16

RAISING FRONT END OF HEAVY TOURING CAR.

And It's All Done Before You Could Find The Jack You've Been Used To.



Weight 50 lbs. Capacity for cars weighing up to 8000 lbs. Length of Handle 50". Range of adjustment from 4 to 20" raising 4½" from these or intermediate points.

WHY

It is too large to be mislaid.
It is never out of order; too heavy to be taken without your permission. Roll it to car, pull up on handle until head touches axle. Press down on handle ONCE, and up goes 4500 lbs. 4½ inches, in 4½ seconds. It will raise 4½ inches from a starting point, 4 to 20 inches from the ground.

This is not a turntable jack. Don't be skeptical because it's new. You must see and use it before passing judgment. Just try one and let it speak for itself. If it isn't more than we claim for it, or if you are not perfectly satisfied with your purchase, send it back. It bears the (Mosco) guarantee, which means your money back (without any strings) if not satisfied.

The list price is **$16.00.** Dealers, Garages and Repair Shops, **$12.80.** Send us your check for one today. Be the first in your town or city to have one. You have my personal guarantee that you will make no mistake.

Do Your Own Welding

A WATERHOUSE OUTFIT

Is a Great Profit Producer in Every Garage, Repair and Machine Shop.

A practical equipment, developed by years of experience, that can repair any worn or broken metal at trifling expense. No other process can equal it for economy. Its use is not confined to automobile work. It can be utilized for hundreds of purposes.

"The Busy Corner"

A Trial Costs You Nothing

WATERHOUSE Equipment will develop business. The value of autogenous welding is known. This service can be made highly profitable.

A WATERHOUSE Welding Plant is comparatively inexpensive. A small investment will equip a shop to do any work.

WATERHOUSE Welding Apparatus is absolutely safe. The torch will not flash. Time is not lost from "flashing," relighting, adjusting flame and from cooled metal. Waterhouse torches are built right, and are guaranteed for a year.

WATERHOUSE Outfits are sold with the right to two weeks' trial. If it doesn't satisfy you send it back and no questions are asked.

NEW PLANT FOR PRODUCING LBA BATTERIES.

Willard Storage Battery Company Erecting New Building Providing Six Acres of Floor Space—Standard Woven Fabric Company Holds Convention.

OWING to the increasing demand for LBA storage batteries, the Willard Storage Battery Company, Cleveland, O., has been obliged to add to its manufacturing facilities, and the company is erecting a new plant, which will provide six acres of floor space. The new plant will include 10 buildings and will be equipped on such a scale as to amply provide for the company's needs for an indefinite period. There is sufficient space, however, for further expansion.

New Factory of the Willard Storage Battery Company, Cleveland, O., Which, When Completed, Will Provide Six Acres of Floor Space for the Production of LBA Storage Batteries.

The new location is on East One Hundred and Thirty-First street, upon 10 acres of land. All buildings will be of brick, of the latest and most approved construction, and will be equipped with sprinkler systems throughout. Each structure will be sufficiently apart from the other to insure adequate protection from fire and to give the maximum of light.

The offices will be housed in a handsome administration building, two stories in height, and equipped in the most approved manner. The accounting, cost and purchasing departments, with necessary private offices, will be located on the first floor, while the private offices for the executives and heads of departments, filing rooms, draughting departments, etc., will occupy the second floor. In a separate building will be the dining rooms for the office and factory employees, where noonday lunches will be served at a nominal cost. Particular attention is to be given to sanitation, and the most modern lockers, bath rooms, dressing rooms, etc., will be installed. A feature of the plant will be a completely equipped hospital for the treatment of the employees, in charge of a physician regularly employed by the company.

A switch track from the Belt line railway, which connects with all railroads entering Cleveland, will extend the entire length of the 10-acre lot in proximity to the end of each building.

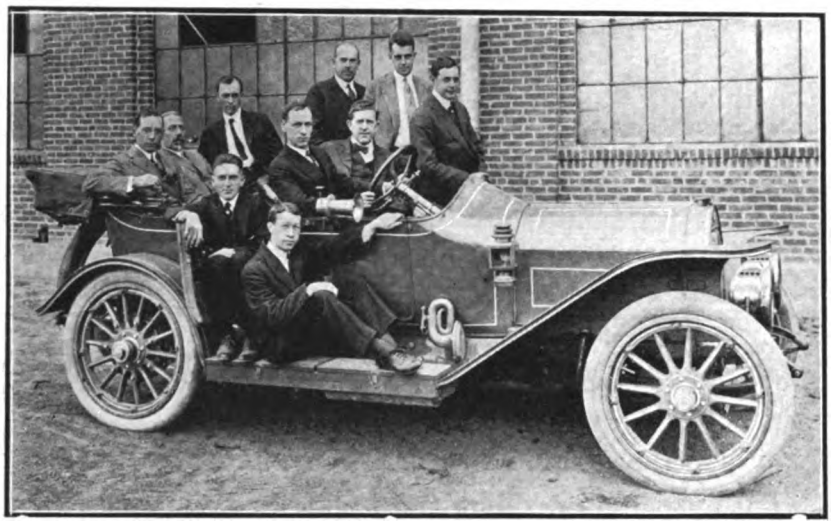
WONKOTE ENAMEL.

F. Ed. Spooner Forms Company to Market Material Applicable to Metals, Glass, Wood, Etc.

F. Ed. Spooner, well known to the industry, has formed the WonKote Enamel Company, Inc., with headquarters at 903 Free Press building, Detroit, Mich., and laboratories at Ravenswood, Ill. He is secretary and general manager, F. J. Wirtz is president and sales manager, and Paul Fuchs, former lieutenant in the German navy, manufacturing manager. The enamel is the discovery of Lieutenant Fuchs. It is a secret preparation and is non-transparent, non-porous, and retains a high gloss against the actions of acids and alkalies. It is applicable to metals, glass, wood, etc., and is produced in every known color. WonKote will be put on the market for the automobile and building trades.



Giving Multibestos Brake Lining a Road Test in General Manager A. H. Burdick's Car.

MULTIBESTOS CONVENTION.

Representatives of Standard Woven Fabric Company Meet at Factory to Discuss 1915 Campaign.

One of the events in the automobile industry last month was the sales convention of the Standard Woven Fabric Company, maker of the well known Multibestos brake lining. The convention was held at the factory at Framingham, Mass., with the idea of going over in detail the plans which have been made for an active sales and advertising campaign for the coming year.

The success of the Standard Woven Fabric Company in the accessory field is largely due to its thorough sales service and distribution policy. The company has five distributing centres, New York City, Boston, Philadelphia, Chicago and San Francisco, each carrying a very large stock of the different sizes of Multibestos brake lining which are in general use. The agent in charge of these centres is a direct factory representative, and he has an allotted territory which he and the salesmen under him cover thoroughly.

This service is maintained chiefly in the interests of the jobbers handling Multibestos material, for while their stock orders are filled direct from the factory, it frequently happens that they have calls for odd sizes, which are supplied by the factory branch, a method assuring prompt service. Due to the activity of these branches, a jobber or distributor is located in practically every city of importance in the country.

The sales plans for the coming year aim to make this distribution even more complete and at the same time to increase the volume of business of the jobbers by means of advertising and assistance from the home office. The company holds that the jobber or large dealer is the logical distributor for Multibestos lining, and the concern makes no effort to sell to garages, repair shops or small dealers. This class of trade is to be appealed to on behalf of the jobber and the campaign includes plans for assuring this business to the jobber and the consumer trade to the garage and repair shop. This, coupled with an endless chain of advertising and sales service, will benefit those handling Multibestos brake lining.

One of the features of the convention was the interesting talk by E. E. Waite, factory manager, on brake linings. He escorted the representatives through the factory and explained each step of the manufacturing process, told how other brake linings were made, and gave reports of his tests, as well as those made in the engineering departments of motor car makers. A point demonstrated by Mr. Waite in his talk was the solidity of the weaves of Multibestos lining, there being no loose plies or stuffers in its makeup.

General Manager A. H. Burdick gave a very interesting talk in which he traced the history of the company's success. According to his report the business was doubled in the past year and the outlook is bright for a similar increase in 1915.

Although the convention was decidedly of a business nature, the representatives were royally entertained. One evening was spent at the Framingham Country Club with Mr. Burdick as host. N. A. Petry, of the Philadelphia branch, presided at the piano. R. D. Northrop, advertising manager, and E. E. Waite, gave an exhibition of the "Friction Clutch" and other modern dances. T. J. Daley, secretary of the company, and Walter Williams, of the Boston office, contributed to the success of the evening.

Those present at the convention included F. Shirley Boyd and Walter Williams of the Boston office; N. A. Petry and G. R. F. Cotton of Philadelphia; T. J. Daley, secretary; M. D. Davies, travelling representative for New England, and R. D. Northrop, advertising manager. The convention was so successful that it is planned to hold another in January, when representatives from the Chicago and San Francisco offices will be present.

Sales Representatives of the Standard Woven Fabric Company Present at Recent Factory Convention: Upper Row Reading from Left to Right—R. D. Northrop, Walter Williams, M. D. Davis, Thomas Lamb, E. E. Waite and F. S. Weeks; Lower Row—N. A. Petry, A. H. Burdick, T. J. Daley and F. Shirley Boyd.

SPARK PLUG MERGER.

Champion Spark Plug Company and Jeffery-Dewitt Company Combine and Former Will Produce Both Makes.

The Champion Spark Plug Company, Toledo, O., and the Jeffery-Dewitt Company, Detroit, Mich., have merged, and the former will manufacture and market the "J-D" and Reliance plugs, formerly the product of the Detroit concern, in addition to its own product, the Champion. All business will be handled exclusively from Toledo. The Jeffery-Dewitt Company will manufacture porcelains and porcelain products only. All machinery and equipment will be moved from Detroit to Toledo and the Champion plant will be enlarged by the addition of 40,000 square feet of floor space.

H. R. McDonald, San Francisco, Cal., has been made manager of the Chalmers Motor Company.

Frank H. Trego, General Manager of the Knox Motors Company.

D. R. Murrell, Norfolk, Va., has been appointed district representative for the Studebaker Corporation.

Robert H. LaPorter, Detroit, has joined the sales staff of the Scripps-Booth Company. He was formerly con-

Digitized by Google

nected with the Franklin Automobile Company.

Frederick H. Elliott, New York City, secretary of the Safety First Society of New York City, is touring the country to build up a Safety First movement. He will give lectures in the various cities emphasizing the importance of Safety First.

Frederick H. Elliott, General Secretary of the Safety First Society.

Henry R. Jossman, Flint, Mich., has accepted a position as travelling representative for the Chevrolet Motor Company. He held a similar position with the Oakland Motor Car Company, Pontiac.

N. F. Sutton, Pontiac, Mich., for almost a year a member of the sales force of the General Motors Truck Company, has been appointed manager of the company's branch at St. Louis.

N. H. Motsinger, Jr., Chicago, has become associated with the Findeisen & Kropf Manufacturing Company. He will be factory representative.

C. J. Patterson, St. Louis, has become secretary of the Velie Motor Company of Missouri.

Harold Pope, Cleveland, formerly of the Pope Manufacturing Company, Hartford, Conn., has joined the engineering force of the Ferro Machine & Foundry Company of the former city.

C. M. Menzies, Portland, Ore., has become identified with the Northwest Auto Company. He has been for the past three years connected with the H. L. Keats Automobile Company.

J. W. Bayard, Detroit, representing the sales department of the Signal Motor Truck Company, left recently for the Pacific coast.

Charles W. Baird, Detroit, formerly president of the Detroit Steel Company and a director in the Federal Motor Company, died at his home recently.

H. E. Bradford, Bridgeport, Conn., has accepted a position as manager of the Erwin M. Jennings Company. He was formerly associated with the Earlye Y. Booth Company, agent for the National car at Los Angeles.

Seymour G. Cole, Detroit, has resigned as general manager of the Parish Manufacturing Company.

H. J. Vogel, Philadelphia, has become district sales manager in that territory for the Maxwell Motor Company, Inc.

F. C. Blanchard, Akron, assistant sales manager of the Firestone Tire & Rubber Company, is touring throughout the northwest.

C. Louis Allen, New York City, is now general sales manager of the Pyrene Manufacturing Company. He was formerly general manager of the automobile department for that company.

C. A. Pfeiffer, Detroit, has resigned as president of the Wolverine Automobile Club, owing to his many business duties. He is secretary and treasurer of the Chalmers Motor Car Company and the Metal Products Company.

R. K. Jack, Toronto, Ont., has been appointed chief engineer of the Russell Motor Car Company. He was associated for a number of years with the Cadillac Motor Car Company, Detroit.

Stefan J. Kjeldsen, New York City, has become associated with the Holbrook Company. He is well known among the importers of automobiles and is also manager of the Importers' Salon held in that city.

Frank G. Eastman, Detroit, of the Packard Motor Car Company, and E. A. Walton, advertising manager of the Timken-Detroit Axle Company, have been appointed members of the house organ committee of the Associated Advertising Clubs of the World.

T. C. Woodin, Detroit, has been appointed factory manager of the Abbott Motor Company. He was formerly sales manager of that company, with headquarters at Philadelphia.

Wallace M. Williams, Covington, Ky., has become associated with the International Liberty Union. He was formerly connected with the Franklin Automobile Company, Syracuse, N. Y., as advertising manager.

C. P. Carey, Detroit, has joined the sales force of the Federal Motor Truck Company and will be district sales manager in the New England states and New York. He was formerly identified with the Peerless Motor Company.

A. Roy Camp, New York City, has been appointed sales manager of the Chalmers Motor Company's branch. Headquarters for the company is at Detroit.

M. C. McCann, Lafayette, Ind., has been appointed representative in northwestern Indiana for the Indiana distributing branch of the Oakland Motor Company.

B. F. Everitt, Detroit, has become associated with the Hayes Manufacturing Company in the body building and trimming department.

Howard Flagg, Cleveland, is now connected with the Standard Welding Company, having joined the sales staff recently. He was formerly associated with the Shelby Tube Company, the National Tube Company and the Ohio Seamless Tube Company.

William M. Gage, New York City, has joined the C. T. Silver Motor Company, agents for Peerless, Willys-Knight and Overland cars. He was formerly associated with the Colt-Stratton Company, Cole distributor in the East.

E. A. Cassidy, New York City, has been appointed general manager of the auto accessories department of the H. W. Johns-Manville Company, succeeding George L. Holmes, resigned.

Ernest Coler has accepted a position with the Briscoe Motor Company, Jackson, Mich. He was formerly publicity manager of the Willys-Overland Company, Toledo, and also advertising manager of the Maxwell-Briscoe Motor Company, Tarrytown, N. Y.

Harry J. De Bear has been appointed manager of the new Maxwell Motor Sales Corporation's branch, which succeeded the agency in New York City. He has been connected with the sales end of the automobile business for some time.

Aaron Waldheim, Indianapolis, president of the Empire Automobile Company, is one of the many Americans stranded in Europe on account of the war. Empire representatives on the Continent and in England have been cabled to assist Mr. Waldheim in returning to this country.

Arthur J. Paige, M. E., who has been assistant mechanical engineer of the National Motor Vehicle Company, Indianapolis, Ind., for over three years, resigned recently to give some time to the development of a new motor of his own design.

C. W. Dow, Washington, D. C., now has charge of the local branch of the Hupp Motor Car Company.

W. M. Hogle, Alma, Mich., has resigned as general sales manager of the Alma Motor Truck Company.

Frank J. Girard, Columbus, O., has been appointed district sales manager for the Peerless car and will make his headquarters at 168 North Fourth street.

Henry Holt, New York City, has become affiliated with the local branch of Dodge Brothers. He will take care of the selling end of the business.

John Dietrick, Detroit, is in charge of the engineering department of the Denby Motor Truck Company.

Charles L. Rutter, Detroit, has been appointed manager of the Rutter, Raths & Theisen Auto Sales Company, 761 Dix avenue.

M. J. Holmes, Alma, Mich., has been appointed sales manager of the Alma Motor Truck Company, maker of the well known Republic commercial cars.

Charles Van Horne, Detroit, has taken charge of the commercial vehicle department of the Studebaker Corporation as sales manager.

W. T. Bush, Walkerville, Ont., has been appointed sales manager of the Studebaker Corporation of Canada, Ltd. He succeeds C. H. Snoke, who recently resigned.

Charles P. Henderson and R. P. Henderson, Who Have Joined the Cole Forces—The Former Is General Manager of Sales and Advertising and the Latter His Assistant.

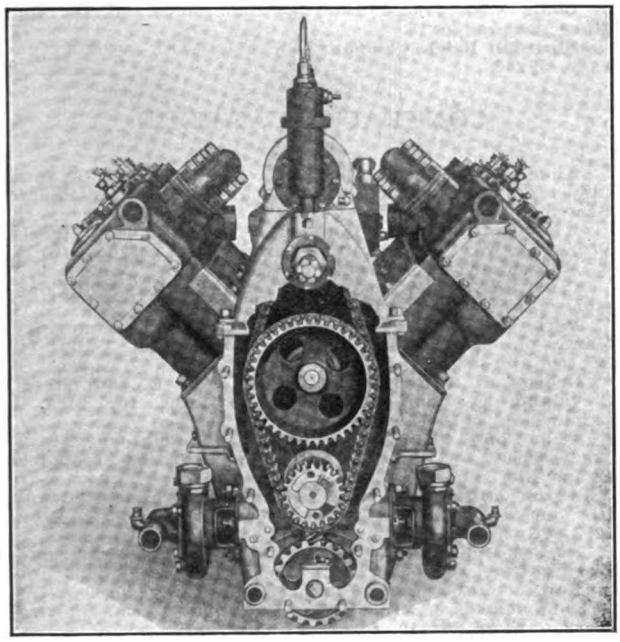
C. P. Henderson, Indianapolis, and his brother, R. P. Henderson, have become associated with the Cole Motor Car Company. They will have charge of sales and advertising.

Digitized by Google

EIGHT-CYLINDER CADILLAC.

1915 Product Innovation Inspired by Aviation Motor Success.

The Cadillac Motor Car Company, Detroit, Mich., has put an eight-cylinder car on the 1915 market which is to cost no more than the previous car, $1975. The eight-



Front View of Cadillac Eight-Cylinder V Motor Having Two Groups of Cylinders Mounted at 90 Degrees to Each Other—A Pump Is Provided for Each Set, and Silent Chain Drive Is Generally Employed.

cylinder motor has been successfully used in aviation and the company has been influenced in its use on motor cars because it creates a power impulse every quarter turn of the crankshaft. There is no interval between the impulses as in a four-cylinder motor, and the application of the power is more continuous than in a six-cylinder engine. To eliminate undesirable dimensions, particularly length, the V type cylinder is utilized. Two groups of cylinders have a block casting of four cylinders mounted at 90 degrees to each other. The motor is more compact than the one formerly used, and it weighs 60 pounds less. The bore of the new motor is 3⅛ inches and the stroke 5½, giving a piston displacement of 314 cubic inches. The application of the S. A. E. formula to the motor gives it a rating of 31.28 horsepower, but the horsepower curve shows that this rating is very conservative, it being developed at approximately 1000 revolutions a minute, whereas the motor develops 70 horsepower at 2400 revolutions a minute. At slightly above 1600 revolutions a minute the chart shows 50 horsepower. The crankshaft has four connecting rods and is 26 1/16 inches long. The camshaft directly above the crankshaft has eight cams, each one operating two opposite valves. The accurate balance necessary with a high-speed motor is obtained by uniformity of weight due to the machining of the pistons and connecting rods to very close limits. The firing order of the new motor alternates from one side to the other. Carburetion is by a single-jet type carburetor, located midway of the engine and between the cylinder blocks. The ignition is by the Delco system. An innovation is the application of thermostatic control to the temperature of the cooling fluid. The lubrication system involves a number of refinements and is of the force feed type. The fan and Delco motor-generator are driven by a shaft vertically in line above the camshaft. The reduction between the electric motor and engine is 25 to one. Numerous other changes in the chassis are noted. The gearset is incorporated with the power plant and the leather faced cone clutch has been replaced by a well designed disc cluch of the dry plate type. Drive to the axle is by an enclosed shaft having two universal joints. The rear axle is of the floating type, but the two-speed construction has been dropped. Spiral gears replace straight bevels. Timken roller bearings are employed and the axle is also a Timken. The other components of the chassis are practically the same. The wheelbase has been increased from 120 inches to 122, and the driver is placed on the left, with centre control. The fuel feed is by pressure, the tank being at the rear of the chassis and the air pump is at the forward end of the camshaft. The tires are 36 by 4½ inches on demountable rims and wood wheels.

A variety of body designs is offered and these follow conventional practise. These include a five and seven-passenger touring car, a four-passenger salon of the open design, a two-three passenger roadster, a coupe, a five-passenger sedan and two seven-passenger limousines. The four-passenger salon body provides a passageway to the rear seats and between the individual seats. The equipment leaves nothing to be desired.

FOUR-PASSENGER BOAT TYPE.

One Addition to the Bodies of the New National Series.

National will continue its six for 1915 and will follow the one-chassis model policy. Of this chassis there will be six body types. Five of these are continuations of the bodies of the past season, with refinements, while a sixth, a four-passenger boat design, is a new one.

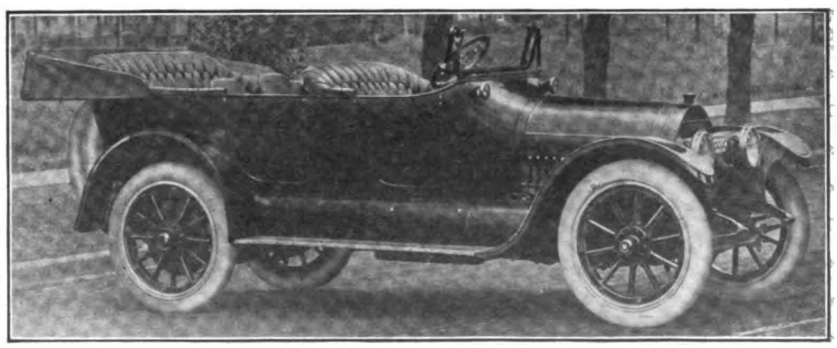
Features of the 1915 line are four-passenger boat body in use, five improved bodies continued, prices unchanged, Remy cranking and lighting adopted, Eisemann ignition is new, reciprocating parts lightened, body weight reduced and other minor improvements.

The four-cylinder car known as series V3 will be continued practically for the coming season.

While the new cars are the same in price and essentially the same mechanically as for the 1914 season, a number of refinements will be noted throughout. The entire electrical equipment of the car has been altered, Remy lighting and starting replacing the outfit used formerly, and in place of the dual system of ignition, the Eisemann magneto now forms the sole source of ignition current.

Twenty-five per cent. has been cut off the reciprocating parts of the motor resulting in an increase in power and the elimination of vibration at high speeds. The crank case now is a heavier casting, adding still further to the rigidity of the motor construction. While the oiling system remains the same in the principles of operation, a vertical oil screen separates the horizontal type, eliminating any chance of clogging, because the oil cannot settle on the surface.

In the gearbox the travel of the sliding pinion has been increased by ¼ inch, making an easier gearshift. The rear springs are now made of manganese. Another alteration in the spring, which is a cantilever design, is that it is practically flat. Although 100 pounds has been clipped from the body's weight, the six-passenger car is longer and wider. The Willard battery has been placed beneath the splash guard at the side of the car. The new boat design body sells at $2700. The National Company is continuing the four-passenger toy tonneau, five-passenger touring and two-passenger roadster, all listing at $2775; a coupe at $2750 and a six-passenger toy tonneau with disappearing seats, $2500. The cars are all fully equipped, tire pump, Collins curtains, extra demountable rim, windshield, horn, etc., being standard. Color is optional, but if not specified, National blue is furnished. Wheelbases of all but the roadster are 132-inch, the roadster being 124. The front axle and frame construction is standard throughout and has no departure from previous National designs. The channel section of the main frame has a web depth of five inches.



A Wide Variety of Open and Enclosed Bodies Is Offered with the 1915 Cadillac Chassis—That Illustrated Is the Seven-Passenger Touring Car.

CONTEMPLATED NEW BUILDING OPERATIONS.

PLANS AND SPECIFICATIONS.

James S. Talley, 1931 Market street, Philadelphia, Penn.; one-story garage, $10,000.

Josiah Grossman, 145 Munroe street, Lynn, Mass.; one-story garage, 20x25.

S. H. Merrill, Brooklyn, N. Y.; one-story garage, 45x56.

William D. Goff, 171 Westminster street, Providence, R. I.; one-story garage, 21x30.

Blevin's Automobile Sales Company, 1101 Madison street, Toledo, O.; two-story garage and service station, 100x132, $50,000.

F. Dietzel, 2014 West Boulevard, Cleveland, O.; one-story garage, 24x18.

W. E. Rodenback, 91 Ohio street, Wheeling, W. Va.; one-story garage, $900.

Dr. G. W. K. Forrest, Wilmington, Del.; one-story garage, 18x28, $3000.

George Gerber, 514 Wunder street, Reading, Penn.; one-story garage, 11x14.

John Hall, Bridgeport, O.; two-story garage, 40x100, $5500.

G. W. Adolph, Bridgeport, O.; three-story garage and apartment building, 40x80, $20,000.

E. J. St. Clare, Pinehurst, N. C.; one-story garage, 30x60, $15,000.

Rev. James J. Murphy, Brighton, Mass.; one-story garage, 34x32.

F. J. Rockwell, Dorchester, Mass.; one-story garage, 55x50, $12,000.

John F. Armstrong, Worcester, Mass.; one-story garage, 25x22.

S. Fink, Westfield, N. J.; one-story garage, 60x90, $10,000.

A. M. Smith, Mt. Lebanon, Penn..; one-story garage, $3000, to be erected at Pittsburg, Penn.

Grant Saylor, 548 Schuylkill avenue, Reading, Penn.; one-story garage, 12x21.

Col. H. E. Robinson, Uniontown, Penn.; two-story garage, $3000.

Mrs. E. E. Strickler, Uniontown, Penn.; two-story garage, $3000.

William G. Thomas, 807 North Broadway, Baltimore, Md.; two-story garage, $10,000.

W. C. Nicholas, Oxford building, Washington, D. C.; two-story garage, 50x75, $10,000.

George W. McClintick, 1104 Washington avenue, Charleston, W. Va.; two-story garage and sleeping quarters, 20x40, $4000.

Hon. W. C. Lewis, Greeley, Col.; one-story garage, 50x90.

J. E. Dongan, Iowa Falls, Ia.; one-story garage, 66x126, $10,000.

Henry K. Wick, Youngstown, O.; one-story garage, 50x150, $15,000.

J. A. Doran, Edgewood, R. I.; two-story garage, 25x30, to be erected at Providence, R. I.

A. H. Cosden, 135 Central Park, West, New York City; one-story garage, 26x36, to be erected at Southold, L. I.

Troy Gas Company, Troy, N. Y.; two-story garage, 37x65.

Charles J. Wells, 1932 So. Salina street, Syracuse, N. Y.; one-story garage, 20x20.

Robert Dunkel, 4253 Washington street, Boston, Mass.; one-story garage, 45x34.

J. Howard Jones, Worcester, Mass.; one-story public garage, 110x45.

Anton Charvat, 1801 So. Ashland avenue, Chicago, Ill.; one-story garage, 22x31.

Buchanan Manufacturing Company, Eldorado, Ill.; one-story garage and machine shop, 50x100 and 125x125.

W. Haldeick, 785 Ocean Parkway, Brooklyn, N. Y.; one-story garage, 49x123, $15,000.

W. A. Kerns, 420 W. 259th street, New York City; two-story garage, 57x65.

Joseph Ringelstein, 223 No. 60th street, Philadelphia, Penn.; one-story garage, $500, to be erected at 222 No. Salford street.

Frank A. Okon, 1044 W. 32d street, Chicago, Ill.; one-story garage, 50x125, $13,000.

Charles S. Meacham, 322 Linden avenue, Oak Park, Ill.; two-story garage, 22x29.

L. Novy & Son, 3223 W. 22nd street, Chicago, Ill.; one-story garage, 20x22.

Hatzbeld & Knox, 7 So. Dearborn street, Chicago, Ill.; one-story garage, 50x125.

Dr. Adolph H. Urban, 1433 E. 10th street, Brooklyn, N. Y.; one-story garage, 16x15, $500.

J. W. Sullivan, 156 Hewes avenue, Brooklyn, N. Y.; one-story garage, 20x198, $15,000.

J. Zaret, Rockaway Beach, L. I., N. Y.; one-story garage, 14x18, $3000.

E. J. Coleman, 99 Main street, Poughkeepsie, N. Y.; one-story garage, 18x24.

Seneca Motor Car Company, Rochester, N. Y.; two-story garage, 50x100, $25,000.

E. J. Mitten Estate, Boston, Mass.; three-story garage, 155x53.

Joseph Rosenberg, S. W. corner Townsend street and Scott avenue, Brooklyn, N. Y.; one-story garage, 40x40, $2500.

George S. Beck, Wyomissing, Penn.; one-story garage, 14x22.

Shoenthal & Naxter, 20 Park street, Orange, N. J.; one-story garage and store, $7000.

Cranwell & Son, 317 Union street, West Hoboken, N. J.; two-story garage, $5000.

Louis Noss, 3408 Library avenue, Cleveland, O.; one-story garage, 20x16.

Barkwill Brick Company, Cleveland, O.; one-story garage, 35x55.

CONTRACTS AWARDED.

Anders Contracting Company, 413 Champlain avenue, Cleveland, O.; one-story garage, 60x96, $8000, for Pilsner Brewing Company.

Klieves Contracting Company, Third and Eoff streets, Wheeling, W. Va.; one-story garage, 12x22, $1000, for A. E. Marschner, 2311 Chaplin avenue.

C. E. Parsie, 274 Academy street, Newark, N. J.; one-story garage, 13x19, for Mrs. K. Knapp.

Patterson & Fox, 1287 Cambridge street, Cambridge, Mass.; one-story garage, 35x39, for Edith L. Dana, 113 Brattle street.

George A. Rutherford Company, 2160 E. 18th street, Cleveland, O.; one-story garage, 33x30, for Mrs. J. Landesman, 1912 E. 89th street.

T. J. Foley Company, Chicago, Ill.; one-story garage, 92x25, $6000, for Standard Oil Company, to be erected at Evansville, Ill.

Aaron Miller, 2911 No. Sacramento avenue, Chicago, Ill.; one-story garage, 25x55, $3500, for Halperin Bros., 1223 Milwaukee street.

Forbes McKenzie, 7 Water street, Boston, Mass.; one-story garage, 80x90, for John G. Reinhardt, 408 So. Huntington avenue, Jamaica Plain, Mass.

John Kaiser & Bro., Elyria building, Elyria, O.; two-story garage, 26x110, for H. M. Andress.

GARAGES AND REPAIR SHOPS.

The Garage Building Company, Baltimore, Md., has purchased property on Charles street and will erect a modern two-story garage at a cost of $40,000.

L. S. Good, Wheeling, W. Va., will erect a garage on 14th street. It will be modern throughout.

Sewell & Company, Clinton, Ia., is erecting an up-to-date garage.

J. Elmer Wood, Beverly, Mass., is erecting a brick garage on Railroad avenue.

C. E. Bowlby, Somerville, Mass., will erect a modern garage on Thorndike street.

John Leary, Southbridge, Mass., is erecting a modern garage on Washington street.

The Newport Auto Service Company, Newport, O., will build a first-class garage near Seventh street, costing approximately $10,000. It will be of iron, steel and concrete, and will have all the latest appliances.

A. A. Bradbridge, Hutchinson, Kan., is erecting an up-to-date garage on Sherman street.

E. F. Rall, Dallas, Tex., will build a modern garage at 2610 Main street at a cost of $75,000.

Warren S. Woodward, Lowell, Mass., is erecting a one-story garage at 7 Fairfield street.

Nathaniel W. Lowe, Lowell, Mass., will build a modern one-story garage on Newell street.

The Carne Company, Chicago, is erecting a garage at the corner of 39th street. It will be one-story, of brick construction, and will cost $50,000.

Morris Snyder, Washington, N. J., is to erect a garage on Broadway, which will be fully equipped.

John C. Burns, Pittsburg, Penn., will erect an up-to-date garage at 1147 Mellon street.

R. E. Mims, Fort Pierce, Fla., is erecting a first-class garage of concrete and iron on Orange street.

Charles C. Housenick, Bloomsburg, Penn., will build an up-to-date garage at the corner of East and Main streets. It will be a three-story building of white cement blocks.

McNaul & Kauffman, Olean, N. Y., is to erect a large livery barn and garage at a cost of $20,000 on North Union street.

Francis H. Thole, Philadelphia, is having plans prepared for the erection of a garage at 58th street. It will be two stories high.

Peter S. Polucki, Baltimore, Md., is erecting a garage at 215 South Bethel street. It will be one-story and modern throughout.

Grolse Bros., Holyoke, Mass., will erect an up-to-date garage on Elm street.

E. E. Burns, Malden, Mass., is building a first-class garage on Irving court.

Digitized by Google

ACCESSORIES, SUPPLIES AND FITTINGS.

ARTILLERY TIRE PROTECTOR.

Comprises a Number of Units Attached to Ring by Hooks.

The Artillery auto tire protector is marketed by the Artillery Auto Tire Protector Company, Inc., Pittsburg,

Penn. It consists of a strip or band, as shown in the accompanying illustration, and is constructed of strong rubber fabric faced with the best grade of chrome leather, to which are riveted the lugs on the tread. The protector, as fitted to a tire, consists of a number of units, each about three inches wide. They are applied around the casing and hooked to a continuous wire cable. The maker states that it is impossible to break this cable and that the hooks, lugs and rivets are of hardened steel. In addition to providing non-skidding qualities, the protector is stated to be puncture and water proof.

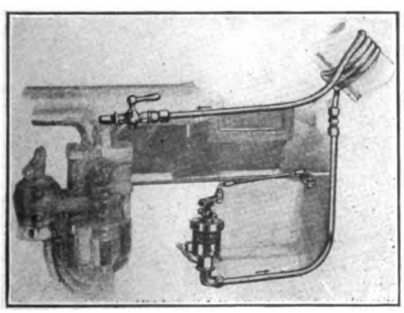
GO MOTOR SPEEDER.

Novel Fuel Economizer with Automatic Control of Air Admitted.

The advantage of utilizing heat for raising the temperature of the fuel is well known, and the use of the warmth of the exhaust gases is standard practise with a large number of car manufacturers. A device operating on this principle is the Go motor speeder, manufactured by the Go Motor Speeder Company, Three Rivers, Mich. It differs in a number of ways from the usual devices, the most noticeable variation being an automatic control of the extra air admitted.

The heat is obtained by a coil of tubing around the exhaust manifold. One end of the pipe is tapped into the intake manifold above the carburetor, and the other end is attached to the device itself. The last-named member is very compact and air is drawn through it by the suction of the piston. In passing through the coil on the exhaust pipe the atmosphere is warmed. The heated air mingles with the mixture drawn from the carburetor, and any particles of fuel are broken up into a useful vapor.

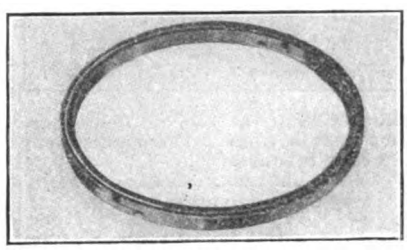
One of the features of the device is the automatic control of the air admitted. The bell crank lever regulating the amount of air is connected by linkage with the throttle control, so that the air supply is augmented and in proportion to the speed of the motor. The maker states that the use of the Go motor speeder will increase the mileage to a gallon of fuel from 30 to 50 per cent., and that starting is made easier, as the mixture left in the cylinder is more homogeneous.



McCADDEN PISTON RING.

Comprises Two Concentrics and Is Stated to Be Leak Proof.

A new type of piston ring, held to be leakless by the maker, the McCadden Machine Works, St. Cloud, Minn., is the McCadden. It consists of two concentric rings, one within the other, and the lap joint of the outer is spaced diametrically opposite the joint in the inner and is held in position by a dowel pin. It is claimed that it is impossible for this pin to work loose or into a position that would cause it to score the walls of the cylinder, as it is not drilled through from either ring. The lap joint is milled to exactly one-half the ring width, and the inner ring is ex-



actly the same width as the outer ring. As its joint is diametrically opposite that of the other ring, it is held to be leak proof. The McCadden is made in various sizes.

AUTO-COMFORT ROBE.

Provides Conveniences of Lap Rug and a Chest Protector.

The Auto-Comfort Robe Company, Inc., Gloversville, N. Y., is manufacturing a lap robe which fulfills a

number of requirements. It is an improvement over the ordinary robe in many respects, particularly when used as a lap rug, as pockets are provided for the feet, thereby eliminating draughts.

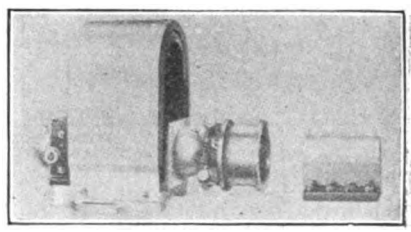
Another use to which the robe can be put is shown in the accompanying illustration, a special chest protector, consisting of an apron attached to that portion of the robe which rests on the knees. This, when in position, extends up to the throat, and is held in place by adjustable straps. The robe is made in light and heavy weight, of fur, velour and mackinaw.

Ed. Note—Manufacturers, distributors and agents of accessories and equipment are cordially invited to forward data and illustrations of their product for publication in this department.

TRECO BATTERY CHARGER.

An Electric Generator with Cut-Out Adapted to the Used Car.

The Tritt Electric Company, Union City, Ind., maker of electrical apparatus for motor vehicles, is mar-



keting the Treco battery charger, which is adaptable to motor vehicles and motor boats. It is of the permanent magnet type and the maker states that nothing but the best of material and workmanship is used.

The generator is equipped with an automatic cut-out of the electrical type and has a flat belt governing pulley. The dimensions of the Treco are five by six by eight inches and the weight is 12 pounds. A friction pulley is supplied if desired.

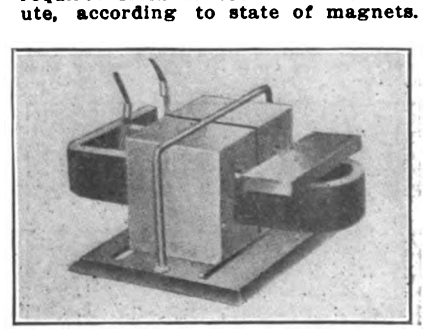
The cut-out is an electromagnet with a compound winding. When the engine is started and the voltage of the generator is equal to that of the battery, the current passes through the finer windings of the cut-out, causing the circuit on the magnet armature to close, thus permitting the current to pass through the coarser winding to the cells. When the speed of the generator falls so the voltage is below that of the battery the circuit is opened, preventing the cells discharging through the generator. The maker states that the cut-out is positive and thoroughly dependable. The Treco battery charger is adapted to the used vehicle and is moderately priced.

The maker will supply the trade with complete details, and will forward discounts upon application. The Tritt Electric Company specializes in electrical equipment.

PEERLESS CHARGER.

Remagnetizes Magneto Magnets and Uses Dry Cells or Battery.

The Sauermann Motor Company, Rock Island, Ill., has brought out a magnet charger which it is claimed will successfully remagnetize any of the magnets of a magneto. The Peerless magnet charger is of simple construction and is provided with two terminals to which are attached the leads from a six-volt storage battery of six dry cells. The maker states that the device can be operated by anyone and that by using it at frequent intervals the magneto is maintained in an efficient condition. It is stated that the charging operation requires from 15 seconds to a minute, according to state of magnets.

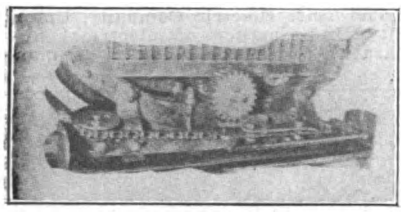


Digitized by Google

MURPHY MOTOR STARTER.

A Mechanical Type Operated by a Pedal and Hand Lever.

One of the features claimed for the Murphy mechanical starter, made by the Murphy Starter Company, Ida



Grove, Ia., is that it is applicable to and practical with any type of motor vehicle. That shown in the accompanying illustration is the Ford.

The starter is of the sliding gear construction. A pinion, fitted to a short shaft and having an engaging clutch at its inner end, takes the place of the usual hand crank. This pinion is actuated by a gear or rack, which moves freely.

A single movement of a pedal engages the clutch with the motor and, by pulling a hand lever conveniently located to the driver, the crankshaft of the engine is rotated rapidly by the gear actuating the pinion, as considerable leverage is obtained by the construction.

One of the starter's qualities noted by the maker is that it can be installed without removing the radiator from the car. No changes, machining, etc., are necessary. Provision is made for preventing any injury to the mechanism in the event of a back fire of the motor, and it is stated that it requires but little effort to spin the crankshaft.

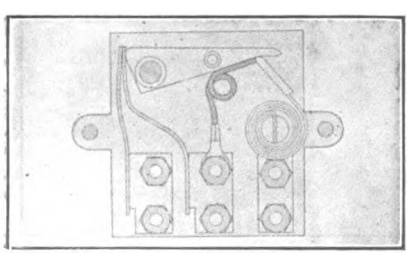
MAPLE THERMO CUT-OUT.

Replaces Fuses in Lighting System and Breaks Circuit.

The R. H. Maple Company, Indianapolis, Ind., has brought out the Maple Thermo cut-out, which is a device for replacing fuses in the electric lighting system of the motor car. It employs the thermostat principle, being affected by the heat of the current passing through it, and it is adjusted to break the circuit at a temperature of 200 degrees.

The thermostat metal is in the form of a coil, as shown to the right in the illustration, and the connections are two nuts at the lower corners. The electricity passes through the thermostat metal and wire connection to the central metal fitting, thence to a similar member at the left through contact points at the upper corner.

Any excess current causes the thermostat to coil more closely, allowing the lever across the top of the cut-out to be lowered under the influence of the spring contact points, interrupting the current. With a two-wire system two cut-outs are combined. A post projects through the cover near the middle of the lever, serving as a visual indicator when the current is interrupted by the cut-out, by assuming a position opposite the word "Off". It is stated that the device offers only a fraction of the

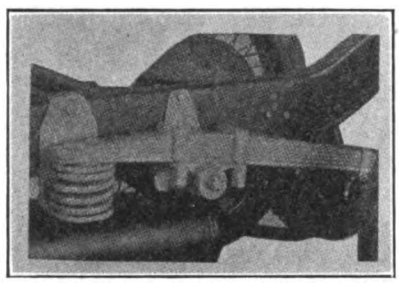


resistance of fuses. It is placed on the dash and wired between the battery and the switch.

CANTILEVER ABSORBER.

A Combination Spring and Double Coil to Check Rebound.

Under the name of the Shock Absorbing Cantilever Spring, the Garden City Spring Works, Chicago, Ill., is manufacturing a combination cantilever and double coil spring. The rear end of the cantilever is attached in the usual manner as is the fulcrum point, but the front rests upon double coil springs inserted in a bracket. The bracket thrusts downward and this is met with a counter thrust upward. In this way, it is claimed, frame rail twist is eliminated. When installed on a Ford the casting has



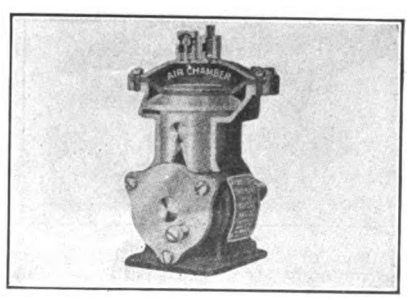
attached to it, at two of its projections, coil springs. The makers say it checks rebound.

TAYLOR POWER PUMP.

New Design Has Many Improvements and Is Lighter.

The Taylor Manufacturing Company, box 485, Chicago, maker of the Taylor engine driven tire pump, has made a considerable change in the original design, which has been described in these columns. The air valves in the head are now machined out of bar stock and replace the rough casting formerly utilized.

It is pointed out that this tends to keep the pump much cooler. The body has been stripped of all unnecessary corners, ribs, etc., and now presents a very smooth, attractive appearance. The weight has also been reduced by the removal of all surplus material. A larger oil filler has been



incorporated for replenishing the supply to its crankcase.

BROWN MASTER VIBRATOR.

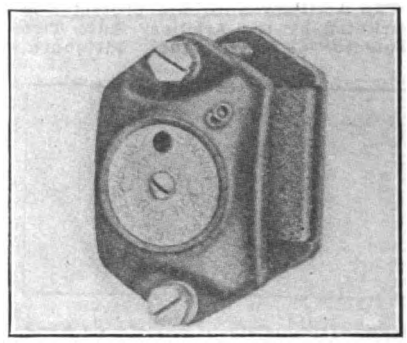
New Design for Model T Ford Motor Held to Be Very Efficient.

The Brown Company, Syracuse, N. Y., is manufacturing a new type of master vibrator for the model T Ford motor, and one of its qualities is the purely mechanical adjustment employed. It is stated that it is so simple that a novice may adjust it without trouble and in a very short time. It is also stated that when once set it will require no attention, as the adjustment is permanent.

BROWN OIL BOX.

Automatically Cleans and Lubricates the Springs.

The Brown Traflog Company, Cleveland, O., is placing a new lubricating device for motor vehicle



springs upon the market. The Brown oiler is designed to automatically lubricate the leaves of the springs, thereby preventing squeaks and making for easier riding. The oil box is attached to the springs, just inside the rebound clips, and contains two heavy felt pads, which supply the lubricant by capillary attraction. The action of the springs forces the oil their entire length, removing deposits, as well as polishing the friction surfaces. The Brown is attached with a screw driver.

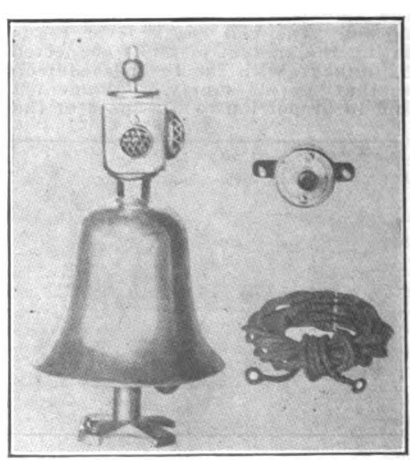
LIBERTY BELL.

Is Operated by Electricity and Has a Melodious Tone.

The Liberty Bell Company, the Arcade, Cleveland, O., is marketing a signal which is stated to produce a melodious tone, one that is distinct and free from annoying features. The Liberty Bell is of the electric type and the blow of the tongue is obtained by the use of a coil and a magnet. The operation is by the conventional push button.

The bell is constructed of special metal, one that gives a clear, but penetrating note, and the operating mechanism is concealed, as well as weather proof. It is easily installed on any convenient place, and is made in two sizes. The No. 1 is five inches high and five in diameter at the base, while the No. 2 is six inches high and six in diameter. Being light in weight it can be attached to the mudguard if desired.

The maker states that the signal conforms with all ordinances, and that it does not detract from the appearance of the machine. The bell and its fittings are constructed of high-grade material and the workmanship and finish are first-class in every respect.

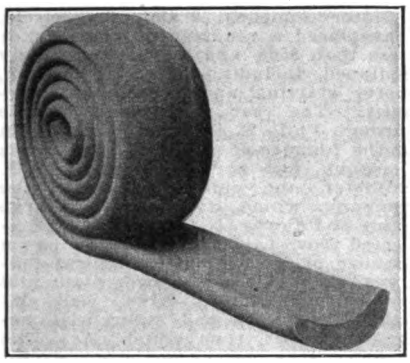


Digitized by Google

CRESCENT TUBE GUARD.

Raises Tube Out of Reach of Puncturing Objects.

The Dahl Company, 1309 Race street, Philadelphia, is marketing the Crescent tube guard which is em-



ployed with pneumatic tires. It is inserted between the inner tube and the casing, and having a concave side does not pinch or injure the tube.

The Crescent guard raises the tube out of reach of puncturing objects, and the maker states that it does not impair the resiliency of the tire. The guard is from ⅝ to one inch thick, is adaptable to any type of casing, and can be changed from one shoe to another as it is not cemented to the tire. It is constructed of one piece, and the maker states that it will reinforce tread and walls of casing.

HANS POWER TIRE PUMP.

Is Inserted in Spark Plug Opening and Equipment Is Complete.

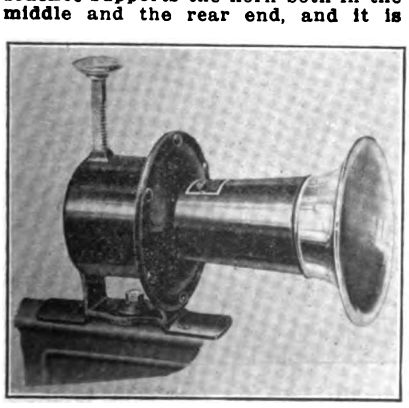
The Hans Motor Equipment Company, La Crosse, Wis., has brought out an automatic tire pump, which comes complete with gauge and 12 feet of high grade flexible hose. It is the spark plug type; that is, it is provided with a threaded end for insertion in the spark plug opening.

The pump is constructed of brass, has two independent checks in the secondary pump, and the bottom inlet is double. Nothing but pure air is forced to the tire, and one of the qualities of the design emphasized is that it will not overheat in service. The gauge supplied is known as the standard No. 3. The material and workmanship are strictly first class.

STEWART BRACKET.

A Device to Hold a Hand Horn at the End as Well as Middle.

To provide a double hold on a hand-operated horn is the aim of the Stewart-Warner Speedometer Corporation, Chicago, Ill., in manufacturing the Stewart horn, which is supplied with this extra device. This double bracket supports the horn both in the middle and the rear end, and it is



claimed by the makers that pressure on the sounding plunger can absolutely have no loosening or wearing effect on the bracket.

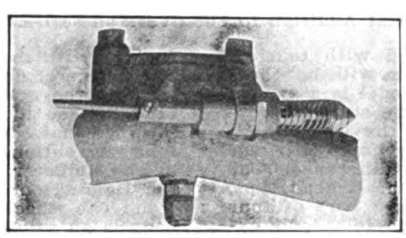
The additional bracket is attached to the top rail of the car and is fastened by a swivel joint, which allows it to change direction with the car.

HANDY CONTROLLER.

Automatically Admits Air to Intake Manifold as Required.

The Handy carburetion controller is the product of the Crary Company, 652 Woodward avenue, Detroit. It is a simple, compact device, which is fitted to the intake manifold between the carburetor and the cylinders. The function of the controller is to automatically provide extra air to the mixture, thereby reducing the suction at the spraying jet and preventing undue enriching of the mixture at all motor speeds. The stream of air striking the fuel vapor breaks it up into a fine spray and mingles it with the air, thereby obtaining a rapid burning charge.

The Handy controller is automatic in its action. After the motor has

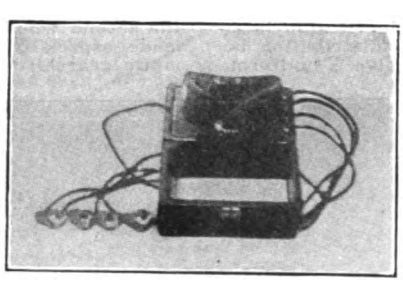


become warmed up a small control lever on the steering column or other convenient place is moved, which opens the Handy valve. A special equipment is made for the model T Ford motor.

DINSHAH ENGINE TESTER.

A Camera-Like Device for Locating Ignition Troubles.

To locate faulty operation of the ignition system requires considerable experience and to make easy the



work of finding the cause of trouble the Dinshah Sales Company, 735 Seventh avenue, New York City, has brought out a device termed the Dinshah engine tester.

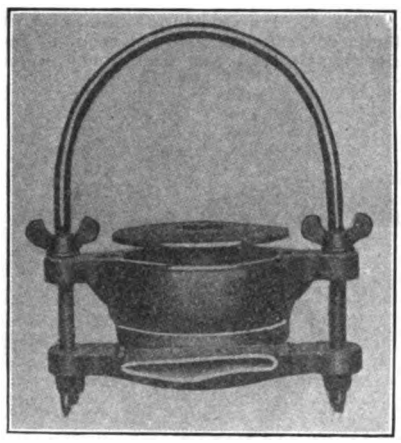
As may be noted by the accompanying illustration, it resembles a camera box, and an opening is provided for inspecting the operation of the electrical apparatus. By observing the color and size of the spark within the box the operator is enabled to ascertain whether or not the particular circuit is working correctly, as well as a dead connection. The Dinshah tester is stated to be adaptable to all electrical apparatus.

Always consult the Classified Buyer's Guide published elsewhere in this issue, when in need of material, etc.

PERFECT VULCANIZER.

Protects the Rubber Around the Repair and Vulcanizes Rapidly.

The Perfect Process Vulcanizer, made by the National Cement & Rubber Company, Toledo, O., is intended



to meet the demand for a medium priced vulcanizer. According to the makers this machine is simple, easily operated and protects the rubber around the repair. The vulcanizing plate has a "hot centre", while the balance of the plate is kept comparatively cool by insulation.

KERN WATER CIRCULATOR.

Assists Cooling System of Ford Motor, Improving Efficiency.

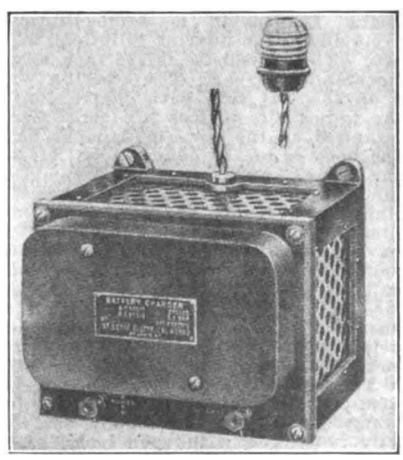
The Pittsburg Manufacturing Company, Ltd., 703 East End Trust building, Pittsburg, Penn., is marketing the Kern water circulator for model T Ford motors. It is designed to augment the flow of the cooling fluid, and comprises a simple propellor incorporated in the lower pipe or inlet water manifold.

The propellor is actuated by a pulley driven by belt, and the water is circulated in proportion to the motor speeds. It is estimated that the device will circulate eight gallons at 500 revolutions a minute and 18 gal-

BATTERY CHARGING APPARATUS.

Said to Operate on a Voltage and Frequency of Wide Variation.

The St. Louis Electrical Works, St. Louis, Mo., is manufacturing a battery charging apparatus designed to operate on a voltage and frequency of wide variation from normal, according to the makers. Its size is six inches by six inches by 6¾ inches, and its weight 14½ pounds. It is made so that it can conveniently be carried under the seat of the car.



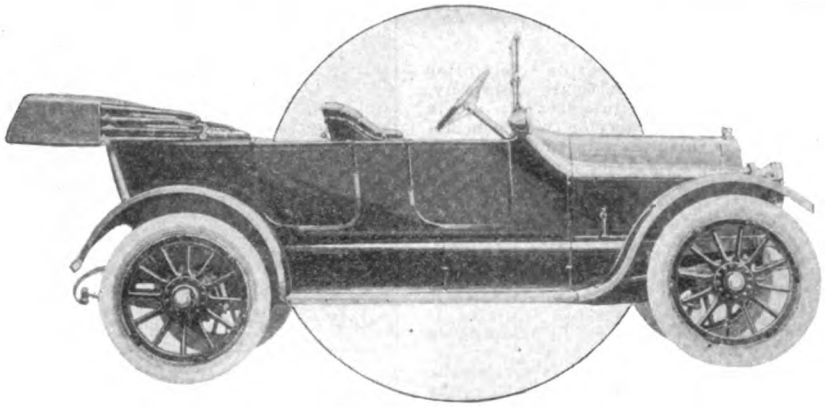
Digitized by Google

OVERLAND SMALL FOUR.

Known as Model 81 and Is One of Three Models for 1915.

The Willys-Overland Company, Detroit, Mich., has departed from its usual custom of manufacturing a single chassis and has announced a small four, which is known as model 81. This is furnished with touring, roadster or delivery car bodies. There will be three Overland models for 1915. The latest model is a typical Overland car in every respect, in that the standard features of the Willys-Overland company have been adhered to in every way. The engine is practically the same as in model 80, except a slight bore difference. The motor, four-cylinder, cast singly, is of the L head type, with the water jacket integral and with a bore of four inches and a stroke of 4½ inches. The inlet and exhaust valves, located on the same side, are actuated directly from below and the same general arrangement of the various parts is adhered to. The S. A. E. formula gives it 25.6 horsepower. The motor is suspended at three points, although the flywheel is not inclosed, and the gearset does not combine with the engine to form a unit power plant. The valves, manifolds, carburetor and generator are located on the left side of the motor. The valves are not enclosed. The intake and exhaust headers have separate openings and the exhaust pipe passes over the intake. The exhaust manifold is made in two sections. The crankshaft is carried on five main bearings in the upper half of the crank case. The camshaft is mounted on three bearings, and is drop forged from carbon steel. The valves are made with carbon steel stems electrically welded to 3½ per cent. nickel steel heads. Cooling is by the thermo-syphon system, which eliminates the circulation pumps and its gears, glands and stuffing boxes. The radiator is of the cellular type with vertical circulation. The lubrication is a constant level splash system, and the oil distribution is so arranged that all four cylinders receive a uniform supply. Power is transmitted to the gearset by a leather faced cone clutch. The ignition is independent of the lighting and starting system and is by means of a high-tension magneto located on the right forward side of the engine. There are no dry cells. The starting motor is on the right side of the motor at the rear, and the ratio of the electric motor to the engine is 11 to one. The spring suspension is semi-elliptic in front and three-quarter elliptical in the rear. The wheelbase is 106 inches, with the standard tread. The steering wheel is on the left side with centre control. The indicating devices are conveniently arranged on the cowl instrument board. The body is of the conventional streamline design, and presents a roomy and handsome appearance. The concealed hinges and inside handles of the door eliminate all unsightly projections and leave the exterior of the car entirely smooth. Deep upholstery adds materially to the riding comfort and appearance of the body, the latter being finished in a rich Brewster green, with striping of white ivory. The whole makeup of the car suggests the model 80.

The five-passenger touring car costs $850; two-passenger roadster, $795; delivery wagon with closed body, $895; and delivery wagon with open body, $850.



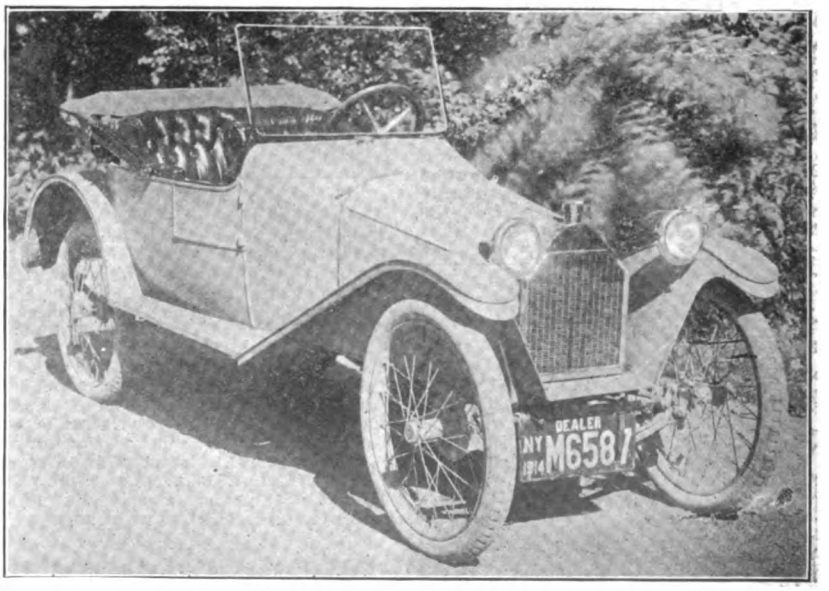
Side View of Overland Model 81, the Latest Addition to the Overland Series.

HAS COMPLETE EQUIPMENT.

Remington Car, with Automatic Gearshift, Sells for Less Than $500.

The Remington Motor Company, 2 Columbus circle, New York, N. Y., has placed a roadster on the market that is to sell for less than $500 and to be completely equipped, including electric lighting, motor starting and automatic gearshift. The car is made possible through Philo E. Remington, grandson of the founder of the Remington Arms Company, and is the design of C. P. Hollister, the chief engineer of the company, which will erect a large plant at Rahway, N. J. Delivery is expected Nov. 1. The Remington has a number of well tried mechanical features, such as a unit power plant and transmission, shaft drive, well designed rear axle and differential, selected gearset, cone clutch, etc. The equipment is very complete and includes top, windshield, speedometer, tools, etc. The features are 40 miles to a gallon of fuel and from four to 50 miles an hour on the high speed. The motor is a four-cylinder, four-cycle, water cooled unit, with cylinders cast en bloc. The bore is 2¾ inches and the stroke 4½. The three-point suspension on the main frame is utilized and the valve mechanism is closed. A late design of float feed carburetor is employed and being close to the cylinders, vaporization of the fuel is accelerated. The flywheel is inclosed. The clutch is of the international cone type and the gearset provides for the four conventional speeds. Change of speeds is obtained by the Hollister automatic gearshift, the patents of which the Remington Motor Car Company has exclusive control. The wheelbase is 100 inches and the tread 42. The body is an attractive streamline design, a two-passenger roadster. The fuel supply is carried in the cowl and the feed is by gravity. The electric motor starter is operated by a pedal and the headlights are fitted with a dimming device.

The Hollister automatic gearshift is of simple construction and very efficient, as well as requiring no attention. Its operation is simple. After starting the motor the operator selects the low speed by moving a lever to a point of the control corresponding with the speed required. The clutch is then depressed and the low-speed gear is quickly and automatically meshed. To change into the second, high and reverse speeds, the lever is set to the desired speed, but the change is not effected until the clutch pedal has been depressed. Changes can be anticipated, but if the operator sets the lever for the low speed, for example, and decides that the second will serve, this speed can be obtained by moving the lever to the second-speed position. The device is of particular value when dropping from the high into the second when ascending a grade, a change not easily made, especially by the new owner. The Hollister automatic gearshift has been thoroughly tested.



Remington Car with Automatic Gearshift Sells for Less Than $500.

GENERAL MATERIAL MARKET QUOTATIONS.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period for purposes of comparison. Northern iron decreased $1.00. Bessemer and open hearth steel fell $1.00 on the ton respectively. Beams and channels dropped from $1.31 to $1.26 for the month. Tin showed a perceptible decrease of $2.87½ on 100 pounds.

BRAKE SPECIFICATIONS.

Royal Equipment Company's Engineers Will Supply Data on Installing and Maintaining Brakes.

Owners realize the importance of having reliable, efficient brakes, and frequently the garageman or repairman is called upon to replace service or emergency members with a more practical design than the original brakes. Generally, this requires careful consideration upon the part of the workman and, unless entirely familiar with brake construction, considerable time is consumed, a loss to the customer. The Royal Equipment Company, Bridgeport, Conn., maker of the well known friction material, Raybestos, maintains an engineering department which easily solves all brake problems. The trade is invited to consult the engineering department when in need of data. The company issues a booklet containing valuable information on the fitting, care and adjustment of brakes, as well as practical knowledge on this important subject. The book will be mailed free to those interested by addressing Department 1380, the Royal Equipment Company, Bridgeport, Conn.

COMET MAGNETO.

An Efficient, Moderately Priced Instrument, One Especially Adapted to the Used Automobile.

The Henricks Novelty Company, Indianapolis, Ind., ignition specialist, is manufacturing the Comet magneto, which represents the results of 15 years' experience in building magnetos for ignition purposes. The Comet is made in four types, is very compact and of light weight. It provides an inexhaustible supply of electricity and can be driven by belt or friction, adapting it to installation on any gasoline motor. The instrument is equipped with a governor and is made for varying motor speeds. This governor insures constant speed, regardless of that of the engine, and the maker states that the magneto has an output at low speeds that is sufficient to make for easy starting. The Henricks Novelty Company issues a very complete catalogue of its line, which will be mailed free to the trade.

SEAMLESS STEEL TUBING.

Edgar T. Ward's Sons Carries Complete Line of Cold Drawn Stock to Meet Every Requirement.

The trade is invited to write for a trial piece of the cold drawn seamless tubing manufactured by Edgar T. Ward's Sons, 25 Purchase street, Boston. Tubing is produced and carried in stock to meet every requirement and a special analysis is to be had for parts, including jigs, bushings, dies, etc., of great hardness.

THE ACCESSORY AND GARAGE JOURNAL

VOL. IV. OCTOBER, 1914. NO. 6.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

THE SMALL AUTOMOBILE.

Never was there such an excellent opportunity for the man with limited means to exploit the small automobile. The conditions obtaining for the representation of a pleasure motor vehicle have greatly changed in recent years and it is now possible to take and maintain the agency of a small car at a reasonable first expenditure and overhead expense. The carrying of small parts, if the contract so stipulates, does not involve a large amount of money. While it is true that the profits accruing are not as large as with the high-priced automobile, they are in keeping with the money invested. The outlook for a prosperous year for the dealer in the small automobile is exceedingly bright.

MAKING THE GARAGE PAY.

Much of the success of the modern garage is due to the adoption of a practical system and its enforcement to the most minute detail. The most complete system, no matter how well adapted to the requirements of the business, loses its value if one or more employees are exempt. The proprietor should insist that each detail be complied with if he is to expect results. It is the small leaks that amount to the losses in dollars, involving profits that rightfully belong to the garage. The success of an efficient system does not require an intricate method of bookkeeping or the exhaustive compilation of data, but rather depends upon the rigid enforcement of its details.

SCHEDULED REPAIR WORK.

A prominent agent of a well known make of popular-priced motor car advertises prices obtained for repairing the machine he represents, listing all such work as removing carbon deposits, grinding in the valves, adjusting bearings, etc. This is indicative of the keen competition existing, and emphasizes the necessity of equipping the repair shop and the garage with the most modern machinery, tools and labor saving devices. Those who hope to compete with this agent must use equipment especially designed for the machine in question.

ENCLOSED BODIES.

That there is a growing demand for the enclosed body, particularly for the used motor vehicle, is evidenced by the number of makers producing high-grade designs. Two and five-passenger bodies, the last named a limousine, are now offered to the owners of the Ford car. The types are ingeniously constructed in that they may be fitted easily and without alterations, and obtain for the owner the same comfort and convenience as provided by the high-priced automobile.

ORIGINAL PACKAGES.

The stocking of material, especially lubricants, put up in original and sealed containers, is the best kind of insurance for the trade. It assures the customer the service which he demands and is entitled to, and protects the dealer in the event of trouble, as the manufacturer stands back of his product. The substitution of "something just as good" has frequently been the cause of lost custom.

FORD ACCESSORY DEALERS.

Practically every garage is afforded an opportunity to become a dealer in accessories, supplies and equipment for the Ford car, as this machine is well represented on the garage floors. The progressive garageman will familiarize himself with the latest specialties for this vehicle, get in touch with the jobber or manufacturer, and be in a position to meet the requirements of his customers.

Digitized by Google

SIMPLE AND ECONOMICAL ACCOUNTING SYSTEM.

Designed for Medium-Sized Repair Shop and Garage---Requires No Expert Knowledge, and Is Easily Installed and Maintained.

SYSTEM is a necessity just as much in the garage or repair shop of small or medium size as in those more ambitious, employing a large number of workmen and possibly combining an automobile and accessories salesroom with garaging, storage, repairing and various other departments. But, in the modest establishment, simplicity is vastly more important as, in such, whatever bookkeeping or clerical work is required must, from the standpoint of economy, usually be performed by the proprietor or one of the partners of the concern, who devotes the major part of his time to the actual shop work or, as no expert knowledge of accounts is necessary, it may be entrusted to a person demanding only a modest salary.

The accompanying suggestions are designed to apply to a repair shop employing such a number of men as to enable the proprietor or a competent foreman to have personal supervision over all the work, but it can readily be adapted to larger establishments by subdividing the work in charge of additional foremen.

While designed primarily for a business devoted to repairs, and carrying only the more common supplies, such as gasoline, oil, etc., it can readily be expanded to cover the handling of a considerable stock of accessories, and to include painting, care or renewal of tops, upholstery, etc., as well as storage.

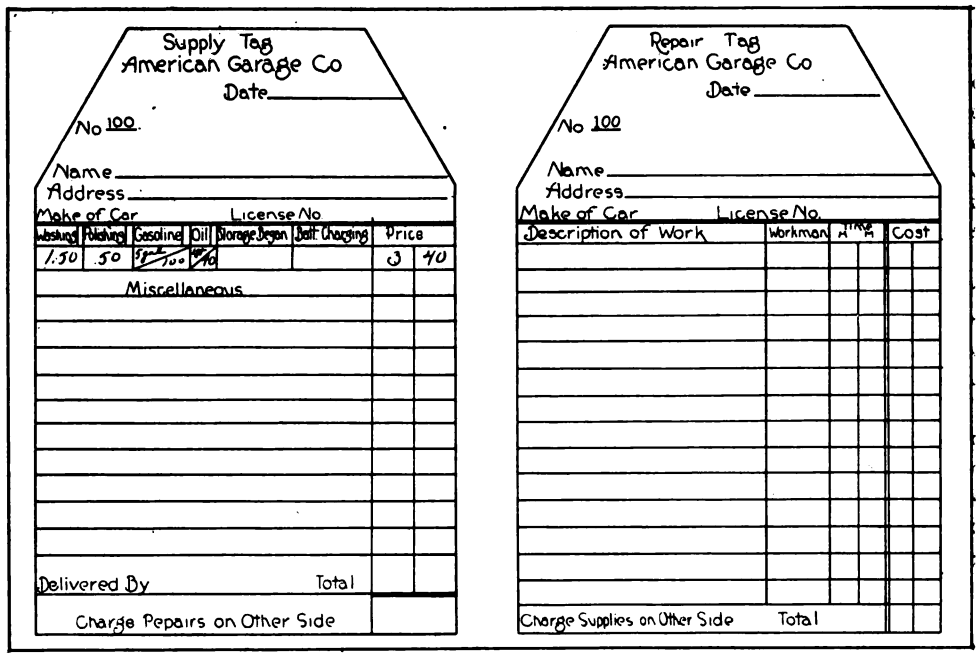
The system outlined would seem to be as simple as could well be devised for this class of business, and includes only a single tag, printed on both sides, a simple slip for the record of supplies furnished when no repairs are done, and the conventional loose leaf ledger. A simple cash book should also be maintained in connection with this system, to keep a record of money received and paid. A number of accounting registers, with which many garages are equipped, have slips for cash paid on account, etc., and the entries can be made from these to the ledger.

It should be understood, at the outset, that this system contemplates only a record of transactions between the garage and its patrons, and does not attempt to include accounts between the garage and supply houses, as, in a business such as is here considered, each proprietor will doubtless have his own method of keeping track of the payment of his bills, renewal of stock, etc., this being a comparatively simple matter in a garage of modest size.

One Side of Tag for Repairs.

As will be seen from the accompanying reproduction, one side of the tag is devoted to repairs, there being spaces at the top for the date, make of car and license number, owner's name and address. The number in the space at the left may be printed in consecutively when the tags are printed, or it may be filled in later by a hand stamp or in ink. The most economical way, however, would seem to be to have the numbers printed with the tag, as then there would be no chance of a job number being omitted. As will be seen, the body of the tag is devoted to the repair work done on the car, each particular operation being entered upon a separate line, there being a space for the workman's name or number, and the amount of time consumed. For convenience in charging or for a cash payment, the tag is ruled at the right, so that the prices and totals can be carried out. The ordinary method of procedure would be for the bookkeeper to carry out the prices on the tags, before charging up on the ledger and, when referring to the tags later, after being filed away, it would be found convenient to have the prices on them.

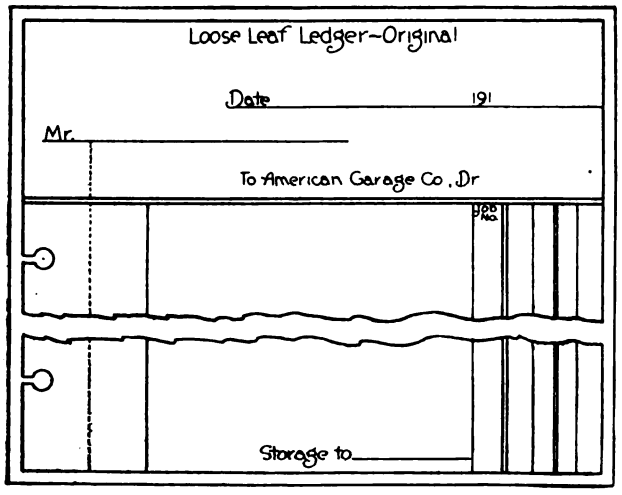
The reverse side of the tag is used when, in addition to repairs, the car is washed and pol-



At Right, Repair Tag, Showing a Record of Work Done, Workman and Time Spent; at Left, Reverse of Repair Tag for Charging Supplies, Storage, Etc.

Digitized by Google

ished or supplies furnished, such as gasoline or lubricating oil, a generous space being left for miscellaneous items. It will not be necessary to



Page of Loose Leaf Ledger Which Is Torn Out and Rendered as a Bill—Duplicate Remains in Ledger File Until Paid.

fill in the spaces at the top of this side of the tag with the date, name of car, etc., if this has already been done on the obverse. When a shop has storage facilities, the space marked "storage began" affords a convenient memorandum to the bookkeeping department when a new car is put into storage, although it is expected that a list of all cars in storage would be kept independently in the office, for convenience when rendering monthly bills.

A space has been left for a record of battery charging for use in case the garage is supplied with facilities for doing this work, but either this or the storage column, or both, can easily be omitted at the option of the user.

The supply side of the tag can be used independently of the repair side when the car is brought in simply for washing and polishing or supplies and, of course, then the top part of the tag would be filled in with the name, make of car, etc. A space is left at the bottom for the name of the person doing the work or delivering the supplies, and also a chance is given at the right to fill in the price and total, as on the repair side.

Method of Procedure.

When a car is driven in for repairs, the proprietor, foreman, or some competent workman will secure a tag from the office and, in the space allotted to description of work, he will enter any repair or adjustment that the owner or chauffeur suggests should be done, or he may make an examination and enter, in the proper space, such work as appears to him to be necessary. Any needed supplies may also be indicated on the reverse side of the tag.

For convenient reference in the office, although it is not absolutely necessary, when the tag is filled out, the name of the owner and the make and license number of the car may be entered in a book in which numbers corresponding to the serial numbers on the tags have been written or stamped. Any ordinary blank book could be used for this purpose, a line or two being left for each job, and the number can be easily stamped in by an inexpensive consecutive numberer such as can be obtained of any stationer. The jobs can also be checked off on this book by numbers when the tags are turned in, although, as the tags are numbered consecutively, any missing number would be noticed and the job traced up.

While the car is in the repair shop, the tag accompanying it may remain in a suitable box at the foreman's desk, or in a convenient rack near the work bench, where it will be kept clean.

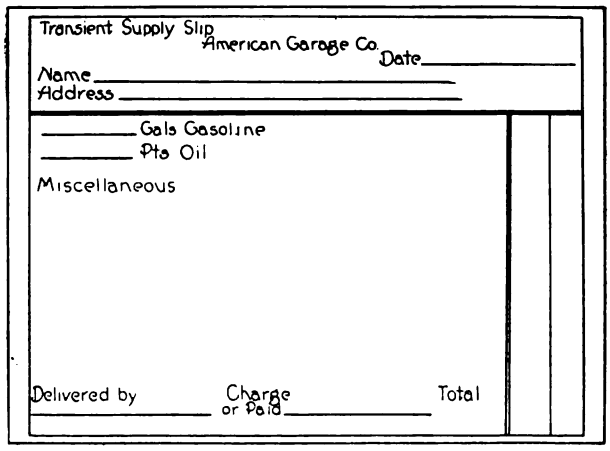
When any work is done on a car, the workman either reports to the foreman the amount of time spent, or makes the entry on the tag himself if authorized to do so. Of course it is needless to state that any necessary work performed, not included in the original inspection and already entered up, is added, with the workman's name or number, and time spent.

If, in addition to repairs, the car is washed and polished, and gasoline or oil or other supplies are needed, these are entered on the reverse side of the tag, or this part of the tag may be used independently of the other, where the car simply needs washing and polishing or supplies of any kind.

When the repairs are finished and the car is ready for use, the tag is left at the office, where the work may be charged up on the ledger at convenience. If the work is paid for at the time the car is taken out, the tag is stamped "Paid" and filed away without being posted to the ledger.

How to Use Loose Leaf Ledger.

The ledger is of the conventional loose leaf type, in duplicate; that is, the upper sheet is generally of white linen stock, printed like the customary bill head. This sheet is perforated at one edge so it is easily torn out, and can be presented to the customer when the work is completed, at the end of the month or at any other time when wanted. Underneath this is an unruled sheet of thicker, colored stock, and when in use, a piece of indelible carbon paper is inserted between the



Slip for Convenient Record of Transient Supplies, Blocked for Use in Garage.

white and colored sheets in the ledger, which has expansible covers, securely holding the various accounts by the patented locking device that is

Digitized by Google

incorporated with the covers. An indelible pencil is used, and this transfers a duplicate of all writing on the white sheet or bill proper through the carbon sheet to the colored sheet beneath it, these tinted sheets always being kept in the ledger until the accounts are settled, when they are taken out and filed away alphabetically in any convenient form for future reference. These ledgers are supplied with lettered index tabs, arranged in alphabetical order, which enables the accounts to be easily inserted and kept also in alphabetical order; thus no separate index is required, as in the old style ledger.

As will be noted, space is provided for entering on the ledger, at the right of the items, the job number corresponding to that on the repair tag. After the work is posted up from the tags, the latter are checked and filed away consecutively by numbers, thus being easily referred to from the ledger accounts if necessity arises. At the same time, as heretofore stated, when filing the tags away, any missing number will be readily noted and can be traced up in the shop.

Whenever a new account is opened, the blank sheets are inserted in the ledger in the proper place alphabetically. Thus one set of covers will serve for a number of years and the blank loose leaves can be obtained in any quantity and at any time needed.

Bill Always Ready for Customer.

When it is desired to tender a bill, the only work necessary on the part of the bookkeeper, if the tags are promptly handed into the office and kept posted up on the ledger, is to foot the bill and tear it out. In case other charges come in before the bill is paid, the bookkeeper simply inserts a new sheet and writes at the top "Bill previously rendered" and carries out the amount, before entering up the new charges.

When the account is paid the original bill is receipted and given back to the customer, while the duplicate in the ledger is stamped "Paid" and can be removed at that or other convenient time and filed away with the "Dead" accounts. To avoid a bulky ledger, it is the best plan to remove all accounts as soon as they are paid, and thus only the running or "Live" accounts will be found in the ledger. If it is desired to obtain, at any time, the total amount of the unpaid accounts, it is a simple matter to copy out the total amount due on each account, and then add up the totals.

It will be noted that, near the bottom of the ledger, a space is provided for entering up storage. This is for convenience when bills are rendered monthly or at other stated intervals, it being presumed that a garage doing a storage business will keep an independent list of such customers, which is gone over before monthly or weekly bills are rendered. Any new car going into storage should be entered up in the proper space on the tag, as already stated, and the bookkeeper can add such to his list when it first appears on the tag, or cancel when the car is put into commission again.

Transient Supply Slip.

It now remains to outline the use of the small blank presented herewith, headed "Transient Supply Slip". This can be printed on any ordinary paper stock, and blocked in convenient size for use in the garage. It is designed to keep an account of supplies, etc., furnished, where the car is not left at the garage for any length of time for repairs, etc. The person delivering the supplies fills out the slip, and turns it in to the office, no matter whether it be a cash sale or charged. If the latter, it is entered on the ledger in the usual way, but no numbers are deemed necessary with these slips. If the amount is paid at the time, the slip is marked paid. These slips should also be filed away in alphabetical order.

It may be stated, in conclusion, that no system, however simple or elaborate it may be, is automatic. To be successful it must be strictly adhered to, and it is needless to say that it is essential that all work done be entered up on the tag, and also that all supplies furnished be charged up, or it cannot be expected that the bookkeeper will be able to make his entries fully and accurately on the ledger, and the business is, of course, liable to lose out to just the extent that any such omissions occur.

NEW DEPARTURE BEARINGS.

Distribution Centres Have Been Established in All Parts of the Country and Are Well Stocked.

The New Departure Manufacturing Company, maker of the well known New Departure ball bearings, which are standard equipment in a large number of cars, has established distribution centres in all parts of the country, where stocks of single-row and Radax types, particularly, are carried. These are interchangeable with other standard makes. Garages and repair shops can have orders filled promptly at any of these stations, an arrangement insuring efficient service to the customer.

KELLOGG ENGINE DRIVEN PUMPS.

Are Made in One, Two, Four and Six-Cylinder Models and Come with Fittings for Attaching.

Many owners of cars not fitted with power driven tire pumps and desiring the equipment will be interested in the Kellogg, as the maker, the Kellogg Manufacturing Company, 128 Circle street, Rochester, N. Y., not only produces them in one, two, four and six-cylinder forms, but supplies special attachments, adapting them to any standard make of car. One of the desirable qualities of the Kellogg product is that anyone can install the pumps and attachments, which makes the proposition an interesting one to the dealer and garageman. The company issues a booklet on power driven tire pumps, which gives complete information upon the subject, and the trade is invited to write for a copy, which will be mailed free upon request. The possession of the book will enable the garageman to advise his customers fully upon the installation of power driven tire pumps.

ECONOMIC VALVE TOOLS.

J. W. Brooks Manufacturing Company Producing Reseating and Refacing Devices of Distinct Merit.

To meet the requirements of the repair shop for an adjustable valve refacing and reseating tool, the J. W. Brooks Manufacturing Company, Stamford, Conn., has brought out the Economic equipment. The refacing tool is adjustable to any size of valve stem by means of bushings supplied, and is adjustable to any diameter of valve up to three inches. The tool is supplied with a double-ended cutter, one end for standard 45-degree angle valves, the other for standard 60-degree valves, and is so constructed that the valves come perfectly true with the stems. The Economic saves over 75 per cent. in time. Those desiring a practical, efficient equipment, will do well to investigate the merits of the Economic outfit.

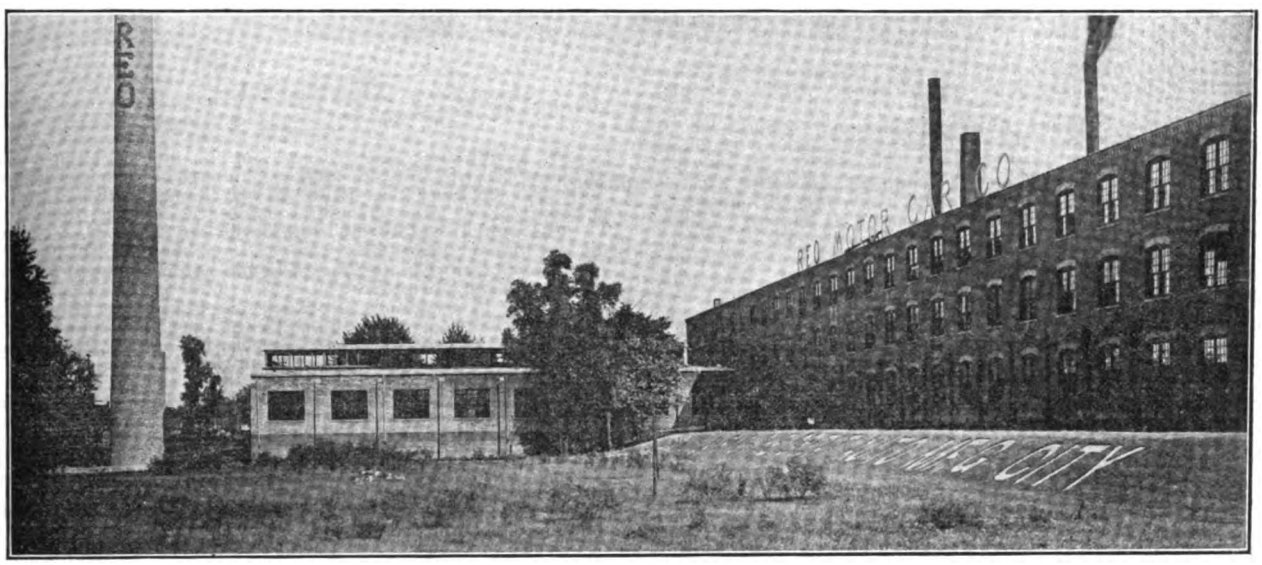
GENERAL NEWS OF THE MANUFACTURERS.

The Crescent Motor Company, Carthage, O., is making a vigorous fight against a receivership filed against it in the county court at Cincinnati, O., by the Hisey-Wolf Company. The suit is on a claim of $85 upon which it is alleged that payment has been refused. The plaintiff says the firm is solvent, but is unable to turn its assets into cash.

The Flagler Cyclecar Company, Cheboygan, Mich., is now in the hands of a receiver. The directors are endeavoring to perfect a plan of reorganization whereby the company may resume its corporate life. It is hoped that it will be possible to merge the company with some other concern other than for the manufacture of motor cars. A stockholders' meeting will be called in the near future.

The Indian Refining Company, New York, N. Y., has opened 17 new service stations. There are seven in Indiana, five in Illinois and two each in New York and Minnesota. The towns where these stations have been opened are: Buffalo, N. Y.; Bluffton, Ind.; Elk River, Minn.; La Grange, Ind.; Lawrenceburg, Ind.; Louisville, Ky.; South Bend, Ind.; Streator, Ill.; Ticonderoga, N. Y.; Wabash, Ind.; Waconia, Minn.; Warsaw, Ind.; Aurora, Ill.; Bedford, Ind.; Huntington, Ind.; Quincy, Ill., and Springfield, Ill.

The Reo Motor Car Company, Lansing, Mich., is expending $300,000 for new buildings and additions to manufacturing facilities. Two new buildings are now in course of construction, and the larger of these will be three stories high and will add 4½ acres of floor space to the plant. An addition is being made to the machine shop, and over $200,000 will be spent on new machine equipment.



Section of Reo Motor Car Company Plant, Lansing, Mich., Where $300,000 Is Being Expended on New Buildings and Additions to Machinery Equipment.

The Standard Welding Company, Cleveland, O., is building its third large addition of the year to its plant. The latest building is of structural iron, with corrugated asbestos, metal reinforced roofing and sidings. The new building, which is 60x240 feet, and 30 feet high, will be devoted entirely to the storage of rims. It will accommodate approximately 100,000 rims of various types.

The Auto Jack & Storage Company, Danville, O., has opened a branch office in Kansas City, Mo.

The Thomas B. Jeffery Company, Kenosha, Wis., has installed a refrigerating plant for the purpose of making cold weather tests on Jeffery carburetors, batteries and motors. In one hour after starting the refrigerating machinery it is possible to get a temperature of from eight to 10 degrees below zero. With this arrangement, winter tests may be conducted under summer conditions.

The Evinrude Motor Company, Milwaukee, Wis., will add one story to its plant in that city at a cost of $14,000.

A. R. Mosler & Co., New York City, has revised its price list and is issuing a new illustrated schedule to dealers and jobbers on application. Likewise this concern has compiled a list of jobbers and invites all jobbers to send in their names, which will be added to its list in event that it has not already done so. Only the jobbers so listed will get the benefit of the Mosler company's lowest quotations.

The Stewart Automobile Company of 225 West 57th street, New York City, has taken the metropolitan agency for the Lewis VI, made by the L. P. C. Motor Company, Racine, Wis.

Dodge Brothers, Detroit, Mich., has appointed Harold L. Arnold as distributor in southern California, George and Thomas W. Gilmore, distributors in Macon, Ga., and the Steinhart-Eckler Company, distributor in Indianapolis. The Lincoln Motor Car Company will represent Dodge Brothers in Cincinnati.

The Chevrolet Motor Car Company's plant at Flint, Mich., was visited recently by William J. Small, distributor in Indiana for the Chevrolet, accompanied by about 60 of his dealers in the state. After an entertainment by the company they all drove home in their 1915 cars. The party also spent two days in Detroit.

The Detroit Steel Products Company, Detroit, Mich., has closed contracts with the National Motor Vehicle Company, Indianapolis, Ind., and the Wichita Falls Motor Company, Wichita Falls, Tex., to supply Detroit self-lubricating springs for all cars manufactured by these companies.

The Ford Motor Company, Detroit, Mich., is discontinuing the old employee's badge, which was of brass, oval shaped, with the employee's number and department stamped across its face and, instead, is using one of German silver with a Ford car designed against the radiator for a background.

The Cole Motor Car Company, Indianapolis, Ind., has sold a Cole Little Six to the Gary, Ind., fire department. The car is for the use of the fire chief, and was driven from the plant to Gary.

The Partin Manufacturing Company, Chicago, Ill., maker of the Partin-Palmer car, recently purchased 1000 bales of cotton at 10 cents a pound, to foster the "Buy a Bale" movement. The purchase, involving an expenditure of $50,000, was made through the Partin-Palmer distributor, the Texas Motor Car & Truck Company of Dallas and Austin, Tex.

The Commonwealth Trust Company has been appointed receiver of the Vestal Motor Car Company, Pittsburg, Penn. Application for the receivership was made by the Jackson Motor Supply Company, a creditor, who claims that the Vestal company is unable to meet its obligations. The assets were placed at $11,500 and the debts at $6900.

The King Motor Car Company, Detroit, Mich., has received a release on all its English shipments. These have been tied up since the beginning of the European war. A number of cars being shipped to England have been purchased by the British government through the King distributor in London. The King Company states that the indications at present point to an early release of a majority of their foreign shipments going to Australia, New Zealand and Africa.

The Chevrolet Motor Company, Flint, Mich., is planning to build at least 10,000 cars for the season of 1915 in its Flint plants. The New York factory, which will take care of all of the New England states and the export business, is expected to turn out 3000 cars. The working forces will be greatly increased in both plants, and within a short time it is expected that the Flint plants will be turning out 50 cars a day.

The National Motor Vehicle Company, Indianapolis, Ind., is taking initial steps toward the erection of a substantial addition to its plants in that city. On ground recently acquired, a dozen frame buildings have been razed and the new building will be started as soon as possible. This new addition will house the administration offices and a number of various departments.

NEW CONCERNS AND BUSINESS CHANGES.

AGENCIES AND DEALERS.

The Postles Automobile Brokerage Company, Wilmington, Del., has been established by Colonel Grantley P. Postles, with offices in the Du Pont building. The company has the agency for that state for the Chandler car.

Winders Motor Car Company, Columbus, O., is the name of a new company organized recently to handle the Velie car in central Ohio. The company is located at 240 North Fourth street.

The Weller Company, Portland, Ore., is a new company which has opened for business at 112 Sixth avenue. A full line of automobile accessories is carried.

Bainse, The Tire Man, Staunton, Va., is the name of a new concern which was opened recently at 21 South New street. Repair of tires is specialized in.

Chanslor & Lyon, Seattle, has opened a service station for Stewart speedometers.

L. G. Brinkman, Lincoln, Neb., has retired from the firm of Lincoln Tire & Repair Company. His partner, J. F. Murphy, now conducts the business.

The Central Garage, Clifton Forge, Va., has opened a service station for Haynes cars. J. C. Chambers is in charge.

E. B. Scapnelli Auto Supply Company, Joliet, Ill., is the name of a new automobile concern which has opened in the Adam arcade. Tires will be specialized in.

The Bruening Brothers Auto Company, Kansas City, Mo., has opened a branch at 1618 Grand avenue. Studebaker cars are handled.

The Benedick-Buick Company, Iona, Mich., has been formed to continue the business of the Iona Auto Company, which has gone out of business. The new company will handle the Buick and Ford cars.

Toburen Brothers, Rantoul, Ill., has opened an automobile supply house and repair shop, which is fully equipped.

The Titan Storage Battery Company, Newark, N. J., has opened an office at 2332 Michigan avenue, Chicago, in charge of D. M. Simpson.

The Auto Jack & Storage Company, Danville, O., has opened a branch house at Kansas City, Mo., in charge of J. M. Stucker. The company is located at Eighth and McGee streets.

The Tioga Automobile Company, Philadelphia, has opened salesrooms at 336 North Broad street. The company will continue the service station at Broad and Tioga streets, where a fully equipped repair shop is conducted.

J. W. Leavitt & Co., Seattle, Wash., has opened a used car department in charge of L. J. Kearns. The company represents the Overland car.

GARAGES AND REPAIR SHOPS.

Fred C. Losen, Galveston, Tex., has opened a garage.

T. H. Field, Cameron, Wis., has opened a garage. A full line of automobile supplies will be carried. Ford and Overland cars will be sold and a repair shop maintained.

The Stoepel Company, Detroit, is the name of a new company recently formed. A garage is to be maintained at 85 East Elizabeth street.

Butler & King, Kittanning, Ga., is the name of a new company which has entered into the garage business. The company is located on North McKean street.

Frost & Drake, Central Lake, Mich., has opened a garage. A full line of automobile supplies will also be carried.

R. A. Pallotti and T. P. Soule, Hartford, Conn., has opened a new garage at 254 Weathersfield avenue. The new company will specialize in repair work of all kinds.

S. R. Boyd, Pomona, Cal., has opened a modern garage at 156 West First street. Maxwell cars are handled.

Lawler & Quick, Huntsville, Ala., has opened a garage on Jefferson street in the building formerly occupied by the Kelley Garage Company.

Bill Organ, Bay Shore, N. Y., has opened a repair shop on East Main street.

The Hermiston Auto Company, Hermiston, Ore., has opened a repair shop in the Telephone building. Parts and supplies will be carried. C. Chaney will have charge.

The Masonic Temple Garage, Detroit, is the name of a new concern located next to Masonic Temple. The company will handle Hupmobile cars.

D. W. Vaughn, Richmond, Va., has opened a garage and repair shop at 319 West Main street.

The Huntsville Taxi Service Company, Huntsville, Ala., has opened offices and a garage at 106 Eustis street. L. W. Becker and P. H. Palmer are interested.

The Central Automobile Company, Lewistown, Penn., has opened a large and up-to-date garage on Chestnut street. The company is agent for the Haynes and Reo cars.

Mingos & Van Horn, Towanda, Penn., has opened a garage on Main street. It is fully equipped.

The Fowler Auto Company, Gainesville, Fla., has opened a garage on Masonic street. A complete line of accessories and parts will be stocked.

Charles W. Rock, Taunton, Mass., has established an automobile repair shop on Washington street.

The General Garage Company, Salt Lake City, Utah, is the name of the new garage which was recently opened on First South street. The building has a capacity for 200 cars and will be open day and night.

The Guarantee Auto Repair Company, Indianapolis, has opened for business and will make a specialty of rebuilding and overhauling automobiles. Fred P. Merz of the Comet Cyclecar Company is interested.

The Ford Shop, Grand Rapids, Mich., is the name of a new company which has opened a repair shop at 626 South Division avenue. Claude R. Buck and Wesley T. Smith are interested in the project. A full line of accessories will also be handled.

Andrew Stried, Ellendale, N. D., has opened a modern garage in the Old Moor Inn. Repair work of all kinds will be given close attention.

The Mission Garage, Santa Cruz, Cal., will conduct a service station for Chalmers cars, where buyers may have their repair work attended to free of charge. The company also handles the Oldsmobile car.

Christofferson & Larsen, Cokato, Minn., has opened its new garage on Broadway. Repair work and storage will be specialized in.

Smith & Parks, Oakdale, Cal., has just completed a new garage, which is 50 by 150 feet.

The Santa Fe Trail Garage, Kansas City, Mo., has started business on Westport avenue under the management of Forest Jones.

Albert Miller, Columbus, O., has opened a vulcanizing and tire repair business at 132 East Spring street.

TRANSFERS.

W. A. Wattles, Battle Creek, Mich., has purchased an interest in the United Motor Company. The company will now be known as Riley & Wattles and will conduct a repair shop. Reo, Overland and Ford cars are handled.

The Soden Motor Cab Company, Brooklyn, N. Y., one of the most flourishing taxicab concerns in that city, has purchased the Central Garage from George Bradt, the former proprietor.

Archie E. Symonds, Chicago, has taken over the corporate stock formerly held by Robert Wachman and wife, also Daniel J. Alpert, in the United States Auto Supply Company. Mr. Symonds is now president of that company.

A. H. Hultman, Webster City, Ia., has purchased the Albright Garage on East Second street. The business will hereafter be conducted under the name of the Hamlin Automobile Company. Paige and Maxwell cars will be handled. Repair work will be specialized in, as a fully equipped repair shop has been installed.

M. Schell, Beardstown, Ill., has purchased the E. N. Cannon garage and machine shop.

Frank Downing, Cadillac, Mich., has bought an interest in the Manton Garage.

The Granville Garage Company, Granville, Ill., has dissolved partnership, but the firm name will not be changed. L. W. Ham is the proprietor, C. H. Bassett having retired from the business.

R. I. Hether and A. Tenniswood, Brown City, Mich., have bought the foundry and repair shop which J. J. McKnight has been operating for over 30 years. The business will be continued and improvements made.

Voss & Conrad, Iowa City, Ia., has sold an interest in its garage and salesrooms to Lattner Brothers, Cedar Rapids. The new firm will operate on a much larger scale. Lozier, Maxwell, Chalmers and Reo cars are handled.

Parker Barrett, Bakersfield, Cal., has purchased the interest of his partner in the M. & F. Garage. Overland and Stutz cars are handled.

Morris Williams, Birnamwood, Wis., has purchased a half interest in the garage and agency business of E. H. Jewson. The firm name has been changed to the Birnamwood Automobile Company. Mr. Williams is an expert electrician and machinist.

A. F. Neumeyer and J. D. Ganst, Smithton, Mo., have purchased the interest of their partner, A. R. Bohon, in the Smithton Automobile Company.

Henry B. Beckwith, Guilford, Conn., has purchased the C. B. Forbes garage on Union street.

The Milford Garage, Milford, Del., has been purchased by Edward Atkins. The company is located on Railroad avenue.

Charles Meighan, South Richmond, Va., has taken over the automobile repair and storage business of J. H. Smith & Co., 717 Hull street.

F. E. Kent, Hart, Mich., has purchased the George Graff Garage and the name has been changed to the Kent Garage. Elwin Kent will be in charge. A first-class repair shop will be maintained and a full line of accessories carried in stock.

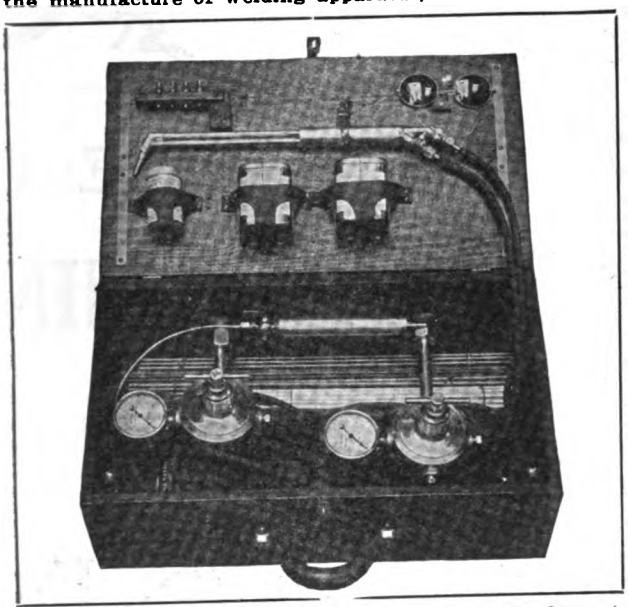
FREE TRIAL OFFER.

Waterhouse Welding Company Permits Use of Welding Equipment for Two Weeks—Terms Are Liberal.

The Waterhouse Welding Company, 8 Pelham street, Boston, Mass., one of the oldest companies engaged in the manufacture of welding apparatus, is making a free trial offer that will interest garages and repair shops desiring this equipment, particularly small concerns of limited capital.



The Waterhouse Welding and Decarbonizing Equipment, a High-Grade, Economical Apparatus Offered to the Trade on Unusually Liberal Terms.

The company permits use of its product for two weeks, at the end of which time the equipment may be returned. Indicative of the liberality of the offer is the statement that the user will not be obliged to give any reason for sending it back.

The price of the outfit is $42 and includes one B welding torch with five tips, one oxygen reducing valve with 50-pound line pressure gauge, one acetylene reducing valve with 50-pound line pressure gauge, one set of special welding hose (20 feet), one pair of welding glasses, one carbon burning torch, and a complete set of instructions. Supplies, such as flux, welding rods, etc., are furnished at a slight extra cost.

The terms are very liberal, a small first payment being required and the balance on easy installments, the amounts being so small it should be an easy matter for the purchaser to pay for the equipment from profits. Complete details of the free trial offer will be supplied upon addressing the company.

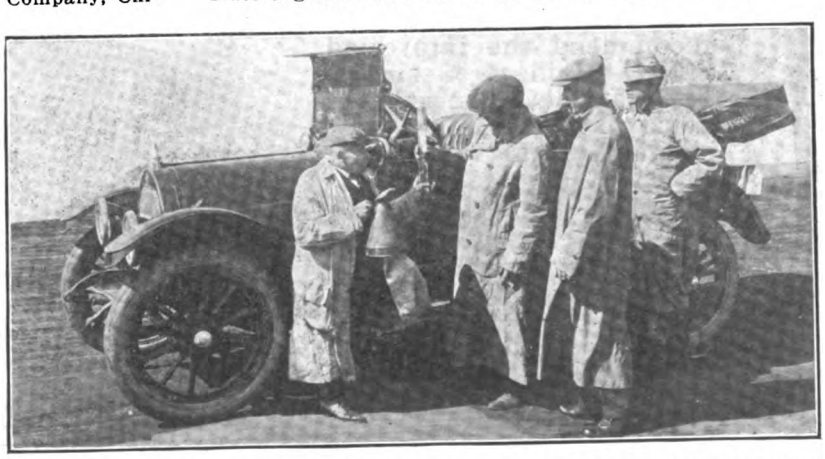
OVERLAND FUEL ECONOMY TEST.

Equipped with Model G Rayfield Carburetor, the Car Travels 24.2 Miles to the Gallon.

Equipped with a model G Rayfield carburetor, made by the Findeisen & Kropf Manufacturing Company, Chicago, Ill., a model 80 Overland touring car, made by the Willys-Overland Company, Toledo, O., obtained 24.2 miles from a gallon of fuel in a series of tests, which included trials for acceleration, throttling, speed and hill climbing.

The trials were held under the supervision of F. E. Edwards, chairman of the technical committee of the Chicago Automobile Club at Chicago, and throughout no change whatsoever was made in the adjustment of the Rayfield carburetor. In the acceleration test the car attained a speed of 30 miles in 12.5 seconds from a standing start. Extreme flexibility was demonstrated, the motor throttling down to a car speed of three miles an hour on the high and quickly accelerating to 42 miles.

The trials were completed with the climbing of Hubbard's hill. The first test was made from a standing start and the machine attained a speed of 18 miles an hour on the high at the top. In the second trial the Overland was started on the high at a rate of 12 miles an hour, and it finished at the top at a speed of 18 miles an hour. The official weight of the car, equipment and four passengers, was 3620 pounds. It was driven by Charles Merz. The Overland used was the demonstrating machine of the Overland Motor Car Company of Chicago. The Findeisen & Kropf Manufacturing Company is naturally pleased over the showing made by its product, which demonstrates the efficiency of the Rayfield carburetor.



Officially Measuring the Fuel Utilized in the Gasoline Test of the Overland Car Equipped with Model G Rayfield Carburetor.

FORD LIGHTING DYNAMO.

Charles A. Jackson Company Produces Equipment, Including Fittings, Selling for $27.

The Charles A. Jackson Company, Motor Mart, Park square, Boston, is marketing an electric lighting system, including the dynamo, cut-out and ammeter, that retails for $27. One of the desirable qualities of the equipment is that installation fittings are to be had for nearly every type of machine. A special equipment is produced for the Ford car. The dynamo is constructed of the best of material and is guaranteed to give perfect satisfaction. Its output is sufficient to meet all requirements. The constantly increasing demand for an electric lighting equipment for the used car affords the progressive garageman and repairman an opportunity to place a large number of these systems. A postal will bring complete details of the various installations, also the big discount offered.

MOTOR PARTS COMPANY.

Boston Concern Now Has Branches All Through New England and Is Rendering Excellent Service.

Organized about a year and a half ago, the Motor Parts Company, 185-187 Columbus avenue, Boston, Mass., has made wonderful progress and has at all times met the needs for quick service and quality products. The organization has been extended to include representative concerns in commercial centres throughout New England, each of which has a fully equipped laboratory for the adjustment and repair of Bosch ignition systems.

In addition to handling all Bosch products, the Motor Parts Company is distributor for a long line of other specialties, including Kemco fan type generators, Zenith carburetors, Leak-Proof piston rings, etc. It is possible to purchase the Bosch ignition system parts and spark plugs of any of the associated companies at the same price that is charged by the main house at Boston, or the branch house in Springfield. Likewise, the associated companies carry in stock a full line of other specialties handled by the parent concern. The object sought is to afford a co-operative plan, in which combined resources afford the fullest benefit through mutuality of endeavor.

CANDIDATE FITZGERALD LOSES FORD.

J. M. Fitzgerald, Democratic nominee for secretary of state, Rhode Island, in addition to seeking votes, is now seeking a brand new model T Ford car, which was stolen from him Sept. 30. Candidate Fitzgerald left his Ford on the corner of Eddy and Westminster streets, Providence, R. I., at 8 o'clock at night, and on his return some 10 minutes later found that his car was gone. Up to the present time the police have not been able to trace it. The maker's number on the car was 207,468, and the state registration number was Rhode Island 2896.

THE RESULTS OF A TEST THAT COVERED FOUR YEARS OF TIME

The Engineering Department of the University of Wisconsin enjoys an international reputation for its efficiency in research work.

For this reason the result of its experiments to determine the Absolute and Relative amounts of power consumed by BABBITT, ROLLER and BALL BEARINGS is authoritative and settles absolutely the merits of these types of bearings for the purpose for which they are manufactured—the elimination of friction.

The charts at the top of this page show graphically the relative amounts of power consumed by friction, by ball and roller bearings as determined by the University of Wisconsin.

The reader will readily see that a motor has to generate three times the power to overcome the friction of roller bearings as it would for ball bearings under practically the same loads.

The following tables are taken from the official statement of the University of Wisconsin giving the result of their experiments on the three types of bearings:

TABLE 1. COMPARISON OF COEFFICIENTS OF FRICTION.

Peripheral speed of shaft = 150 ft. per min. corresponding to 235 r. p. m.

	Average Load Per Bearing = 727 Lb.		Average Load Per Bearing = 1227 Lb.		Average Load Per Bearing = 1727 Lb.	
Bearing	Temperature Bearing = 77° F Coeff. Friction	Temperature Bearing = 100° F. Coeff. Friction	Temperature Bearing = 77° F. Coeff. Friction.	Temperature Bearing = 100° F. Coeff. Friction.	Temperature Bearing = 77° F. Coeff. Friction	Temperature Bearing = 100° F. Coeff. Friction
Ball	0.0025	0.0019	0.0022	0.0018	0.0020	0.0016
Roller	0.0069	0.0055	0.0055	0.0047	0.0049	0.0042
Babbitt	0.0112	0.0075	0.0082	0.0058	0.0070	0.0051

TABLE 2. COMPARISON OF RELATIVE AMOUNTS OF POWER CONSUMED IN FRICTION.

Bearing	Temperature of Bearing = 77° F.	Temperature of Bearing = 100° F.	Temperature of Bearing = 77° F	Temperature of Bearing = 100° F.
Ball.	1	1	1	1
Roller	2.2	2.5	2.7	3
Babbitt	3	3.6	4.5	4

Table 2 gives the relative amounts of power consumed in friction by the three types of bearings, assuming the relative amount of power consumed in friction by the ball bearing as 1. The relative numbers given are based in each case on the average power for three loads: 710, 1210 and 1710 lb. for ball bearings; 740, 1240 and 1740 lb. for roller bearings; 730, 1230 and 1730 lb. for babbitt bearings.—*American Machinist.*

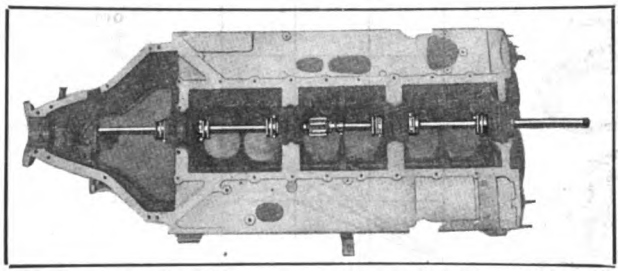
FEATURES OF MARTELL ALIGNING REAMER.

ANY tool obtaining more accurate results than possible with manual methods, and which economizes in time, is a profitable investment for the repairman and the service station. It is perfected machinery and modern equipment that enables the automobile manufacturer



The Martell Aligning Reamer in Service in Crank Case of a Six-Cylinder Packard Motor—The Tool Eliminates Scraping Bearings by Hand, Insures Perfect Alignment and Saves Considerable Time and Labor.

to increase his production and to market it at a lower price than formerly. This applies particularly to the motor bearings, and the large factories have abandoned the hand scraping of crank bearings because of the inaccurate results and time consumed.

The progressive repairman will be interested to learn that the Martell aligning reamer, a tool that will successfully compete with any of those utilized by large factories, is now being produced by the Harding Manufacturing Company, South Main street, Mansfield, Mass.

Not only does it perform the work quickly and accurately, but it insures perfect alignment. One of the several advantages of the Martell aligning reamer is that it can be used on any motor. It not only produces perfect surfaces in correct alignment with each other, but makes possible the correct meshing of gears. It is equally adaptable to connecting rod and other bearings.

The supporting bushings, shown in an accompanying illustration, depicting the Martell reamer in service, are provided with a very fine thread on the tapered portion, and screw very firmly into the ends of the bearings to be reamed. They are also provided with means of adjustment in any direction, the range being about .095-inch. They also have a micrometer reading, showing the amount of "set".

The maker states that one or two operations with the reamer will perfect one in its use and that scraping is seldom necessary except fillets. Generally the motor can be left in the frame when utilizing the reamer.

The Martell Reamer, Including Heads, Adjustable Blades, Etc., Comes in a Neat, Substantial Box.

The reamer consists of two heads, each carrying six adjustable blades, the range of adjustment being about .08-inch. The small head takes all sizes from 1⅝ to 1⅞ inches, and the large member from two to 2¼ inches. This range is obtained by the use of six blades, and it is an easy matter to make any desired changes.

The smaller illustration shows the Martell reamer set up in the crank case of a Packard six-cylinder motor, and reaming out bearings after the gears have been set correctly and the rear end trued up. This work was completed in 11 hours without any attempt to make a record. The time was taken from starting to shim the bearings until the main and rod bearings were all reamed, fillets scraped and connecting rods and crankshaft assembled.

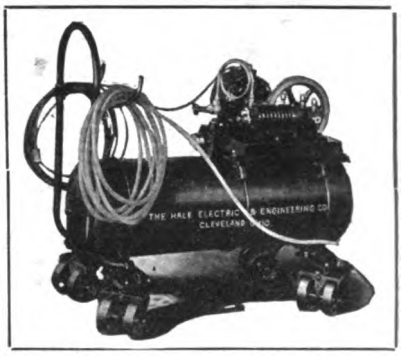
The maker states that the operation of the tool does not require an expert; a workman more or less familiar with bearings and the use of a micrometer can run it. The Martell eliminates the element of uncertainty in estimating jobs for repair work. It is as easy to ream .02 as .002-inch.

Mr. Martell, the inventor of the reamer, is a well known mechanical engineer. For several years he was at the head of the experimental and testing department of the Packard Motor Car Company. He is now with the Harding Manufacturing Company as factory manager. The company issues a booklet upon bearings, which will be mailed upon request. The Harding Distributing Company, Boston, Mass., is the sole distributor.

HALE GARAGE COMPRESSOR.

A Practical Equipment for the Public or Private Garage, One Operated from a Lamp Socket.

The Hale Electric & Engineering Company, 1232 East Third street, Cleveland, O., is manufacturing a portable electric air compressor that can be operated from any lamp socket. The Hale compressor comprises a steel tank mounted on sturdy wheels, and includes an electric motor, compressor, gauges, hose, cable, etc. The tank has a capacity of 175 pounds maximum pressure, and the pump supplies 1½ cubic feet of air a minute. High-grade material and workmanship are incorporated, and the Hale is a good selling proposition for the dealer and jobber, as it is as practical for the private garage as it is for the public service station. Details and prices will be supplied upon request.



Hale Compressor.

TIRE REPAIR EQUIPMENT.

Mapes & Maburn Manufacturing Company Producing Vulcanizer Adapted to Garage and Repair Shop.

To meet the demand for a moderately-priced, high-grade vulcanizer, one adapted to the requirements of the garage and repair shop, the Mapes & Maburn Manufacturing Company, 19 Fulton avenue, Rochester, N. Y., has brought out the Maburn Superior steam vulcanizer. It will repair all kinds of tires under four inches, also motorcycle tires, and is adaptable to all vulcanizing. The construction is not only very compact, but the equipment is capable of a wide variety of work at a slight cost. It comes complete, including the heating apparatus. With one of these vulcanizers the garage and repair shop can build up a nice trade in tire and inner tube repairing, and the profits are very attractive. Complete details of the offer made by the company will be supplied upon request.

NEW MOSCO SPECIALTIES.

Include Practical, Easily Operated Power Tire Pump and Shock Absorbers for Ford Car.

The Motor Specialties Company, Waltham, Mass., manufacturer of high-grade appliances for motor vehicles and power boats, announces several new Mosco specialties for the Ford car, including a power tire pump and shock absorbers.

The Mosco pump is designed for direct connection to

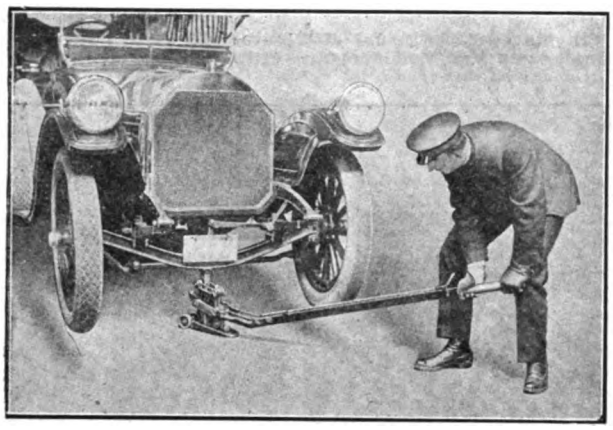
the Ford motor and is driven by an extension of the timer shaft, as shown in accompanying illustration. By means of an ingenious clutch arrangement the pump can be started and stopped by a simple movement of a shifting lever, easily accessible and without lifting the hood. The



Showing Excel Auto Jack in Service.

pump is substantially constructed, is made from castings throughout, and has individually lapped pistons. It is stated to be capable of inflating a Ford tire in less than three minutes. It retails for $7.50 and comes complete with 15 feet of high-pressure hose and a 150-pound capacity gauge.

The Mosco shock absorber is built on the principle of of a torsional spring, two of which in each absorber work in unison on either side of the shackle. The springs and moving parts are enclosed in a steel housing of attractive appearance, finished in black enamel. Some departure from conventional practise is noticeable in that the height of the Mosco is only 5½ inches. The construction is such that in case of breakage of springs no inconvenience is experienced, as the car can be operated and the replacement of the spring can be made when convenient, the work being easily accomplished within five minutes. The Mosco shock absorbers are listed two ways, a complete set of four retailing for $10, or either pair of front or rear members for $6.

The Motor Specialties Company is also marketing the Excel auto jack, a large and powerful tool for the rapid and easy handling of motor vehicles weighing up to 8000 pounds. It is a practical, useful jack for garages, service stations, repair shops, tire agencies, etc., as with it any car may be lifted up to 26 inches without blocking, permitting the removal of shackle bolts, springs, front suspensions, etc. The jack is especially convenient when adjusting the steering gear and its linkage. One of its desirable qualities is that it has sufficient range of action to permit the removal of a Ford front suspension.

The maker of the Excel auto jack states that it requires but little effort to raise a car and that any desired height up to the maximum can be obtained. The jack is always under complete control of the user.

A feature of the construction is that the jack can be instantly adjusted to any part of the frame of chassis by the 50-inch handle and without stooping. The wide, heavy base is provided with rollers, making for easy handling, and one downward movement of the handle lifts the car instantly. A four-inch toe extension permits using the jack under a car with a broken axle and raising it sufficiently high to place a truck or skids for towing. The auto jack retails for $16 and is guaranteed.

LUTZ HAS NOVEL COMPETITION.

Tool Concern Offering Prizes for Best Answers for Uses to Which Their Product Can Be Put.

The Lutz-Webster Engineering Company, Philadelphia, Penn., has inaugurated a novel scheme to ascertain the uses to which it is possible to apply Lutz compression tools. The company states that its product fits the needs of almost every condition and requirement of mechanics generally. The company offers prizes of $100, $50, $25, five prizes of $10 and 10 prizes of $5 each for the best reports covering: (1) Most interesting account of universal use of Lutz tools; (2) best application of Lutz tools under difficult or unusual conditions, and (3) origination of new uses or ideas having a commercial value.

The Lutz compression wrench is the foundation of the company's line. This tool will grip finished or rough surfaces, on threads, without marring or crushing. This instrument is used interchangeably with Lutz compression ratchets, drill sockets, nut and bolt sockets, etc., making a distinct tool for each purpose at the cost of one. The drill posts combine all the features of a radial drill press, as they provide adjustment in every direction and at any angle by the use of a swivel arm.

By addressing the Lutz-Webster Company, full particulars regarding the prize competition, and the company's latest bulletin, will be mailed.

OPPORTUNITY FOR GARAGES.

Staybestos Manufacturing Company Makes Liberal Offer of S-M-C Improved Brake Lining.

The Staybestos Manufacturing Company, Germantown, Philadelphia, Penn., maker of the S-M-C brake lining, is making an unusual offer to all public garages. The company will send, absolutely free of charge, sufficient S-M-C brake lining to equip a car so that the material may be given the most practical test, that of service, believing that the user of its product is the best judge.

Every sale of S-M-C brake lining is made with the maker's guarantee to the purchaser that it gives the highest degree of satisfaction or the money is refunded. The guarantee is based upon the need of safety first, last and always, and it assures to the owner endurance, economy and dependability, every service requirement.

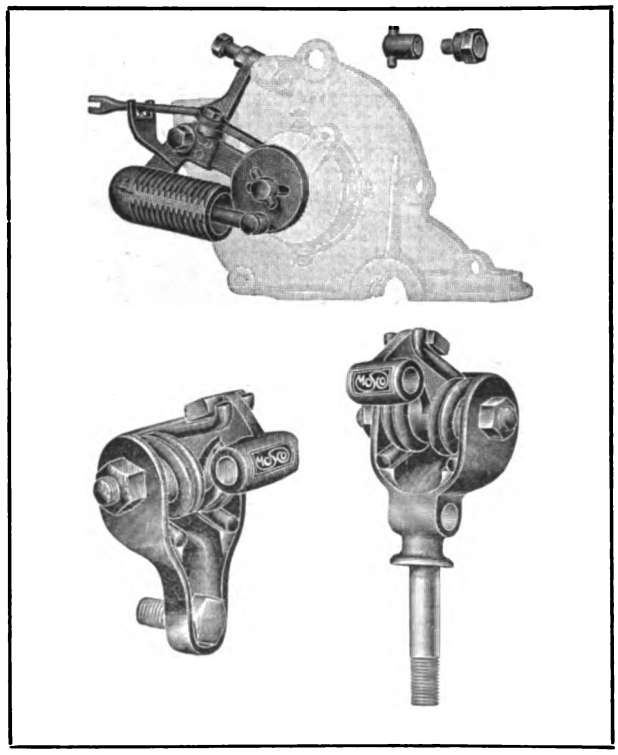
The manufacturing processes of the S-M-C improved brake lining assure absolute uniformity of quality. There is a width and thickness for every purpose; also a special lining for the Ford cars. The Staybestos Manufacturing Company specializes in trade service and quick deliveries and has a broad selling policy. Details and prices will be supplied upon request.

NEW VELVET SHOCK ABSORBER.

The 1915 Model Will Be Ready for Delivery About Jan. 1 and Will Be Exhibited at Shows.

The John W. Blackledge Manufacturing Company, 2110 South Michigan avenue, Chicago, Ill., maker of the Velvet shock absorbers, announces a new 1915 model constructed on the well known Velvet principles, but embodying a number of improvements and refinements, which add considerably to both the efficiency and the appearance of the absorbers. It is expected that the new model will be ready for delivery about the first of January. It will be exhibited at the New York City and Chicago shows.

The company also announces the addition to its line of a new and unique Velvet shock absorber for the Ford car. The Velvet absorbers are handled almost entirely through distributors, who contract for exclusive selling privileges, and it is understood that some changes will be made in the allotment of territory for the coming year. The John W. Blackledge Manufacturing Company calls particular attention to its policy of protecting its representatives, and suggests that concerns not assigned territory write direct to it.



New Mosco Appliances for Ford Car, Including Power Tire Pump and Shock Absorbers.

Digitized by Google

BOSCH BRINGS OUT A NEW TYPE OF MAGNETO.

THE Bosch Magneto Company, New York City, is marketing a new magneto which differs from conventional practise in that the usual distributor and armature shaft gears are eliminated, as is the distributor. These components have been replaced by a novel and ingenious construction for distributing the high-tension current.

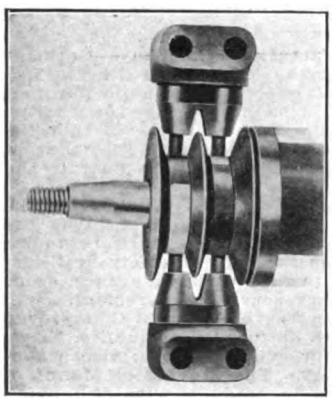


Fig. 1—Bosch Double Slip or Collector Ring.

The new instrument, which is known as the type NU4, is a true high-tension magneto. It is very compact, its small dimensions being due to the elimination of the components above referred to. In place of the usual distributor plate and gears is the slip ring arrangement shown at Fig. 1. This is a double slip ring mounted on the driving end of the armature shaft, and consequently rotates at crankshaft speed. The ring follows Bosch practise in that it is a one-piece construction, but it is provided with two grooves in the hard rubber insulation. Imbedded in the base of each groove of the double slip ring is a metal segment mounted flush with the surface of the material. As may be noted by reference to Fig. 1, there are two segments placed diametrically opposite, or 180 degrees apart. These metal segments are insulated from each other, as well as from the metal of the frame, armature core, etc.

The high-tension current is collected by carbon brushes, four in number. Connecting with each of these brushes by a novel method is a cable which leads to a spark plug, the wires being attached to the plugs according to the firing order of the motor; that is, the timing is such that, when one brush is making a contact to produce a spark in a cylinder ready to fire, the other brush, resting against a segment, leads the high-tension current to a cylinder that is exhausting. From this it will be seen that two sparks occur each half revolution of the armature shaft, and that but one is utilized for igniting the mixture in the cylinder. The surplus spark is, therefore, exactly 360 degrees behind the ignition spark.

In place of the usual distributor plate with its terminals, two brush holders are utilized, these fitting directly into openings in each side of the driving shaft end plate. These holders are marked in white figures, 1 and 2, indicating the pairs of brushes receiving simultaneous contact. The type NU4 is for four-cylinder motors.

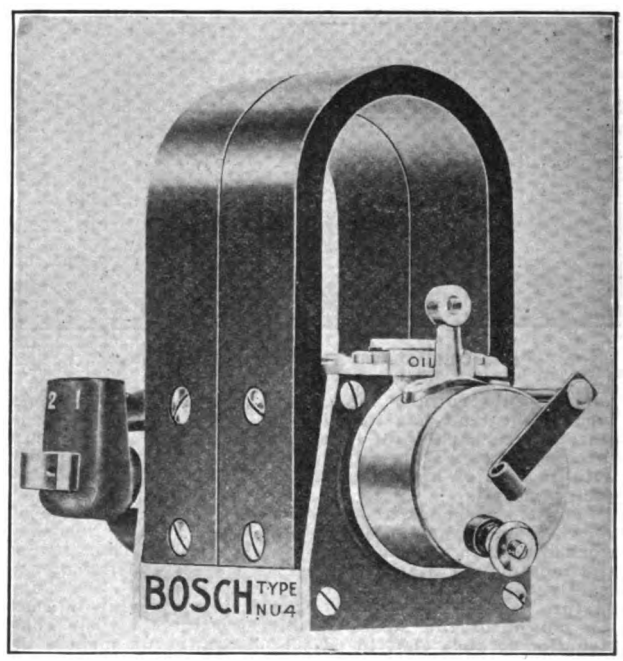

Fig. 2—The Bosch Type NU4 Magneto, a True High-Tension Instrument, in Which the Conventional Distributor Is Replaced by a Double Slip Ring Driven at Crankshaft Speed.

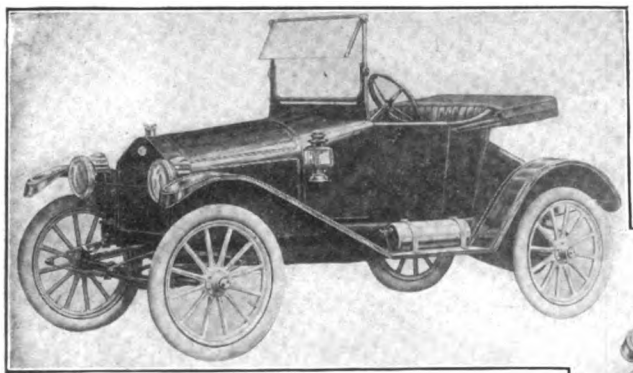
METZ FEATURES NEW FORE DOOR BODY.

FOR the season of 1915 the Metz Company, Waltham, Mass., will produce its well known model "22", to which will be fitted a new body. The new design not only provides the maximum of comfort and convenience, but the lines are unusually graceful. The seat is roomy and wide, and is so shaped as to give support to the back. The fore doors are 20 inches wide, making for easy entrance and exit of the passengers. The new Metz body makes it possible to drive with safety and comfort in stormy weather, as a heavy plate glass rain vision windshield protects the face, while an extension top with curtains excludes all water and wind.

The friction drive is retained, having demonstrated its practicability and efficiency in hill climbing and road tests. It provides a wide variety of speeds, both forward and reverse.

The Metz is an all around motor vehicle and has demonstrated its efficiency in hill climbing contests and in reliability tours, it having won the classic Glidden trophy. The maker states that 28 to 32 miles to a gallon of fuel are obtained and that 100 miles are secured to a pint of lubricant. Completely equipped the car weighs 1150 pounds. The fittings include cover slip for the top, gas headlights, Prest-O-Lite tank, dash lamps, tail light, pump, jack, complete set of tools and tire outfit. The rear compartment of the body provides ample space for the storing of luggage, and the hinged cover excludes water and foreign elements. The mechanical features of the Metz were presented in a previous issue of the Accessory and Garage Journal. The new model sells for $495, completely equipped.



New Fore Door Body Fitted to the Metz Model 22 Gives Maximum of Comfort and Convenience.

NEW AND ATTRACTIVE LINES.

LEAK-PROOF PISTON RINGS.

Are Constructed Concentric and So Designed as to Leave No Unsealed Openings for Escape of Gas.

The McQuay-Norris Manufacturing Company, St. Louis, Mo., is marketing the Leak-Proof piston head packing rings, which are a radical departure from conventional types. As may be noted by the accompanying illustrations, the rings are made in two sections and the construction is on the angle iron principle. Consequently, there are no unsealed openings, as the flange of each section completely seals the opening of the other, this obtaining gas tight construction and making for perfect compression. The Leak-Proof rings are made concentric, instead of eccentric, and one of the qualities of the design is their equal tension on the cylinder walls.

Leak-Proof Piston Rings.

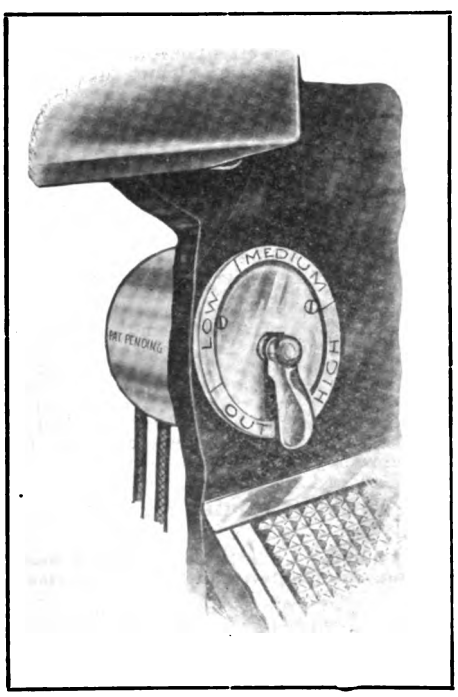
The rings are of particular value in motors where trouble is experienced through oil working up past original members, and they are held to be decidedly efficient where imperfect compression is experienced. They are made in standard sizes. The company will mail free a booklet on piston rings.

It deals specifically with the construction and operation of piston rings in the cylinder of the motor and explains how loss of compression can be remedied. The data are the result of years of experience and will prove of decided value to the garageman and repairman. The Leak-Proof rings are indorsed by thousands of users and can be obtained from supply houses or direct.

CHANEY HEADLIGHT DIMMER.

Enables Driver to Graduate Intensity of Light and Conforms Fully with All Ordinances.

The progressive dealer and garageman anticipates the wants of his customers and stocks material before it is demanded, thereby being able to supply it promptly. The trade in cities prohibiting the use of glaring lights will do well to investigate the merits of the Chaney headlight dimmer shown in an accompanying illustration.



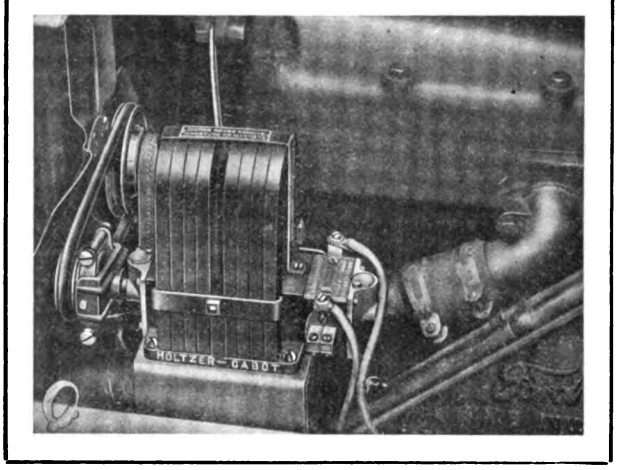
Chaney Headlight Dimmer.

One of its desirable qualities is that it enables the driver to graduate the intensity of the light with a minimum of effort, as the control lever is located on the dash and can be operated by a touch. The device provides complete control of the lights and is noticeable for its simplicity and compactness. It is very neat, being mounted flush with the dash, and the average owner can install it in 10 minutes. The Chaney is a tried and proven headlight dimmer and is guaranteed. It is moderately priced and the discount to the trade is liberal. Complete details and prices will be supplied upon request.

HOLTZER-CABOT GENERATOR.

Charges Battery Through a Cut-Out and Will Supply Current Direct—Designed for Ford Car.

The Holtzer-Cabot Electric Company, Brookline, Mass., one of the oldest electrical concerns in the country, has brought out a magneto lighting system for Ford and other small and medium automobiles. The storage battery is charged through a cut-out, but the generator can be utilized to supply current direct if desired. One of the desirable qualities of the magneto-generator is that it can be run in either direction. It requires but little power to operate and the wiring plan is very simple. The compactness of the design is shown by an accompanying illustration depicting the generator installed on a Ford motor. This system of lighting will appeal to owners, as the current from the battery may be utilized for starting or operating, electric horn, etc. The equipment is moderately priced and the trade discounts are liberal. Complete information and discounts will be supplied upon request.

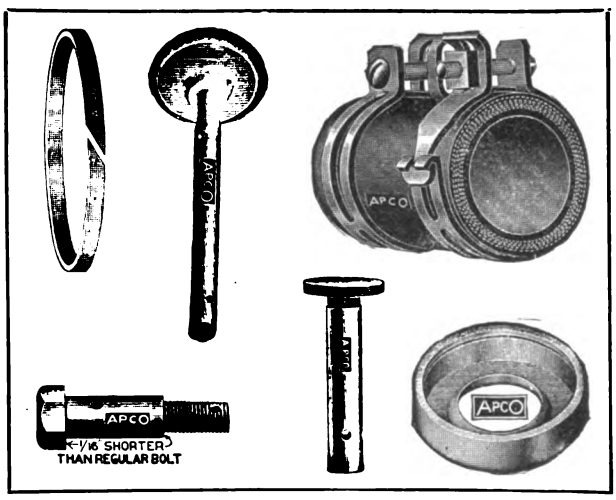


Showing the Holtzer-Cabot Magneto-Generator Installed on Ford Motor.

FORD REPAIR PARTS.

Auto Parts Company Manufacturing a Line in Demand at This Time of the Year.

The Auto Parts Company, Providence, R. I., whose trade name "Apco" is a household word in the trade, calls especial attention to its line of repair parts for the



A Few of the Apco Ford Repair Parts, Including Hose Clamp, Valve, Ball Race, Adjustable Spindle Arm Bolt, Piston Ring and Push Rod.

Digitized by Google

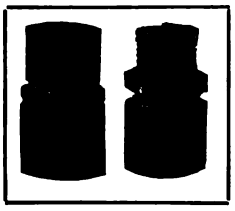
model T Ford car. The company produces a most complete line of parts, all of which are constructed of the best of material and made by skilled workmen, men familiar with the requirements of motor car repairing.

The parts produced by the Auto Parts Company are those subject to the most wear and they are particularly salable at this time of the year when the owners are overhauling their machines for fall and winter service. Some of the parts are shown in an accompanying illustration, but numerous others are produced. The prices are very attractive, the company stating that they are considerably less than factory goods, and that every part is guaranteed. A postal will bring the catalogue, also special discount sheet.

STEVENS TIRE CHECK VALVE.

Saves Time and Labor in Pumping and Is Sold Under a Money-Back Trial of 30 Days.

The Stevens Manufacturing & Supply Company, Fisher building, Chicago, is producing the Stevens auto tire check valve, which is shown in actual size herewith. The maker states that the valve is one of the best and quickest sellers on the market, and is retailed for $1 the set of four, with the guarantee of 30 days' trial and money back if not satisfactory. The Stevens valve is applicable to any tire tube valve stem, and eliminates the hard work of pumping, as the valve mechanism offers little if any resistance to the air. The design is simple and the maker states there is nothing to get out of order. It is also claimed that a tire can be inflated in half the time required with the conventional valve. Agencies are wanted in all unassigned territory. Terms and discounts will be forwarded to all interested.



Stevens Tire Valve.

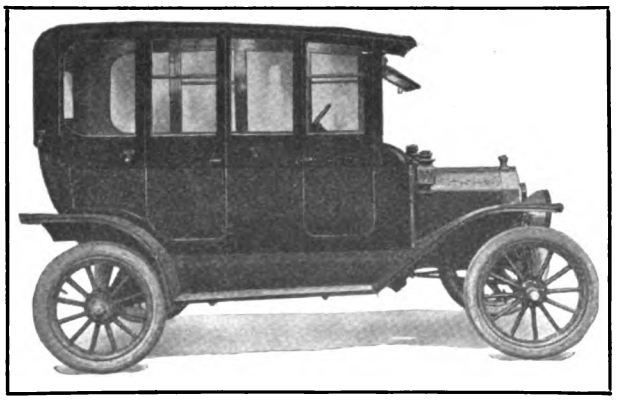
MANDEL LIMOSETTE.

A High-Grade Enclosed Body That Can Be Attached to the Ford Car in 30 Minutes Without Alterations.

To meet the demand for a high-grade enclosed body for the Ford car, one that provides real limousine luxury in every particular, the Mandel Limousine Company, 1455-1457 Congress street, Chicago, has brought out what is termed the Mandel Limosette. It is constructed in two forms, one for the Ford roadster and the other for the touring car.

One of the desirable qualities of the construction is that it can be fitted to the Ford body without any changes other than displacing the regular top and windshield. The design is simple and practical in its application, can be attached in less than 30 minutes, and so fits the body that it is difficult to distinguish between it and the conventional limousine. It is secured by a simple arrangement provided with each body.

One of the features of the Limosette is that the Ford doors are utilized. They are actuated by the handle on the Mandel body and become practically a part of the latter. The roof is of three-ply veneer, one ply on the inside being genuine mahogany. The top is equipped with an adjustable rain vision type of windshield that can be automatically set at any desired angle to provide



Mandel Limosette, a High-Grade Limousine Body for Ford Touring Car That Can Be Attached Without Alterations.

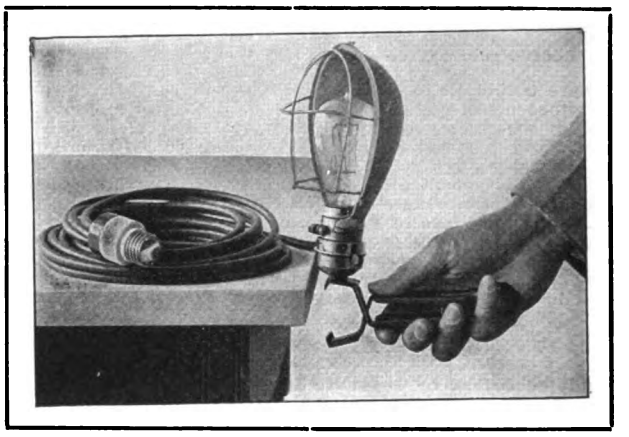
ventilation. The windows are raised and lowered easily, and are weather tight and rattle proof. The interior is fitted with an electric dome light having concealed wiring.

The Limosette for the touring car weighs but 150 pounds and, when attached, adds but 75 pounds, while the roadster adds 40 pounds. As may be noted by the accompanying illustration depicting the touring car construction, the body lines are graceful and conform to the latest accepted enclosed body practise. The finish and trimmings are first-class in every respect. The maker calls attention to the fact that his product is not the so-called "poor man's limousine", one constructed of celluloid and canvas, but a high-grade top, made of carefully selected kiln dried lumber, glass and steel, and reinforced where strength is required. Prices and complete information will be supplied upon request.

MUELLER CLAMP LAMP.

A Handy, Practical, Adjustable Light for the Garage, Repair Shop and the Motorist.

R. S. Mueller, 420 High avenue, Cleveland, O., has brought out a clamp lamp that presents several interesting, as well as practical features. In working about the chassis of a car, on the bench, lathe, etc., or on disassembled components of the machine, much time is lost in securing and adjusting the light to obtain a good illumination. The Mueller lamp is instantaneously adjusted, as it is provided with jaws that grip firmly and which may be fitted quickly to any part, such as a fender, spoke, etc. The reflector rotates, enabling the workman to direct the rays of light to the best advantage, and the construction also economizes time. The complete equipment includes the clamp, socket, reflector with wire guard, two feet of slicked portable cord, and a two-piece



Mueller Clamp Lamp, a Practical and Convenient Device Having Adjustable Reflector, Ample Length of Cord, Socket, Etc.

separable plug. It retails for $3 and the trade discount is liberal. A postal will bring a circular illustrating and explaining the merits of the Mueller clamp lamp.

INTERNATIONAL METAL POLISH COMPANY.

Supplying the Trade in Quantities With Blue Ribbon Cold Cream Soap.

The International Metal Polish Company, Indianapolis, Ind., maker of Blue Ribbon metal polish, nickel polish, auto body gloss and radiator cement, is supplying the trade in quantities with Blue Ribbon cold cream soap, an article brought out some months ago.

This new soap is free from all grit and the use of water is not required. Likewise, it is stated that this cleanser leaves the hands soft and clean and, of course, chapped hands are avoided because of the absence of water. The trade can secure full information regarding terms, etc., as well as a sample, by writing the factory or the New York City office, 335 Broadway. The full size can of cold cream soap retails for 10 cents.

NEW FORD CARBURETOR.

Perkins-Campbell Company Marketing the Johnson Model D in Addition to Complete Line of Accessories.

A carburetor making for easy starting of the Ford motor and which is held to be economic of fuel, is the model D Johnson, marketed by the Perkins-Campbell Company, 603 Broadway, Cincinnati, O. It comes ready to attach and retails for $12. The maker points out that it is a good seller and that it solves many carburetion problems.

The Perkins-Campbell Company also markets a complete and guaranteed line of motor car accessories, including Percama, a top cleaner, which contains no gasoline, benzine or any injurious ingredient.

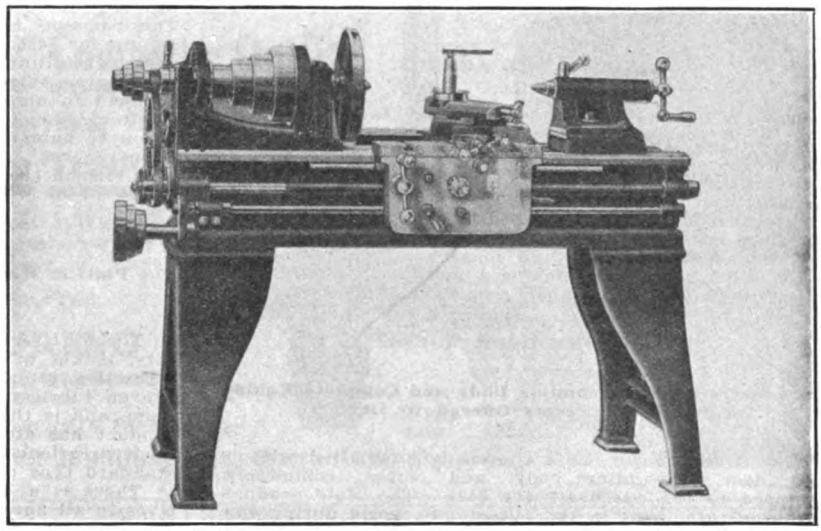
Digitized by Google

NEW MACHINERY AND EQUIPMENT.

THE Sebastian Lathe Company, Cincinnati, O., is manufacturing the Sebastian 15-inch lathe shown in the accompanying illustration. It is especially designed for the garage and repair shop and can be utilized by the manufacturer. It saves times and money on small and medium sized work and is accurate and rapid. Convenience, rigidity and strength are qualities of the lathe, which has screw, rod and power cross feeds, and cuts standard threads with furnished gears from five to 36.

The dimensions are as follows: Swings over bed, 15 inches; swings over carriage, 9½ inches; length of bed, six feet; takes between centres, 40 inches; front bearings, 2 3/16 by 3½ inches; diameter of spindle nose, eight inches; hole through spindle, 1 5/16 inches; centres, Morse taper No. 3; size of tools, ½ by one inch; ratio of back gearing, 7½ to 1; diameter of tail spindle, 1 9/16 inches; compound rest travels 4¼ inches; capacity of centre rest, 3½ inches.

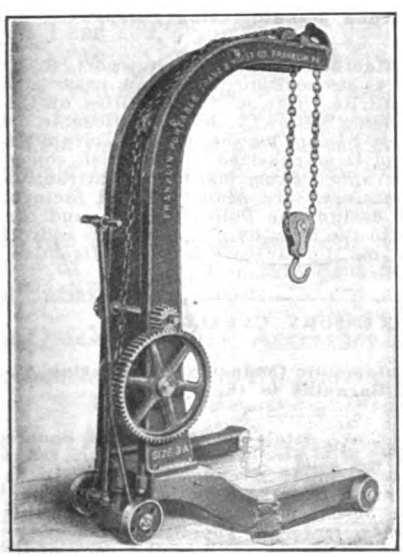
The cones are 3½, five, 6½ and eight inches in diameter, and the width of the driving belt is two inches. The weight is 1200 pounds. A taper attachment is furnished, also a set of 10 tools. A hand rest, extra gears and chuck plate are listed extra. Complete details and prices will be supplied upon request.



Sebastian 15-Inch Engine Lathe Particularly Adapted to the Garage and Repair Shop.

FRANKLIN PORTABLE CRANE.

The Franklin Portable Crane & Hoist Company, Franklin, Penn., manufactures a variety of portable crane hoists, one of which, size 2 A, is shown in an accompanying illustration. This crane has a capacity of two tons and an overhang of two feet, 7½ feet, six inches inches. The height is seven and the height of the hoist six feet, three inches. The dimensions of the bed are: Outside, two feet, 10 inches; inside, two feet, 2½ inches; height, 12 inches. The net weight is 800 pounds. The Franklin portable crane hoists are constructed of the best of material, and complete details and prices will be supplied by the maker upon request.



Franklin Portable Crane.

DRIVER TOOL RACK.

C. H. Driver, Racine, Wis., is marketing the Driver sectional tool rack, which is constructed to keep the cutting tools in order. The rack is provided with sections, each holding a certain sized tool. This enables the workman to locate quickly the desired tool. The rack can be attached to the walls, posts, etc.

KEARNS DRILL PRESS.

The Kearns Tool Machine Company, Hamilton, O., is marketing a drill machine which is provided with a tilting table, allowing the table to be swung at any angle. It is a combination machine, as with it jigs and fixtures can be drilled at different angles without disturbing the original clamping. The machine is practically a combined horizontal and vertical drilling machine. In addition to the table, which is rigidly held to the saddle by four bolts, the machine has a complete equipment such as wheel and lever, back gears, power feed and automatic stop. Details will be supplied upon request.

ADJUSTABLE BORING BAR.

Allen & Curtis, 228 South Main street, South Bend, Ind., is placing upon the market the "Simple" adjustable boring tool for service with millers, lathes, drill presses, etc. It is constructed in two styles, on a plain bar with provision for taking the ¼-inch square cutters, and the other has a small cutter integral with the bar. The first named will bore any hole from one to five inches, the second up to two inches.

OPPORTUNITIES FOR DEALERS.

BIG CHANCE FOR LARGE SALES.

Sullivan Motor Car Company Has Attractive Proposition for the Next Year.

A broad, liberal and progressive plan that should be of special interest to dealers is being offered for 1915 by the Sullivan Motor Car Company, Rochester, N. Y., maker of the Sullivan 3000-pound motor truck. According to the company the dealer will be enabled to make a large number of sales and big profits.

The Sullivan truck sells for $1600 and the company prides itself upon the high-grade material and workmanship. Every detail of the design makes for simplicity, accessibility, economy of operation and maintenance. The company back of the Sullivan truck is an old and well known concern. Complete details of the dealer proposition will be sent upon request. This is a live wire for the right people.

PANHARD OIL AGENCY.

George A. Haws Offers Interesting Inducement to Representative Members of the Trade.

George A. Haws, 148 Front street, New York City, manufacturer of Panhard oil, has an exceptionally attractive agency proposition open to garages, dealers, etc. The high-grade quality of Panhard oil as a lubricant is well known to the trade and consequently needs no introduction. Mr. Haws' plan is a new one, and full details will be forwarded upon request.

NEW FORE DOOR MODEL.

Metz for 1915 Has Streamline Body and Complete Equipment—Liberal Terms Offered to Dealers.

The well known Metz chassis is now fitted with a fore door, streamline body, and comes completely equipped to the purchaser for $495. The Metz product has been prominent in the automobile world during the past season, having won a number of hill climbing contests against high-powered, expensive machines, and has established a reputation for durability and economy of operation. Among the achievements of the product of the Metz Company is that of winning the Glidden tour. The company offers liberal terms to dealers and invites them to write for particulars and the new catalogue F. The maker points out that the Metz fully meets all requirements for a low-priced, strictly high-grade machine.

DEALERS' OPPORTUNITY.

Territory Open for Remington Light Car with Automatic Gearshift, Electric Lighting and Motor Starting.

An announcement of interest to the trade, particularly those seeking the agency for a high-grade, popular-priced motor car, is that made by the Remington Motor Car Company, 2 Columbus circle, New York City. This company is manufacturing a four-cylinder roadster selling for $495 and having the unusual equipment for a vehicle retailing for less than $500, of electric lighting and motor starting, and automatic gearshift, features confined to high-priced automobiles. The company has territory open for live dealers and an interesting proposition to submit, the details of which will be supplied upon request. A complete description of the Remington is published elsewhere in this issue.

VEEDOL OIL OFFER.

The Platt & Washburn Refining Company Has Attractive Selling Plan for Trade.

The Platt & Washburn Refining Company, New York City, maker of the well known Veedol oil, has a very attractive proposition for the trade. Veedol oil is a proven lubricant, made from pure Pennsylvania petroleum, and is the result of 30 years of experience. This product has stood the test of every method known to modern science, and also in actual service in every standard type of car.

There is a big business opportunity for representatives in all automobile centres of the country. Complete details of the proposition will be supplied on request.

DESIRABLE SUPPLIES THAT ARE IN DEMAND.

ELECTRICAL SPECIALTIES.

Mabey's Line Includes Cigar Lighter, Trouble Lamp, Patching Tool and Other Accessories in Demand.

In these days of the electrically equipped motor car there is a demand for electrical accessories such as a trouble lamp, cigar lighter, patching tool, etc. Mabey's Electric & Manufacturing Company, 940 North Pennsylvania street, Indianapolis, Ind., specializes in such equipment, and not only are the articles moderately priced, but the trade is given a liberal discount. Garages and dealers should send for the descriptive matter issued by this concern, as the information will be of decided value to their customers.

SPARK PLUG DATA.

Pertinent Facts Given in Booklet Issued by A. R. Mosler & Co., Ignition Specialist.

To obtain the best results from the ignition system, the spark plug utilized should be adapted to the motor. If the points are pocketed, the propagation of the flame is not as complete as when they are properly located. These facts and many other interesting ones are explained in the booklet issued by A. R. Mosler & Co., ignition specialist, New York City. The booklet is free for the asking and will be of value in solving ignition troubles.

TOP AND LEATHER DRESSING.

The Product of the Frank Miller Company Comes in Convenient Packages and Is Guaranteed.

There is always a demand for a high-grade water proof dressing for automobile tops, seats and cushions; also a dressing for tops and covers constructed of mohair, pantasote, etc. A dressing for the last named material must impart a velvety finish without hardening the surface and should not contain any traces of varnish or similiar ingredients.

The Frank Miller Company, 349 West 26th street, New York City, has specialized for years in leather and top dressings and its product is well and favorably known to the trade. It comes in quart cans, a convenient container; is easily stocked and is guaranteed. The maker has a proposition for the trade which will be submitted upon request.

MORGANBRITE POLISH.

A Brass and Metal Polish Sold in Cans Sealed at the Factory of the Morgan Manufacturing Company.

The Morgan Manufacturing Company, Newport, R. I., has a profitable dealers proposition in its new brass and metal polish, MorganBrite. One of the qualities of the polish is its color. Being yellow, it is not noticeable on brass should any of it be left on the metal. Durability of the lustre imparted is emphasized. The polish comes in handsomely lithographed cans, making an attractive display, and the containers are sealed at the factory. The can is a special design, the Polisaver type, and the screw cap is secured to the body by a chain and a swivel. The discount offered on MorganBrite is very attractive. Details will be supplied upon request.

NEW ACCESSORY CATALOGUE.

The Times Square Automobile Company Still Offering Attractive Bargains to the Trade.

In its "price wrecker" catalogue, the Times Square Automobile Company, 56th street and Broadway, New York City, and 1210 Michigan avenue, Chicago, Ill., is still offering some very attractive bargains to the trade. There are thousands of cut price articles listed in this book, comprising parts, material, supplies and accessories. The Times Square Company will mail a copy of its latest catalogue upon request.

"NORMA" Ball, Roller, Thrust and Combination Bearings

Stop the Blinding Headlight Glare!

The law says it must be done —blinding glare is a menace to public safety. Screens simply interpose an obstacle between the light and the street —the user pays for the full power of his headlights and gets half power. The logical solution of the problem is the

Chaney Automobile Headlight Dimmer

It enables the driver to graduate the intensity of the light. It can be changed from high to low as you would turn down an oil lamp. Installed on the dash and operated by moving the dimmer handle, it gives complete control of the headlights from the seat. In city driving the light is kept low with small current consumption—in the country where full power is needed a touch of the handle brings back the full searchlight efficiency.

This device is practical, dependable and efficient, costs little to buy and is readily installed on the dash of any car. The average car owner can do it himself in ten minutes. It can be operated by a slight kick of the foot, while both hands are on the wheel.

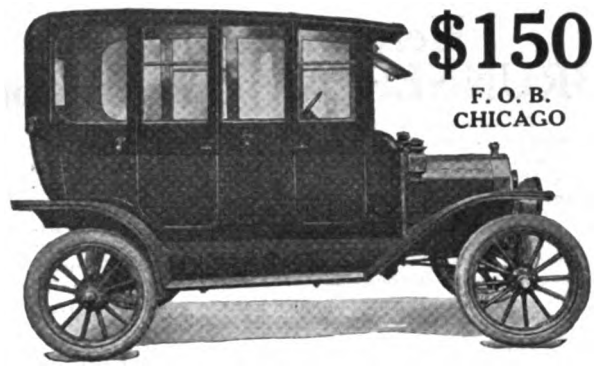
Mandel Limosette

Makes the Ford a Year 'Round Car



$150
F. O. B.
CHICAGO

Limousine luxury, supreme elegance and beauty are embodied in the MANDEL LIMOSETTE. Every Ford Owner will appreciate its many advantages. One small additional investment gives Ford Car owners every convenience of the modern, high priced limousine. The MANDEL LIMOSETTE insures absolute protection from storm and wind. It is a flush-fitting top—made of wood, metal and glass. Built exclusively for 1913-14-15 Ford Touring Cars and Roadsters. Equipped with rain vision wind shield, electric dome light, and handsome cowl dash. The generous overhang in front accentuates the length of the Ford. When attached the LIMOSETTE adds only 75 lbs. to the weight of the Ford Touring Car. Can be attached in less than an hour.

Exclusive Territory to Agents and Dealers

We want live agents to sell LIMOSETTES in exclusive territory. A big money-making proposition.

300,000 Fords

to be "LIMOSETTED." Gives agents a tremendous field. Every Ford owner will want a LIMOSETTE. Write at once.

$100
F. O. B.
CHICAGO

For the Ford Roadster

In design and construction the MANDEL LIMOSETTE for Ford Roadsters is the same as for the touring car. The ROADSTER LIMOSETTE is invaluable for professional and business men who must ride their cars in all kinds of weather. It gives all the comforts and pleasures of the closed car at less than one-half the regular cost. The ROADSTER LIMOSETTE can be attached in about thirty minutes. When attached it adds but 40 lbs. to the weight of the Ford Roadster.

The LIMOSETTE makes the Ford doubly serviceable. Attach it in Winter--detach it in summer

No. 42—Motor Driven Compressor

Here's Another BRUNNER Air Compressor

This one is designed for the larger garages and service stations. Delivers 2½ cu. ft. of air per minute and 150 lbs. pressure and won't overload its ½ H. P. motor. It can be operated from any lighting circuit.

Equipped with a Brunner Airtite Tank and fittings, and a Brunner Model L Pressure Controller, it will give you free air—always "on tap"—with convenience, without interruption.

Especially if your garage houses 50 cars or over, ask to see the Brunner No. 42.

There are many styles and sizes of Brunner Air Compressors to meet ordinary and peculiar conditions.

There is a jobber in your territory that handles the Brunner. Write us for his name.

Reaching Trade

Is the big problem for the business man—the problem that successful men study at all times.

The certain way is the direct way—for then there is no loss of time and money is well spent.

The Means

This information, supported by positive proof, can be had at request. This story is so candid and so simple that it is absolutely convincing.

There is no cost attached, no obligation attached or implied. The detail, if utilized, can save you thousands of dollars each year.

State your requirements, and a statement will be made that will demonstrate the practicality of increasing your trade service 100 per cent. at 50 per cent. of the present cost.

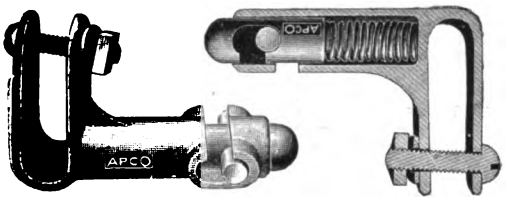
TRADE APCO MARK LEADS

Others Try To Follow

And you've heard about the celluloid dog chasing the asbestos cat thru Hell

TRADE APCO MARK Brake Rod Supports



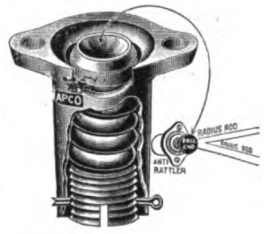
Takes the place of the pressed steel support furnished on the Ford Car. Holds the brake rod rigid but allows it to work freely. Prevents rattle, working loose and breaking. Eliminates excessive wear on brake rod clevis pins. Made from semi-steel, sheradized to prevent rusting. Well machined and guaranteed to outlast the car to which they are applied. This is the only self-lubricating support on the market. Space back of plug is packed with grease and hole in plug allows grease to work through to brake rod. The pressed steel supports that come with the car are continually breaking, working loose and causing all kinds of trouble. The APCO Supports are clamped to the rear radius rods and when fastened in place the plug is forced back with the thumb and the brake rod slipped in, the whole installation requiring less than twenty minutes. Furnished complete ready to attach.

Steel 50c.

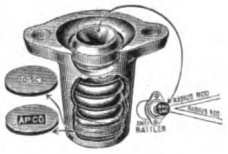
Bronze $1.00

TRADE APCO MARK Anti-Rattling Ball Sockets

Patented Nov. 12, 1912.



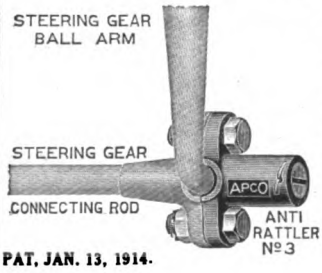
50c.



40c.

Extending back from the front axle of the Model "T" Ford are two rods that meet under the crank case of the engine. Where these rods come together, they form a ball which fits into a socket rigidly fastened to the crank case. When the car leaves the factory this is held in place by a steel cap and is adjusted very carefully so that it is tight enough to prevent rattling and not so tight as to prevent the ball moving in its socket, a condition that would cause the ball to break off from the rods, as they twist considerably when the car is moving over rough roads. Our patented caps are constructed so that when once applied, no further attention is necessary, as the heavy spring automatically takes up the wear as it occurs and to accomplish this result with the steel cap now on the car, it would be necessary to adjust the cap every hundred miles. We make two styles of this cap, one with a screw adjustment, and the other adjusted with discs. They are both made with steel springs and plugs and are guaranteed to prove satisfactory in every respect. Our number one is constructed so that the spring can be put in the shell after shell is bolted to engine case. A very necessary feature, making installation easy.

TRADE APCO MARK Steering Rod Anti-Rattler No. 3



PAT. JAN. 13, 1914.

This device takes the place of the steel cap on both ends of the steering gear connecting rod. It consists of a shell containing a steel stud and a heavy spring adjusted by means of a screw plug in the base of the shell. We anticipate a larger sale for this device than either of our other anti-rattlers as when the balls on the steering rod flatten slightly it is impossible to adjust the steel cap, for the reason that if it is tight where the ball is flat, it would be impossible to turn the wheel as the cap would bind on the round part of the ball. The APCO Steering Rod Anti-Rattler will make your car steer easier, hold the road better, prevent all rattles and vibration. Worth their weight in gold.

40c.

WAR

ON FORD ANTI-RATTLER INFRINGERS

Due Process of Law is too slow to suit the occasion. The infringers are scattered over several states and it would take some months to clear the atmosphere. We are too busy to spend our time in courts and we do not wish to keep the trade disturbed with patent litigation indefinitely.

We have adopted a more direct and decisive method to "smoke out" the infringers and remove them as a source of annoyance to the trade.

After November 1, 1914, List Prices Will Be As Follows:

Radius Rod Anti-Rattler, Disc Adjustment, - - -	40c each
Radius Rod Anti-Rattler, Screw Adjustment - -	50c each
Steering Rod Anti-Rattler, Screw Adjustment - -	40c each
Steering Rod Anti-Rattler, with Oil Cup - - - -	30c each

PANHARD OIL

Panhard Agencies Are Quality Shops

High class business men select stocks with extreme care because they must, to succeed, sell what the people want.

Every buyer wants the greatest value obtainable, and that value is measured by experience or by the reputation for quality.

PANHARD Quality can only be obtained in Panhard Oils, and Panhard Quality has been established by these oils affording better results than all others.

PANHARD Oils are sold with a guarantee of quality, and sold in containers that insure this quality, at shops where quality is the big asset and the buyer takes no chances.

PANHARD Oils are known the world over because of quality. This reputation has made them a standard of lubricants. Panhard Oils have made good in every form of competition and in every service.

PANHARD Oils are not cheap oils, but measured by quality, by economy of thorough and satisfactory lubrication, by high efficiency production, they represent the greatest value that money can buy.

The PANHARD policy of distribution is a worth while proposition. At your request we will advise you fully of the details.

OUR GUARANTEE

RAYBESTOS is guaranteed for one year (365 days) from the date it is placed on a car. If it does not endure the full period it will be replaced without cost. This guarantee applies to all types and weights of pleasure cars and to all light trucks.

Garage Managers and Repairers

You and your customers are entitled to the service this guarantee insures. If all do not receive it the reason is your own indifference. No guarantee could be broader or more liberal. The user decides whether or not the material satisfies him.

This guarantee has been given for nine years. It has never been conditional. It is reiterated to cause a full realization by those whose uniform satisfaction with RAYBESTOS has caused them to be less conscious of the advantage—the quality, service and economy—of specifying and insisting upon RAYBESTOS BRAKE LINING.

RAYBESTOS is better guaranteed than is any tire or other part of car or equipment not made of steel. It is a logical guarantee—a guarantee to give perfect braking efficiency for one year, whether the car is driven 500 or 50,000 miles.

To justify such a guarantee RAYBESTOS must afford its fullest qualities during maximum service that can be given a brake lining.

Gambling is poor pastime, and when safety is made the stake of a gamble, absolute indifference to possibilities is manifested. Why not use RAYBESTOS and be sure?

That you may distinguish RAYBESTOS from other brake linings, both edges are coated with silver, and each yard bears the famed RAYBESTOS trade mark.

WATERHOUSE PRACTICAL INSTRUCTIONS

The car owner has saved lots and you are entitled to something. But to get a good result, first get a good torch. It is easy if you follow WATERHOUSE instructions. They tell how to weld aluminum. Aluminum castings come high and you can make good money saving old ones.

The early bird gets the worm. The first owner of a WATERHOUSE WELDING EQUIPMENT in your community will make the most money. Build up a big welding business before the other fellow wakes up.

Waterhouse Outfit

	Value
1 B-Welding Torch with 5 tips	$17.00
1 Oxygen Reducing Valve with 50 lb. line pressure gauge	10.25
1 Acetylene Reducing Valve with 50 lb. line pressure gauge	11.00
1 set of Special Welding Hose (20 ft.)	3.00
1 pair of Welding Glasses	.75
1 Carbon Burning Torch	Free
1 set Instructions	Free
Net cost complete	**$42.00**

If you have a regulator for carbon burning, the oxygen regulator with the outfit is unnecessary, and you can deduct the price ($10.25), from the above total price.

TERMS: 5% discount cash with order or C. O. D., or $20 cash with order, balance in two payments, first of $12 in 30 days, $10 in 60 days after receipt of outfit by you.

Rods and Fluxes $4.50

What you get

- **1 Bottle Aluminum Flux**
- **1 Can Cast Iron Flux**
- **1 Can Copper and Brass Flux**
- **2 Pounds Brass Welding Rods**
- **5 Pounds Cast Iron Welding Rods**
- **2 Pounds Aluminum Welding Rods**
- **2 Pounds of Steel Welding Rods**

If you do not own a welding equipment you should remember when broken down that we weld in our own shop for a whole lot less than the cost of new parts.

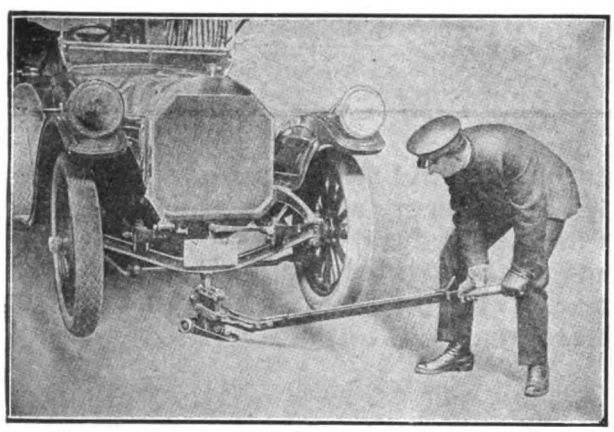
$12.80 PAYS FOR ITSELF $12.80

TIME Saving Is MONEY Saving

Order This EXCEL AUTO JACK TODAY

DON'T Turn This Page Until You Study the Picture and Read My Offer



Raising Front End of Heavy Touring Car in Four Seconds

If I didn't know positively and beyond any possible doubt that each and every garage will eventually have from two to ten EXCEL AUTO JACKS, this advertisement would not be written.

THE EXCEL AUTO JACK is not new—practically every service station and shop in New England uses them—there isn't an untried or unproven feature about them, BUT

I am anxious to place at least *one* EXCEL AUTO JACK in every shop in this country within four months.

Heretofore the selling price of the EXCEL AUTO JACK has been much higher. By manufacturing in huge quantities and the careful checking of our costs I believe we can make our usual percentage of profit and yet sell to the garage at $12.80. (List price $16.)

I believe YOU will recognize the wonderful value we are offering you if you will but study the picture and apply its almost unlimited uses to YOUR garage, but in order to hold this price DOWN I must have your order promptly.

The EXCEL AUTO JACK is an hourly necessity. It does in a second the things it now takes you fractions of hours—and you know that no garage can make money unless they serve their customers quickly.

It weighs 50 pounds---it has a handle over 4 feet long---it's too big to get lost and too strong to get out of order. Its range of adjustment is from four to twenty inches and it will raise 4500 pounds from these or intermediate points 4 1-2 inches in 4 1-2 seconds, by pressing down the lever ONCE.

Most concerns would market this at double our price, but like all our products, we estimate our margin of profit SMALL and our sales BIG. I can hold the price on the EXCEL AUTO JACK down to $12.80 by getting your check for this amount TODAY. Positive money back privilege of course (Mosco guarantee) if not satisfied.

S. K. Campbell.

Sales Manager.

MOUNTING THE COUPE TOP

11.50
COMPLETELY CONVERTED

Every Ford Dealer Has Hundreds of Live Prospects

HIGHLAND COUPE TOPS

A standard equipment, adaptable to any Ford Runabout, will afford a service equal that of an open and enclosed car, for an investment so small that every Ford owner can be interested.

Highland Coupe Tops are interchangeable with the folding tops of all Ford Runabouts. Removal of the folding top and windshield is the only preparation; no special tools, no change of fittings, no mechanical experience necessary. Every top is guaranteed in every respect.

Highland Coupe Tops are engineering creations, carefully designed, strongly built, handsomely trimmed and finished, perfect in lines and in all details equal to limousine construction. The method for mounting affords adjustments to compensate for variations in original body irons.

Highland Coupe Tops are interchangeable, so that should an owner change cars the top is always serviceable. It does not lose its value for utility. When not in use but little storage space is required.

Highland Coupe Tops are built by one of the oldest and largest body building concerns in the country. Standardization makes practical a stock production from which an order can be filled at an hour's notice.

FORD and OTHER DEALERS

Selling Highland Coupe Tops need make no investment, nor carry stock, nor take risks. The business possibilities with this line are unlimited.

The Highland stock line of commercial bodies for Ford Chassis is complete and the best produced by any concern in America.

Complete detail, catalogues, prices, etc., supplied at request.

VOL. IV. PAWTUCKET, R. I., NOVEMBER, 1914. No. 7

NEW LAWS COSTLY FOR GARAGE OWNERS.

Other States Following Lead Set by New York and Massachusetts in Compelling Public Garages to Adopt Drastic Fireproof Measures.

THE movement that is spreading throughout the country to regulate public garages, it is estimated, will cost the owners millions of dollars within the next few years. The Massachusetts law has gone into effect and the New York act was to become effective on Dec. 1, but has now been delayed temporarily. In the meantime, Providence, R. I., is modelling an ordinance that follows the lines of the other two.

In all three of these acts the same specifications are incorporated to a greater or less extent. The first change in each one is the requirement that all garage floors must be of cement concrete not less than three inches in thickness. Likewise, all stairways and elevator shafts must be enclosed in partitions covered with metal lath. While there are other slight duplications in the three acts, a resume is given herewith, giving the salient points.

Inspect Fuel Storage.

The Massachusetts authorities are keen in regard to the new act. John A. O'Keefe, fire hazard commissioner, is making a tour of garages and service stations in company with J. S. Hathaway, president of the Massachusetts Garage Association, and Chester I. Campbell, secretary of that association. The commissioner is inspecting the manner in which gasoline is handled, and asking questions about the danger of fire. Secretary Campbell is preparing a draft of about 50 questions to be submitted to every garage and service station proprietor in Boston regarding the condition of their plants, and when these have been answered there will be a conference with Mr. O'Keefe relative to regulations for safety devices. A brief summary of the New York and Massachusetts laws, which are identical, follows:

All existing buildings or other structures in any city or town used as garages, with capacity for housing more than four motor vehicles, shall be made to comply with the following requirements:

Building Requirements.

The floor of the first story shall be covered with cement concrete not less than three inches in thickness. All first-story ceilings of garages that are more than one story in height, if constructed of combustible material, shall be covered with metal lath and hard plaster not less than three-quarters of an inch in thickness. All stairways and elevator wells leading upward from the first story shall be enclosed in partitions covered with metal lath and hard plaster not less than three-quarters of an inch in thickness, or sheet steel well lapped and securely nailed, or with some other fire resisting material. All doorways in said partitions to be fitted with iron frames and standard automatic closing fire doors. All windows in exterior walls, which expose dwelling houses, hotels, mills, factories, or places of public assembly within 20 feet, shall be fitted with wire glass and metal sashes and frames, or closed up solid with fireproof material.

Sprinklers Required.

If the chief of the district police, or the official designated by him, so directs, any building of more than two stories in height, having a wooden interior in which a public garage is maintained, shall have a sprinkler system installed throughout the building, except in such part as may be separated from the garage by unpierced fire walls and floors.

Thomas J. Hearn, state fire marshal of New York, is holding hearings at Albany for the consideration of the code of rules and regulations governing the construction of garages, and changes that should be made in existing garages. The next hearing will take place on Dec. 9, and in the meantime the original order calling for the act to become effective Dec. 1 has been delayed.

Limits Height.

In the case of the Providence bill, this has been submitted to the common council for consideration. This act provides that no garage shall be located within 50 feet of the nearest wall of any school, hospital, church, theatre, place of public amusement, dwelling, tenement or lodging house. It also provides that every building used for a public garage in the future shall be of absolutely fireproof construction, not over one story in height in the first fire district or two stories in the second fire district, and shall cover an area not in excess of 8000 square feet.

Material Defined.

Rigid specifications are also made as to the materials of construction and the equipment of the building. The act is based upon a resolution presented in the common council more than two years ago, and the ordinance committee has been at work on the matter since that time. The section of the bill relative to public garages is in part as follows: "Every such building or structure of mill construction shall have all stairways and elevator walls, leading from the first story, enclosed in partitions covered with metal lath and hard plaster not less than three-quarters of an inch in thickness, or with some other equally fire resisting materials, and all doorways in said partitions fitted with iron frames and standard automatic closing fire doors.

Additional Precautions.

"Every such building or structure of whatever construction shall have all windows in any exterior wall or walls, which windows are within 20 feet of any adjoining lot line or of the nearest wall or part of any building or structure, fitted with wire glass and metal sashes and frames. Every such building or structure of mill construction shall be equipped with a system of automatic sprinklers in accordance with the rules of the National Board of Fire Underwriters.

"The city council of said city from time to time by ordinance may prescribe such reasonable regulations, consistent herewith, governing the equipment and manner of operation and maintenance of either or both public and private automobile garages now or hereafter existing in said city, as it may deem best, to diminish the fire hazard, and to preserve the safety and physical comfort of the portion of the public residing or being about or near the location thereof, or of the public generally."

Compliance with Laws.

All garages will be given six months to comply with the terms after the passage of the ordinance. Other obligations will be the building of all floors of cement concrete at least three inches thick; no forge, boiler or fire pot will be allowed except in a separate room, which has walls of incombustible material.

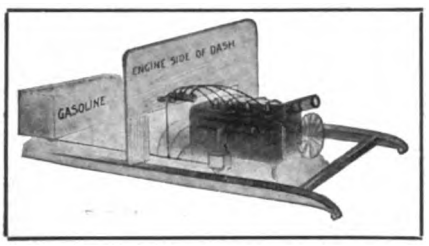
CHANEY SPARK PLUG PRIMER.

Is Operated from the Seat and Forces Charge of Gasoline Spray into Plugs and Combustion Chamber.

The L. F. Chaney Company, Springfield, O., has brought out a new priming device, which presents several interesting as well as practical features, among which is that the cylinders can be primed with fuel from the seat. A desirable quality of the primer is that the fuel is supplied from the main line, as may be noted by accompanying illustration. The gasoline is forced to the cylinders by a plunger pump and the fuel enters the spark plugs and combustion chambers in the form of a fine spray. Priming the plug assures an explosion with each spark and a series of explosions as each cylinder is primed. The Chaney spark plug primer is adaptable to any car and is serviceable with machines electrically started. Dealers are invited to write for particulars and trade discounts.



Chaney Spark Plug Primer.

BALL SOCKET PATENTED.

Danver Accessory Company Granted Claims on Anti-Rattling Device Having Grease Cups.

Letters patent have been granted the Danver Accessory Company, Pawtucket, R. I., maker of the well known line of Daco specialties for the model T Ford car, on a ball socket having a grease cup, a bearing member, a screw plug with a passage for lubricant, a spring and means for regulating the tension between the socket and the ball. The patent number is 1,116,571, and was filed May 11, 1914. The device is marketed as the Daco combination anti-rattler and grease cup, and is designed to replace the ball socket caps of the Ford car.

HIGHLAND COUPE TOPS.

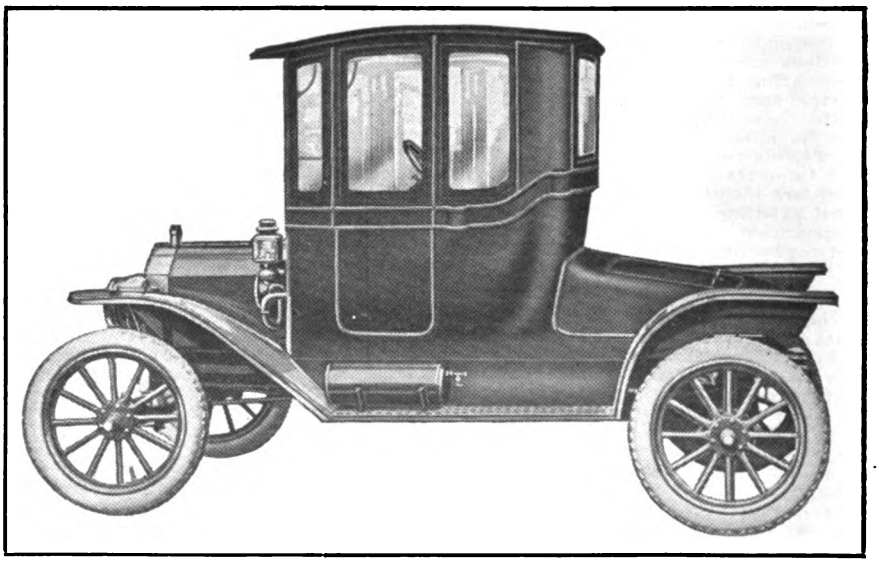
Handsome, Interchangeable Design, Adaptable to Any Ford Runabout, Easily and Quickly Fitted.

An equipment that will convert any Ford runabout into an enclosed two-passenger car has been perfected by the Highland Body Manufacturing Company, Cincinnati, O. One of the desirable qualities of the design is that it is constructed to be interchangeable with the usual top and windshield, and when mounted forms a body that is complete and gives as satisfactory protection as if it were of the limousine construction.

The body is, when converted, handsome in design and equal to the standards of the high-class enclosed vehicles. It is stoutly built, admirably trimmed and finished, and is sightly and pleasing in appearance. The coupe top, as it is known to the maker, is comparatively light in weight and affords every quality that makes for comfort and convenience.

The top is so built that it can be mounted without the use of special tools or fittings, and the means of mounting are provided with adjustments should there be any variations in the runabout body ironing. Aside from lifting the top, all the work can be done by one man, and conversion is practical whenever desired. Being interchangeable with reference to runabout bodies, an owner can change chassis several times and still use the top with equal satisfaction.

Just as the Ford runabouts are standardized, so the Highland coupe top has been designed for use on these machines, so that an owner at a comparatively small expense will have available a vehicle that will be suited for comfortable and satisfactory operation every day of the year. As may be noted by accompanying illustration, it is difficult to distinguish between the Highland body when fitted and the conventional type. Complete details, including prices, will be supplied upon request.



Highland Coupe Body for Ford Chassis, a Construction That Can Be Mounted Easily and Quickly.

ENJOIN DEALER FROM SALES.

Auto Parts Company and Emil Grossman Manufacturing Company Get Injunction Against Harry Weinstein.

Judge Charles M. Hough of the United States district court for the Southern District of New York, on Oct. 31 issued an injunction against Harry Weinstein, enjoining the latter from making or selling thrust bearings covered by the United States patent No. 1,044,468. The appeal was made by Thomas F. Wilson of the Auto Parts Company, Providence, R. I., and the Emil Grossman Manufacturing Company, Inc., Brooklyn, N. Y. Weinstein does business under the trade names of Royal Auto Tire & Supply Company, Liberty Tire & Supply Company and the Union Tire Company. It is alleged by Mr. Wilson and the Grossman Company that he has been infringing on United States letters patent No. 1,044,468, issued on Nov. 12, 1912, to Henry Kirk, Jr., and now owned by them.

SPECIAL TO THE TRADE.

Goodyear Tire & Rubber Company Has Free Show Case Offer Productive of Trade Building.

The Goodyear Tire & Rubber Company, Akron, O., is making a special free offer to the trade of a show case in which to display Goodyear accessories. The use of these cases enables a dealer to show the products to advantage, and the equipment is a silent salesman. By filling out the coupon in the announcement of the company elsewhere in this issue, complete details of the offer will be supplied.

NOW GEORGE A. HAWS, INC.

Firm Marketing Panhard Oil Dissolved and Business Transferred to Reorganized Concern.

The firm of George A. Haws, New York City, maker of the well known Panhard oil, has been dissolved, and the business has been transferred to George A. Haws, Inc. Florence A. Haws and Michael J. Martin composed the former company, and they announce that future business will be conducted along the same broad lines by the new firm.

OPPORTUNITY FOR DEALERS.

Kellogg Manufacturing Company Supplying Agents with Circulars Showing Installation of Tire Pumps.

Announcement is made by the Kellogg Manufacturing Company, Rochester, N. Y., to the effect that motor car dealers will be supplied free with circulars describing the No. 101 single-cylinder, all metal Kellogg engine driven tire pump with attachments for their particular cars. The attachment and its installation are important factors, and the circulars have been carefully prepared to meet the requirements of each individual machine. Dealers will be supplied upon addressing the Kellogg Manufacturing Company. Model of car should be given.

PERSONAL NEWS OF THE INDUSTRY.

Frank E. Titus, Pittsburg, Penn., has been appointed manager of the local branch of the B. F. Goodrich Company. He has been assistant manager of the Buffalo branch of that company for the past seven years.

R. M. Owen, of the Premier Motor Manufacturing Company, Who Will Develop the Weidely Motor.

E. F. Quimby, South Bend, Ind., has resigned as secretary and general manager of the Colfax Manufacturing Company.

Emmet Scott, Laporte, Ind., has resigned as treasurer of the M. Rumely Company. His successor has has not yet been appointed.

W. W. Bond, Detroit, Mich., has been appointed by the Anderson Electric Company district sales manager for the states of Indiana and Kentucky.

R. M. Owen, George A. Weidely and Harold O. Smith have perfected arrangements with Frank E. Smith, receiver of the Premier Motor Manufacturing Company, Indianapolis, Ind., for the development of the Weidely motor. The plans call for the receiver to turn over the core boxes and patterns and to sell certain parts of the motor to the three men. The plan has been approved by the United States court.

Artemus Ward, Jr., Detroit, Mich., vice president of the King Motor Car Company, states that it is the intention of his company to bring out, in the near future, a two-passenger cabriolet roadster of special design.

D. C. Muhleman, Wilmington, Del., and Henry V. Poor, were elected directors to fill two vacancies on the board at the annual meeting of the Maxwell Motor Company. The other retiring directors were re-elected.

W. H. Cochran, Detroit, has been appointed manager of sales of the Decker Auto Top Company.

F. L. Brown, Hartford, Conn., has resigned as manager of the Stutz Motor Car Company of Connecticut.

John A. Rose, Kenosha, Wis., has been appointed manager of the newly created export department of the Thomas B. Jeffery Company.

H. F. Sundin, Kansas City, Mo., until recently manager of the National Motor Car Company, has been appointed special western representative for that company.

Paul J. Fisher, St. Louis, Mo., has been appointed secretary of the St. Louis Manufacturers & Dealers' Association. He succeeds Robert E. Lee, resigned.

W. A. Allen, Montreal, Que., has become manager of the Gordon Motor Company. He was formerly manager of the Pope-Hartford Motor Company of Canada.

W. M. Mann, Dallas, Tex., is now district manager for S. F. Bowser & Co., Fort Wayne, Ind. His territory is all of the Lone Star state and he will make his headquarters in the Commerce building.

W. F. Siegmund, Kansas City, Mo., has been appointed manager of the Nordyke & Marmon Company's local branch. He was formerly distributor for the Detroit Electric in St. Louis.

H. H. Sturgeon, Toledo, O., has become affiliated with the Willys-Overland Company in the advertising department. He will be located at the company's headquarters. He was formerly assistant advertising manager of the F. B. Stearns Company, Cleveland, O.

James R. Hayes, Detroit, Mich., has been elected president of the Speedway Country Club, which proposes to erect a speedway, club house, administration building, etc., for automobilists. It is understood that a site has been secured in Wyandotte, a suburb of Detroit.

Finley R. Porter, Port Jefferson, N. Y., is at the head of the recently incorporated Finley-Robertson-Porter Company. He was formerly engineer of the Mercer Automobile Company, Trenton, N. J.

Roy R. Chapin, Detroit, Mich., has joined the army of benedicts, having been married to Miss Inez Tiedman of Savannah, Ga. He is president of the Hudson Motor Car Company.

K. W. Pickell, Kansas City, Mo., has been appointed retail sales manager of the Overland Automobile Company.

W. C. Gray, Detroit, Mich., has been appointed manager of the local branch of the Apperson Brothers Automobile Company, Kokomo, Ind.

E. M. Cutting, Boston, Mass., has joined the C. P. Rockwell Company, which handles the Jeffery car. He was formerly assistant treasurer of the Pope Manufacturing Company, Hartford, Conn.

H. M. Snow, Boston, Mass., has been appointed manager of the branch of the Ford Motor Company, opened recently on Copley square.

W. G. Jones, Boston, Mass., has resigned as manager of the Whitten-Gilmore Company.

H. A. Banta, San Francisco, Cal., has joined the staff of the Swan Carburetor Company as sales manager. He had been with the Chanslor & Lyon Company for a number of years.

Al Adams, Worcester, Mass., has become associated with the Auto Sales Company in the capacity of manager for the used car department. He was formerly connected with the Joseph Donovan Company, Boston, in the same capacity.

L. M. Bourne, Auburn, Ind., has been appointed factory manager of the Double Fabric Tire Company. He was formerly production manager of the Goodyear Tire & Rubber Company, Akron, O. He is an expert on rubber.

A. Figman, Marion, Ind., has become sales manager of the Indiana Truck Company, with offices and service station at 250 West 54th street, New York City. He has been with the Garford Company of the latter city for the past six years.

E. Ralph Estep, New York City, has joined the Cheltenham Press, which is an advertising agency. He was formerly associated with the Packard Motor Car Company, Detroit, Mich.

W. Irvine Fickling, New York City, for the last four years sales manager of the R. & L. Company, eastern distributor of the Garford truck, has resigned.

Charles P. Sieder, Detroit, Mich., who is president of the newly organized R-C-H Corporation, announces that definite details regarding the company's new model will be ready in the course of a few weeks.

R. E. McComas, Minneapolis, Minn., has been made secretary and manager of the Owl Electric Garage Company, in which he has purchased an interest. Until recently he was connected with the Chicago office of the Woods Electric Company.

Paul E. Ryan, Cleveland, O., has become sales manager of the Osborn Manufacturing Company. He held the position of manager of publicity and assistant sales manager for the National Acme Manufacturing Company previous to his going with the former company.

A. S. Robinson, Los Angeles, Cal., has severed his connection with the local branch of the Kissel Motor Car Company, for which he has acted as manager since the death of Roger Stearns.

Tom Wilkinson, Los Angeles, Cal., has been appointed manager of the branch of the United States Tire Company. He was formerly manager of the retail branch of the United States Tire Company, San Francisco.

H. W. Kyte, Chicago, Ill., has become western manager for the George W. Houk Company, Buffalo, N. Y. He was formerly vice president and general manager of the Electric Vehicle Company, Hartford, Conn.

J. C. Wilson, Detroit, Mich., has accepted a position as factory superintendent of the Auto-top Inclosure Company. He was formerly connected with the Michigan Buggy Company.

Charles E. Thompson, New York City, a member of the Motor and Accessory Manufacturers, takes care of the space allotments handled directly by the show and allotment committee of which he is chairman. The excellent work that the Motor and Accessory Manufacturers are doing is well known throughout the country. He is also general manager of the Electric Welding Products Company, Cleveland, O.

Charles E. Thompson, Chairman of the New York Show Committee.

C. C. Turley, Indianapolis, Ind., has become connected with the Haynes Motor Car Company as manager. He

Digitized by Google

first became associated with the Haynes Company in 1909, when he joined its engineering department. He remained with the concern for three years, when he became agent for another make of car at Logansport, Ind.

Ray Harroun, Chief Engineer of the Maxwell Motor Company, Inc.

Ray Harroun, Detroit, Mich., has been appointed chief engineer of the Maxwell Motor Company, Inc. He was formerly with the Nordyke & Marmon Company, and is the designer and builder of the Maxwell racing cars.

E. J. Bennett, Los Angeles, Cal., has joined the De Vaux Motor Sales Company as sales manager. He is well known to the trade.

Estel Scott, Kansas City, Mo., was elected president of the Kansas City Motor Car Dealers' Association at the annual meeting of that organization held recently.

T. G. Woods, New Haven, Conn., has become sales manager of the White Company. He was formerly connected with the company at Boston and Providence.

E. A. Haskins, Detroit, Mich., has taken charge of the service department of the Federal Motor Truck Company. He was formerly connected with the Packard Motor Car Company.

Herman G. Farr, Springfield, Mass., has resigned as chief engineer of the Knox Motors Company and will open an office as consulting engineer. Mr. Farr is one of the pioneers of the industry having, in conjunction with Harry A. Knox, designed one of the first successful gasoline cars in America.

H. M. Woodside, Indianapolis, Ind., formerly sales manager of the Ball Fintze Company, Newark, O., has become state representative for the Hearsey-Willis Company in Ohio.

John M. Lansden, Pontiac, Mich., has resigned as second vice president and consulting engineer of the General Motors Truck Company. He will go into business on his own behalf.

W. T. Kyle, New York City, has joined the sales force of the Okonite Company at 253 Broadway. For the past six years he has been connected with the Duplex Metals Company as district sales manager.

J. R. Lee, Detroit, Mich., delivered an address recently before the world's first conference on profit sharing, describing the plan as worked out at the Ford Motor Company's plant.

E. Le Roy Pelletier, who is well known to the automobile advertising world, and William Tripp, formerly of Cleveland, O., have formed an advertising agency under the name of Pelletier-Tripp, Inc., with offices in the Fine Arts building, Detroit, Mich.

G. S. Ashbrook, Detroit, has been appointed sales manager of the McClerman Company, the Globe Seamless Steel Tube Company, Worth Brothers and the Phoenix Tube Company. He is located in the Ford building.

W. R. McCulla, Springfield, Mass., has become assistant chief engineer of the Knox Motors Company. He was formerly research engineer of the Packard Motor Car Company, Detroit, Mich.

F. E. W. Howe, Providence, R. I., for some years with Alvan T. Fuller, Boston, Mass., has been promoted to the managership of the Providence branch. Packard cars are handled.

C. W. Heintz, Buffalo, N. Y., for the past five years connected with the sales department of the Republic Rubber Company, has been appointed manager of the local branch to succeed B. F. Morris, resigned.

H. B. Wollaver, Boston, Mass., has accepted a position as manager of the service department of the Henley-Kimball Company, agent for the Hudson car.

T. J. Boland, Council Bluffs, Ia., has become manager of the newly established local branch of the Jackson Automobile Company, Jackson, Mich. He was formerly with the Pioneer Implement Company.

William A. Roby, Indianapolis, Ind., president of the Electric Vehicle Service Station Company, has acquired the interest of H. L. Krieger in that company.

George H. Phelps, Detroit, Mich., has become associated with Dodge Brothers in the sales promotion department. He was formerly manager of the New York branch of the Studebaker Corporation.

A. C. Stevens, Portland, Ore., has been appointed manager of the Winton Motor Car Company's branch in that city. He succeeds Bert Roberts.

Lloyd Tremper, Streator, Ill., has become associated with the L. P. Halladay Accessory Company. He was formerly general purchasing agent for the Western Motor Company, Marion, Ind.

D. D. A. Outcault, Tacoma, Wash., has been elected president of the Tacoma Automobile Club. Edward B. King is vice president.

Edgar O. Hayes, well known in the automobile industry, is now travelling representative of the Pilot Car Sales Company, Richmond, Ind., in New England and the State of New York.

James E. Westrich, St. Louis, Mo., has been appointed manager of the H. E. Wilcox Motor Company, succeeding Frederick E. Hole, who has been transferred to an executive position at the company's factory in Minneapolis, Minn.

T. B. Shoemaker, New York City, who for several years has been secretary to the contest board of the American Automobile Association, has severed his connection with the A. A. A. He has been prominent as an official at many of the automobile contests.

A. H. Collins, Detroit, Mich., vice president of the R-C-H Corporation, has just returned from an extensive trip throughout the West and South. He reports that business conditions are generally good.

George W. Kerr, Chicopee Falls, Mass., for a number of years body engineer for the Stevens-Duryea Company, has resigned.

Ray Tisch, Detroit, Mich., has become associated with the Paige-Detroit Motor Car Company as advertising manager. He was formerly connected with the Haynes Automobile Company, Kokomo, Ind., in the same capacity.

E. R. Maurer, M. E., Detroit, Mich., has been appointed service engineer of the Studebaker Corporation. He has charge of all service parts, orders and claims at the Detroit factory and at the various branches of that company.

Carl H. Clement, Toledo, O., has been appointed travelling sales engineer of the Bock Bearing Company. He was formerly connected with the Metal Products Company, Detroit, Mich., as chief engineer and sales manager.

Z. B. Barker, Detroit, Mich., has become associated with the Monarch Motor Car Company as general sales manager. He was until recently middle western sales manager of the Briggs-Detroiter Company.

R. E. Levers, Dallas, Tex., has been appointed manager of the United Auto Supply Company.

J. H. Carlson, El Paso, Tex., has accepted a position as manager of the wholesale department of the Auto Supply Company.

Abner Powell, San Antonio, Tex., has been appointed local manager of the Krit Motor Car Company.

D. M. Rhodes, Detroit, Mich., has been appointed sales manager of the Abbott Motor Company.

J. J. Gormley, Boston, Mass., has become affiliated with the New England branch of the J. I. Case Threshing Machine Company, Racine, Wis.

C. V. McGuire, Lansing, Mich., has been appointed advertising manager of the Olds Motor Works. He was formerly with the Lozier and United States Tire companies.

R. D. Campbell, Detroit, Mich., has accepted a position as director of sales for the Signal Motor Truck Company. He was formerly associated with the White Company, Cleveland, O.

F. N. Dalton, Los Angeles, Cal., has been appointed local assistant manager of the Studebaker Corporation, Detroit, Mich. He was travelling auditor for the company for some time.

Charles J. Gormley, Boston, Mass., has succeeded G. B. Jeffery as advertising manager of the local branch of the Firestone Tire & Rubber Company.

L. C. Malott, Boston, Mass., has become manager of the wholesale department of the William Small Company, distributor for the Chevrolet car.

F. L. Bragg, Hartford, Conn., has severed his connection with Edward H. Harris, and has joined the Overland-Connecticut Company's sales force.

Homer McKee, Indianapolis, Ind., has become associated with the Mahin Advertising Company and will have charge of the Cole Motor Car Company's publicity campaign.

Homer McKee, Who Conducts the Advertising of the Cole Motor Car Company.

D. B. Webster, Indianapolis, Ind., has become assistant mechanical engineer of the National Motor Vehicle Company. He was formerly experimental engineer of the Hudson Motor Car Company, Detroit, Mich.

Job H. Lippincott of the New Jersey state department of motor vehicles, states that he intends establishing a rogues' gallery for pictures of automobile thieves, receivers of stolen machines and their accomplices.

E. P. Chalfant, New York City, has been appointed secretary of the Electric Automobile Manufacturers' Association. He will open offices in Chicago and devote his efforts to the interests of the organization. Mr. Chalfant is well known to the industry, having been connected with the Packard Motor Car Company and the Thomas Motor Car Company.

WHAT AMERICA GAINS BY EUROPEAN WAR.

Automobile Industry Will Thrive—Neutrality No Bar to Private Sales to Belligerents—South America's Business—Belgium a Heavy Loser.

THE automobile business in this country has apparently not felt any bad effects from the European war; in fact, it would seem that this branch of the United States industry has received quite an impetus as the result of the conflict. While it was first thought that certain countries would be closed to the American manufacturer, yet it is now seen that the belligerent nations are America's largest purchasers in the automobile, truck and accessory line. This fact was accentuated recently when 3300 to 3500 trucks were sold to England, France and Russia. The total number of trucks exported to every country in the world for the fiscal year ending June 30 last, was 784, valued at $1,181,611. From this it is seen that for one month the exports of trucks to three countries were 500 per cent. greater than they were for the entire world during the past fiscal year.

In view of the President's plea for neutrality, it seemed at first to be generally conceded that the United States manufacturer was barred from selling contraband articles to the warring nations. The idea, however, has been refuted in the official statement recently issued by Robert Lansing, acting secretary of state at Washington. Mr. Lansing points out that this country's neutrality does not prohibit any individual from selling to belligerent governments, even if the articles sold include fire arms, explosives, or the like.

Contraband articles are subject to seizure by an enemy of the purchasing government, the acting secretary points out, and if this occurs it is merely one of the misfortunes of war. The report of Mr. Lansing says in part: "In the first place it should be understood that, generally speaking, a citizen of the United States can sell to a belligerent government any article of commerce he pleases. He is not prohibited by international law, treaty provision or United States statute. It makes no difference whether the articles sold are exclusively for war purposes, such as fire arms, explosives, etc., or are food stuffs, clothing, horses, etc., for the use of the army or navy of the belligerent.

"Furthermore, a neutral government is not compelled, by international law, by treaty or by statute, to prevent these sales to a belligerent. Such sales, therefore, by American citizens do not in the least affect the neutrality of the United States.

"It is true that the articles mentioned are considered contraband and are, outside the territorial jurisdiction of a neutral nation, subject to seizure by an enemy of the purchasing government. It is the enemy's duty, however, to prevent the articles reaching their destination, not the duty of nation whose citizens have sold them. If the enemy of the purchasing nation happens for the time to be unable to do this, that is for him one of the misfortunes of war; the inability, however, imposes on the neutral government no obligation to prevent the sale."

Mr. Lansing then points out that for the government of the United States itself to sell to a belligerent nation would be an unneutral act, but for a private citizen to sell any product of the United States is neither unlawful or unneutral. It is not within the power of the executive to prevent or control.

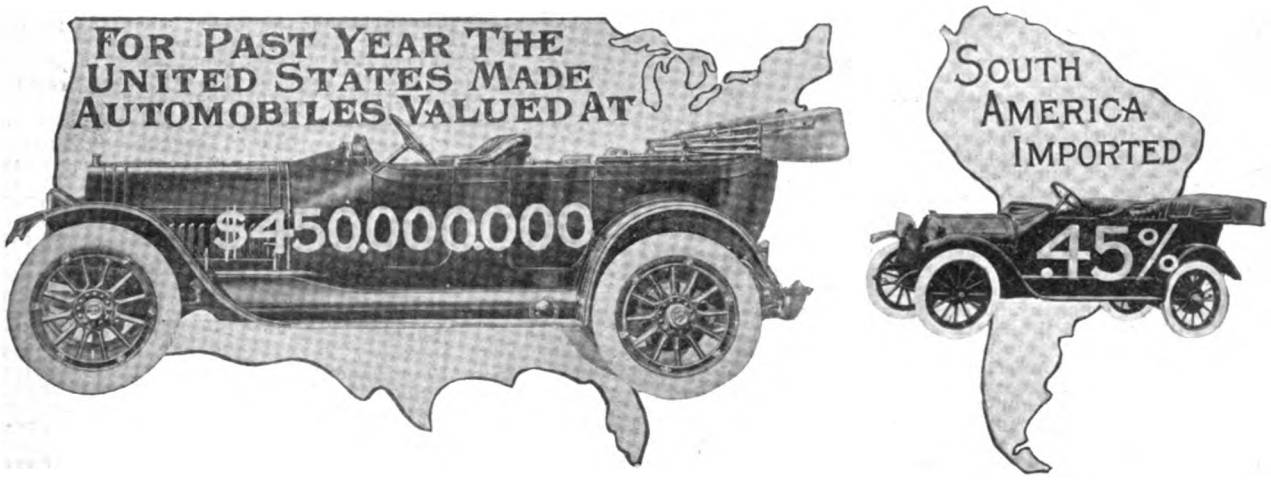
"The foregoing remarks", concludes the official statement, "do not apply to the outfitting or furnishing of vessels in American ports or of military expeditions on American soil in aid of a belligerent. These acts are prohibited by the neutrality of the United States."

Consequently, it is plainly seen from the foregoing that American automobile, truck or accessory manufacturers are not barred from the European markets. In fact, with all of the foreign plants either closed or wiped out of existence, it can easily be seen that, with the war dragging on throughout the winter, the American manufacturer should reap the profit.

The slight effect of the loss in exports from this country caused by the European war will be fully appreciated when it is stated that of the $450,000,000 worth of automobiles produced in this country for the fiscal year ending June 30, 1914, exactly 1.76 per cent. were exported to the countries now engaged in warfare. Consequently, from this viewpoint, it can be stated without contradiction that the European war will mean nothing to the motor car industry of the United States. This loss of a fraction over 1¾ per cent. is more than offset by exports to be gained in other countries.

Of this $450,000,000 worth of automobiles produced in the United States last year, less than one-half of one per cent, were exported to South America. While America was exporting motor cars valued at $1,939,213 to these Latin-American countries for the year ending June 30 last, Europe exported $13,168,508. In other words, the United States has lost its grip on European exports valued at $7,936,506, but has gained a $13,000,000 selling field in one section alone to compensate it for the loss sustained.

South America is not a stranger to the United States in matter of imports. As a matter of fact, the United States ranked second last year in this respect, having exported $317,323,294 worth of goods to that country. Great Britain was first with $322,036,347, Germany third with $216,010,418, and France fourth with $103,220,223. So diverting from the automobile figures for a moment, it is seen that, of the total of $1,304,261,736 of goods imported by South America last year, only $317,323,294 were imported from the United States. The war cuts off $699,040,630 of imports direct, and difficult shipping conditions forces South America to look to this country for practically all of her imports for the current year.



SOUTH AMERICA'S $2,870,188,575 COMMERCE FOR 1913.

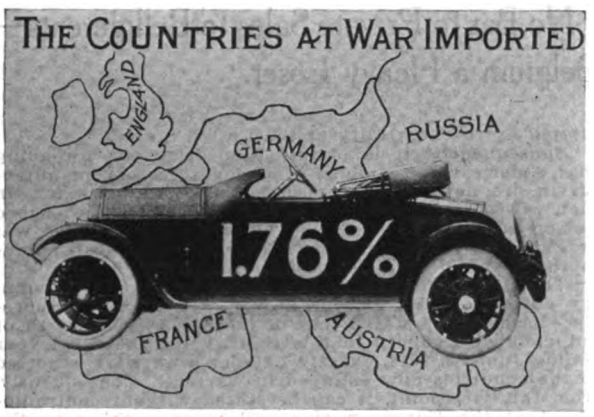
	Imports	Exports
United States	$317,323,294	$504,378,212
Great Britain	322,036,347	316,419,914
Germany	216,010,418	192,394,702
France	103,220,223	120,907,415
Italy	55,494,413	27,964,001
Belgium	48,747,164	62,557,566
Austria-Hungary	9,026,478	23,294,991
Netherlands	8,293,859	43,277,631
Switzerland	6,189,050	.....
All other countries	217,390,517	247,722,380
Total	$1,304,261,763	$1,565,916,812

This will mean that America will export about $1,000,000,000 worth of goods to South America this year. Of this amount, approximately $15,000,000 will be automobile exports, exclusive of tires, parts, etc.

The United States would probably not have made much of an impression in South America if it were not

Digitized by Google

for the European war. For the 12 months ending June 30, 1913, this country exported 2820 automobiles to South America, valued at $3,165,205. This dropped to 1985 cars exported for the 12 months ending June 30 last, valued at



$1,939,212. While no clear explanation is offered for this decrease, yet it might be said that Europe "tightened up."

South America did not recognize the United States in a financial way, and the United States was more or less indifferent to the Latin countries south of its Panama canal. All clearings were made through London, and rubber shipments from Brazil came to this country by way of London. However, this has now been eliminated, and South America has appealed to this country to establish direct steamship communication. This is now being accomplished, and Brazil has turned a large number of her ships into the American service. Direct credits between the two countries must be established at the same time the shipping service is inaugurated, or there will be further complications.

This phase of the work is being handled more rapidly than the shipping end of it. Various American banks are establishing branches in South America, which will permit credits to be handled direct with this section. The American Express Company and the New York Central Railroad Company have sent special representatives to study conditions, with a view of improving transportation facilities in South America. American manufacturers are invited to take advantage of the services of these representatives, and any work within reason will be done by them gratis and reports furnished. Such requests should be made to the American Express Company, 65 Broadway, New York City, care of the South American department.

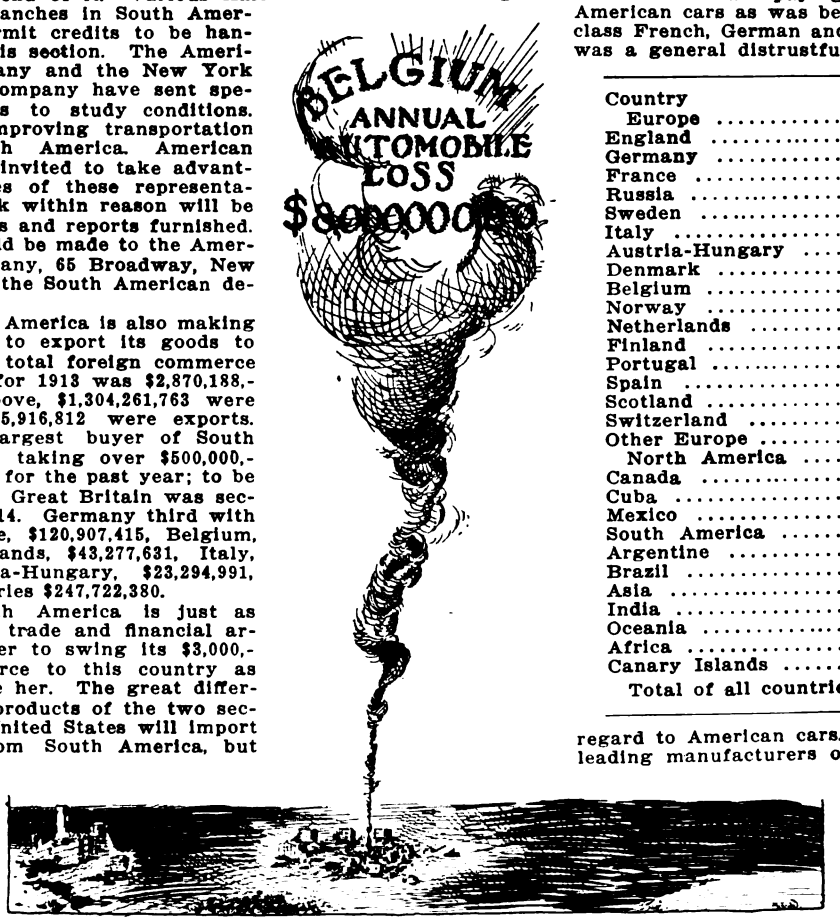
Naturally South America is also making a strenuous effort to export its goods to this country. The total foreign commerce of South America for 1913 was $2,870,188,575. As stated above, $1,304,261,763 were imports and $1,565,916,812 were exports. America is the largest buyer of South American products, taking over $500,000,000 worth of goods for the past year; to be exact, $504,378,212. Great Britain was second with $316,419,914. Germany third with $192,394,702, France, $120,907,415, Belgium, $62,557,566, Netherlands, $43,277,631, Italy, $27,964,001, Austria-Hungary, $23,294,991, and all other countries $247,722,380.

Obviously, South America is just as anxious to perfect trade and financial arrangements in order to swing its $3,000,000,000 of commerce to this country as America is to have her. The great difference between the products of the two sections is that the United States will import raw materials from South America, but will export manufactured articles to it.

America will buy the crude rubber from Brazil and will sell back the same rubber in the form of automobile tires. This will mean a great deal more to the American manufacturer than it will to South America. Brazil furnishes approximately 40 per cent. of the supply of rubber, but heretofore all of this rubber has been brought to this country by foreign vessels, through foreign ports.

Experts, who have analyzed the situation, state that the only reason the European products, especially the European automobiles, were popular in South America, was because of the excellent shipping facilities. The campaign of the American automobile manufacturers could not be as aggressive as that of the foreign makers, and the securing of parts for the American car was naturally more difficult than for the foreign makes. The South American, like everyone else, wants a good, cheap quality car, and it is safe to say that the American manufacturer is the only one who can supply such a demand.

While the larger manufacturers were sitting back and resting on their laurels from business gained in this and European countries, a number of independent traders were fleecing the Latin-Americans on American car sales. Cars that sold for $1000 in this country fully equipped, were palmed off on the South Americans for $2500 to $3000 without the equipment. The duty is 10 per cent. on American cars, and the cost of shipment is not extremely heavy. In 1912 the total imports of automobiles in Argentina were 4281 cars. Of this number, 1651 were imported from France, 708 from the United States, 627 from Germany, 451 from England, 422 from Italy and 295 from Belgium. However, when the public of Argentina discovered it was paying the same for cheap American cars as was being asked for high-class French, German and British cars, there was a general distrustful feeling created in regard to American cars. But now that the leading manufacturers of the United States are taking a hand, the entire situation will be placed on a businesslike basis, with an idea of securing and permanently maintaining commerce between South America and this country.



While the outlook is extremely bright for the United States, yet the war has made a pathetic figure of Belgium. By using this country as one of the principal battlefields of Europe, the warring nations have caused, among other things, the wiping out of the automobile industry of that country. After a hard struggle the Bel-

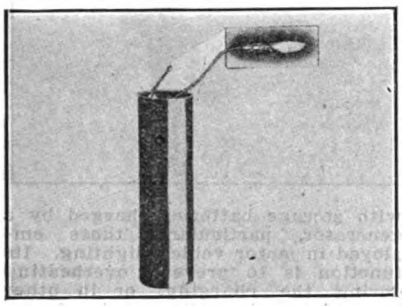
ACCESSORIES, SUPPLIES AND FITTINGS.

(Always Mention the Accessory and Garage Journal When Writing for Prices, Etc.)

PREST-O-TORCH.

Provides Convenient Soldering Equipment Using Acetylene.

The Prest-O-Torch, made by the Prest-O-Lite Company, Inc., Indianapolis, Ind., is a useful and practical



accessory for the motorist, as with it soldering and brazing may be accomplished without resorting to the gasoline torch, etc. One of the desirable features of the Prest-O-Torch is that it can be connected to the Prest-O-Lite tank. The torch is but two inches long and ½-inch in diameter. Its compactness makes for convenience in storing, as well as enables the user to reach places not easily accessible with the usual soldering equipment. The flame of the Prest-O-Torch is small, but it is intensely hot. It is easily controlled, as the supply is taken from the gas tank. It is particularly adaptable to the requirements of the motorist, as it can be used out of doors as well as in the garage.

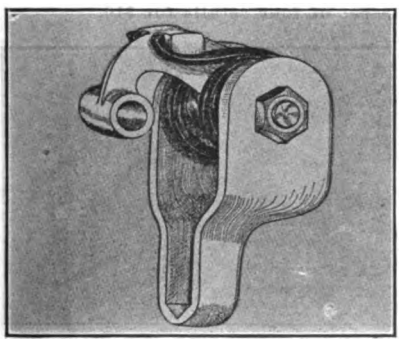
TREMO SHOCK ABSORBER.

Relies upon Torsional Spring to Obtain Resiliency.

The D. Henry Bonner Company, 96 Plympton street, Cambridge, Mass., maker of the well known Tremo exhaust operated horn for all types of gasoline motor vehicles, is marketing the Tremo shock absorber, which comes in sets of four or in pairs, as is desired by the purchaser.

The Tremo is the result of careful experimentation and tests and relies upon the principles of torsional spring action to obtain resiliency, quick action and durability. The maker states that this principle was adopted and applied to the Tremo because the strain comes with the draw of the metal and is not so apt to be affected by a sudden jar.

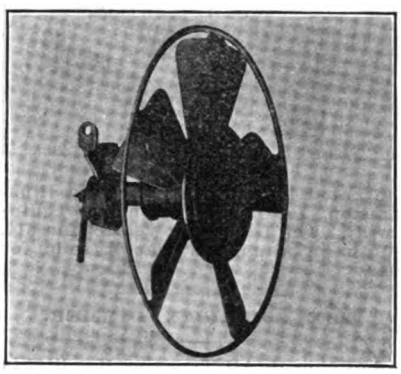
The construction of the Tremo not only permits of easy attachment, but the suspension is such that should an absorber spring break, the journey can be continued, as the car spring is effectually shackled. This permits of operating the machine until it is convenient to replace the spring, which is stated to be accomplished quickly and easily. The Tremo shock absorbers retail for $12.50 a set of four or $7 a pair. Further details will be supplied by the maker upon request.



BEARTONE FAN HORN.

A Mechanical Signal Operative Only When Motor Is Running.

The Oakes Company, Indianapolis, Ind., is marketing the Beartone signal, which is a combination fan and horn. The maker states that it embodies the same mechanical action as the high-grade motor driven horn, but requires no current or wire for operation. It has the same action as a hand horn, but is operated by pressing a button, and one of the features of the new signal is that the volume of sound may be varied by the pressure. A desirable quality of the signal is that the horn cannot be

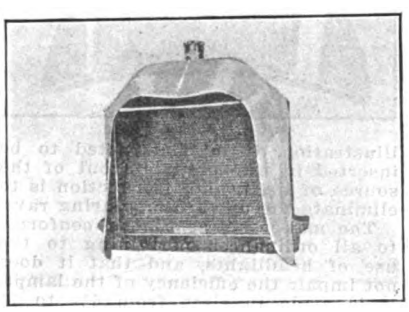


operated when the motor is not running, which prevents tampering.

IDEAL FORD RADIATOR.

Is Provided with a Wind Scoop to Prevent Overheating.

The Ideal Sheet Metal Works, 2807-2809 Michigan avenue, Chicago, Ill., specialist in radiators, has brought



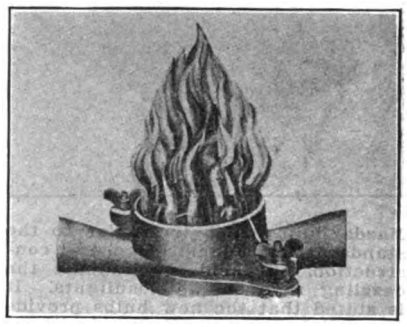
out a unique design for the model T Ford automobile. The radiator embodies the same principles as are used in the larger and standard types produced by this company, the water separating and circulating through every section. All bends are on a slant, preventing the accumulation of sediment.

The corners are rounded and all components carefully soldered all the way through. A feature of the design is the wind scoop, which is intended for those motors having a tendency to overheat. This wind scoop can be applied to any standard Ford radiator and lists for slightly extra.

MODERN VULCANIZER.

Moderately Priced and Adaptable to Tubes and Casings.

The Modern Specialty Company, Racine, Wis., is marketing the Modern vulcanizer, which is adaptable



for repairing casings, as well as tubes. The heater is made in four sections and is so arranged that the flames cannot converge and overheat at any one point. The heat is conducted by centre bars, and it is stated that the aluminum surface heats uniformly and to the proper temperature. The Modern vulcanizer is equipped with a clamp arrangement for work on tubes and a chain for repairing tires. It sells for $2.75.

HANDY POWER PUMP.

National Motor Supply Company Producing a Small Design.

The National Motor Supply Company, Cleveland, O., has brought out a small production of its well known National telescope pump for small cars, such as the Ford, Metz, etc. It is also adaptable to cyclecars. The National is constructed similar to the internal combustion engine, having a cylinder of gray iron and a piston. The last named member is turned from a solid steel bar. The National pump is constructed with the same high-grade material and workmanship for which the products of this concern are noted, and will inflate a Ford tire to 60 pounds in two minutes. A pressure of 150 pounds is obtainable if desired. The pump screws into the spark plug opening in the cylinder, has 10 feet of extra heavy, fabric covered hose, with dial pressure gauge in line if desired.

The company is also marketing the G-Wiz steam vulcanizer, a small edition of the Wizard, and intended for tires and tubes 3½ inches and smaller. The water utilized is enclosed in a metal body and the supply does not require replenishing. The heat is automatically controlled, and the vulcanizer can be successfully employed by the most inexperienced. Complete instruction and supplies accompany each outfit, which weighs but two pounds. The price of the G-Wiz vulcanizer is within the reach of all.

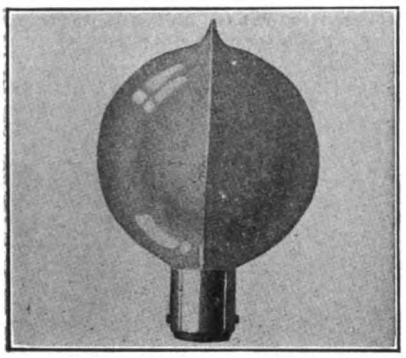
GUIDE NO-GLARE BULB.

Special Lamp Eliminating Dazzling Rays of Headlights.

The Guide Motor Lamp Manufacturing Company, Cleveland, O., is producing what is termed a No-Glare



Mazda bulb, which is similar to the standard Mazda lamp in general construction, but held to eliminate the dazzling rays of the headlights. It is stated that the new bulbs provide a parallel ray, as well as side illumination, but the upward rays are eliminated, preventing glaring. The new design can be utilized in any headlight equipped with an Ediswan socket or fittings, and is made for large machines as well as Ford cars.

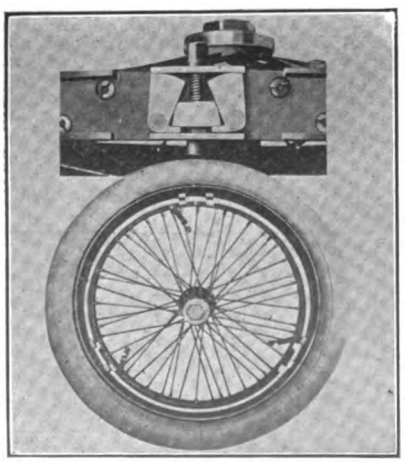
SPRANGER WIRE WHEEL.

Utilises Quick Detachable Rim in Place of Usual Hub.

The Spranger wire wheel is manufactured by the Spranger Rim & Wheel Company, Detroit, Mich., and the construction has several interesting features. The maker states that it is the only wheel made in which the spokes are laced directly to a steel channel felloe, and that the construction obtains extreme rigidity, as well as eliminates any chance of the spokes loosening at the nipples.

The Spranger wire wheel has a patented demountable rim, the feature of which is the positive locking device operated by the loosening of three screws. The only tool necessary to operate the rim is a brace, which is supplied with each equipment. The maker states that the Spranger is the only wire wheel marketed on which any standard quick detachable rim can be employed without changing the construction of the wheel itself.

It is pointed out that the air space between the felloe and the rim assists materially in carrying off the heat from the tires and that, in using a demountable rim in place of a hub, a saving in weight is obtained. For a spare it is only necessary to carry

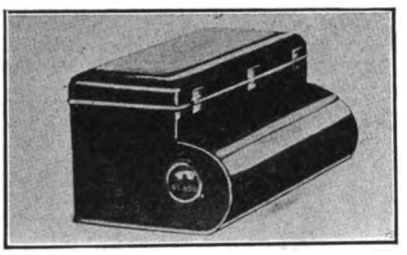


an extra rim, a further saving in weight. Lightness is one of the qualities of the construction emphasized. The factory began operations with a capacity of 75 sets a day, which production will be increased to meet the requirements of the trade.

GLOBE COMBINATION BOX.

Permits Carrying and Locking up Gas Tank, Batteries and Tools.

The Globe Machine & Stamping Company, Cleveland, O., is manufacturing what is termed the style B Globe box. It is a combination affair in that provision is made to carry the type B Prest-O-Lite gas tank, batteries and tools. The box is made compact to conform to narrow running boards, and is particularly adaptable to those boards setting out some distance from the chassis frame. The valve of the tank is protected by a canopy, preventing the clothes from catching and tearing, and the gauge is easily read, as may

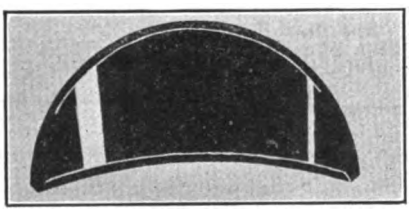


be noted by the accompanying illustration. A lock is standard equipment. The Globe box retails for $10. With an aluminum mat it sells for $12.

THE AMERICAN DIMMER.

Adaptable to All Types of Headlights and Eliminates Glaring.

The American Mantel Company, 910-936 Central avenue, Hamilton, O., is marketing a headlight dimmer for automobiles and motorcycles. As may be noted by the accompanying



illustration, it is constructed to be inserted in the lamp in front of the source of light, and its function is to eliminate the upward or glaring rays.

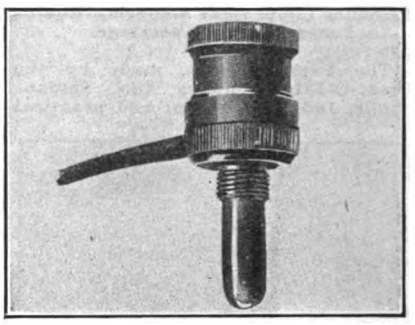
The maker states that it conforms to all ordinances pertaining to the use of headlights, and that it does not impair the efficiency of the lamps. It is made in sizes from 6½ to 11 inches and comes in black and aluminum finishes, or in bronze. The American headlight dimmer retails for 75 cents.

Ed. Note—Manufacturers of motor starters, electrical, mechanical, etc., are invited to forward illustrations and descriptive matter of their products applicable to the used motor vehicle. If cuts are furnished, they should not exceed 2 1/16 inches in width. Devices for making easy the starting of Ford and other small cars are particularly desirable at this season of the year by owners. Give street address when forwarding.

ANDERSON REGULATOR.

Controls Charging of Battery, Preventing Overheating.

The Economy Electric Company, Ambridge, Penn., is marketing the Anderson regulator, a device utilized



with storage batteries charged by a generator, particularly those employed in motor vehicle lighting. Its function is to prevent overheating during the charging, or in other words, it regulates the supply of current.

The maker states that the Anderson will protect the battery from overcharging, as it practically cuts out the current supply when the cells are fully charged. The device is applicable to any standard battery, is very compact, and the maker states that its advantages have been demonstrated in practical tests and not theoretically. It sells for $3.50.

ROB-ROY SHOCK ABSORBER.

Employs Spring Enclosed in Dust Proof Metal Cylinder.

The Rob-Roy shock absorbers are produced for the model T Ford car by the Rob-Roy Manufacturing Company, 259 Willis avenue, East, Detroit, Mich. The effects of vibration and shock are compensated for by a heavy spring enclosed in a dust proof iron cylinder. The spring is retained in the centre of the cylinder by the spring seat, and it is stated that it does not contact with the walls, thereby eliminating friction. The cylinder is attached to the car by two heavy spring shackles and the shackle and cylinder are a unit construction.

High-grade material and workmanship are qualities emphasized in the construction by the maker. The spring is of oil tempered steel and the bolts are hardened and ground. They are lubricated by dust proof oilers and grooved to insure proper lubrication of the bearing surfaces. The cylinder enclosing the spring is black enamel, baked on.

The company states that a set can be installed in 30 minutes by the motorist and that the only tools necessary are a wrench and the special tool supplied with each equipment. It is claimed that it is not necessary to displace the wheels, hangers, tie-rod or other components of the car. A set of four retails for $10.

DRESSEL SIDE LAMP.

Electric Light Having Ratchet Bracket and Flat Socket.

Equipping used cars with electric lighting involves the employment of side lamps if the headlights are not

provided with dual bulbs. The Dressel Railway Lamp Works, 3860-3880 Park avenue, New York City, specialist in lamps, is marketing a side light which is equipped with a ratchet bracket and flat socket, a construction adapting it to easy installation.

Its dimensions are: Height, 5½ inches; depth, six. Option is given on an Ediswan or Edison socket, and either a tungsten or carbon lamp of four candlepower and any voltage may be utilized. The reflector is of highly polished aluminum, and the glass is a five-inch white optical lens. The finish is black enamel. The maker calls attention to the simplicity and strength of the design and states that it is very economical of current. The Dressel Railway Lamp Works produces a variety of lamps for motor vehicles and issues a complete catalogue of its product.

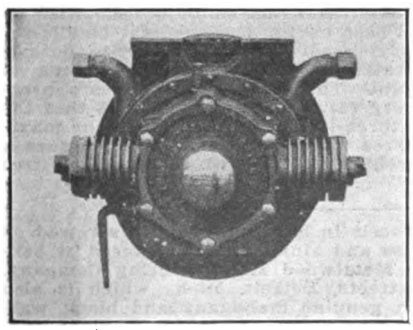
THURBER ROTARY DEVICE.

Combines Starter and Pump and Is Employed for Inflating Tires.

The Northern Engineering Works, Detroit, Mich., is manufacturing the Thurber rotary starter, which is adaptable to any motor vehicle, and it operates on the compressed air principle. Mounted at the front of the chassis is the combined rotary engine and air pump, a unit construction, and the starter proper obtains its energy with a small amount of air by means of reduction gearing.

The starting device operates on the well known rotary principle, and is actuated by placing the foot on the starter button mounted on the footboard of the car. This allows air from a tank to flow to the rotary construction, which includes an automatic clutch, which comes into operation when energy is applied to the engine shaft. Upon the motor starting all parts of the starter become inactive, with the exception of a central shaft, which is mounted on ball bearings.

The supply of air in the tank is

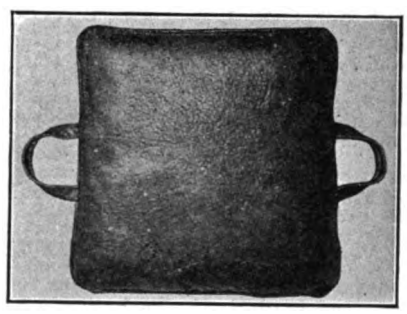


maintained by a pump and a dash gauge indicates the amount on hand. The pump is controlled by a pedal and the supply is renewed as required. Provision is made for utilizing the air for inflating tires, and the maker states that the Thurber double-acting valve absolutely prevents loss of air, assuring positive starting of the motor.

ARSENAL TONNEAU CUSHION.

Constructed to Eliminate Fatigue Experienced on Long Trips.

The Arsenal Varnish Company, Rock Island, Ill., is manufacturing the Arsenal tonneau cushion, which is designed to be utilized as a support to the small of the back, thereby preventing fatigue when the car is traversing rough roads or long tours are undertaken. They are also serviceable in the driver's seat. The tonneau cushions are made in dark green, high-grade upholstery leather, and the maker states that they can be utilized in the home, as well as in the car, as they are attractive in ap-



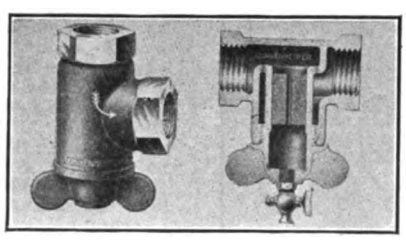
pearance The cushion retails for $3.50. A feature of the tonneau cushion is that it is easily cleaned, and is durable.

LUNKENHEIMER STRAINER.

Has Removable Gauze Filter, Easily Accessible and Displaced.

The Lunkenheimer Company, Cincinnati, O., maker of motor vehicle specialties, produces a number of gasoline strainers, two types of which are shown in the accompanying illustration. That at the right is a longitudinal view of the horizontal filter. This type is for service on motor vehicles and motor boats and is incorporated in the fuel line between the tank and the carburetor.

The device is provided with a

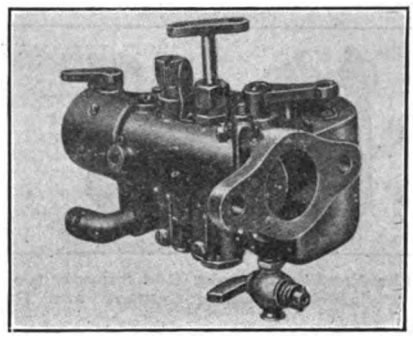


strainer, which prevents water or foreign elements reaching the carburetor, as these materials are collected by the large trap or chamber in the bottom of the filter. One of the desirable qualities of the Lunkenheimer is that, in addition to the usual petcock, means are provided for easily cleaning the strainer proper. A wing shaped cap screws into the main body of the filter, permitting the displacement of the strainer when desired. The Lunkenheimer strainer comes without the petcock, which is furnished upon order. The illustration at the left is that of the angle type strainer. The prices vary according to the size, etc.

MARVEL CARBURETOR.

Model N Is for Ford and Can Be Installed Easily.

The Marvel Carburetor Company, Flint, Mich., whose product is utilized on several well known motor



vehicles, is marketing a carburetor especially constructed for the model T Ford motor. The Marvel is very compact, and one of its qualities is that it can be installed without any alterations. The pipe for utilizing the heat of the exhaust can also be employed.

A feature of the Marvel is the simplicity of its construction and the provision made for controlling the supply of air. The air adjustment is conveniently located on the top of the carburetor, and the usual valve for shutting off the air supply when starting is incorporated. This is operated by a rod extending to the front of the radiator. The fuel needle valve is so arranged that the Ford dash control rod is utilized. As previously stated, the Marvel may be installed without any changes. Economy of fuel, flexibility and ease of starting are features of the construction emphasized. The carburetor is known as the model N and operates on the same principle as the well known model E. The Marvel Ford carburetor retails for $8.

G-P MUFFLER CUT-OUT.

Made in Two Sections and Is Attached Without Flanges.

The G-P muffler cut-out, manufactured by the G. Piel Company, 13th street and Boulevard, Long Island City, N. Y., is made in two sections, and the maker states that the construction of the valve tongue and its seat is such, that when the cut-out is open, the line to the muffler is completely shut off. Also, that a correct angle is obtained for deflecting the exhaust gases freely without creating any back pressure.

One of the qualities of the construction emphasized is that when the cut-out is closed the pressure of the gases cannot open it. It is also stated that carbon or soot will not collect on the seat. An advantage claimed in the cut-out is that the area of the sections being greater than any of those of the exhaust line, the volume of sound obtained is intensified. Sizes up to and including 1¾-inch retail for $4.50; others are proportional.

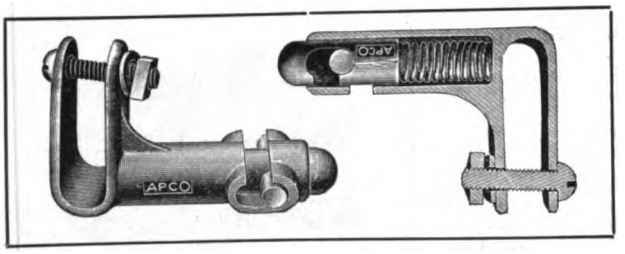
APCO BRAKE ROD SUPPORTS.

Auto Parts Company Brings Out New Design for Ford Car Having Self-Lubricating Feature.

The Auto Parts Company, Providence, R. I., whose trade name Apco is well known to the trade and owners of the model T Ford car, announces a new brake rod support for the Ford machine. It replaces the original supports, prevents rattling and breakage, and reduces wear on the clevis pins to the minimum.



The New Apco Brake Rod Support for Ford Cars, Having Self-Lubricating Feature and Easily Attached.

One of the features of the Apco support is the ease with which it may be fitted by the owner. As may be noted by the accompanying illustrations, a plug is contained within the support proper, and is not removed when fitting the device to the radius rods. This plug is held in proper contact with the brake rod by a spring, and the space back of the plug is packed with grease, which finds its way through a hole in the plug to the friction surfaces. The construction eliminates wear on the parts and insures easy movement of the brake rod in service.

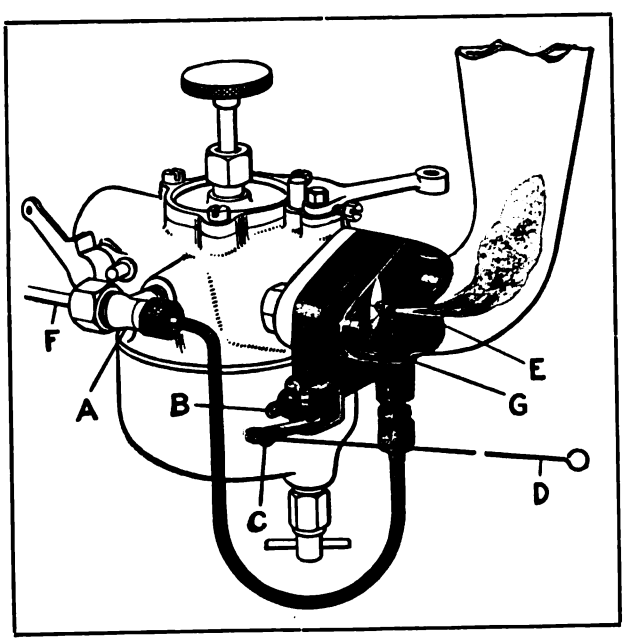
The Apco brake rod supports are made of semi-steel and sheradized to prevent rusting. They are easily attached to the radius rod by removing the threaded bolt and slipping them into place. As is obvious from the illustration, the brake rod is fitted by moving back the plug member. The Apco steel brake rod supports retail for 50 cents and the bronze for $1. The Auto Parts Company has reduced its prices on a number of specialties for the Ford car, and the trade is invited to write for the revised quotations.

THE INJEX PRIMER.

Sprays Gasoline from the Supply Pipe Directly into the Intake Pipe or Manifold.

A very timely device, now that cold weather is here, is the Injex primer, offered to the trade by the Reflex Ignition Company, 211 High avenue, Cleveland, O.

It will be seen, by reference to the illustration which shows the flange type, that connection with the gasoline supply pipe is made through a T marked A, located at the carburetor. From this point a curved pipe runs to the spray nozzle E, located directly in the intake pipe in the flange type, or in the intake manifold in the manifold type. The lever C is operated by a pull wire, terminating in a ring D, which may be brought out either at the radiator or dash. For starting, this ring is pulled, actuating the plunger B, drawing a charge of gasoline into the primer cylinder, this charge being forced through the spray nozzle, on the release of the ring, by the action of a strong spring behind the plunger.



The Injex Primer, Showing Flange Installation.

The primer is manufactured in two types, the flange form being illustrated, which is built in three sizes, for 1⅛, 1¼ and 1½-inch carburetors. The manifold type is built in one size only. The flange primer is installed, as shown, between the carburetor and the intake pipe, and the manifold style may be placed at any convenient point on the intake manifold.

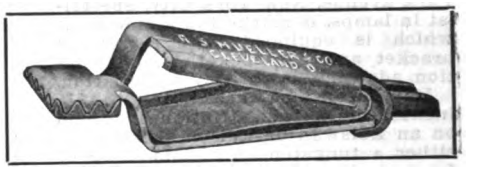
The ease of installation and the low price of $2.50 should make this a very fast selling accessory.

UNIVERSAL TEST CLIPS.

A Practical Time and Labor Saving Device for Charging Batteries Singly or in Series.

The very general use of electric lighting and motor starting systems provides the garage an opportunity to increase its profits by charging batteries. Ordinarily when a battery is placed on the charging table, more or less time is consumed in removing the terminals and connecting the leads from the source of current supply.

R. S. Mueller & Co., 431 High avenue, southeast, Cleveland, O., is manufacturing the Universal test clip shown in the accompanying illustration. With this device considerable time and labor is saved, as the jaws of the clip have a wide spread and the clip can be instantly attached to the battery terminals.



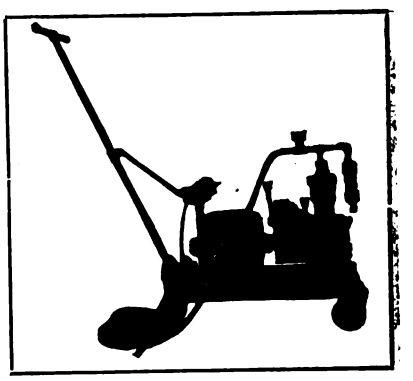
Mueller's Universal Test Clip.

The clips will carry 15 amperes without heating, are made of copper and are indestructible. The design provides means for charging in series, as a number of clips can be wired. The Universal test clip sells for 15 cents in single lots, with a suitable reduction in price in quantity.

VELOS PORTABLE COMPRESSOR.

A Complete Electric Equipment Mounted on a Metal Base and Having an Efficient Pump.

There are several uses to which the compressor can be put in the garage, repair shop and service station. For the garage it is a convenience for the customers, as well as employees, as with it a tire can be quickly and easily inflated at a small cost of upkeep. Where the customer has tire changes made, a compressor affords a garage an opportunity to add materially to its profits. The equipment is also of service in cleaning upholstery, and the air is useful in the repair shop.



Velos Electric Garage Compressor.

The Philadelphia Timer & Machine Company, 51st street and Lancaster avenue, Philadelphia, Penn., specializes in compressors, and the equipment shown in the accompanying illustration is the Velos, a portable electrical outfit. The compressor and motor are mounted on a three-wheel metal base having a convenient handle for moving the apparatus about the building. The hose is of the best grade material and is sufficiently long to meet all requirements. The equipment includes a pressure gauge and safety valve. The maker states that the Velos will inflate a three-inch tire from flat to the maximum pressure in three minutes. The company issues a catalogue of its product, which will be furnished free upon request.

Bent steering wheels in hard maple, with screwed on spiders in both brass and aluminum, are offered at bargain prices by the Metalwood Manufacturing Company, Leib and Wright streets, Detroit, Mich., which is also prepared to furnish genuine mahogany and black walnut wheels with concealed rims and inserted spider.

NEW CONCERNS AND BUSINESS CHANGES.

AGENCIES AND DEALERS.

E. Briggs, Sacramento, Cal., has opened a tire and accessory business in the garage of the Casey Company on M street.

The Fayetteville Auto Company, Fayetteville, Tenn., is the name of a new concern doing business there. Ford and Dodge cars are carried.

The Morgan & Marshall Tire Company, East Liverpool, O., has opened a branch at 36 16th street, Wheeling, W. Va.

The Panama Tire & Rubber Company, Newark, N. J., located at 231 Halsey street, has taken the agency for Power Gas, a new product, which can be mixed with gasoline, and is said to be free from carbon producing elements.

The Auto Supply Company, Milwaukee, Wis., has opened a branch store for Ford accessories exclusively at 152 Eighth street.

The Tire Shop, Milwaukee, Wis., is the name of a new company conducting a tire business at 88 Biddle street.

The Lewis Automobile Company, St. Louis, Mo., has opened a new showroom at the corner of Walton and Washington avenues.

The Simplex Tire Repair Company, Omaha, Neb., has been formed and opened a store and tire repairing department at 2110 Farnum street.

The W. G. Hirsig Company, Nashville, Tenn., has opened a large automobile supply house at Ninth avenue and Broadway. The company carries a full line of supplies and accessories.

The Broad Oak Automobile Company, Columbus, O., has opened a display room at 172 North Fourth street. The company handles the Pierce-Arrow, Chalmers and Saxon cars.

The McClure Tire & Rubber Company, Columbus, O., has taken the agency for Keaton black tread tires.

M. W. Weil, Toledo, O., has opened a Stewart-Warner service depot at 305 10th street.

The Front-Market Motor Supply Company, Harrisburg, Penn., has opened for business at Front and Market streets. A complete line of supplies is carried.

The Chew-Goucher Company, Washington, D. C., has opened a tire and accessory store at 1620 14th street.

The Hardman Tire & Rubber Company, Jacksonville, Fla., has opened a salesroom at 821 Miami street.

The Everett-Thompson Company, Indianapolis, has been formed to act as distributor of Dayton airless and Dayton pneumatic tires. The company is located at 5 West North street.

L. W. Worsham, Houston, Tex., has opened an automobile store at 1605 Main street and will handle the Chalmers car.

The Vixen Motor Car Company, Chicago, Ill., has opened offices and salesrooms at 2007 Michigan avenue. The Vixen light car is handled.

The J. B. Burwell Supply Company, Oklahoma City, Okla., has opened an automobile supply house at 323 North Broadway.

The Ohio Electric Agency, Louisville, Ky., has opened a salesroom and service station at 602 Fourth street.

L. T. Adams, Taft, Cal., has opened a first-class automobile accessory store on Fourth street. He handles the Lee tire.

Wesley House, Wheeling, W. Va., has opened a bicycle and motorcycle store on Market street. A complete line of accessories and supplies is carried.

Will Austin, Lawton, Okla., has opened a motorcycle shop at 407 Fourth street. He is agent for the Flying Merkel motorcycle.

GARAGES AND REPAIR SHOPS.

B. A. Krandall, Seattle, Wash., has opened a completely equipped service shop and garage at Fifth avenue and Wall street.

C. A. Nelson, Haverhill, Mass., has opened a garage at 212 Main street.

The Blackwell Garage & Auto Supply Company, Blackwell, Okla., composed of Messrs. Clark and Nelson, has opened a garage on East Blackwell avenue.

Henry Blomgren, North Conway, N. H., has opened a garage and repair shop.

The White House Auto Repair Company, Penn Yan, N. Y., has started business in the plant of the Penn Yan Flexible Conduit Company.

The Island Tire Repair Company, Wheeling, W. Va., has started business at 8 South Huron street.

H. Foster, St. Louis, Mo., and G. Hueppner, formerly with the Overland Company, have opened a modern repair shop at 1023 South Vandeventer avenue.

Hubbard's Garage, Bakersfield, Cal., opened recently at 23rd street. A first-class repair shop is conducted.

Elmer Shear, Thawville, Ill., has opened a motorcycle garage.

The Hamilton Garage Machine Company, Stroudsburg, Penn., has commenced business at Sand Hill, in which W. Green and M. Allegar are interested.

Clyde Hoskins, Edwardsville, Ill., operating a welding shop at North Main street, has purchased a half interest in the Broadway Garage and has removed his welding business to that address.

G. H. Falick, Wichita, Kan., has sold his automobile supply business to the Hocakday Auto Supply Company.

A. Jordan, Danielson, Conn., will open a first-class garage and repair shop.

The Bering Tire & Rubber Company, Houston, Tex., has opened a vulcanizing plant.

J. H. Klingbeil, Strawberry, Ia., has opened an automobile tire repair shop in the Blake house, which is being remodelled.

The Independent Auto Repair Shop, Fort Dodge, Ia., has opened for business in the Lanforsweller building.

The St. Louis Auto Inn, St. Louis, Mo., has opened a garage and repair shop at Jefferson street. F. Schwenk and H. E. Schillings are interested in the project.

Jesse Adamson, Chicago, Ill., and Charles Manning have opened an automobile repair shop at 3021 Michigan avenue.

A. S. Benson, Monroe, Wash., has opened the Monroe Garage.

M. S. Clover, Dayton, O., has opened a tire repairing shop at 342 South Main street.

Paul Dalzell, Youngstown, O., has opened a tire supply shop and vulcanizing plant at 9 Chestnut street.

The Universal Motor Car Company, Harrisburg, Penn., has opened an up-to-date garage at 1826 Wood avenue.

Daniel Meehan, Wilkes Barre, Penn., has opened an up-to-date garage at 38 Terrace street. It is of fireproof construction.

S. W. Simpson, Grand Rapids, Mich., has opened a service station.

Mason J. Foft, Kingsley, Ia., has opened a garage.

The Electric Service Company, Indianapolis, has opened a service station at Walnut street.

The Manayunk Empire Garage, Roxborough, Penn., has been opened by Joseph D. Chiorano.

The Auto Service Company, Salisbury, N. C., has opened a garage and repair shop. The company is located at 115 East Council street.

The Raymond Garage, Raymond, Kan., has opened a garage and repair shop. N. J. P. Sendergard is manager.

TRANSFERS.

The Crescent Motor Company, Washington, D. C., is now owned entirely by E. S. Harnden, who recently bought out the half interest of C. M. Dow. The business is located at 1612 14th street, N. W. The company handles the Hupmobile car.

The Missoula Motor Car Company, Missoula, Mo., has been formed and has taken over the business of the Missoula Auto Company at East Main street. The new company will conduct a general automobile business.

Frank C. Perry, Jackson, Mich., has purchased the Briscoe Motor Sales Company and will operate the business. He was formerly with the Cutting Motor Car Company.

Herbert H. Downing, Littleton, N. H., has purchased the interest of his partner in the garage business at Apthorp and will conduct it alone.

M. J. Harman, Milo, Me., has purchased the garage business of W. N. Freeze.

R. B. Cutting, Lyndonville, Vt., has sold his garage to E. C. Monroe.

The Liniger Automobile Company, Omaha, Neb., has bought J. A. McIntyre's interest in the McIntyre Automobile Company.

The Auto Garage, Chillicothe, O., has been purchased by Homer S. Kay and Hugh M. Lynch. Ford cars are handled.

The Hoopeston Auto Company, Hoopeston, Ill., has been bought by B. George Prebe and Frank Ham.

The Hedrick Auto Company, Hedrick, Ia., has been purchased by O. E. Tjorne and he has combined it with his garage.

R. Adrian, Jefferson, Ia., has sold his garage on South Cherry street to August Greiner.

Arthur Brothers Auto Garage, Spirit Lake, Ia., has been purchased by W. W. Stone and William Cramer.

B. R. Mills, Woodbine, Ia., has sold his automobile business and garage to F. C. Krueger.

George E. King, Atchison, Kan., has purchased the business of the Smith Auto Supply Company and has removed the stock to his garage.

J. F. Douthet, Columbia, Ala., has sold his garage business to J. H. Brazeale and C. C. Copham.

Crown & Waldon, Des Moines, Ia., has sold its machine and automobile repair shop to James Gunn.

Kelfer Odum, Lebanon, Tenn., has sold his interest in the City Garage to L. D. Ramsey.

L. A. Mabbott, Palm Beach, Fla., has purchased the motorcycle business of Teder & Hill.

THE ACCESSORY AND GARAGE JOURNAL

VOL. IV. NOVEMBER, 1914. NO. 7.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

SHOW NUMBERS.

As in the past, the show numbers of the Accessory and Garage Journal will be replete with valuable data for the jobber, dealer, garageman and repairman. The December issue will be the advance number of the New York show and will contain detailed information of the new cars, as well as of parts, material, equipment and supplies, many of which will be exhibited for the first time. The January and February issues will be the review numbers of the New York show and these will be of particular interest to the trade inasmuch as they will contain complete information on the Chicago exhibits. One of the many features of the show numbers will be detailed specifications, prices, etc., of all gasoline and electric pleasure and commercial vehicles.

INCREASED PROFITS.

There is an excellent opportunity for the garage to add materially to its profits by specializing in the care of storage batteries. With electric lighting and motor starting standard equipment on the new models, and even on the popular-priced motor vehicles, the services of an expert electrician are not necessarily required when the system develops troubles due to the owner not complying with the instructions of the maker of the battery. Carelessness upon the part of the motorist is largely responsible for battery troubles. Generally a battery giving trouble can be restored to its maximum efficiency by proper charging, and as apparatus adaptable to lighting and starting batteries is not expensive, its installation not only obtains revenue for the garage, but convenience and service for the customer. Many owners of used motor vehicles rely upon the storage battery as a source of current supply for ignition, and this trade could be easily diverted to the garage.

REPAIR SHOP EQUIPMENT.

The equipping of the repair shop requires careful consideration upon the part of the proprietor, especially the selection of tools and machinery. In these days of keen competition, profit is made possible only with the installation of modern time and labor saving devices. While their first cost is more than that of ordinary equipment, they are well worth the increased expenditure and are soon paid for in the profits derived. Motorists are fast learning to analyze the costs of maintaining the motor vehicle insofar as the repair shop is concerned.

VALUE OF SHOWS.

The local automobile show is of distinct value to the dealer, and even the sub-agent will find it to his advantage to be present at the exhibit, as many of his future prospects are likely to be in attendance. In connection with these local shows it is interesting to note that the prospect desires specific information as to the cost of maintenance, fuel economy and practicability of equipment instead of speed. The day is past when a salesman can utilize speed as a selling point in his talk.

STOCKING WINTER SUPPLIES.

Now is the season for the dealer, garageman and repairman to give consideration to winter supplies and equipment. The time is not far distant when the owner will desire a lubricant adapted to his motor in cold weather, anti-freezing solutions, tire chains, etc. In these days the motorist generally desires his orders promptly attended to, and the progressive dealer anticipates these wants.

That there is to be an increasing demand for practical devices eliminating the dangerous glare of headlights, is indicated in the agitation against the use of powerful searchlights upon highways.

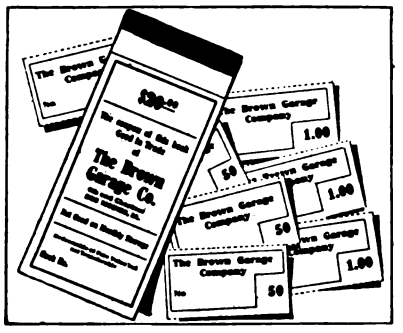
SIMPLE AND EFFECTIVE GARAGE SYSTEM.

How the Brown Garage, Des Moines, Ia., Having a Capacity of 300 Cars, Eliminates Complications and Cares for All Types of Machines,

THE system employed in the Brown garage, Des Moines, Ia., is worthy of description because of its simplicity and manifest effectiveness. Much thought has evidently been spent in eliminating those complications which often make the best systems impracticable in the hands of the ordinary employee.



Coupon Book Sold at a Discount by the Brown Garage.

The garage referred to specializes in service rather than repair work and in its new building, recently opened, provision is made for the care of all types of motor vehicle, commercial, gasoline and electric. The arrangement of space for these purposes is well thought out, and the equipment is of the best. Regular customers are handled on a monthly storage basis, with a schedule of rates for various forms of service, supplies being separately charged, and transients are cared for at fair rates.

Assigning Space.

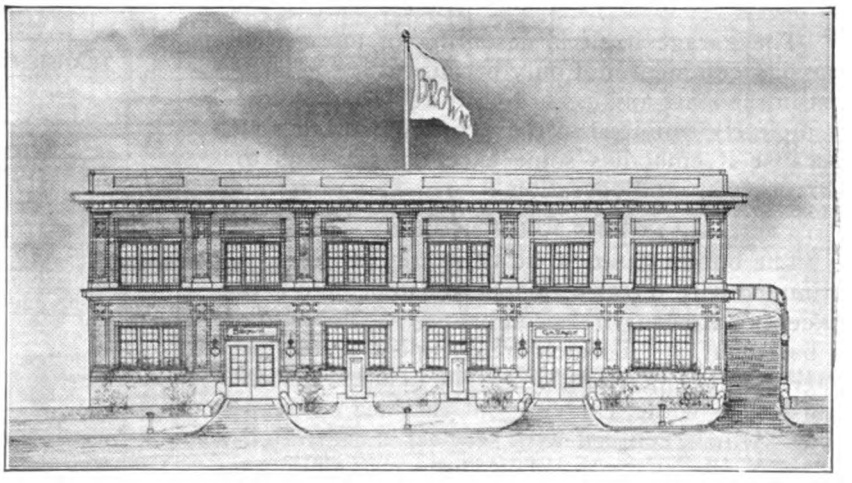
When a car comes in, whether for monthly or transient service, a space is assigned to it and a ticket is made out showing the transaction. If on the monthly basis, the card bears the name and license number of the car, the number of the space assigned, the owner's name, the month, and the rate which is payable in advance. This is signed by the owner, and kept by him. On the back, blanks are provided for use in case he desires to send some one for his car, in which event he fills out and signs the form which is an order for delivery on a specified date, upon presentation of which the garage will deliver the machine to the person designated, and will retain the ticket which has also been signed by the employee making the delivery, returning it to the owner in person. The value of this system in protecting customers from unauthorized use of their cars, without in any way imposing inconvenient restrictions, will be obvious and is an important feature of the system.

The ticket made out for transient service carries the license number, and provides space for the entry of the details and the price of supplies furnished and work done, as well as for the special instructions of the owner to which his signature is attached. The top of the card bearing the same serial number as the body of the ticket, is detached and given to the person bringing the car in, as a means of identification. While the monthly rate for full service covers all charges that are likely to be made, whether this or any of the several alternative rates are the basis of the transaction, a form is used for the entry of the separate items. That employed for electric vehicles is reproduced herewith, the upper half of the illustration being the face of the card, which is 10½ by 7½ inches, and the lower part showing the back. It will be seen that space is provided for a daily record of the details of service, full information being given both as a basis for billing and as a record of the condition and use of the car. The form on the back deals with the conditions of charging, and supplies valuable data as to the battery. Unless the monthly storage rate applies, the customer is billed for current, etc., directly from this record, the card itself being filed for reference.

Use Coupon Books.

For the payment of all items except monthly service, a $20 coupon book, sold at a discount of 2½ per cent. of its face value, may be used. Besides the saving involved, this feature is of value for owners who intrust their garage transactions to the chauffeur, yet hesitate to provide him with cash sufficient for the payment of these charges for any considerable time, or in any large amount.

While repair work is subordinated to service, a considerable volume necessarily comes in, and provision is made in the system for this branch of the business. The nature of the work is entered on a shop order, together with the owner's name and the make and license number of the car, the entry being signed by the person order-



The $100,000 Brown Garage, Des Moines, Ia.

ing the job, and the employee by whom it is taken. The space below is arranged for the record of the hours and the price of labor and, on the back, are carried the material items, and any special comment or memorandum not provided for in the other columns. This order, with the necessary copies for the various departments involved, takes full care of the job and provides the complete record necessary for filing and billing. Like all the other forms employed, it is both simple and comprehensive.

Rates for Electrics.

The rates a month in effect for electrics are as follows:

Full live service—according to distance..	$25.00 to $30.00
Full service less delivery.....	15.00
Live storage, with washing and polishing	10.00
Dead storage, with no attention to batteries	5.00
Normal battery charge.....	1.25
Partial and overcharge, a kilowatt.....	.06

The garage itself is deserving of more than passing comment, not only because it is the largest in the state and, according to report, the most completely equipped in the entire West, but also because it embodies some excellent ideas as to arrangement and operation.

Concrete Construction.

The building is of solid concrete construction trimmed with terra cotta and sandstone, and is of exceptional beauty. It comprises two floors and a basement, all of which are occupied by the garage and its appurtenances. The inside walls are finished in white, carrying out the idea of cleanliness which, coupled with service, is the watchword of the business. The absence of unnecessary piers, together with the carefully planned lighting arrangement, adds greatly to the spacious appearance of the floors, as well as facilitating the movement of cars. A novelty in garage construction, copied perhaps from the old time carriage factory, is the use of an incline outside the building for running cars to the second floor, avoiding the necessity of devoting valuable interior space to large elevators.

Store Commercial Cars.

The basement is devoted to commercial vehicles, the first floor is especially equipped for handling electrics, and gasoline cars are accommodated on the second floor. For charging, self-regulating devices are used, avoiding danger of injury to storage batteries, and gasoline, air and oil are supplied by the best systems which it was possible to install. Much care was used in placing the various taps and connections, to insure the greatest accessibility and convenience, and the resulting service is said to be the most complete with which a garage was ever equipped. Reasonable prices are charged for gasoline, oil and supplies; air, use of telephone, etc., are free, and comfortable rest rooms are provided for the accommodation of tourists and other patrons, the latter convenience being much appreciated by the ladies. There is also a well equipped waiting room for chauffeurs.

Adequate Facilities.

The accommodations are ample for 300 cars without crowding, and all the facilities are adequate for the care of the full number, or even more in an emergency. The spaciousness and capacity of the building are shown by the fact that its formal opening was in the form of a show, conducted by agents representing 35 makes of cars, all of which were exhibited on the main floor. Several trucks were shown in the basement and a considerable number of accessories on the second floor. The opening was an important event in local automobile circles, and was well attended.

The garage is located at Fourth and Chestnut streets, opposite the Brown hotel and next door to the Y. M. C. A. Its cost is stated as $100.000.

NEW EIGHT-CYLINDER CAR.

King Motor Car Company Announces That Model Will Be Ready for the New York Show.

Announcement is made, by the King Motor Car Company, Detroit, Mich., of a popular-priced, eight-cylinder car. The new model is to be fitted with a 40-45 horsepower motor and the equipment will be most complete, including electric lighting and motor starting. The new machine will be exhibited at the New York and Chicago shows, and deliveries are expected to be made after Dec. 30.

MULTIBESTOS BRAKE LINING.

A Material That Originated the Slogan, "The Grip That Grips."

Multibestos brake lining is the result of investigation and experiment and has been proved through many exhaustive tests. Not satisfied with the production of a merely good lining, nor willing to base its reputation on past history, the manufacturer of Multibestos has continually applied engineering tests calculated to show any point of weakness, or any opportunity for improvement. The requirements of brake linings are so varied and exacting and the failure of the braking system so often disastrous, that too much care cannot be exercised in the production of the materials used in the friction surfaces, and the dependable qualities of any lining are of the highest importance.

Realizing that the result of its investigations will be of interest, the Standard Woven Fabric Company, Framingham, Mass., the manufacturer of Multibestos, has prepared signed reports of the tests applied by its engineers, and will gladly send copies free on request.

SPACE FOR COMMERCIAL CAR MAKERS.

While No Trucks Are to Be Exhibited, Manufacturers Are to Have Headquarters at New York Show.

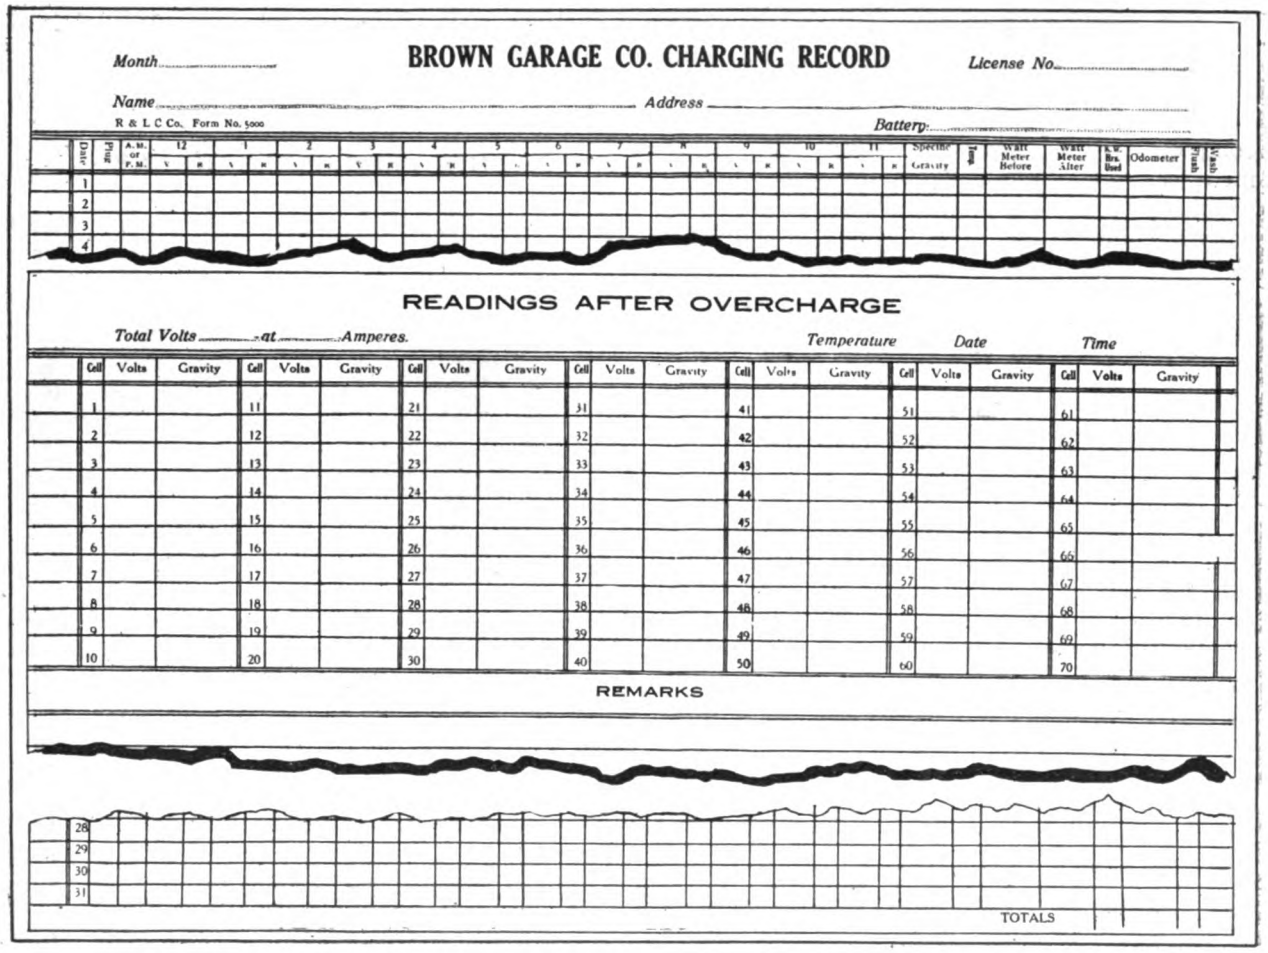
While there will be no display of commercial cars at the New York show, an arrangement has been perfected by the board of directors of the National Chamber of Commerce whereby headquarters will be established in the automobile division, where 31 commercial car makers affiliated with the chamber could meet dealers and those interested in such vehicles.

RHINELAND MACHINE WORKS COMPANY.

War Interferes with Importation of Ball Bearings and Fafnir Company Will Market Its Own Product.

The Rhineland Machine Works Company, New Britain, Conn., announces that inasmuch as the European war has interfered with the importation of Rhineland and R. B. F. ball bearings, it has been arranged that the Fafnir Bearing Company, New Britain, Conn., will market its product direct from the factory in the future. Heretofore the Rhineland Company has been acting as selling agent for the Fafnir concern, and the latter will now have its sales department at the factory.

D. D. Davis, who has been the Chicago manager of the Rhineland Company, will make his headquarters at New Britain, and will take charge of the sales of the Fafnir Bearing Company. The Rhineland Machine Works Company will continue to assist in the sale of the Fafnir bearings in conjunction with the sale of its large stock of imported bearings, and such R. B. F. and Rhineland bearings as are now coming in from Europe. The office of the Rhineland Company is at 1737 Broadway, New York City.



The Brown Electric Vehicle Charging Record.

FORM MOTOR STARTER COMPANY.

Detroit Starter Company, Detroit, Mich., to Manufacture Electric System for Motor Vehicles.

The Detroit Starter Company, incorporated recently at Detroit, Mich., is to market an electric lighting and motor starting system for motor vehicles, and plans a production of 200 equipments daily. The officers of the company are: J. W. Fitzgerald, president; F. J. Lamb, vice president, and A. B. Porter, secretary-treasurer.

The Harding Tire Agency, Hartford, Conn., is now a direct factory branch of the Hardman Tire & Rubber Company, Belleville, N. J., with W. Austin Crockett as manager.

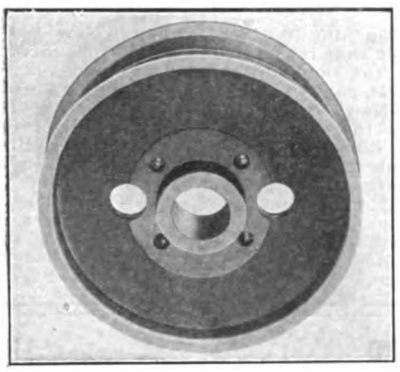
NEW PARTS, MATERIAL AND EQUIPMENT.

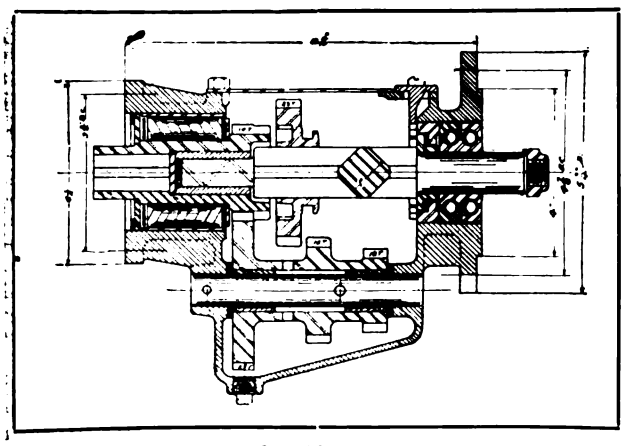
THE Oakes Pressed Steel Company, Indianapolis, Ind., is producing pulleys for motor vehicles, and the standard line includes material for cyclecars and light cars as well. The Oakes pulley is constructed of pressed steel, a material making for light weight, as well as enabling the reducing of cost production to the minimum. The pulley is furnished complete with keyway ready for attachment to the motor. One of the designs produced by the company is shown in an accompanying illustration. The Oakes Company particularizes in pressed steel parts, and metal stampings, plain, machined or assembled into specialties are produced to meet all requirements of the trade. Data and prices will be supplied upon request.



Oakes Pressed Steel Pulley.

LEFEVER TRANSMISSION.

The Lefever Arms Company, Syracuse, N. Y., maker of transmissions and jackshafts for both pleasure and commercial vehicles, is marketing a new line of transmissions for light pleasure vehicles. They are of the rear axle type and are available for assembly to light rear axles recently developed by the prominent axle manufacturers. The Lefever transmissions are very light and compact, and the same high-grade material and workmanship characteristic of the product of this concern are incorporated. The model 0900 is a two-speed and reverse, progressive type, suitable for cars of from 10 to 15 horsepower. That illustrated is the model 1800, a selective, three-speed and reverse design for cars of from 15 to 20 horsepower and not weighing over 1600 pounds.



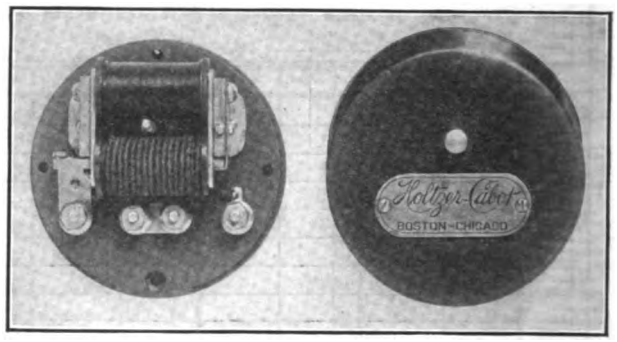
Lefever Transmission for Light Cars of from 15 to 20 Horsepower and Weighing Not Over 1600 Pounds—It Provides Three Forward Speeds and a Reverse.

ADJUSTABLE STEERING GEAR.

V. M. Moore, 5046 Lakeside avenue, Chicago, Ill., is marketing an adjustable steering gear of the worm and sector type. It involves the use of two parallel levers rigidly connected with the shafts of the sectors. These sectors engage with a worm and are operated by it. A right and left hand threaded locking screw is utilized to bring the levers into closer relation to each other, or to separate them, as may be necessary in the adjustment. It is pointed out that by this means the teeth of the sectors are maintained in proper contact with the worm, preventing lost motion. The sectors may be utilized until worn very thin.

HOLTZER-CABOT RELAY.

The Holtzer-Cabot Electric Company, Brookline, Mass., announces that its reverse current cut-out utilized with its magneto generators has been improved by the use of new contracts, larger binding posts and a new cover. The binding posts are now equipped with cupped washers, obtaining firm connections without the use of solder, and a weather proof cover encloses the terminals, preventing injury to the meter, etc. The type 6 magneto generator is improved by employing a larger capacity armature of the same size and by new pole shoes, the last named insuring an average output of five amperes. Complete details of the new equipment and line of generators produced will be supplied upon request.



New and Improved Cut-Out Utilized with Holtzer-Cabot Lighting Generator.

LOPPACKER PUMP.

Albert Loppacker, Bloomfield, N. J., is producing the Eureka combination air compressor and rapid cleaner. It comprises a four-cylinder pump, tank and hose, and the container may be utilized for kerosene, soap suds, or any other cleansing fluid, which is forced out at a high velocity. The flow of the fluid is controlled by a two-way valve. The equipment is designed particularly for the garage and repair shop.

McClintock & Weaver, 24 West Phil-Ellena street, Philadelphia, Penn.; one-story garage, $2000, for W. R. Eisenhower, to be erected at 608 West Upsal street.

Edwin M. Evans, 321 Sansom street, Philadelphia, Penn.; one-story garage, $400, for J. F. Schiller, 50th street and Wyalusing avenue.

J. S. Woodruff, 5545 Kenwood avenue, Chicago, Ill.; two-story garage, $2300.

GARAGES AND REPAIR SHOPS.

Henry B. Ferry, Boston, Mass., contemplates the erection of a brick garage at 21 Central avenue.

Myron E. Tripp, New Bedford, Mass., is erecting an up-to-date cement garage on Cottage street. Gideon Gray is also interested in the enterprise.

Middlesex Motors Company, Lowell, Mass., will erect a first-class garage.

Robert Plant & Son, Brooklyn, N. Y., contemplates the erection of a two-story brick garage at 552 Johnson avenue at a cost of $4000.

James R. Crelin, Philadelphia, Penn., will erect a modern three-story garage, 50 by 80.

W. M. Redding, Bade City, Fla., is erecting an up-to-date garage on Cherry street. With him in the deal is L. B. Bessenger. The company will handle Ford cars.

The United Machinery Company, Beverly, Mass., is erecting a garage for the accommodation of the company's large equipment of automobiles.

Walter P. Brower, Beverly, Mass., is planning to erect a garage on Lake View avenue.

B. H. Moulton, Beverly, Mass., is erecting a fireproof garage at 13 Cross street.

Ernest C. Currier, Ipswich, Mass., will erect a modern garage on South Main street.

The Converse Rubber Shoe Company, Edgeworth, Mass., is erecting a large garage near its factory on Pearl street for the accommodation of its commercial trucks.

The Winchester Auto Company, Winchester, Mass., is building a garage on Converse street.

Joseph Caneelmo, Philadelphia, Penn., is erecting a modern garage at 130 Dock street.

Bigler Brothers, Wyandotte, Mich., is planning to erect a garage on Biddle avenue.

G. A. Tomlinson, Duluth, Minn., is building a garage on Park avenue at a cost of $7500.

George F. White, Lowell, Mass., is erecting a large garage of brick and steel on Middlesex street to cost $8000.

Charles Ross, Little Falls, N. Y., will erect a first-class garage.

Frank Ganson, Urbana, O., proposes to erect a garage at the corner of East Court street.

Busch Auto Repair Works, San Francisco, Cal., will erect an up-to-date public garage at 63 Natoma street.

Moses Williams Estate, Boston, Mass., will erect a garage on Seventh street.

V. V. Goodard, Holyoke, Mass., has purchased property at 124 Chestnut street on which to build a modern garage.

Elmer Day, Gallipolis, O., is building a modern garage on Upper Fifth street. It will be two stories high and of brick construction and will include a machine shop.

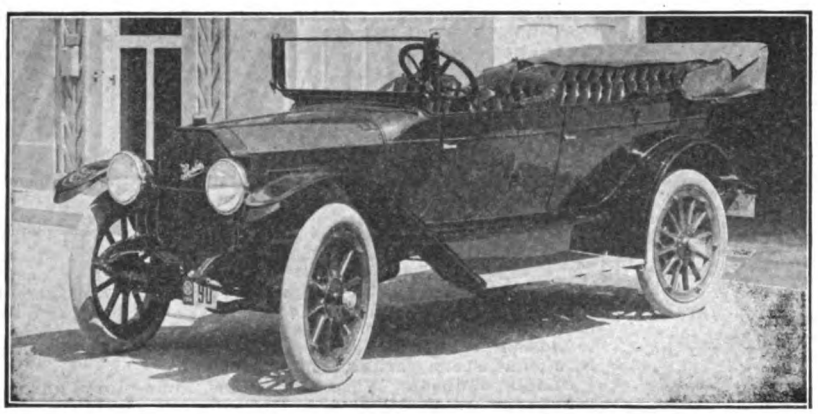
"ALL PURPOSE" PEERLESS.

New Light Four and Six Models Are Very Attractive.

A series of "All Purpose" cars have been announced by the Peerless Motor Car Company, Cleveland, O., for the 1915 season. These will be made in addition to the large sixes, which will be continued this year. The new models include a four-cylinder, 113-inch wheelbase model, selling for $2000, and a light six-cylinder, 122-inch wheelbase car, that sells for $2250. The four weighs slightly less than 3000 pounds and the six weighs just a trifle over that figure.

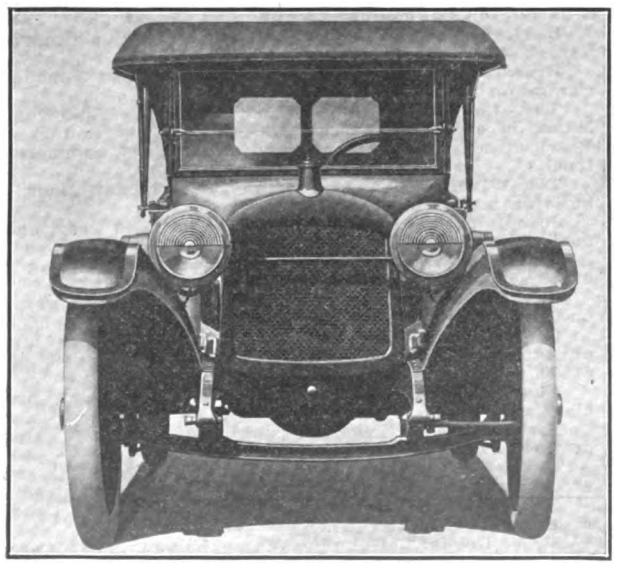


Three-Quarter View of Peerless "All Purpose" Four, Model 54.

With the exception of the bore and stroke, cooling system employed, capacity of oil reservoir, wheelbase and valve port diameter, the mechanical details of the new four and six models are identical. Both L head motors are cast en bloc, the four having a bore of 3¾ inches and a stroke of five, giving it a rating of 22½ horsepower by the S. A. E. formula. However, the manufacturer's rating is 37, which may be considered conservative when the piston displacement of 220.9 cubic inches is considered.

The stroke of the six is the same as the four, and the bore is 3½ inches. It develops 50 horsepower at 2200 revolutions a minute and has a piston displacement of 288.6 cubic inches. The cooling of the four-cylinder motor is by the thermo-syphon system, the Peerless fin and tube radiator having a capacity of six gallons. The capacity of the six radiator is five gallons, and the circulation is by a gear driven pump located at the forward end of the motor. The cooling is further assisted by a five-bladed fan mounted at the forward end of the cylinder block and adjusted by an eccentric. The drive from the pulley is by a V leather belt.

The lubrication is by the force feed and splash system. In the four-cylinder motor the oil is drawn from a compartment completely enclosed by wire gauze,



Front View of 1915 Hupmobile—Note Holophane Headlights and Castor Effect of Front Axle.

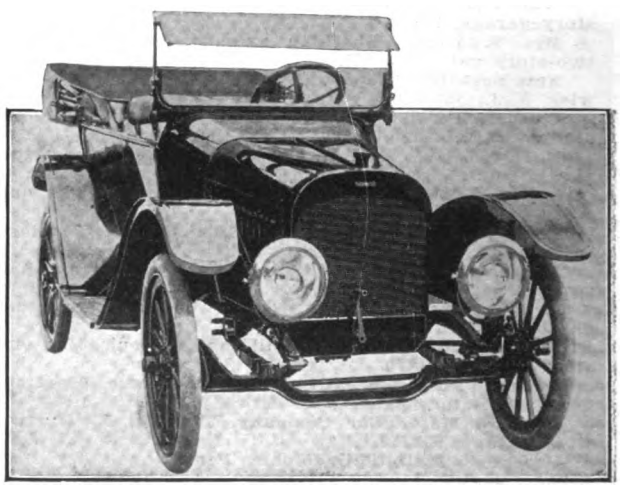
NEW HUPMOBILE MODEL.

Longer Wheelbase and Many Refinements, the Features.

While the Hupp Motor Car Company, Detroit, Mich., has a much larger and more powerful car this year, it has not increased the price. The wheelbase of the new Hupmobile has been increased from 106 to 119 inches, this affording two inches more leg room in the front compartment and seven inches in the tonneau. The price remains at $1200. For an additional $125 the company now furnishes a removable coupe top, and for $165 a sedan can be procured.

The present motor, a four-cylinder, cast en bloc, has a bore of 3⅜ inches and a stroke of 5½. This compares with a bore of 3¾ inches for the 1914 model, with a stroke of the same size. Cooling is by thermo-syphon circulation, and the radiator is of a new cellular type, the cells being hexagonal and extra large.

Ignition is by the Atwater Kent system, battery type. Electric lighting and starting is the Westinghouse, and is included in the regular system. The lubrication is by the centrifugal force of the flywheel, as was the case in the model H. However, slight changes have been made: The face of the flywheel in the new motor is much wider than that of the previous model, which gives a larger volume f oil; also the oil leads to the cylinders have been eliminated.



Three-Quarter Front View of New Monarch Car.

A Zenith carburetor is employed, and this is bolted directly to the cylinders on the opposite side from the valves. Hot air for starting in cold weather is supplied through a passageway in the cylinder casting, which is connected on one side with the carburetor and on the other to a hot air collector, running to the exhaust pipe. The air adjustment is controlled by a short lever on the steering wheel.

MONARCH ADDS TO LINE.

A Four-Passenger Light Car with Complete Equipment.

A four-passenger car selling at $675 is the latest addition to the line of the Monarch Motor Car Company, Detroit, Mich. This car is a four-cylinder model, and the price includes complete equipment, with the single exception of electric cranking, which is $25 extra. There are no rear doors on this model; the front seats being divided and the right hand seat folding up permits adequate entrance to both the front and rear compartments.

The motor, thermo-syphon water cooled, cast en bloc, has a bore of 2¾ inches and a stroke of 4½. A gearless differential is employed in the rear axle. The ignition, of the Connecticut make, is in a unit with the Auto-Lite generator, the latter being regular equipment, and mounted on a bracket on the left side of the engine. This drives through a gear at the front end.

GENERAL NEWS OF THE MANUFACTURERS.

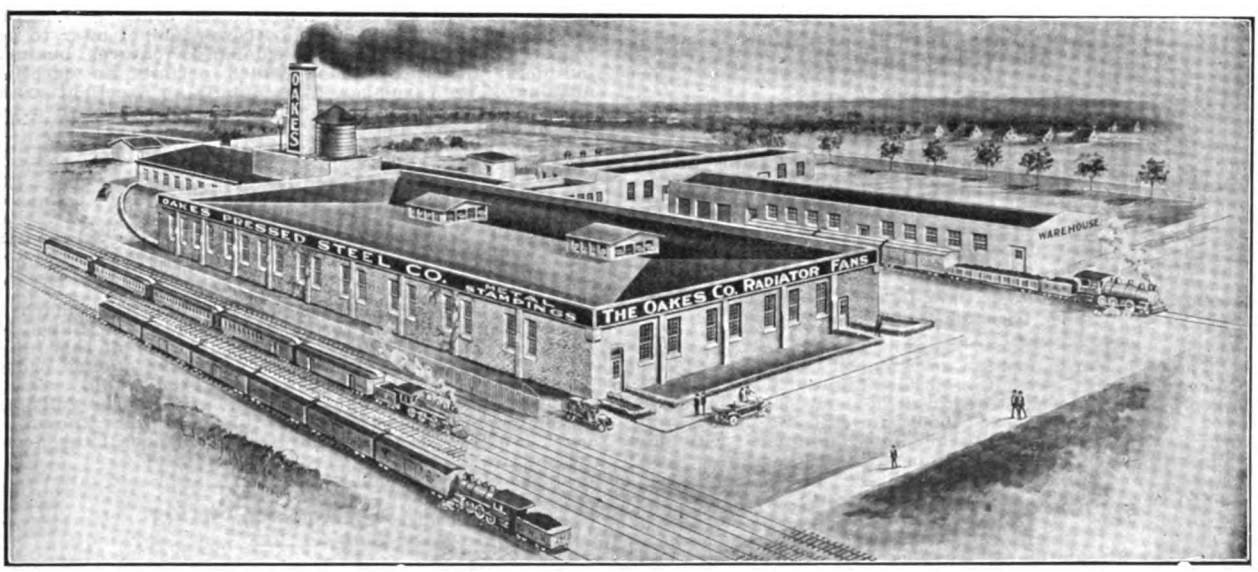
The United States Light & Heating Company, Buffalo, N. Y., is said to have received an order for 3000 electric starters from one of the largest manufacturers of automobiles in England, who has been obtaining starters from Germany. The company was placed in receivership a few months ago, but its business is continuing satisfactorily and is working 65 per cent. capacity.

The Motor & Accessory Manufacturers, New York City, has elected the following concerns to membership: Ball Bearings Company of America, Lancaster, Penn.; Bock Bearing Company, Toledo, O.; Dreadnaught Tire & Rubber Company, Baltimore, Md.; Golde-Patent Manufacturing Company, New York City; L. P. Halladay Company, Streator, Ill.; Robert H. Hassler, Indianapolis, Ind., and Sloan & Chace Manufacturing Company, Newark, N. J.

The Fafnir Bearing Company, New Britain, Conn., announces that its present selling arrangement with the Rhineland Machine Works Company, New York City, has been terminated. The ball bearings of the former company will be marketed direct from the factory at New Britain.

The Williams I. X. L. Tire & Rubber Company, Buena Vista, Penn., has purchased a site and plans to build a plant there for the manufacture of motor vehicle tires and commercial rubber articles. The company has a capital of $300,000.

The Oakes Pressed Steel Company, Indianapolis, Ind., is to make a new line of motor vehicle products. The company is especially prepared to manufacture light metal stampings of all descriptions. An accompanying illustration shows the plant of the company, which is equipped with modern conveniences for the production of pressed steel parts.



Plant of the Oakes Pressed Steel Company, Indianapolis, Ind., Specialist in Light Metal Stampings.

The New Departure Manufacturing Company, Bristol, Conn., is constantly establishing new distribution centres. Practically all parts of this country are now taken care of, so that a dealer anywhere in the United States may secure bearings for his replacement or repair work within two hours time. The following additional distribution houses were established recently: Ahlberg Bearing Company, Los Angeles, Cal.; Chapin Company, Calgary, Alberta; Western Rubber & Supply Company, San Francisco, Cal.

The Ford Motor Company, Detroit, Mich., in co-operation with the Y. M. C. A., is establishing English classes for its foreign employees desiring to learn that language.

The Marathon Rubber Company, Akron, O., is to erect a plant at St. Catharines, Ont., at a cost of $50,000, and will employ a maximum of 100 hands at the start. The rate payers of St. Catharines have passed a by-law to grant the company a five-acre site and a fixed assessment of $10,000 for 10 years.

The Ahlberg Bearing Company, Chicago, Ill., has opened an office and factory at 325 West Pico street, Los Angeles, Cal. The new plant will handle all of the business west of Denver, and all of the trade east of that city will be taken care of by the Chicago factory and the branches at New York City, Detroit and Cleveland.

The Fisher Body Company, Detroit, Mich., plans an addition of two stories to its factory, which will be 30 by 137 feet, and will cost $10,000.

The W. H. McIntyre Company, Auburn, Ind., is offering $100 to the person who suggests the best name for its two new models of two-passenger and four-passenger cars, electrically lighted and started, and listing between $400 and $600. The company produces the well known Imp cyclecar.

The Endurance Tire & Rubber Company, New Brunswick, N. J., is having plans prepared for a factory, 80 by 250 feet, one story, of brick construction, at an estimated cost of $50,000.

The Auto Wheel Company, Lansing, Mich., held its annual meeting recently and re-elected the following officers: President, E. H. Porter; vice president, H. E. Bradner; secretary and treasurer, D. L. Porter.

The Packard Motor Car Company, Detroit, Mich., has increased its shipments for the last two months 75 per cent over those during the corresponding time of last year.

Blood Brothers, Kalamazoo, Mich., will remove to Allegan, Mich. A factory building, $75,000 in stock subscriptions and an additional $25,000 for removal expenses have been offered by the inhabitants of Allegan. The company manufactures the Cornelian cyclecar.

The U. S. Metal & Manufacturing Company, New York City, has been appointed a resident purchasing agent in America for the following companies: Underground Electric Railways Company of London, Ltd., London General Omnibus Company, Ltd., Metropolitan District Railway Company, London Electric Railway Company, Central London Railway Company and City and South London Railway companies.

The Chevrolet Motor Company, Flint, Mich., is planning to build 10,000 cars for the 1915 season at its Flint plants. The factories located in New York City and Tarrytown, N. Y., will take care of all the New England states and the export business, and are expected to manufacture 5000 cars. The working force will be greatly increased at all the plants.

The Premier Motor Manufacturing Company, Indianapolis, has been put in charge of Frank E. Smith as receiver, by the United States district court of Indiana. This action was deemed necessary to prevent threatened proceedings by a number of creditors. It is stated that plans are being made for the continued manufacture of the Premier car.

The Maxwell Motor Company, Detroit, through its president, Walter E. Flanders, has made report to the stockholders of the company for the year ending July 31, 1914, in which a net profit of $1,505,467.09 is shown, which has been set aside as a surplus. He also states that the company's business for the first two months of the new year, July and August, is double that for the same period last year.

The Lozier Motor Company, Detroit, has been declared bankrupt. The Detroit Trust Company was appointed a receiver Sept. 23 and was authorized to take possession of all the assets of the company. According to the receiver, the total assets, including land and buildings, are $4,912,717.97, and the total liabilities are placed at $6,709,141.88.

The Studebaker Corporation, Detroit, has issued a statement to the effect that during September its sales of Studebaker fours and sixes amounted to nearly $5,000,000.

OPPORTUNITIES FOR DEALERS.

THERMOID RUBBER OPPORTUNITY.

New Jersey Company Is in Market with Proposition That Should Prove Interesting.

The Thermoid Rubber Company, Trenton, N. J., manufacturer of the Thermoid hydraulic compressed brake lining, has a proposition for dealers that should bring forth big sales. This company, with its characteristic guarantee of "Thermoid will make good—or we will", will send full details of its selling plan on request.

SPEDOLENE AGENCIES OFFERED.

Continental Asbestos Corporation Desires Representatives for Its Product.

The Continental Asbestos Corporation, 7-11 Summer street, Worcester, Mass., maker of Spedolene, has territory open for distributing agencies, and progressive dealers are invited to write the company for details. Spedolene is a lubricant for gearsets, differential gears, universal joints, etc., and one of its desirable qualities is that it is not affected by heat. It is a combination of high-grade mineral oil and asbestos, will not pack or harden, and makes for economy in lubrication. It comes in sealed packages. Prices and particulars of the distributor proposition will be supplied upon request.

KOEHLER MEN DEMONSTRATE.

Travelling Representatives Show Dealers What the One-Ton Truck Can Do.

Every travelling representative of the H. J. Koehler S. G. Company, New York City, has one of the Koehler one-ton trucks with him, and is ever ready to demonstrate its powers to prospective dealers. Parties interested should write to the company for complete catalogue and selling plan.

MANDEL LIMOSETTE.

Enclosed Body for Ford Cars Offers Unlimited Possibilities for Dealers.

The Mandel Limousine Company, 1455 Congress street, Chicago, Ill., maker of the Mandel Limosette, has a selling proposition interesting to all dealers. The Limosette is a high-grade enclosed body for the Ford car, and provides real limousine luxury in 30 minutes. Full details will be furnished on request.

STRONG INDUCEMENTS IN METZ.

New 1915 Streamline Model Has Fore Door Body and Complete Equipment at a Moderate Price.

With a string of hill climbing records behind it, not to mention the winning of the Glidden tour, the Metz car offers exceptional value. The 1915 model, produced by the Metz Company, Waltham, Mass., is fitted with a fore door, a streamline body, and comes completely equipped. The price is $495. This concern is making liberal terms to dealers, and a special invitation is extended to all interested parties to write for full details.

BEARINGS FOR ALL PURPOSES.

Norma Company of America Carries Complete Line of Ball, Roller, Thrust and Combination Members.

The Norma Company of America, 1790 Broadway, New York City, carries a complete line of Norma ball, roller, thrust and combination bearings, and is prepared to supply the trade on short notice. The company also has in stock bearings for magnetos, lighting generators, starting motors, etc. Correspondence on bearings will receive prompt attention.

MONOGRAM SELLING POLICY.

New York Lubricating Oil Company Presents a Profitable Selling Scheme to Dealers.

The New York Lubricating Oil Company, New York City, maker of the famous Monogram line, is offering a selling policy to dealers that is along exceptionally broad and liberal lines. Monogram oils and greases have been used satisfactorily for years in all classes of motor cars, and are sold in sealed containers that give the same protection to dealers and consumers. Correspondence relative to agencies is invited, and full details will be furnished on request.

TUBING CONCERN SALE PLAN.

Edgar T. Ward's Sons Is Co-Operating with Dealers with a View to Producing Large Sales.

Edgar T. Ward's Sons, 25 Purchase street, Boston, Mass., maker of cold drawn seamless teel tubing, is co-operating with representatives of the trade, and attractive offers are being made to dealers, etc. The company invites all interested to write for its monthly stock list, and its special analysis for parts, such as jigs, bushings, dies, etc., where extreme durability and great hardness are required. The full details of the selling plan will be mailed on request.

RUB-ON CABINET OFFER.

Maker of Auto Top Renewer and Other Specialties Has a Strong Business Building Device.

The Rub-On Manufacturing Company, Buffalo, N. Y., maker of the Rub-On auto top, Sta-Fix radiator mend, the auto turn jack and a half-dozen other well advertised specialties, is making a liberal cabinet offer to garages and dealers. This company features business builders, and the cabinet, which permits an excellent display of its varnishes, dyes, etc., is an excellent example. Full particulars will be mailed on receipt of a letter or post card addressed to the company.

PANHARD OIL QUALITY.

George A. Haws Has Aggressive Plan for Stimulating Business.

With its reputation for quality behind it, Panhard oil needs no introduction to the trade. George A. Haws, 148 Front street, New York City, manufacturer of this lubricant, is offering an exceptional attractive agency proposition to representative members of the trade.

This plan is an aggressive one, and will be fully appreciated by dealers when the full details are known. A post card to the above address will bring all the necessary data.

FREE TRIAL OF OUTFIT.

Waterhouse Welding Company Grants Garages and Dealers Two Weeks' Use of Equipment.

A great profit producer in every garage, repair and machine shop is being offered on a two weeks' free trial by the Waterhouse Welding Company, 3 Pelham street, Boston, Mass., maker of the well known Waterhouse welding outfit. There are no strings to the company's offer and, in the event the outfit is not adaptable, it may be returned and it is not necessary to give reasons. Full terms and details of free offer will be sent to any interested party.

VEEDOL OIL APPEALS TO TRADE.

Platt & Washburn Refining Company Makes Alluring Offer to Representatives.

A very attractive proposition is being offered to the trade by the Platt & Washburn Refining Company, New York City, maker of the widely advertised Veedol oil. As is well known in the automobile industry, Veedol is a proven lubricant, made from pure Pennsylvania petroleum, and is the result of 30 years' experience on the part of this company.

Complete details of the proposition offered by the Platt & Washburn Company will be forwarded on request. The business opportunity afforded is a big one for representatives in all the automobile centres of the country. Veedol oil has been tested by every method known to science and also in actual service in every standard type of car.

GENERAL MATERIAL MARKET QUOTATIONS.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as those prevailing at the beginning and ending of that period, for purposes of comparison. Taken as a whole, the commodities market was fairly stable and consistent during the past month, the fluctuations were light. Bessemer and open hearth steel both fell $1 on the ton, duplicating the decrease of the previous month. Para rubber prices have settled, and war prices are now unknown. Owing to the continued closing down of the stock exchanges, stock quotations are, of course, eliminated, as during the past three months.

NEW BRAENDER "BULLDOG" NON-SKID TIRE.

Has Six Heavy Webs of Rubber Placed Between Fishtail Cross Bars, Providing Greater Wearing Surface, Etc.

The Braender Rubber & Tire Company, Rutherford, N. J., is marketing a new and improved type of non-skid tire which promises to equal, if not to exceed, the popularity of the well known Braender "Bulldog" non-skid tires, which established an enviable reputation in racing events for endurance. As may be noted by the accompanying illustration, the tread of the new shoe is of the combined raised and depressed type. It retains all the advantages of the original Braender "Bulldog" non-skid, with the well known fishtail cross bars, but has, in addition, six heavy webs of rubber so placed between the cross bar projections as to provide considerably more rubber on the tire, as well as obtaining a larger tread surface.

New Braender "Bulldog" Non-Skid Tire.

The webs overcome the tendency to side skidding on muddy roads and wet pavements and, in combination with the cross bars, insure a continuous, smooth riding surface. The maker states that this construction effectually prevents the wear that rounds the edges of ordinary projections, without sacrificing the advantages of the non-skid features. The webs, moreover, are so placed as to relieve the strain heretofore borne by the cross bars alone, strengthening them and distributing the wear evenly over the tread. It is further pointed out that each depression between the bars and the webs provides a vacuum grip on the road, formed and released by the rolling tire and without waste of power.

The new Braender "Bulldog" non-skid tire will be produced in all sizes, and the material and workmanship will be of the same high grade as has characterized the product of the company. The new casing will be exhibited at the New York City and Chicago shows.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

MOTORCYCLE AGENCIES.

118—New Jersey Dealer is in the market to represent motorcycles ranging in price from $150 to $300.

CYCLECAR AGENCIES.

1782—New Jersey Firm wants information relative to cyclecars selling from $350 to $500.

1786—Indiana Dealer is in the market to represent a line of cyclecars selling from $300 to $600.

1789—Massachusetts Company wants to secure the agency for cyclecars ranging in price from $350 to $500.

ELECTRIC PLEASURE CAR AGENCIES.

520—Indiana Concern is in the market to secure the agency for electric pleasure cars selling from $700 to $2000.

523—Ohio Firm is anxious to represent a line of electric pleasure cars ranging in price from $1500 to $3000.

526—Indianapolis Concern is in the market to represent a line of electric cars selling from $1750 to $3200.

GASOLINE PLEASURE CAR AGENCIES.

3027—New Jersey House wants information relative to securing the agency for pleasure cars selling from $500 to $2500.

3035—Indiana Company wishes to secure an agency for pleasure cars selling from $400 to $2200.

3038—Ohio Dealer is in the market to represent a line of pleasure cars ranging in price from $300 to $600.

3041—Indianapolis Company wants the agency for a line of pleasure cars from $1550 to $7200.

3044—New York Dealer wants information relative to pleasure cars selling from $700 to $4000.

3048—Pennsylvania Firm wants to represent a line of pleasure vehicles selling from $400 to $2000.

3049—Illinois Dealer wants to secure the agency for pleasure cars ranging in price from $800 to $1250.

3052—Ohio House wants information relative to a line of pleasure cars selling from $400 to $1200.

3054—Massachusetts Dealer is in the market to represent pleasure cars selling from $400 to $1500.

3057—New York Company wants to represent a line of gasoline pleasure cars selling from $950 to $1250.

3058—Iowa Dealer is in the market to secure the agency for pleasure cars selling from $450 to $1965.

3061—Kentucky House wants information pertaining to pleasure cars ranging in price from $795 to $2750.

3064—Arkansas House is desirous of securing the representation for pleasure cars selling from $500 to $800

3067—Tennessee Dealer wants to represent a line of pleasure cars selling from $400 to $500.

COMMERCIAL CAR AGENCIES.

6132—Indiana House wants information relative to gasoline commercial vehicles selling from $400 to $2800.

6135—Virginia Dealer is in the market to represent a line of gasoline commercial cars selling from $700 to $1500.

6138—Alaska Dealer is anxious to secure the agency for gasoline and electric trucks.

6141—New Jersey Company wants to hear from a line of gasoline commercial trucks selling from $500 to $2500.

6143—New York Dealer wants to represent a line of commercial cars on consignment only.

6146—New York House is in the market to represent a line of gasoline trucks selling from $700 to $4000.

6149—Indiana Company wants to secure the agency for a line of gasoline commercial vehicles selling from $1500 to $4500.

6152—Massachusetts Concern would like to represent gasoline commercial trucks from $700 to $2000.

6153—Illinois Firm wants to represent a line of gasoline commercial cars ranging from $1000 to $2000.

6156—Pennsylvania Company is anxious to establish a line of gasoline trucks selling from $1000 to $3000.

6158—Kentucky Company would like to represent gasoline commercial trucks at $1350.

6161—Illinois Dealer is anxious to secure the agency for gasoline commercial cars selling up to $2500.

6163—New York Company wants information from a reliable manufacturer of one, 1½ and two-ton trucks, who wishes to build up or enlarge his trade in Spanish speaking countries.

6166—Tennessee House is in the market to secure the agency for two-ton trucks.

ACCESSORIES, EQUIPMENT AND SUPPLIES.

548—Ohio House is anxious to secure air pumps, bumpers, carburetors, clutches, cones, curtains, cushions, cylinders, dimmers, fans, gaskets, gears, goggles, graphite, headlights, horns, hose, lamps, maps, mechanical starters, mufflers, nuts, patches, plugs, rims, speedometers, starters, timers, tire accessories, tools, tops and parts, waste and windshields. The goods to be used for general repair work.

551—California Concern is in the market for arbor presses, axles, bearings, bodies, brakes, cans, carburetors, castings, chains, clutches, connectors, couplings, cranes, cups, cutters, cylinder machines, cylinders, dashes, discs, drills, drums, emblems, engines, fans, fenders, forgings, gear cutting machines, gears, grinders, headlights, hose, hubs, ignition, jacks, jigs, joints, knuckles, lathes, levers, machinery, magnetos, mechanical starters, metal parts, motors, mufflers, nuts, pans, pinions, pistons, plugs, presses, printed matter, pumps, races, radiators, reamers, rims, rods, rubber, scrapers, screws, seats, shapers, shims, soaps, speedometers, spokes, springs, stampings, starters, steel, steering wheels, switches, tanks, tape, terminals, tire accessories, tires, tools, tops and parts, transmissions, trimmings, tubing, upholstery, valves, varnishes, vises, vulcanizers, washers, waste, wheels, windshields, wire and wrenches. The products to be used for manufacturing cars.

554—Ohio House wants bolts, cans, chains, coils, engines, furnaces, gasoline, gear cutting machines, headlights, horns, ignition, machinery, mechanical starters, motors, nuts, paints, platinum, polishes, printed matter, separators, shock absorbers, speedometers, springs, starters, tanks, tire accessories, tires, tools, valves, vises, vulcanizers, whistles, wire and wrenches. The above goods to be used in the retail trade.

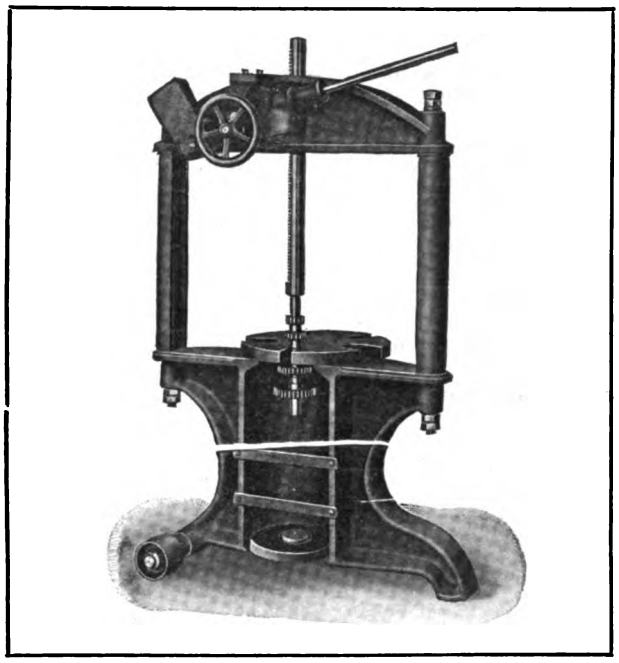
GREENERD ARBOR PRESSES.

Edwin E. Bartlett Offers Number of Sizes of Varying Leverage and Capacity.

An arbor press is a necessary adjunct to the repair shop, as it permits of a wide variety of work being performed, including operations generally requiring considerable time by ordinary methods. Edwin E. Bartlett, 326 A street, Boston, has specialized in the manufacture of arbor presses for years and the product of this concern is indorsed by manufacturers and machine shops.



The No. 15 Greenerd Arbor Press, Manufactured by Edwin E. Bartlett.

The Greenerd is built in 14 sizes, with a leverage ranging from 25 to one to 250 to one, or a pressure of 35 tons. The pinions and rams are made of a special steel with well proportioned teeth, having an angular pressure of 22½ degrees. The pressure is direct by a lever on the end of the pinion shaft on the small presses, and the large ones are provided with a pawl and a ratchet, so that the lever can be utilized where most effective. The frames are designed to withstand heavy strains. The Greenerd presses take work from 3½ to 36 inches in diameter, depending upon the size. Sizes Nos. 4, 5 and 7 have an adjustable knee, which can be operated by a crank handle. While small presses are manufactured, the maker states that the larger sizes are more serviceable and economical in the end. A postal addressed to Edwin E. Bartlett will bring complete details, illustrations and trade discounts of the Greenerd arbor presses.

MODERATELY-PRICED VULCANIZER.

High-Grade Tire Repair Equipment Suited to Garages and Repair Shops.

The Mapes & Maburn Manufacturing Company, 19 Fulton avenue, Rochester, N. Y., is producing a vulcanizer adapted to the requirements of repair shops and garages, a complete equipment, including heater, being furnished. The device is of the steam vulcanizing type, and is very compact, yet capable of a great variety of work, being adapted to all forms of vulcanizing and handling all tires of less than four-inch diameter, including motorcycle. The profits in this class of work are very attractive, and the addition of the vulcanizer described will add to the money making possibilities of any garage. Full particulars will be furnished on application, including an offer which is being made to the trade.

SPLITDORF MAGNETO FOR FORDS.

The New Model Is Provided with Movable Circuit Breaker Housing.

The Splitdorf Electrical Company, Newark, N. J., after considerable experiment, has produced a new high-tension magneto for Ford cars, meeting the requirements of the Ford high-speed engine and creating an exceedingly intense spark, which contributes to easy starting.

A feature of the new equipment is the fact that it may be installed by the car owner, no machining or alteration whatever being required. This and all other details are fully described in a new booklet issued by the Splitdorf Electrical Company, Newark, N. J., outlining the system and containing much valuable information on ignition. This booklet will be mailed free on request.

FOSNACHT VALVE RESEATER.

A Tool That Rapidly Cuts Both Valve and Seat at Exactly the Same Angle.

In the reseating of valves, a frequent and important repair, accurate and rapid work is necessary, and a suitable tool is an important addition to the equipment of any garage. Such a tool is provided in the Fosnacht valve reseater, manufactured by H. G. Paro, 30 North Michigan avenue, Chicago, Ill. By its use, both the valve and seat may be cut in a very few minutes to the same angle, and with absolute accuracy, insuring perfectly fitting valves, a result hard to attain with many other methods. Too much attention cannot be given to valve fitting, and a tool especially designed for this purpose should meet with general approval. Agencies are being arranged and full information will be given on request.

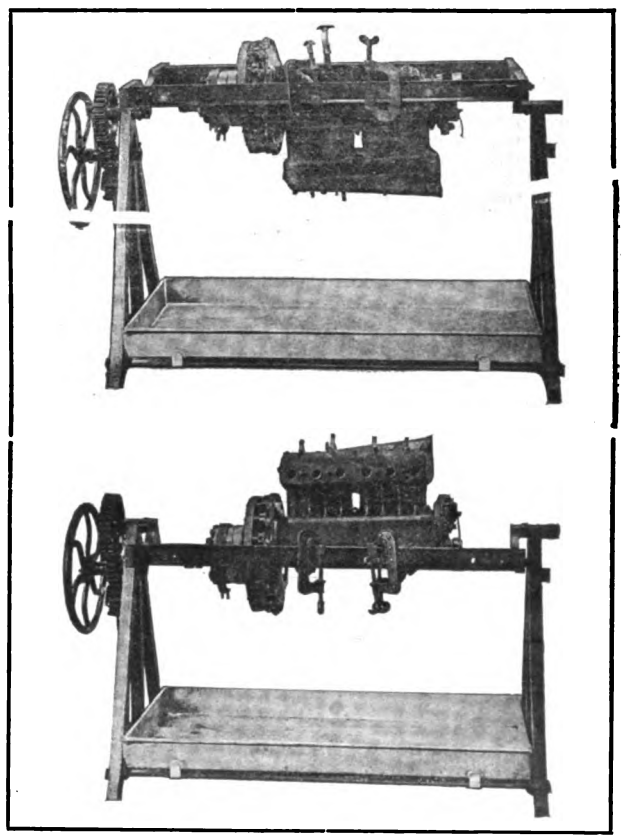
THE ST. ALBANS ENGINE RACK.

An Adjustable Work Table for the Convenient Handling of Repairs and Adjustments of Automobile Motors.

A valuable piece of shop equipment is the automobile engine rack, just brought out by the St. Albans Foundry and Implement Company, St. Albans, Vt.

A pivoted table is provided, large enough for any six-cylinder motor and adjustable in a few minutes to the smaller sizes, mounted on a frame and turned by a hand wheel. It may be locked in any of 32 positions by the action of a simple foot mechanism, leaving both hands free. The whole construction is iron, and practically indestructible, yet not of excessive weight, and the design is very compact, occupying a floor space five feet nine inches by 37 by 30. A removable galvanized drip pan is provided.

With this equipment the work can always be set in the most convenient position, and many adjustments can be made without disassembling the engine, and at a great saving of time. The price quoted is $38.50, including the pan, and $35 without the pan, f. o. b. St. Albans, Vt., subject to discounts to the trade.



The St. Albans Automobile Engine Rack, Showing Adjustable Table Carrying Engine in Horizontal Position and the Table Reversed, Bringing Engine Bottom Up.

DESIRABLE LINES THAT ARE IN DEMAND.

THE MILLER DRESSINGS.

Guaranteed Preparations for Use on Leather and Other Fabrics.

The Bright dressing for leather tops, cushions, straps, etc., is produced by the Frank Miller Company, 349-351 West 26th street, New York City, which also makes a similar dressing for mohair, pantasote and the like. The latter is not a varnish, and produces a perfect finish without hardening the surface, and is particularly adapted to tops and covers. The quart can, which sells for $1, is sent by parcel post, and full information will be given to the trade upon application.

MOSSBERG WRENCH SET NO. 14.

Has 55 Openings, Meeting All Requirements of the Repairman, Garageman and the Trade.

The Frank Mossberg Company, Attleboro, Mass., calls the special attention of the trade to its new wrench set No. 14. It is most complete in every particular and the equipment, which includes socket and other types of wrenches, provides 55 openings that are continually needed. This outfit lists for $12.90 to the trade, an average of 23½ cents a wrench. The workmanship and material incorporated are of the same high-grade as characterizes all products of this company, and all are guaranteed.

CHANEY HEADLIGHT DIMMER.

A Practical and Inexpensive Device That Controls the Headlight.

Most city ordinances, to say nothing of a common sense consideration for the safety of night driving, require the obviating of the headlight glare, and the installation of some equipment for that purpose is a matter of necessity. The Chaney dimmer, beside meeting these requirements, has the further advantage of reducing the consumption of gas when the lights are down, a distinct advantage over the screen, which is often used and which simply shuts off the light without reducing it. The dimmer is mounted on the dash, the handle being conveniently placed for operation from the seat by a slight kick of the foot. The installation is very simple and the cost of the device is low. Further information will be promptly furnished by the manufacturer, the L. F. Chaney Company, Springfield, O.

McQUAY-NORRIS LEAK-PROOF.

A Piston Ring Which Positively Prevents Any Possibility of Leakage.

To provide a continuous ring without break in the circumference, but with the same flexibility as the usual cut ring, the McQuay-Norris Manufacturing Company, St. Louis, Mo., has produced the Leak-Proof, a packing ring of novel design. Two flanged sections are used, the flanges interlocking and closely fitted together. Each section is diagonally cut, the laps being at opposite sides of the circumference. Since the sections are free to move upon each other, the ring conforms to the cylinder bore as easily as the single ring, but each joint being covered by a solid portion of the other section, there is no possibility of leakage. The ring is concentric, instead of eccentric, giving uniform pressure on the cylinder wall. The construction and use of piston rings is thoroughly discussed in a booklet, issued by the McQuay-Norris Manufacturing Company, which will be sent free on request.

BROOKS VALVE TOOL.

Efficiency, Economy and Merit Are Qualities of This Well Known Line.

The demand for an adjustable tool for refacing and reseating valves has been met by the production of the Economic equipment, made especially for that purpose by the J. W. Brooks Manufacturing Company, Stamford, Conn. The tool, which is equipped with a double cutter, one end for standard 45-degree angles and the other for standard 60-degree angles, may be adjusted for any diameter up to three inches and is so designed that the valve is certain to come absolutely true with the stem. Garages and repair shops equipped with this tool will be fitted for rapid and accurate work, and the owners of all shops doing automobile work are advised to investigate it.

ELECTRICAL SPECIALTIES.

Mabey's Electric & Manufacturing Company Marketing a Number of Attractive Accessories.

Mabey's Electric & Manufacturing Company, 940 North Pennsylvania street, Indianapolis, Ind., is marketing a number of electrical specialties that are in demand in these days of the electrically lighted and started automobile. The specialties produced by this company are not novelties, but practical conveniences such as a cigar lighter, trouble lamp, vulcanizing tool, etc. A line to the manufacturer will bring complete descriptions, illustrations and trade discounts.

BLUE RIBBON COLD CREAM.

A New and Agreeable Cleanser with Which Water Is Not Necessary.

A cleanser that may be used without water, and on this account does not produce chapped hands, although removing all dirt and leaving the skin perfectly clean, has recently been brought out under the name Blue Ribbon cold cream. This soap is free from grit or irritating chemicals, and leaves the hands soft and smooth after application. It is made by the International Metal Polish Company, Indianapolis, Ind., which also manufactures Blue Ribbon metal polish, nickel polish, auto body gloss and radiator cement. Full information and a sample package of the new soap can be obtained by writing the manufacturer either at Indianapolis or at the New York office, 395 Broadway, New York City.

COXAJUSTO SHOCK ABSORBER.

Spring Type Featuring Easy Adjustment, Adopting It for Any Load.

The Coxajusto is claimed to be the only spring shock absorber on the market having an adjustment feature permitting it to be adapted to any load. The construction is very strong and consists of tapered helical springs of the best Swedish steel, working in manganese bronze cylinders. The method of attachment is easy but of such a character as to insure stability and long service. Shock absorbers not only contribute to the comfort of the user, but are profitable accessories to handle and install.

The Coxajustos are fully described in an attractive folder, which will be sent free on request by the maker, the Cox Brass Manufacturing Company, Albany, N. Y. Address Dept. M.

HENRICKS LINE OF MAGNETOS.

The Comet Instrument Is Efficient, and Reasonable in Price.

The Comet magneto, which has been built for 15 years by the Henricks Novelty Company of Indianapolis, Ind., is a very light and compact machine for the production of a constant supply of electric current for ignition purposes. It is made in four types, adapted to installation on any gasoline motor, and may be driven by belt or friction, as may be found most satisfactory, the governor with which it is equipped automatically adjusting it to varying speeds. The output is such that the engine may be started without the use of batteries, the current production, even when motor is turned over by hand, being ample for the purpose. A very complete catalogue of the Henricks line is issued by the manufacturer.

TIMES SQUARE "PRICE WRECKER."

The Price Wrecker No. 5, issued by the Times Square Automobile Company, 56th street and Broadway, New York City, offers 3000 automobile bargains, many of them at half regular prices. This company sells everything pertaining to the motor car at cut prices, and its catalogue is practically a complete list of automobile accessories. A branch is maintained at 1210 Michigan avenue, Chicago, Ill., at which will be found the same complete variety of bargains, and to which inquiries from that part of the country may be addressed. The catalogue referred to, the Price Wrecker No. 5, will be sent free by either branch.

What America Gains by European War.

(Continued from Page 12.)

gian motor car manufacturers achieved the pinnacle of their ambition when they exported $6,258,737 worth of cars and chassis for the past year, the record of the industry. Adding motor parts and motorcycles, the total exports of the Belgian automobile trade for last year were $6,992,557.

According to a recent report received from the seat of war, the plants of the Minerva Motor Works in Antwerp were completely destroyed. These consisted of two large four-story buildings, and from the meager news now at hand, it would seem that the Belgians blew up the buildings rather than let them fall into the hands of the Germans.

At the beginning of the war crisis Belgium stood third in importance among the car producing countries of Europe, France and England being first and second respectively. Among the well known cars manufactured in Belgium were the Minerva, Metallurgique, Nagant, Springuel, Sava, Germain, Pipe, Excelsior, F. A. B., Dasse, Elge, Fif, F. N., Linon and La Moderne.

While the total exports were record breaking for the year ending Dec. 31st last, yet Belgian automobile manufacturers were greatly handicapped owing to the strike that prevailed in the automobile trade during the early part of the year. Following this a general increase in the price of gasoline caused dissatisfaction throughout the country, and was instrumental in holding back sales.

However, the total output of the Belgian automobile industry exceeded the $7,000,000 mark by far for the last fiscal year period. This merely embraces the exports of the country, and does not allow for cars, parts, etc., that were sold in the home market. As Belgium imported $1,753,050 in cars and parts for the same period, it is only natural to assume that the natives patronized their home industries to the extent of $1,000,000 at least. Consequently, the minimum figure at which the business of the Belgian automobile industry could be placed would be $8,000,000.

In addition to the rapid strides that were being made by the manufacturers in respect to the pleasure cars, they were also making a name for themselves in regard to commercial vehicles. The Minerva Company was manufacturing a delivery lorry of a type accepted by one of the leading London express companies. Pipe, another Belgian truck manufacturer, was exhibiting an excellent three-ton truck before the war, and several other manufacturers in that country were turning out trucks during the first part of the year.

While the foregoing deals principally with the future, so far as the United States is concerned, yet the actual results of the past year in exports must not be overlooked. The last fiscal year saw a record high total of $40,000,000 worth of automobiles, trucks, parts, etc., exported from this country. Europe imported 13,108 cars valued at $10,168,218; 249 motor trucks, with a value of $248,716, and $1,830,560 worth of parts. Taken as a whole, Europe was the largest customer of the United States. The largest individual country purchaser was England, who took 6992 pleasure cars, worth $5,615,487; 203 trucks with a value of $189,099, and parts worth $1,282,388. Canada was the next largest purchaser, taking 4377 automobiles, worth $5,445,052. A tabulation showing the countries purchasing the largest number of American made motor cars, and their value, during the 12 months ending June 30 last, is printed on page 12.

In addition to the 28,306 automobiles exported last year, valued at $25,392,963, as shown by this table, there were $8,624,232 worth of parts and $1,181,611 represented by truck exports. Under all other Europe are included: Greece, one commercial, $1800; 25 motor cars, $28,256. Turkey, one commercial, $2000; 35 automobiles, $21,052. Also the following passenger cars: Azores and Maderia, 20, $10,771; Bulgaria, 43, valued at $21,679; Gibraltar, 64, $33,030; Iceland, five, $2488; Malta, etc., one, $422; Roumania, 28, $17,018; Servia, four, $2843, and Ireland two, $1593. Under other North America: Newfoundland, one commercial, $1221; five others, $2761; Dutch West Indies, one commercial, $595; 13 others, $9605; Santo Domingo, one commercial, $1800; 11 others, $15,195, and a total of nine passenger cars valued at $8368 to British Honduras, Hayti and the Danish West Indies.

MOTOR CAR EQUIPMENT COMPANY.

Boston Concern Absorbs the Bi-Motor Equipment Company of the Same City.

The Motor Car Equipment Company, Boston, Mass., has acquired the stock, good will and business of the Bi-Motor Equipment Company, likewise of Boston. James A. Abels, secretary of the Motor Car Equipment Company, announces that the new concern will continue the business at 180-182 Massachusetts avenue, along the same lines as the company's New York City house, and in conformity with the latter's policy of selling at wholesale only.

Catalogues and discount sheets will be mailed out shortly, and the company's monthly bulletins, comprising everything in accessories, tools and hardware pertaining to motor cars, will be mailed upon request. It is the intention of the new company to carry one of the largest and most complete stocks in New England, and to make the name of the Motor Car Equipment Company synonymous with service.

POWER TIRE PUMPS.

Kellogg Manufacturing Company Marketing Complete Equipment for the Used Automobile.

Many owners desiring to equip their car with a power tire pump have abandoned the idea because of the cost of installing it, as generally this involves considerable expense and alteration.

The trade will be interested to learn that the Kellogg Manufacturing Company, 128 Circle street, Rochester, N. Y., is manufacturing complete attachments for its well known single-cylinder air pump for standard makes of cars. This enables the dealer and garageman to install a power driven tire pump at a price that will interest his customers.

The Kellogg Manufacturing Company carries the attachments above referred to in stock and the complete equipment, including the No. 101 one-cylinder pump, retails for $15. Liberal discounts are offered to the trade. Catalogue and information will be supplied upon request.

Write today for printed matter and special information. Give us name and model of your car and name of your dealer. As our pumps are guaranteed, you save time by sending your check with above information. Satisfaction guaranteed or money back.

The Only All-Metal Pump Which Will Not Spray Oil

Compare the Kellogg with any other pump and you will appreciate its superiority.

The reason why there are more Kellogg pumps in use today than all other makes combined is that over 60,000 are serving their owners faithfully and most satisfactorily.

Our six years' experience in building pumps has taught us to make pumps better than others consider necessary.

Kellogg pumps stand up because we select the best material and insist upon accurate workmanship.

Do not forget that you do not have to wait for attachments to be made or pay extra for them.

Dealers: Write us for discounts and get busy. Every car owner can afford this pump.

Stop the Blinding Headlight Glare!

The law says it must be done—blinding glare is a menace to public safety. Screens simply interpose an obstacle between the light and the street—the user pays for the full power of his headlights and gets half power. The logical solution of the problem is the

Chaney Automobile Headlight Dimmer

It enables the driver to graduate the intensity of the light. It can be changed from high to low as you would turn down an oil lamp. Operated by moving the dimmer handle, it gives complete control of the headlights from the seat. In city driving the light is kept low with small current consumption—in the country where full power is needed a touch of the handle brings back the full searchlight efficiency.

This device is practical, dependable and efficient, costs little to buy and is readily installed on any car. The average car owner can place it on his car.

Dealers: At $3.50 the Chaney Dimmer is the best value in the accessory field and a fast seller. Our liberal trade terms make your margin of profit generous. You can clean up in your territory, for the dimmer is a legal necessity, and the Chaney is the best of all dimmers, and the only one sold under a ten year guarantee.

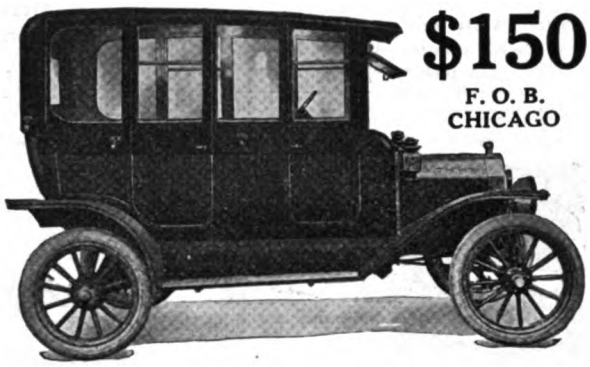
Mandel TRADE MARK Limosette

Makes the Ford a Year 'Round Car



$150
F. O. B. CHICAGO

Limousine luxury, supreme elegance and beauty are embodied in the MANDEL LIMOSETTE. Every Ford Owner will appreciate its many advantages. One small additional investment gives Ford Car owners every convenience of the modern, high priced limousine. The MANDEL LIMOSETTE insures absolute protection from storm and wind. It is a flush-fitting top—made of wood, metal and glass. Built exclusively for 1913-14-15 Ford Touring Cars and Roadsters. Equipped with rain vision wind shield, electric dome light, and handsome cowl dash. The generous overhang in front accentuates the length of the Ford. When attached the LIMOSETTE adds only 75 lbs. to the weight of the Ford Touring Car. Can be attached in less than an hour.

Exclusive Territory to Agents and Dealers

We want live agents to sell LIMOSETTES in exclusive territory. A big money-making proposition.

300,000 Fords

to be "LIMOSETTED." Gives agents a tremendous field. Every Ford owner will want a LIMOSETTE. Write at once.

$100
F. O. B. CHICAGO

For the Ford Roadster

In design and construction the MANDEL LIMOSETTE for Ford Roadsters is the same as for the touring car. The ROADSTER LIMOSETTE is invaluable for professional and business men who must ride their cars in all kinds of weather. It gives all the comforts and pleasures of the closed car at less than one-half the regular cost. The ROADSTER LIMOSETTE can be attached in about thirty minutes. When attached it adds but 40 lbs. to the weight of the Ford Roadster.

The LIMOSETTE makes the Ford doubly serviceable. Attach it in Winter--detach it in summer

"Don't Gamble With Safety"

The Manufacturer who sells with an unlimited guarantee must know the quality of his products.

IMPROVED S-M-C ASBESTOS BRAKE LINING

IS SOLD WITH THE GUARANTEE:

Perfect Satisfaction or Money Back:

THE PURCHASER IS THE JUDGE

S-M-C improved asbestos brake lining has been perfected to overcome the troubles experienced with other brake linings. It is indestructible from heat; is not affected by oil, gasoline or water. It has exceptionally long life and affords the highest braking efficiency until worn through. There is a width and thickness for every form of brake. A special lining for Ford cars.

(IMPROVED)

ASBESTOS BRAKE LINING

To substantiate the manufacturer's guarantee of quality—as to endurance, economy, efficiency and safety, this company offers free of cost to any dealer or public garage owner a sufficient quantity of brake lining to equip any car, so that he may have personal knowledge of the service given by this brake lining in his own operating conditions. S-M-C brake lining is the cheapest of all brake linings in service and cost.

Write for details of the S-M-C selling policy and prices and discounts—the most liberal made.

Universal Test Clips

Time savers for charging automobile storage batteries—made of copper—indestructible—may be used over and over again—will carry 15 Amperes without heating—the jaws have a wide spread—the spring is strong.

To charge batteries in series, provide a number of pieces of lamp cord 15 to 20 inches long and equip with clips on each end. Connect the batteries by snapping the clips over the lugs.

Write for a free sample, using your company's letter head. No attention paid to postals.

Build on Confidence

Why It Pays to Sell Goodyear "Tire-Savers"

Trade sometimes is won, held and built on little things like a tube patch. Failure of such a small item through inferior quality works to your disadvantage just as much as if it had been a costly tire.

Confidence in the line you carry and in the service you give is the factor that wins for you all the time. And fullest confidence goes with Goodyear Accessories.

All Goodyear products are up to the master-standard set by No-Rim-Cut Automobile Tires, rulers of Tiredom. Which means that Goodyear "Tire-Savers" have a double duty to perform: (1) to be worthy the name from a standpoint of quality and workmanship; (2) to measure up to the name from a standpoint of value and service rendered.

GOODYEAR
AKRON, OHIO
Accessories

A Winning Line

Goodyear Accessories come to you—if you desire—in beautiful, free show-cases that set them off to the best advantage. The one shown above is a fair example of how these show-cases add to the attractiveness of any store, while serving as "Silent Salesmen" as customers come and go.

The quality is there; the demand is there; the profit is there. The name Goodyear itself insures satisfaction. Other lines may pay a little more on paper; but in real dollars and cents, as a result of increased aggregate sales, Goodyear "Tire-Savers" win—not forgetting the assurance of *service* that goes with them.

Send the Coupon

Send the coupon and learn how easily you can secure magnificent show-cases that would cost you money elsewhere. Sending the coupon binds you to nothing. It will bring you information about Goodyear "Tire-Savers" that will surely show you a way to add to sales, profits and prestige.

Send the coupon now. It holds a real opportunity for you.

No. 30

Mossberg "Safety First" Set of Socket Wrenches

Surely, the most complete **Ford** set of wrenches on the market for **$2.00.**

Contains: No 355 Ratchet Handle
One Long Extension Tube
One Universal Joint
One Screw Driver Bit
Ten Pressed Steel Sockets
(heaviest made)
$\frac{17}{32}$" $\frac{19}{32}$" $\frac{21}{32}$" $\frac{23}{32}$"
$\frac{25}{32}$" $\frac{29}{32}$" $\frac{31}{32}$" Hex.
$\frac{15}{32}$" Square, Oval, main bearings socket and spark plug wrench.

Price $4

Ten Socket Wrenches for $2.00

HONEST, CAN YOU BEAT IT?

Hex. $\frac{17}{32}$" $\frac{19}{32}$" $\frac{21}{32}$" $\frac{23}{32}$" $\frac{25}{32}$" $\frac{29}{32}$" $\frac{31}{32}$"
Square $\frac{15}{32}$" (1915 main bearing nuts)
Spark Plug Socket $\frac{31}{32}$"
Oval Socket (main bearing nuts)

In Canvas kit $2.00

All Steel Monkey Wrench No. 100

Your "life-insurance" against loose adjustments, and resulting accidents. Polished, mechanics' finish, each wrench packed in carton, thoroughly hardened and absolutely guaranteed.

Price each $ .60

10 inches long

No. 10 Set of

FORD Engineers' Wrenches

Thin-model, guaranteed, open-end wrenches, thoroughly hardened and excellent finish. Five wrenches—10 openings. Packed in enamel duck case.

Price, per set, $1.27

Reverse and Brake Pedal Tension Spring Wrenches

No. 645

Ratchet Wrench designed especially for reverse and brake pedal springs. Saves 30 minutes every time you use it.

Price, each - - 50c

No. 640

Goose neck, plain open end, for reverse springs.

Price 10c each

MASTER TOOLS

—FOR—

Ford Automobiles

Frank Mossberg Co.

ATTLEBORO, MASS.

Send for Catalog No. 17 A

Be MASTER of Your FORD!

The most discouraging trouble with motors is the need of frequent grinding of valves. If you will take the trouble to investigate No. 605 Grinder of **Mossberg** brand, you will be surprised to know how easy the valve troubles are entirely obviated.

Price, each 25c

No. 605 **Mossberg** Valve Grinder

The cleverest ever invented for **Ford** cars is the wrench No. 630, designed for cylinder head nuts and rear axle housing nuts. You know yourself how hard it is to get in on these nuts that are "shouldered" into the casings.

Price, each - - - - 26c

No. 630 Cylinder Head Nut Wrench

This shape of a valve grinder is preferred by some of the "boys". We can supply you.

Price, each - - 25c

JH Tonneau Shield

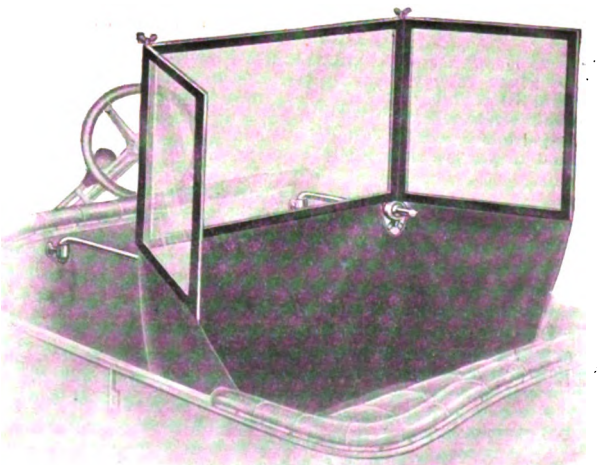
THE LAST WORD

IN MOTOR CAR REFINEMENT, CONVENIENCE AND COMFORT.

The J. H. Tonneau Shield protects the rear seat from wind, dust, rain, cold or snow. Attached to any car gives all the advantages of the limousine, minus its cost.

The J. H. is adjustable to almost any position, permits lady passengers to motor without goggles or veils and to wear the finest clothes.

The J. H. can be folded to take no more room than a robe. When raised it does not interfere with entering or leaving the rear seat. It can be operated by a child with hardly any effort.



Made in two models to fit all cars, $25 to $60

METZ "25"

The Quality Car

TOURING MODEL

$600 Equipped Complete, Including Electric Starter and Electric Lights

To Dealers:

The new METZ Touring Model, illustrated above, will prove a *big* seller and a *quick* seller.

Its equipment includes every up-to-date improvement that has been found worthy and practicable. Nothing is lacking on this car that adds to the completeness of motoring pleasures.

It is just the car that the average man wants, because, while it possesses the *style* and all the fine points that are so much admired, it insures to him and his family the luxury of motoring *at a price that he can easily afford.*

FEATURES OF SPECIAL INTEREST

Gray & Davis Electric Starter and Lighting system.
Plate glass rain-vision, built-in wind shield.
Stream line body, instant "one man" top.
32-inch wire wheels.
32x3½-inch Goodrich clincher tires.
Tufted unpholstering, deep cushions.
105-inch wheel base, standard tread.
All standard equipment, including 25 h. p. water-cooled motor, Bosch magneto, Hyatt roller bearings, speedometer, built-in gasoline gauge, signal horn, jack, tools, etc.

In addition to meeting fully the existing general demand, this new METZ model will make live prospects of people who heretofore have never thought of purchasing a car. We want a representative dealer *in your territory.*

Write for new Catalog "F" and particulars.

TRADE MARK
Raybestos
REG. U.S. PAT. OFF.
SERVICE

EVERYWHERE

Every shrewd business man will appreciate the trade service we have built up to take care of the distribution of RAYBESTOS.

Nearly one hundred leading distributors with headquarters in fifty-seven big cities carry RAYBESTOS BRAKE LINING in stock at all times ready for immediate shipment in large or small quantities.

No better prices, no more favorable terms and no better business treatment can be obtained from the factory than each and every one of our distributors is prepared to afford those who have dealings with them.

RAYBESTOS is not consigned---it is too high grade a product for that kind of merchandising.

Any automobile dealer, garageman or repair man who is not inclined to invest the amount of money a good working stock of RAYBESTOS requires, or who has not facilities for stocking it, can by telephone, telegraph or mail fill his requirements by dealing with the nearest RAYBESTOS distributor.

Upon request we will mail the business names and addresses who handle RAYBESTOS in any particular town or section.

All matters of making good our guarantee ---"If RAYBESTOS fails to last one full year from the time it is placed on the car, we will furnish new lining without charge, which guarantee applies to all types and weights of pleasure cars and to light trucks"---are handled direct with the factory, thus relieving the trade of any burden on that score.

Automobile manufacturers have found our system of distribution to be a most practical trade service.

By far the greatest number of cars are RAYBESTOS equipped.

CONVERTIBLE BODIES FOR FORD CARS

$350

A splendid all year body ready to attach to Ford Cars.

¶ The three pictures opposite represent our new convertible body for Ford cars. They show it first with the top up and glass windows in place, as used in winter or rainy weather. The next view is the same body with the glass folded and top up for sun protection. The third view shows the top down. It is now an open touring car.

¶ Will be first shown at our space at the New York Show. We will then be ready to assign territory.

PRACTICAL SHOP EQUIPMENT IS YOUR BIG ECONOMY

The New GREENERD No. 15 ARBOR PRESS

Can do any job to its pressure capacity,—10 tons with one man and 16 tons with two men.

The jobs that require good equipment, that pay good prices and earn good profits, go to those who can handle them. The garages, repair and machine shops that are making profits and having continuous work, are equipped to do big work.

The Greenerd No. 15 Arbor Press is the economical equipment because of the great diversity of work you can do with it. The press that will do all work is economical because its earning power is unlimited. The smaller press is an extravagance in comparison because of its limitations.

The difference in price between a Greenerd No. 15 Arbor Press and a small press is the best investment that can be made. The short cut to big work is a No. 15 Greenerd Arbor Press.

We build Greenerd presses for all work. ***Prices and details at request.***

THE LARGEST MANUFACTURERS OF FORD SPECIALTIES IN THE

GUARANTEED FORD SPECIALTIES

The Auto Parts Company are the largest manufacturers of Ford Car Specialties in America. All APCO Specialties are proven to meet the precise requirements for which they are designed. The manufacturing and distributing resources of the company are such that any demand can be met at any time.

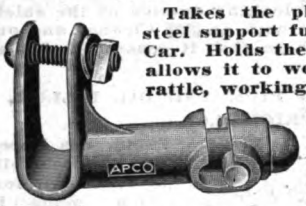
APCO Specialties are standard with all owners of Ford Cars. They are sold with the broadest guarantee that can be given. The APCO trade mark guarantees to the dealer and the owner, the world over, the highest quality of material, workmanship, endurance and satisfaction, and the LOWEST PRICES known for grades that are unequalled.

The APCO catalogue for 1915 for Jobbers and Dealers is ready for distribution. The co-operative policy of the Auto Parts Company means the support of its selling organization to Jobbers, wherever located.

Every Jobber in the country is in a position to supply APCO goods. If he will not it is because he makes more profit on imitations.

Some of the APCO Ford Car Specialties are illustrated and described in the following four pages.

APCO **BRAKE ROD SUPPORTS.**
STEEL 50c. BRONZE $1.00.



Takes the place of the pressed steel support furnished on the Ford Car. Holds the brake rod rigid, but allows it to work freely. Prevents rattle, working loose and breaking. Eliminates excessive wear on brake and clevis pins. Made from semi-steel, sheradized to prevent rusting. Well machined and guaranteed to outlast the car to which they are applied. This is the only self-lubricating support on the market. Space back of plug is packed with grease and hole in plug allows grease to work through the brake rod. The pressed steel supports that come with the car are continually breaking, working loose and causing all kinds of trouble. The APCO Supports are clamped to the rear radius rods and when fastened in place the plug is forced back with the thumb and the brake rod slipped in, the whole installation requiring less than 20 minutes. Furnished complete set of two ready to attach.

APCO **SPEED GRADUATOR. PRICE 50c.**

The notches under the Ford throttle rod are very coarse and far apart. This means that every time the throttle is opened a notch the speed increases about 3½ miles per hour. Most owners find that this adjustment is not fine enough and the APCO Graduator fastens over the old graduator, as shown in cut, and one notch represents one mile, so that practically any speed can be obtained within the range of the motor. All the high priced cars have this fine adjustment and there's a reason. On old cars, where quadrants are worn smooth, this eliminates throttle vibrating open. You will enjoy running your car more with one of these on it. Installed in ten minutes.

APCO **RADIUS ROD ANTI-RATTLERS.**
NO. 1 50c. NO. 2 40c.
Patented Nov. 12, 1912.

NO. 2. NO. 1.

Extending back from the front axle of the Model "T" Ford are two rods that meet under the crank case of the engine. Where these rods come together, they form a ball which fits into a socket rigidly fastened to the crank case. Ordinarily this is held in place by a steel cap and is adjusted very carefully so that it is tight enough to prevent rattling and not so tight as to prevent the ball moving in its socket, a condition that would cause the ball to break off from the rods, as they twist considerably when the car is moving over rough roads. Our patented caps are constructed so that when once applied, no further attention is necessary, as the heavy spring automatically takes up the wear as it occurs, and to accomplish this result with the steel cap now on the car, it would be necessary to adjust the cap every hundred miles. We make two styles of this cap, one with screw adjustment, and the other adjusted with discs. They are both made with steel springs and plugs and are guaranteed to prove satisfactory in every respect. Our number one is constructed so that the spring can be put in the shell after shell is bolted to engine case. A very necessary feature making installation easy. Number one is screw adjusted and number two is disc adjusted.

APCO **SPEEDOMETER GEARS. PRICE 20c.**

The small gears on the end of the speedometer shaft are made from fibre and they wear out frequently. We can supply duplicates of gears for the Stewart Speedometer and they come in two styles. New Style fastens with nut, and Old Style with cotter pin. Be sure and specify which style is wanted when ordering.

AUTO PARTS COMPANY, Providence, R. I.

SEND FOR OUR 1915 FORD SPECIALTY CATALOG—IT'S FRE

TRADE APCO MARK

APCO CLUTCH RELEASE. PRICE 50c.

A simple device that automatically releases the clutch on the model "T" Ford when the foot brake is applied. Pressure on the brake pedal releases the clutch before the brake is applied, and if you wish to coast, you simply push the brake pedal forward, which releases the clutch, and pushing the brake pedal further forward applies the brake and brings the car to a standstill without the use of the emergency brake or the clutch pedal. This device will be found a great help to amateurs, as with it, it is impossible to apply the brake without first throwing out the clutch. In reversing, the foot is always on the brake pedal to stop the car instantly without stalling the engine. Applying the brake without first throwing out the clutch wears the brake out quickly and puts a strain on the clutch that will cause it to slip after a few weeks' use. Our first release was rather hard to install, but by using a chain construction we have eliminated this trouble and anyone can make the installation in ten minutes with a screw driver and a wrench. Furnished complete ready to install.

APCO FORD STARTER. PRICE $15.00.

The APCO Starter is the latest effort of the inventor of the only successful mechanical starter ever marketed for the FORD and the improvements over his original starter are very marked. The APCO is Ball Bearing throughout, requires one-quarter the time for installation, requires only one-half the power to turn the motor over, is lighter in weight and its cost is less, and it will meet with the Ford Owner's approval we know. The APCO Starter will not start a motor that cannot be started by hand, but if hand cranking will start it the APCO Starter will with less effort and less danger. The price of effective starters has been prohibitive heretofore, but with the advent of the APCO price ceases to be an object. The construction is pressed steel throughout and this not only reduces the cost and weight, but makes an unbreakable article. The application is extremely simple and can be done without machine work, drilling of holes or mutilating dash or other parts of the car, and no parts of the car have to be removed. When applied the only visible part is the handle on the dash. We have eliminated the chance of a back kick, and guarantee that your car will start with less effort than when cranked by hand. The modern car carries the crank in the tool box. Make your Ford modern and put your crank there too.

APCO FORD ROBE RAILS. BLACK 50c. BRASS 75c.

Cut shows one end of our Robe Rail specially designed for Ford Cars. It fits at the top of the front seat and is the only one that can be put on the car successfully. The rod is 5/8" and when not in use can be folded down against the seat. Made in two finishes, black enamel and polished brass, both having black enamelled ends. Furnished complete with screws.

APCO STEERING ANTI-RATTLER.

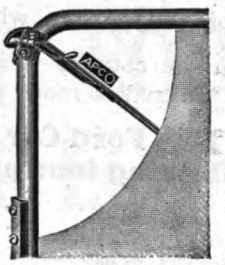
NO. 3 40c. NO. 4 30c.

NO. 4.

NO. 3.

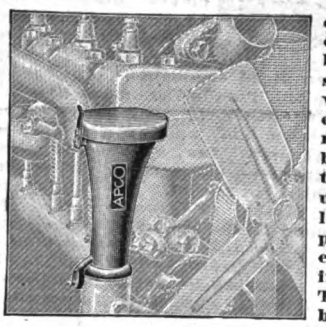
These are designed to take the place of the steel cap on the steering gear connecting rod. The shells contain a spring and cupped stud and the spring holds the steering arm ball under tension at all times and prevents rattle as well as eliminating all play in steering wheel. These have always been better sellers than the radius rod anti-rattlers, as when the balls on the steering rod flatten slightly, it is impossible to adjust the steel cap, for the reason that if it is tight where the ball is flat, it would be impossible to turn the wheel, as the cap would bind on the round part of the ball. The APCO Steering Rod Anti-Rattlers will make your car steer easier, hold the road better, prevent all rattle and vibration. Worth their weight in gold. Made in two styles. Number Three being adjustable with screw in bottom. Number Four not adjustable, but fitted with oil cup for lubrication. This is an improved type and much better than a grease cup lubricating device owing to the difficulty of procuring grease that will not harden.

APCO WINDSHIELD CLEANER. PRICE $1.00.



This device clamps to the upper left hand corner of windshield as shown in cut and is guaranteed not to rattle, which is the main trouble encountered in most cleaners now on the market. Ours does not clean off the entire shield, but does clear off enough so the driver can get perfect vision, and if desired the cleaner can be fastened to the top of shield and this makes the cleaned space slightly larger. There is no need of looking outside of the shield to get a clear view with an APCO Cleaner and our price is low enough so that it ceases to be an object.

APCO BREATHER PIPE AND OIL FILLER. PRICE $1.00.



This has been one of our best sellers, and it is now being made in semi-steel with a very fine black enamel finish. This makes a stronger, better looking article and permits us to make a much lower price. It is permanently fastened into the original breather pipe. There is a fine brass screen located near the bottom through which all oil must pass. Prevents oil spilling over the motor and makes it easy to put oil into the car. Also eliminates the chance of dirt getting into the motor with the oil.

APCO VALVE COMPOUND. PRICE 25c.

Grinding valves without proper grinding compound is a very unsatisfactory proposition. Some compounds grind quickly, but leave a poor finish, while others give a good finish but require too much labor. The APCO Compound is the genuine Carborundum and only one grade is necessary to obtain a perfect finish in a very short time. There is nothing better than Carborundum for this purpose and our large can will last a long while.

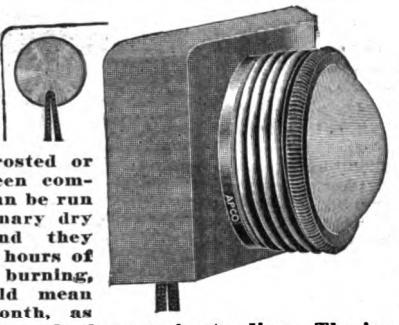
END FOR OUR 1915 FORD SPECIALTY CATALOG — IT'S FREE

Digitized by Google

BATTERY OUTFIT NO. 3. PRICE $2.

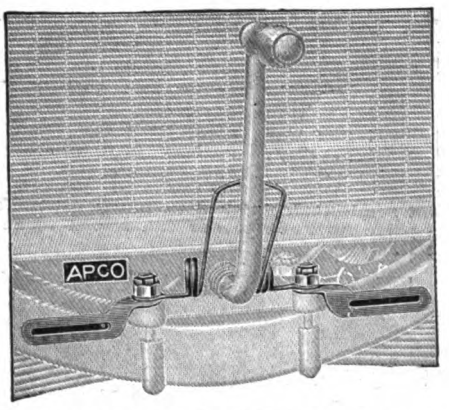


This outfit is designed to take the place of the oil lights on Ford cars and is furnished in frosted or red and green combinations. Can be run on two ordinary dry batteries and they will give 24 hours of continuous burning, which should mean one full month, as they are only used when car is standing. The installation is extremely simple: bore holes in dash and insert lamps. Furnished with two complete lamps, wire and switch ready to attach.

MASTER VIBRATOR. PRICE $10.00.

Furnished in a handsome imported mahogany case 4½" x 5" overall. The lugs that hold it to the dash are heavy cast brass dull finished. The cover is held in place by patent snap catches. The platinum points are liberal in size and the screw is provided with a ratchet arrangement to prevent it unscrewing. The construction is mechanically perfect and the material the best money can buy. Provided with single adjustment, which eliminates chance for improper regulation. Large kick switch for battery and magneto with removable key.

STARTING CRANK HOLDER. PRICE 25c.



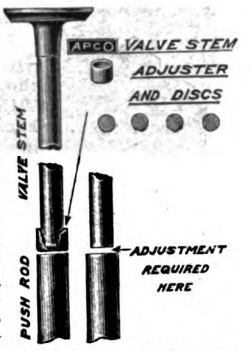
Ford Owners have been looking for an Automatic Starting Crank Holder and here it is. Made from one piece of spring steel. Easily applied, positive in action and requires no attention. Does not interfere with spinning of the car and holds the crank out of the mud and stops the rattle. Application is simple. Remove two nuts from spring clips and put on holder pointing up as shown in cut. After cranking car, lift crank to position shown in cut and it will stay there. It is invisible ten feet from car.

FRONT NUMBER HOLDER. PRICE 25c.

Designed especially for Ford Cars, made from high grade stamped steel, sheradized to prevent rusting. The lightest, strongest, neatest and best holder ever put on the market and the large production allows a reduction in price. Complete with screws, washers and nuts.

The Crank and Number Holder can be used in combination and make an excellent accessory.

VALVE STEM ADJUSTERS. PRICE 40c.

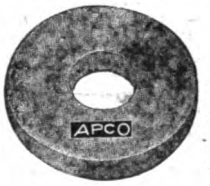


If you do not keep your valve stems adjusted properly your car will lose power, and as the valves are intended to open at a certain time, even a fraction of a second late means a great loss. The valves on a Ford car open about ⅜ of an inch and if there is ⅛ of an inch play between push rod and valve stem the valve only opens ¼ of an inch, or in other words, you lose one-third of the power. Still another thing to be considered is the noise caused by this play and 90% of motor noises arise from this source. Note the quietness with which the large cars run, due to the fact that the push rods are adjustable. The Valve Stem Adjusters consist of hardened caps made from high grade steel and a quantity of very thin hardened steel discs. To apply the adjusters all that is necessary is to raise the valve slightly and slip an adjuster on the end, and if this is not sufficient put enough discs in the cap to reduce the play to the thickness of a newspaper. The whole set can be put on in less than a half an hour and wear can be taken up very easily by inserting discs. All the high priced cars have an adjustment and if our price was $10.00 you could not afford to be without them. State model and year of car or diameter of valve stems when ordering. Made in three sizes, 5-16 in., ⅜ in., 7-16 in. Set includes eight adjusters and a quantity of discs to take up wear as occasion requires. The price is nominal, the improvement is phenomenal.

DASH OIL GAUGE. PRICE $1.50.

This device fills a long felt want and it possesses features that will instantly appeal to Ford Owners. Our low price crank case gauge will do the work, but it is not as convenient as this one. To attach simply remove lower pet cock and put our fitting in place, connect reservoir to pipe, fasten stand pipe to dash with clip and gauge is ready for business. Made from solid brass throughout. Swaged and soldered joints, ⅝ inch brass stand pipe. Red indicator with white background enclosed in glass tube that is removable for cleaning. This is the only gauge we know of that has a reservoir drain and the oil entrance at the side, and both of these features are very important. Each gauge is packed in a mailing tube and weighs about one pound.

FELT WASHER.
PRICE 6 for 25c.



Fits on the rear axle shaft before wheel goes on. Made of specially prepared felt that will positively prevent grease working out around brake drum.

FORD OAK RUNNING BOARDS, PRICE $6.

This is the latest Ford Specialty, and it will meet with a ready sale. The boards are made from heavy selected white oak painted on the under side and the top is covered with green battleship linoleum, which will outwear the car. The edges are trimmed with heavy aluminum moulding and fastened with nickel-plated brass screws. These boards make a handsome addition to the car and prevent all rattle where the guards and running boards come together. The best cars built cannot have better material for this purpose. The bolts are all under the linoleum and do not show from the top.

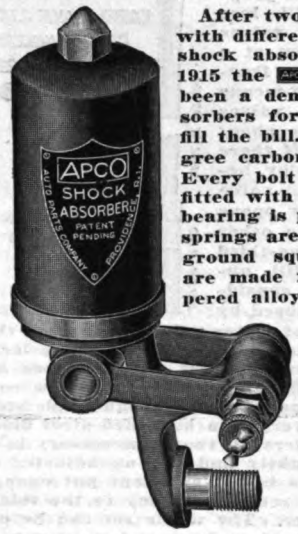
TRADE APCO MARK

APCO FORD SHOCK ABSORBERS. PRICE $7.50 PAIR.



After two years experimenting with different types and styles of shock absorbers, we offer for 1915 the APCO. There has always been a demand for quality absorbers for Fords and ours will fill the bill. All parts are 30-degree carbon steel drop forgings. Every bolt is a lubricating bolt, fitted with a grease cup. Every bearing is phosphor bronze. The springs are square in section and ground square on ends. They are made from the finest tempered alloy spring steel and are guaranteed not to settle or break during the life of the car to which they are attached. The cantilever side links prevent all side sway, reduce skidding, and by using these links, the center suspension is free and therefore it requires no lubrication. The casing or shell is attached so that it goes down with the car and prevents the shell from being crushed by the front mud guard bracket, a trouble met with by practically every other absorber on the market. The shell is fastened in place by the top nut and can be removed easily, but will not drop off on the road. The APCO Shock Absorbers have no internal strains within themselves to contend with and in action they are as free and resilient as the air itself. They contain all that is good and efficient in shock absorber construction and resilient suspension. There are no castings of any description used in their makeup. They will prevent spring breakage, increase tire mileage, reduce upkeep and lengthen the life of the car. Sold on a 30 days free trial. They cost more, but are worth more, and when you realize that a broken shock absorber would turn your car over, we think you will pay the difference and be sure.

OUR GUARANTEE.

We guarantee the APCO Shock Absorber for life and will replace any defective parts absolutely free of charge, including transportation charges and COST OF MAKING THE CHANGE. This is the most liberal guarantee ever made and we know there will be no replacements or we should not make the offer.

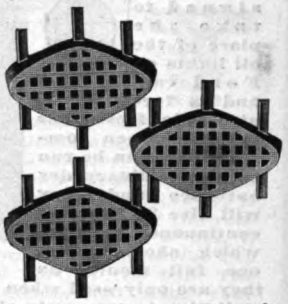
APCO SPRING LEAF SEPARATOR. PRICE 50c.

You will be surprised to see how much easier a car rides when the springs are lubricated, but it is nearly impossible to lubricate the springs without a tool to hold the leaves apart. The APCO Separator is made from steel, the screw has machine cut threads, the thumb nut is electrically welded to the screw, and the points are hardened tool steel, the one on the screw being pivoted so that it does not turn when the screw does. Put one in your kit and cut out the squeaks.

APCO RADIATOR CAP. PRICE 50c.

As shown in the cut the APCO Radiator Cap is of the dumb bell pattern and is cast in solid brass highly polished. It is an ornament to the car, as well as a useful accessory. Never gets too hot to handle.

FORD RUBBER PEDAL PADS. PRICE 50c SET.

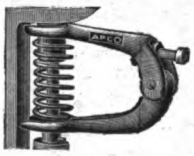


This is one of the most useful and appreciated accessories we have ever offered. The Pads are made from real, live, soft rubber, not composition or papier mache. They eliminate the vibration that comes from the engine and prevent the feet slipping off the pedals. They act a good deal like rubber heels and they fasten in place by simply clamping the steel strips around the foot pedals.

APCO SOCKET WRENCHES. SINGLE 30c, DOUBLE 40c, TRIPLE 50c.

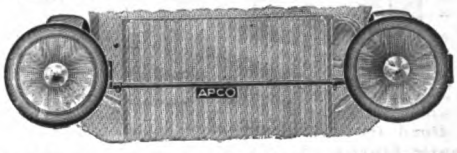
It is impossible to remove the cylinder head bolts on the Ford Car without a special wrench. The ones we offer are made from steel and blued. SINGLE END has one socket for cylinder head bolts, DOUBLE END has two sockets, one to start the bolt with and the other to spin it out with. TRIPLE END is same as the double with the addition of a socket to fit the rear axle housing nuts. The only wrenches on the market that are guaranteed against breaking.

APCO VALVE SPRING REMOVER. PRICE 25c.



A brand new remover that will remove the valve spring easily and quickly without danger of bending, and it is also built to replace the spring. It weighs but a few ounces and can be carried in the vest pocket. Made from semi-steel, finished in black rubber and at the price no Ford Owner can afford to be without it.

APCO HEADLIGHT BRACE. PRICE 50c.



A large percentage of bulb breaking is due to the excessive vibration of the headlights and our brace prevents this vibration and improves the appearance of the car. Finish is our regular black and the brace is made adjustable to fit any car.

APCO REAR NUMBER HOLDER. PRICE 35c.

Designed especially for the Ford Touring Car, but will fit any Ford with the flat bracket. Lowering the number support prevents plate from rattling against body of car, and this will be appreciated by owners. Made of semi-steel and provided with an adjustment to allow for variation in regular light brackets. Finished in our regular hard rubber finish. Complete with screws and washers.

Remington Roadster, 25 Horsepower, 106 Inch Wheelbase.

WHAT THE NAME "REMINGTON" MEANS ON A GUN ---WHAT IT SIGNIFIES IN THE TYPEWRITER WORLD ---NOW IT GUARANTEES IN AN AUTOMOBILE.

BIG FEATURES:

FULLY EQUIPPED
ELECTRICALLY STARTED
ELECTRICALLY LIGHTED
AUTOMATIC GEAR SHIFT

Touring Car or Roadster $695

Now, Mr. Dealer, what do you want? Results---the greatest possible results for the minimum of effort? This can always be obtained by offering the greatest quality at the lowest price. This is your opportunity to join the REMINGTON forces and offer just that. You will be supported by the REMINGTON way of doing things. The REMINGTON fairness in business dealings is exemplary of the REMINGTON method of doing things.

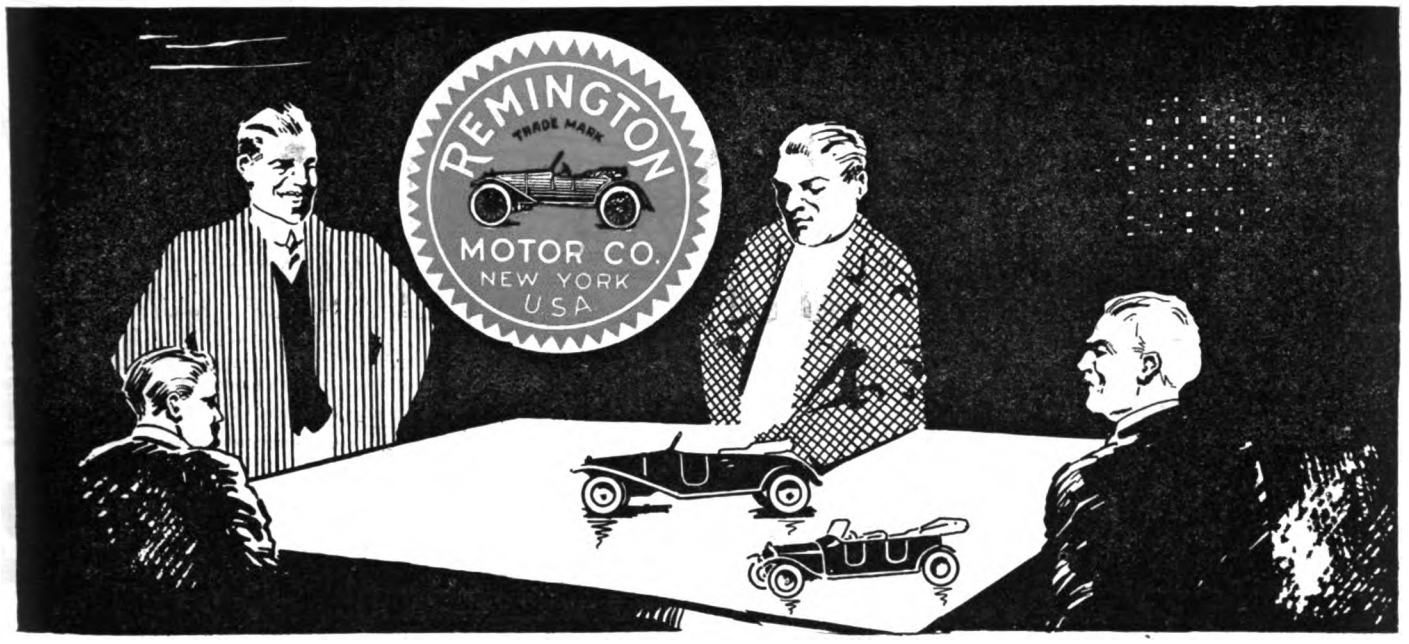
When you sell a REMINGTON car, you make your customer your friend for life. This is the kind of business that you want to do.

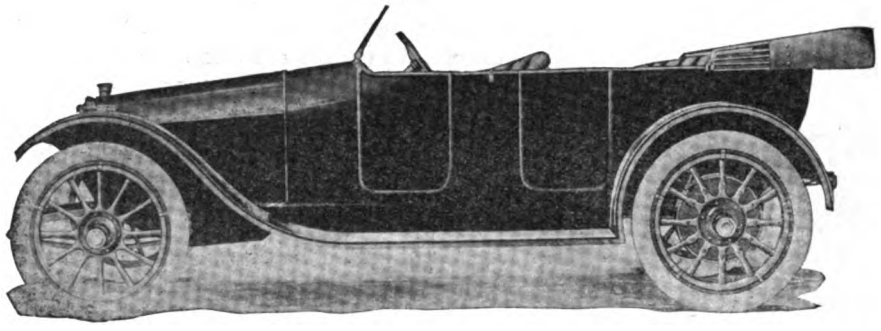
There is still some very desirable territory open. We would like to hear from those dealers who appreciate what REMINGTON means. Ask for the territory that you want.

THE CATALOG WILL TELL YOU ALL---ASK FOR IT

You Will Not Have to Sell a REMINGTON Car---It Will Sell Itself

Digitized by Google





Narragansett Model, Fully Equipped Touring Car.

A CAR BUILT TO A STANDARD

The REMINGTON was first built and built as good as it was possible to build an automobile with all the up-to-date improvements and equipment that go to make a complete modern car. It was then given the acid test and came out a TRUE REMINGTON PRODUCT. REMINGTON engineers have held strictly to standard practise and modern methods, which have been accepted both in this country and abroad as representing the most advanced principles of automobile construction.

REMINGTON Cars Are Honestly Built—Honestly Sold—Honestly Guaranteed

Designed to please the most fastidious. Built to satisfy the astute critic. Sold to meet the requirements of every man. Every purchaser of a REMINGTON receives his car with that confidence and pride of knowledge that comes to one who knows he has an elegant, dependable, satisfying car—a car that will fulfill his requirements to the utmost and give that fullness of service to be expected in a quality production.

REMINGTON CHASSIS SPECIFICATIONS:

AXLES—Front I beam drop forged. Rear ¾ floating bevel and pinion and differential; gears of special nickel steel specially heat treated.
BEARINGS—Front wheels ball bearings—special construction. Rear axle, Hyatt high duty extremely quiet roller bearings.
BODY—Special Remington design—streamline.
BRAKES—Service foot pedal control—external contracting on rear wheel drums. Emergency center control hand lever, internal expanding on rear wheel drums, adjustable for wear directly at the brake, retaining same leverage under all adjustments.
CARBURETOR—Float feed type.
CLUTCH—Cone clutch.
COLORS—Brewster green.
CONTROL—Spark and throttle on steering wheel.
DRIVE—Shaft drive with double universal joints.
DASH—Leather covered instrument board.
FRAME—Pressed steel channel section, 3", with heavy cross members.
GASOLINE TANK—Ten gallons capacity, carried in the cowl.
HORN—Electric, concealed under the hood.
IGNITION—Atwater Kent automatic advance ignition.
LAMPS—Adjustable focusing incandescent electric bulbs and dimming device for headlights.
LUBRICATION—Splash feed and pressure feed—very efficient.
MOTOR—Four-cylinder, cast en bloc, water cooled, thermo-syphon. Extremely large valves with low lift, insuring quietness of operation. All valves on right hand side and enclosed. Belt driven fan.
PAINT AND VARNISH—Applied by hand, of Remington quality.
RIMS—Demountable—quick detachable.
ROBE RAIL—Adjustable strap.
SPRINGS—Front, semi-elliptic, 1½" wide, 32" long. Rear, cantilever, 1½" wide, 37½" long.
STARTER—Disco electric system.
STEERING WHEEL—Left drive, 17" in diameter.
TOP—One-man top, mohair.
TOOL KIT—Standard equipment, with tire pump, jack, etc.
TRANSMISSION—Three speeds forward—one reverse. Center control. Operated by Remington automatic gear shift. All gears nickel steel, mounted on Hyatt high duty, specially quiet roller bearings.
UNIVERSAL JOINTS—Spicer.
WHEELBASE—106 inches.
WHEELS—Hickory spokes, natural finish, demountable rims.
WINDSHIELD—Special design.
Fully equipped with top, windshield, speedometer, electric horn, electric lighting and starting outfit and automatic gear shift.
WEIGHT—Touring car, 1500 pounds; roadster, 1350 pounds.
PRICE—Narragansett Touring Car—30x3½" tires—$695.
Roadster, Model E—30x3½" tires—$695.

We will exhibit in space C 9, Third Floor, Grand Central Palace, New York, and in Space 1, Coliseum Basement, in the Chicago Show.

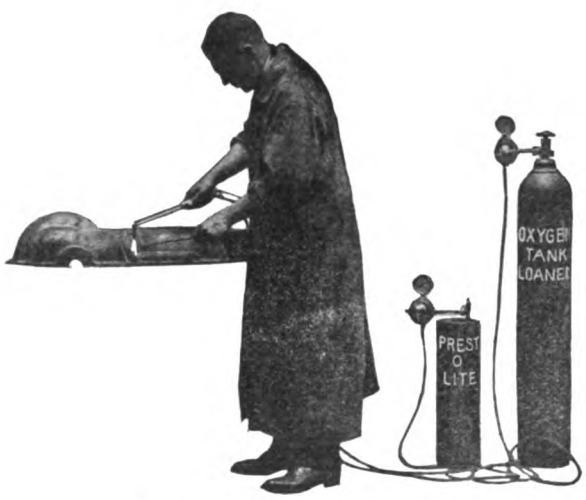
A BUSINESS FOR $42



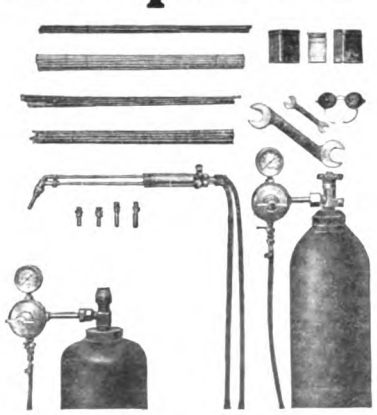
When you own a Waterhouse Welding Outfit you are established as a business man. You can then do work that no other concern can do unless it has a Waterhouse Welding Outfit. Its practical utilities are almost unlimited. It can be used for the repair of all metal constructions, and can be efficiently operated by any intelligent mechanic.

With the Waterhouse Welding Outfit there is great economy of time, metal, labor and machine and hand work after the welding process.

An established business can start a Waterhouse autogenous welding department for the bare cost of the outfit—No additional space or equipment is required. A new business needs but a small space to successfully operate on the largest work. A Waterhouse Outfit can be placed in a corner or carried anywhere.

The Waterhouse Outfit is highly economical because there is no waste of time or fuel—the torch will not flash—it can be used all the time it is needed, and it is absolutely safe.

Complete Waterhouse Welding Outfit $42



Waterhouse Outfit

	Value
1 B Welding Torch with 5 tips	$17.00
1 Oxygen Reducing Valve with 50 lb. line pressure gauge	10.25
1 Acetylene Reducing Valve with 50 lb. line pressure gauge	11.00
1 set of Special Welding Hose (20 ft.)	3.00
1 pair of Welding Glasses	.75
1 Carbon Burning Torch	Free
1 set Instructions	Free

Net cost Complete $42.00

Rods and Fluxes $4.50

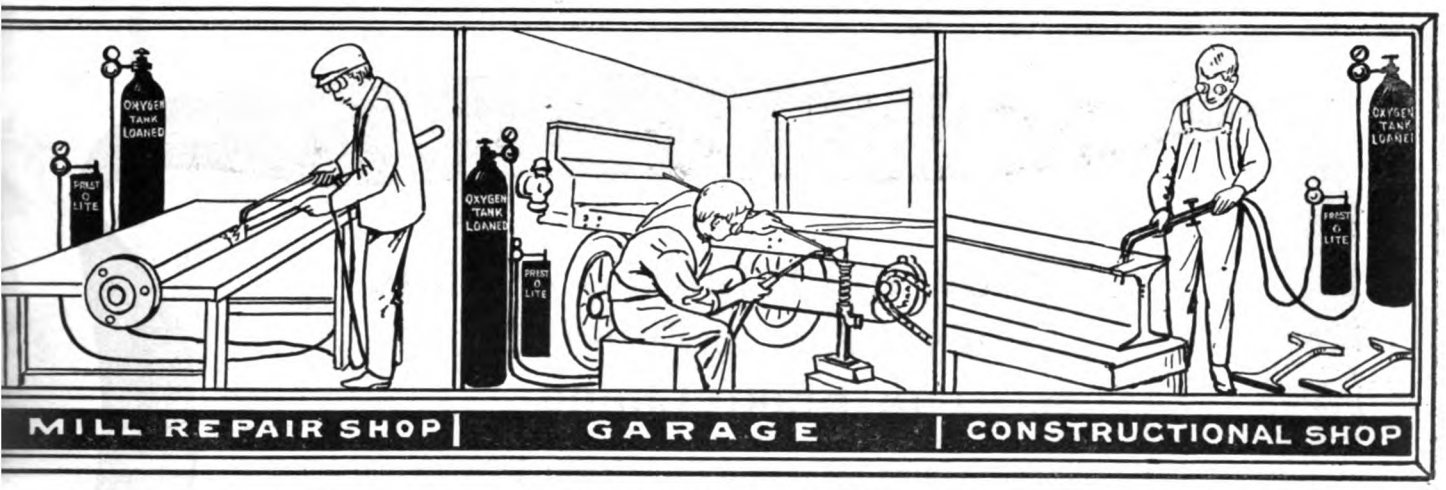
What you get

1 Bottle Aluminum Flux
1 Can Cast Iron Flux
1 Can Copper and Brass Flux
2 Pounds Brass Welding Rods
5 Pounds Cast Iron Welding Rods
2 Pounds Aluminum Welding Rods
2 Pounds of Steel Welding Rods

With every Waterhouse Welding Outfit is given free a carbon-burning torch with which carbon can be removed from the cylinders of any car---an incidental but a substantial source of profit.

If you have a regulator for carbon burning, the oxygen regulator usually sent with the outfit is unnecessary, and a deduction of the price ($10.25) can be made from the total price of the outfit quoted.

Digitized by Google



PROFITS FROM THE TRIAL PERIOD WILL PAY FOR IT

$42

FREE TRIAL OFFER

If at the end of two weeks' trial in your shop, you decide you do not want the outfit, ship it back to us and we will refund your money IN FULL. No strings to this offer. Not necessary to give any reasons.

$42

TERMS: 5% cash discount with order or C. O. D., or $20 cash with order, balance in two payments, first of $12 in 30 days, $10 in 60 days after receipt of outfit by you.

With the practical instructions furnished free with every Waterhouse Outfit any mechanic can do satisfactory work from the start. These instructions deal with the treatment and repair of all kinds of metal.
Be the first owner of a Waterhouse Welding Outfit in your community. Secure the welding business, and the profits that can be made from it.

Follow the White Foot Prints They Lead to Satisfaction in Brake Lining

Tireless study, labor and experiment have taught us that Multibestos stands today unequaled—a brake lining meeting every requirement of the hardest service.

With this perfection of quality we have aimed to provide protection to the car owner and special service to the trade. This we have done by marking Multibestos with plain white lines across the fabric exactly one foot apart.

These White Foot Prints are exclusive with Multibestos and will always identify it from other brake linings. And they also afford a great saving of time and inconvenience to the men in the trade who are handling Multibestos, for the marks are spaced exactly and can be used for measurement when cutting from stock to fill orders.

This sales service and protection backed by the supremacy of the goods themselves make Multibestos in every way the logical lining for every live dealer.

BOSTON GARAGES WIN SEPARATOR FIGHT.

Massachusetts Garage Association Makes Acceptable Suggestions to Authorities—Dealers and Accessory Men in Several States From Organization.

BOSTON garages and dealers have apparently won their fight against the adoption of separators in all their places of business as proposed under the new fire hazard law, and outlined by John A. O'Keefe, the commissioner in charge of that work. If the places are conducted so as to minimize the hazard, separators will not be necessary. If not they will be ordered installed.

The successful termination of the fight made by the trade is largely due to J. S. Hathaway, president of the Massachusetts Garage Association, who appointed a committee to formulate regulations to be presented to the commissioner, who gave the motor interests a hearing.

Blanks containing 30 questions were sent to 250 garages and service stations in Boston and these were filled out. From the replies, data were carefully compiled, suggestions made and submitted to Mr. Hathaway. These were referred to the commissioner and were as follows:

We would suggest that, when any person purchases gasoline in small quantities from a garage to be used outside a garage, a record be kept of the name and address of said purchaser.

Make it unlawful to use gasoline for any other purpose in garages than the filling of tanks in automobiles.

No gasoline to be used by industrial institutions, tailors, cleansing establishments, dyers, etc., without a special permit from the fire commissioner, and a record to be kept showing in what manner the gasoline is disposed of.

Upon investigation we find that there is more danger from gasoline used by industrial institutions, cleansing establishments, etc., than that used by garages.

A printed card, approved by the commissioner, should be placed upon the floor of every garage, public and private, stating that the use of gasoline other than for motors is prohibited. This card to be signed by the fire commissioner.

If clause 66 of the laws and regulations governing such fluids is enforced, there will be no need of installing a separator, in our opinion.

Garages to be supplied with a complete set of these laws and regulations regarding the use of gasoline, etc.

We would suggest that a law be put into effect to prohibit the storage of gasoline in garages other than that kept in the tanks of automobiles, storage tanks and portable tanks.

The storage of gasoline in cans to be kept in a vault outside the garage building, the same distance as that required for gasoline tanks. This vault to be kept locked except when in use.

Commissioner O'Keefe intends to promulgate a set of regulations, to go into effect Jan. 15, covering this matter. Although these have not been fully determined, separators will not be insisted upon as previously explained.

KRIT COMPANY BANKRUPT.

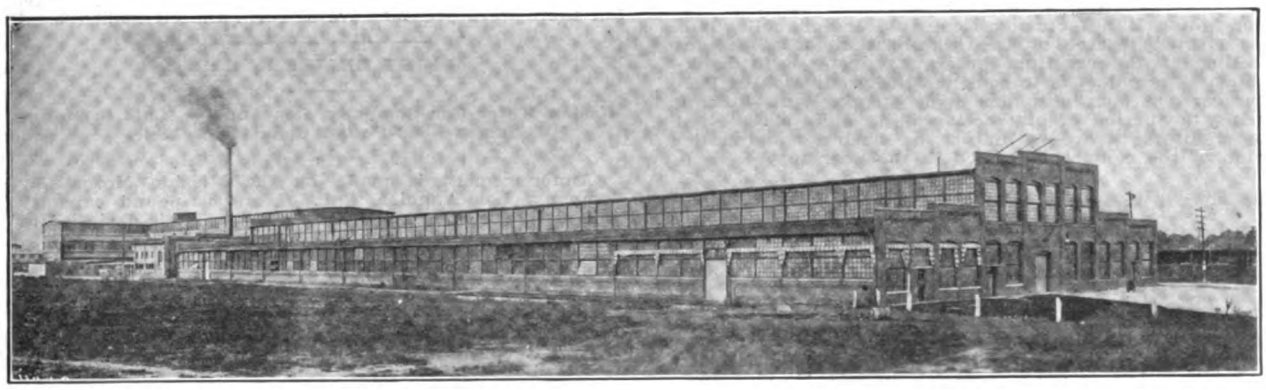
Krit Sales Company, Formed to Render Financial Assistance, Also Involved in the Failure.

According to advices received from Detroit, the Krit Motor Car Company and the Krit Sales Company of that city have filed a petition in bankruptcy. The liabilities of the motor company are said to be $881,088, with assets of $662,533. The liabilities of the sales company, as appearing in the petition, are $256,814. The sales company was formed to render financial assistance to the motor company about a year ago.

CODE TO BE REVISED.

New York Garage Building Rules to Be Suspended at Request of Automobile Trade Association.

As a result of a conference between the directors of the Automobile Trade Association of New York State and Fire Marshall Thomas J. Ahearn, held on Dec. 9



The Big Plant of the Inter-State Motor Company, Muncie, Ind. Which Concern Succeeds the Inter-State Automobile Company.

Digitized by Google

last, at which the garage building rules, which were to have gone into operation Dec. 1, were discussed, the association has been requested to redraft the regulations. This redraft is to be in the hands of Mr. Ahearn, and will form the basis of another draft which will be made by him. In the meantime the earlier rules have been suspended and will so remain pending the result of the conferences on the new draft.

NEW INTER-STATE MODEL.

Successor to Inter-State Automobile Company Producing Five-Passenger Car to Sell for $1000.

The Inter-State Motor Company, Muncie, Ind., which purchased the assets and factory of the Inter-State Automobile Company, is producing a new five-passenger car which sells for $1000. The new organization, which took over the business last February, is composed of men of long and successful experience in large industrial affairs, and the active management is in the hands of those thoroughly conversant with the automobile trade. The new concern has ample backing. F. C. Ball, president of the Ball Brothers Glass Manufacturing Company, maker of the Mason fruit jars, is president, and B. W. Twyman is general manager.

The plant in which the new model is to be produced is not only thoroughly equipped for a large production, but the various departments are in charge of men entirely familiar with the manufacture of motor vehicles on a large scale.

The plant in which the new model is to be produced is not only thoroughly equipped for a large production, but the various departments are in charge of men entirely familiar with the manufacture of motor vehicles on a large scale.

CONCENTRATE PRODUCTION.

United States Rubber Company to Operate Two Plants for Pneumatic Tires, Detroit and Hartford.

Beginning with the new year the United States Rubber Company, New York City, will produce all of its pneumatic automobile tires at Detroit and Hartford. All solid tires will be built at Providence, R. I., and bicycle and motorcycle tires will be made exclusively at Indianapolis. Each of these plants will specialize in its own particular line, the result being that, on the important item of pneumatic pleasure car tires, there will be one large factory in the East and another in the West, obtaining efficient distribution and service.

UTICA AGENTS IN SESSION.

Form an Active Organization, Discuss Prospects for Show and Elect Officers for 1915.

With an attendance of over 80 per cent. of the automobile dealers of the city, the Utica, N. Y., association was formed recently. While the prospects for a show were discussed, nothing definite was decided. The tentative plans of the organization will be considered at a meeting of the board of directors in the near future. The following officers were elected: President, Frank P. Miller; vice president, A. A. Ledermann; secretary, George C. Donohue; treasurer, William F. Carroll.

FRANK E. SMITH, TRUSTEE.

Receiver of Premier Motor Manufacturing Company Makes Excellent Showing and Company May Continue.

Frank E. Smith, who has been receiver of the Premier Motor Manufacturing Company, Indianapolis, Ind., was elected trustee of the organization at a recent meeting of the creditors before the referee in bankruptcy. The object is to continue the production of Premier cars, as Mr. Smith has made an excellent showing during the period of his receivership. It is stated that the creditors favor continuing the business and a decision of the court is expected in the near future.

RECEIVER FOR HASSLER.

Creditors and Robert H. Hassler Ask That Shock Absorber Sales Company Be Adjudged Bankrupt.

Two petitions have been filed with the United States court at Indianapolis, Ind., in behalf of the Hassler Shock Absorber Sales Company of that city. Robert H. Hassler has petitioned for a receiver, and Robert H. Hassler, Inc., Asa P. Robertson and the Advertisers' Press, creditors, ask that the concern be adjudged bankrupt. The court has appointed Homer L. Archer receiver.

ADMIT ACCESSORY MEN.

New Orleans, La., Dealers' Association Amend By-Laws and Many Supply Houses Join.

The by-laws of the Automobile Dealers' Association of New Orleans, La., was amended at the annual meeting so as to permit the admittance of local dealers in automobile accessories. Practically every accessory house was represented at the meeting. The following officers were elected: President, Lucien Lyons; vice president, W. A. Shuler; secretary-treasurer, George E. Dick. The report of the treasurer showed a balance of $1000.

VICTOR TO SELL DIRECT.

Gasket Manufacturer Discontinues Its Selling Arrangements and Will Market Its Own Products from Now On.

The Victor Manufacturing and Gasket Company, Chicago, Ill., will sell direct from its factory from now on, having discontinued the selling arrangement with Stevens & Co., New York City. Victor gaskets will now be handled direct from the factory through jobbers only, and dealers will find it convenient to place their orders with the nearest jobbers.

DALLAS DEALERS COMBINE.

The Dallas Automobile and Accessory Dealers' Association Interested in Legislative Matters.

Prominent dealers, accessory and supply men of Dallas, Tex., met recently and formed the Dallas Automobile and Accessory Dealers' Association. The club will have for its purpose legislative activity in addition to protecting the interests of its members. The association was launched at a banquet at which the guests were attired as chefs. The menu was unique.

ATLANTIC MOTORS BANKRUPT.

Failure of Atlantic Motors Company Affects Agents Who Made Deposits on Cars.

A voluntary petition in bankruptcy has been filed by the Atlantic Motors Company, Savannah, Ga. It is stated that the liabilities of the concern are $12,229 and assets $13,566. Among the assets is $5390, most of which was deposited by dealers or as part payment on cars. The concern has been in existence less than a year.

MUST REPORT TO POLICE.

Dealers in Second-Hand Cars, Parts, Accessories, Etc., of Indianapolis, Ind., Must File Sales.

The city council of Indianapolis, Ind., has passed an ordinance compelling dealers in second-hand cars, parts and accessories, to report all purchases within 24 hours to the police department. It is believed that this will result in the recovery of much stolen property.

ST. LOUIS AUTO MEN DINE.

Annual Banquet of Automobile Manufacturers' and Dealers' Association a Notable Success.

The recent annual banquet of the Automobile Manufacturers' and Dealers' Association of St. Louis, Mo., was a notable success. Not only was the attendance large, but there were present several state and city officials.

LIGHT DELIVERY CAR.

Mission Motor Car Company, Los Angeles, Cal., to Manufacture 800-Pound Capacity Vehicle.

Announcement is made by the Mission Motor Car Company, Los Angeles, Cal., of an 800-pound capacity light delivery car termed the Crescent. It is designed to meet the requirements of tradesmen.

MANY NEW GARAGES.

Over $100,000 Worth of New Buildings Erected at Grand Rapids, Mich., During 1914.

The total garage construction for Grand Rapids, Mich., during 1914, amounted to $100,000. Approximately 246 permits were also granted for private garages.

FIFTEENTH ANNUAL NEW YORK SHOW.

In the Beauty of Its Decorations, and the Number and Variety of Exhibits, the 1915 New York Show Will Surpass All Previous Automobile Expositions.

WHEN the doors of the Grand Central Palace, New York City, are opened for the 15th national automobile show, on Saturday, Jan. 9, the greatest display of motor cars and accessories set in the most effective scheme of decoration in the history of the trade will be offered for inspection and approval. This year, as last, the exhibit will be under the auspices of the National Automobile Chamber of Commerce, the successor of the old Association of Licensed Automobile Manufacturers, and the Automobile Board of Trade, which was amalgamated with it. The general management will also remain in the hands of S. A. Miles, who last year demonstrated that he was able to live up to the very enviable reputation which had preceded him from the middle West, the scene of much of his long experience. Entering the Palace, the lobby will be found to have been converted into a California garden or rather a huge pergola whose walls, composed of mirrors, give the effect of great space. There will be bay trees and creeping vines, with lighting fixtures in the form of tulips, effectively placed. Passing to the interior of the building, the visitor enters a Persian garden, the effect of broad area being given by great mirrors, 19 by seven feet, set in gold frames, alternating with decorative sun bursts. Persian draperies hung in numerous sections of the building, and oriental hangings and cartouches will adorn the upper halves of the white marble pillars, which rise from a green carpeted floor. The great court will be strung with garlands of roses and wistaria, set off by brilliant green foliage and ivy, and crystal chandeliers, 10 feet in diameter, hung from the ceiling will afford brilliant illumination. This year, too, instead of painted signs designating the spaces of exhibitors, the names will be worked out in electric light tubes, so that the whole effect will be as brilliant as it will be beautiful.

The Show Committee of the N. A. C. C. and S. A. Miles, Who Is Managing the Show This Year for the Second Time.

Each national automobile show is the index of the progress of the industry from year to year, both in the extent and value of its output, and in the advance in the quality of the automobiles themselves. The enormous increase in production, from less than 700 cars in 1899 to 515,000 in 1914, is no more striking than the changes in construction and design that have marked the development of what is probably the most rapidly advancing branch of engineering in the history of that science. While the user, actual or prospective, will take advantage of the opportunity afforded for comparison along the lines of his knowledge and his needs, the dealer, the garage owner, and the technical man will find, for his inspection, the many details that indicate the steps that are being taken and the improvements that are being made. Not only in the cars themselves, but among the accessories, will be found much of interest and of value to the owner, the garage man and the dealer. The exhibits in this department will number approximately 225, as compared with displays of between 90 and 100 lines of cars, both probably exceeding the number shown last year.

The National Automobile Chamber of Commerce, aside from its service as the central organization of the trade, is doing a very valuable work along many lines in fostering a spirit of cooperation which is already making itself felt in ways that are of direct benefit to the car user and which are important factors in the progress of the industry. Automobiles are being made better, more reliable and safer, because the engineers are being united in the work of development and standardization rather than competing

Digitized by Google

along lines where competition can only do harm. However keen the desire for individual features, ideas have been interchanged to the end that the automobile might become a better machine, and now a cross licensing agreement is in contemplation which will eliminate litigation on patents which is so often a bar to progress. This exemplifies the spirit of the N. A. C. C. in its activities for the betterment of all branches of the industry, but the accomplishment must and does depend upon the individual manufacturers, and their support of the policies which are determined upon. The evidence of this co-operative work will without doubt appear in the similarity of many details, and the many signs of standardization shown in the 1915 cars. This does not mean that individuality has been sacrificed, or that there is less worth seeing than in previous years, but it does mean that features of construction and design which experience has shown to be correct, are coming into universal use.

One of the biggest things of its kind in the world, the national automobile show can give but a faint suggestion of the extent of the industry which it represents—an industry whose history goes back a little more than 15 years. Some idea of the wonderful advance is shown by the statistics of the N. A. C. C., which give the value of the cars produced in this country in 1914 as approximately $485,000,000, the number of manufacturers as 450 and the number of cars registered in the United States as 1,500,000. There are 15,500 dealers, 13,630 garages, 1280 repair shops and 680 supply houses handling the cars which stay in America, to say nothing of the business agencies involved in the disposal and care of the cars exported, which, for the year ending in June last, amounted to $34,500,000.

The total number of exhibits at the Grand Central Palace will be very close to 350, of which seven will be electrics, 12 motorcycles, about 90 gasoline cars and the balance accessories. Complete automobiles will be shown on all four floors, which are available for the purpose, and accessories will be found on the third and fourth floors, in such spaces as are not occupied by automobiles, the decorative arrangement being the same for either class of exhibit. M. A. Singer is in charge of the many details of the decorative scheme. While the main purpose is to afford surroundings which will display the cars to the best advantage, it is believed that exceptional beauty will be attained as well, and that even the magnificent building in which it is carried out will have an added attractiveness.

As compared with previous shows, both cars and accessories will probably exceed in number not only those of last year, but also the representation in 1913. The cyclecars will not be in evidence as such, the name having been abandoned by nearly all manufacturers in favor of the designation, "Light Car", none of those who stick to the old nomenclature being included in the list of exhibitors. There are 16 manufacturers listed to show cars who have not exhibited before, and a greater proportion of the accessory lines will be new. Commercial cars will not be shown, although their representatives will be assigned space for headquarters, at which customers may be met.

A Glimpse at the Interior of the Grand Central Palace, New York City, Where the 1915 Show Is to Be Held.

MILWAUKEE DEALERS ORGANIZE.

At a recent meeting of the automobile and supply dealers of Milwaukee, Wis., held at the Hotel Pfister, it was decided to form an association for protection against dead beats, the maintenance of prices, and united action on legislation. The meeting was attended by about 100, and was addressed by Francis L. Plummer of the American Fair Trade League.

ZENITH ADMITTED TO M. A. M.

The Zenith Carburetor Company, manufacturer of the well known Zenith carburetor, has been elected to membership in the Motor and Accessory Manufacturers, New York City.

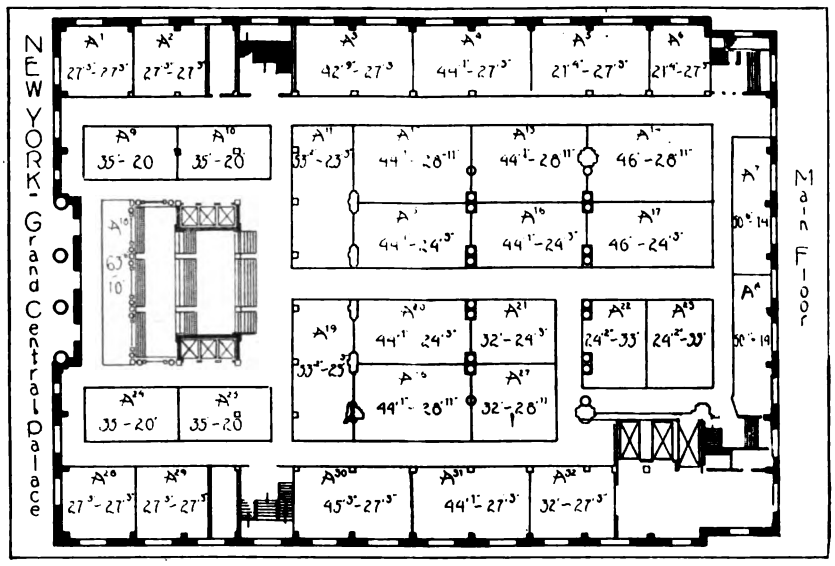
LIST OF EXHIBITORS AT THE NEW YORK SHOW.

THE accessory manufacturers will have their greatest year at the forthcoming 15th annual automobile show in the Grand Central Palace, New York City, Jan. 2-9. While the number of automobile exhibitors will far surpass last year, yet the increase in accessory makers is one of the features of the year. These total 236, as compared with 104 in New York in 1913.



Main Floor, Section A, Where Gasoline Cars Will Be Exhibited.

When the first announcement of the list of exhibitors was made the National Automobile Chamber of Commerce reported a total of 188 exhibitors for New York, including both automobile and accessory manufacturers. However, the following week saw an additional list of 118 accessory manufacturers for both the New York and Chicago shows. A list of car and accessory manufacturers that will exhibit at the New York show includes the following:

Pleasure Cars.

C-22—Allen Motor Co., Fostoria, O.
B-26a—Anderson Electric Co., Detroit, Mich.
B-29—Apperson Bros. Auto Co., Kokomo, Ind.

NOVEL SPRING OILING DEVICE.

Brown Trailog Company Marketing Oil Box That Automatically Lubricates Motor Vehicle Springs.

The Brown oil box, a new device for automatically lubricating the leaves of pleasure and commercial car springs, has been brought out by the Brown Trailog

Brown Oil Box, a Device for Lubricating and Cleaning the Springs.

Company, Cleveland, O. It stops squeaks in the springs, makes the car ride easier and saves wear upon both tires and springs. The Brown oil box bolts on to the springs, just inside of the rebound clips. The box contains two heavy felt pads, which carry the oil, which is fed between the leaves of the spring by capillary attraction. The feathering action of the springs forces the oil the entire length of the leaves, removing rust and polishing the bearing surfaces. The Brown device can be attached with an ordinary screw driver and requires no attention after installation other than occasionally renewing the supply of oil. A set of four will fully equip a Ford, while other makes require six or more. The introductory retail price is $1. The oil box is sold through the regular trade. Details of the Brown device will be supplied on request.

BROWN COMPANY INCREASES LINE.

The Brown Company, Syracuse, N. Y., has purchased the rights, plans and good will of the Lewis-Sanford Pump Works, Boston, Mass. This company manufactured several types of pumps, including one for the Ford and other cars.

NEW MOSCO SPECIALTIES.

A Complete Line of High-Grade, Practical Accessories, Parts and Equipment for Ford Cars.

The Motor Specialties Company, Waltham, Mass., manufacturer of motor car specialties under the well known trade name of Mosco, has brought out a number of new devices for the model T Ford car, some of which are shown herewith.

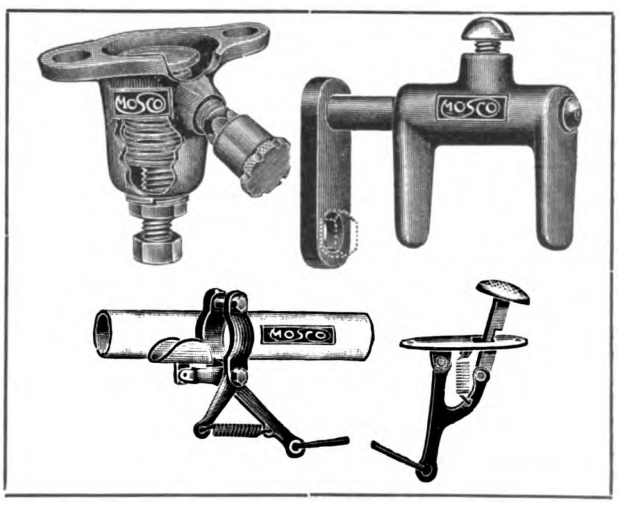
The Mosco muffler cut-out is a very light, compact construction and is very useful for noting the explosions of the motor when testing it for a skip, etc. A desirable quality of the cut-out is that it comes ready to install and does not require any alterations to fit. It can be easily fitted by the owner and retails for $1.

The Mosco anti-rattling ball sockets are for taking up lost motion in the radius and steering rods. They replace the usual parts and being accurately made, do not require any fitting. They are equipped with compression grease cups, and the tension of the spring is adjustable, a desirable feature. The design for the radius rod sells for $1; that for the steering rod for 75 cents.

The Mosco fan belt guide is a device that should appeal to the owner, as it is a safeguard against the belt slipping on the pulley. The guide is attached to the side of the timer gear housing without requiring an extra bolt or hole. The device is made of semi-steel and retails for 50 cents.

Two adjustable wheel pullers are produced for the Ford car, the No. 1 and the No. 2. The first-named will fit all cars having the tapered rear axle and, because of a variation in the diameter of the hub thread, the Mosco will fill a long felt want of Ford owners, as provision is made for over and under sized threads. The Mosco wheel puller is easily used. It is screwed on the hub, the clamping bolt tightened and turning the centre bolt will remove the most obstinate wheel. The Mosco wheel puller retails for 50 cents.

The Motor Specialties Company produces a large number of devices for the Ford machine, and particulars and trade discounts will be mailed upon request.



Some of the Mosco Ford Specialties, Including Anti-Rattling Ball Socket for Radius and Steering Rods, Fan Belt Guide and Muffler Cut-Out.

GENERAL MATERIAL MARKET QUOTATIONS.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as those prevailing at the beginning and ending of that period for purposes of comparison. Southern iron dropped 50 cents, while northern iron rose $1 for the month. Bessemer and open hearth steel fell 50 cents on the ton. Copper showed a tendency to rise, electrolytic advancing $1.92½ and lake $1.95 for the month.

The New York Stock Exchange reopened Dec. 12 after being closed for a period of 19 weeks owing to the European war and the financial condition of the country. Accordingly restricted measures have been taken by the governors of the exchange and dealings in stock as such shall be specified by, and be under the supervision and regulation of, a committee of five, shall be for cash or in regular way only and not below the minimum prices authorized by the committee from time to time. Transactions at prices below those allowed by the committee, or in evasion of its rules, will be prohibited.

GARAGE REGULATION HEARING.

Many Proprietors and Property Owners Present and Majority Object to Its Provisions.

The hearing on the proposed ordinances regulating public and private garages in Providence, R. I., resulted in considerable opposition being manifested against the measure, particularly the clause requiring that within six months after the passage of the bill owners of public and private garages shall make such alterations as would conform to the law. It was pointed out that if the measure became a law it would entail an unreasonable amount of expense to the owners, upon too short a notice. Many suggestions were made, and the committee has taken these under advisement.

RAYFIELD FORD EQUIPMENT.

A Special Outfit for Ford Motors That Are Fitted with Gear Driven Magnetos.

Announcement is made by the Findeisen & Kropf Manufacturing Company, 21st street and Rockwell avenue, Chicago, Ill., maker of the well known Rayfield carburetor, that a special outfit is being produced for the Ford car, one that can be easily and quickly installed on Ford motors equipped with a gear driven high-tension magneto. This should prove of interest to all dealers handling Ford equipment. Particulars and prices of the new carburetor and fittings will be supplied upon request.

OPENS LONDON OFFICE.

A. Schrader's Son, Inc., to Establish an Office and Factory to Produce Tire Valves and Gauges.

A Schrader's Son, Inc., New York City, maker of tire valves and gauges, is to establish an office and factory at London, England, with W. H. Cole in charge. The machinery and equipment has been shipped and the factory is expected to be in operation before the end of the month.

CIRCULARS FOR DEALERS.

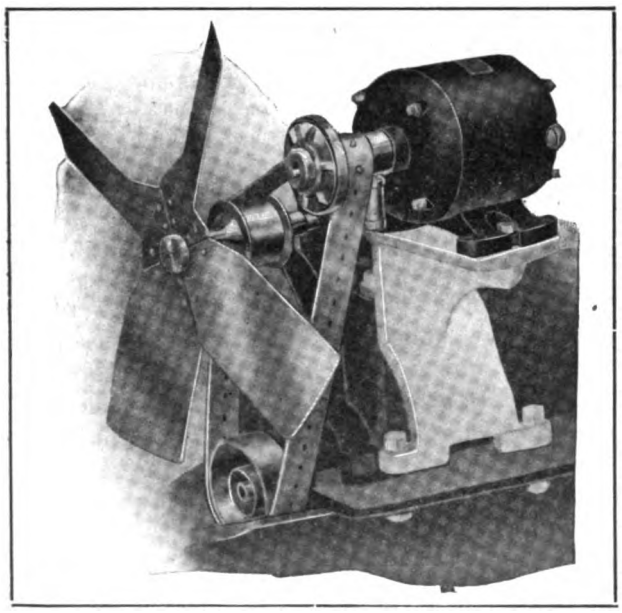
Kellogg Manufacturing Company Will Supply Free Printing Matter of Interest to All Owners.

An announcement of unusual interest to the trade is that of the Kellogg Manufacturing Company, Rochester, N. Y., maker of the well known line of Kellogg pumps, etc. The company is prepared to furnish automobile dealers with circulars describing the No. 101 single-cylinder, all metal Kellogg engine driven air pump with attachments for the makes of cars represented by the agent. The attachment and method of installation are most important in the application of the power driven tire pump. The circulars are carefully prepared, and describe the pump with its fittings for all standard makes. For example, there is a folder for the owner of a Reo car and the data will interest the prospective purchaser as well. These circulars can be utilized to a good advantage in the publicity matter mailed by the dealers. Agents are invited to write to the Kellogg Manufacturing Company for particulars, and it is suggested that the number of circulars required be stated.

NEW LIGHTING EQUIPMENT.

Carleton Company Marketing Complete Electric Outfit for Used and New Cars with "Porcupine" Device.

The Carleton Company, 170 Summer street, Boston, Mass., has brought out a new drive, termed the "porcupine", for the No. 68 Carleton dynamo, which is retailed



Illustrating the "Porcupine" Drive Now Supplied with the Carleton Generator for Ford Cars.

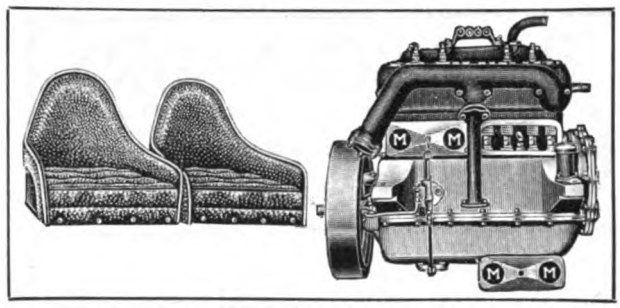
for $15. As may be noted by the accompanying illustration, the generator pulley is provided with spurs, which fit into holes in the belt. The maker states that always three or more holes are occupied by the spurs, obtaining a practical drive, one free from the possibility of slipping. The new drive permits using a small pulley, and wear on the bearings is reduced to the minimum, as the tension is very light.

The Carleton Company carries in stock brackets for standard models, enabling the installation of the dynamo with no tools other than a screw driver and a wrench. Every bracket is accurately made, and a special design is produced for the Ford car. The complete outfit includes, in addition to the dynamo, an automatic cut-out, ammeter and storage battery. The Carleton equipment should prove an attractive proposition to the owner of a car not fitted with electric lighting, and dealers and the trade are invited to write for particulars and discounts.

ATTRACTIVE BARGAINS.

Auto Parts Company Makes Special Offer on Racing Seats and Four-Cylinder Motor Complete.

The Auto Parts Company, 737 West Jackson boulevard, Chicago, Ill., manufacturing jobber and dealer in motor vehicle parts, material, supplies and equipment, is making a special offer on racing seats. They are made of heavy gauge leaded steel, with rolled edges, and are very durable and comfortable. The seats are 16



Complete Motor and Racing Seats Offered at Attractive Prices by the Auto Parts Company, Chicago, Ill.

inches wide, 17 deep and 21 high, and are upholstered with a high-grade leather. They are particularly adaptable to an old car in that they will bring the machine up to date.

The Auto Parts Company is offering a Michigan 40-horsepower motor, complete with fan, oiler, pump and supporting arms, at a reasonable price. The bore is 4¼ inches, stroke 5¼, and the power plant comes complete for installation.

The company carries a large stock of all kinds of parts and supplies, and garages and repair shops rebuilding cars that have been wrecked or remodelling old types, will do well to get in touch with the Chicago concern. It can supply about everything needed, and its prices are very attractive.

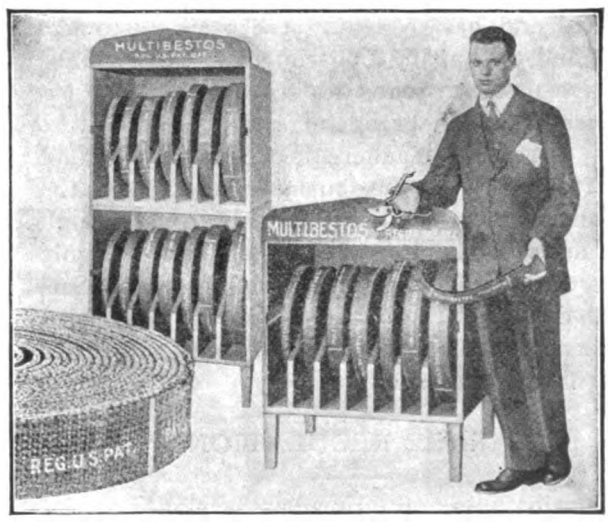
BRAKE LINING CABINET.

Standard Woven Fabric Company, Maker of Multibestos Friction Material, Supplying Stand.

The Standard Woven Fabric Company, Framingham, Mass., manufacturer of the well known Multibestos brake lining and friction material, announces a new cabinet for stocking and displaying its product. The new stand is termed the "Automatic Salesman" and is constructed to hold 700 feet of brake lining. Each roll has a separate department and revolves on a separate axis, so that the desired quantity may be obtained easily and quickly.

The cabinets are built along the lines of sectional bookcases, and as many as are needed can be provided, so that the requirements of the small, as well as the large dealer, are fulfilled. The cabinets are in the natural wood, but the Standard Woven Fabric Company offers to stain them to match the wood work in the dealer's store and they are loaned without cost.

An innovation that is being introduced, one that marks an advance in brake lining, is a new system of marking the material with plain white lines at intervals of exactly one foot. These marks are termed "white foot prints" and the company has filed an application for a patent on the method This arrangement will be of great assistance to the dealer, as it will enable him to obtain the desired lengths easily and quickly. Both the cabinets and the new method of marking the Multibestos brake lining will be displayed at booth D, space 202, at the New York show. Particulars of the cabinet offer will be supplied dealers upon writing.



Automatic Sales or Brake Lining Cabinet Supplied Dealers by Standard Woven Fabric Company, Maker of Multibestos Friction Material.

THE ACCESSORY AND GARAGE JOURNAL

VOL. IV. DECEMBER, 1914. NO. 8.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

SATISFYING CUSTOMERS.

The dealer, garage man or repair man obtains his livelihood by supplying the people in his vicinity with material and equipment that are of value to them. To prosper he must sell goods that give the customer complete satisfaction. On the other hand, if he fails to do so, he will lose custom. And it should be borne in mind that the dealer, garage man or repair man is permanently located and has to sell to the same customers over and over again. Consequently, he is obliged to give them a square deal every time they patronize him. The garage man or repair man who does not strictly adhere to this policy, cannot achieve success in his business. Similarly, the manufacturer who fools the dealer and through him deceives the consumer, loses that desirable opportunity in business, the repeat order. Satisfied customers purchase the second and third time and continue to buy the supplies and material that give satisfaction.

GARAGE REGULATIONS.

Considerable opposition has developed to the proposed bill regulating garages in Providence, R. I., the features of which ordinance were published in the November issue of the Accessory and Garage Journal. Many garages were represented at the hearing and practically all speakers for and against the measure were unanimous in stating that they believed the provisions of the bill, as it affects buildings to be erected in the future, were on the whole reasonable. Many protests, however, were made against the section which calls for compliance within six months after the passage of the ordinance. There is no doubt that it would mean the expenditure of large sums on the part of the garage owners, and that a certain class would be severely handicapped. It is to be hoped that the committee having the bill under advisement will give consideration to the small garage, as well as the large one.

THE NATIONAL SHOW.

All indications point to the most successful show ever held in New York City. When the doors of the Grand Central Palace open on Saturday, Jan. 2, it is estimated that the number of exhibits, particularly those of accessories, supplies and equipment, will exceed all previous records. The national show serves several useful purposes. It not only provides those contemplating the agency of a motor vehicle an opportunity to inspect the machine, but brings the prospect in close touch with the manufacturer and the sales organization. One of the features of the show will be the large number of makers exhibiting garage and repair shop equipment, including the most modern time and labor saving devices. The national show is not only educational, but it is a business promoter.

EQUIPPING THE GARAGE.

The equipping of the garage and repair shop requires careful consideration, for in these days of keen competition the service obtained by the customer is a most important factor. And the average motorist is quick to discern between the shop employing old methods and the new utilizing time and labor saving equipment. The liberal selling policy of the manufacturer or garage and repair shop equipment permits the small concern to install modern tools, machinery, etc., without any great first expenditure. A number of makers allow 30 days' trial of their product, enabling the user to derive profits that in some instances will practically pay for the equipment.

A practical garage and repair shop system not only prevents leaks and losses, but instills confidence in the customer. If the business is loosely conducted the customer is apt to believe that he is not being given a square deal.

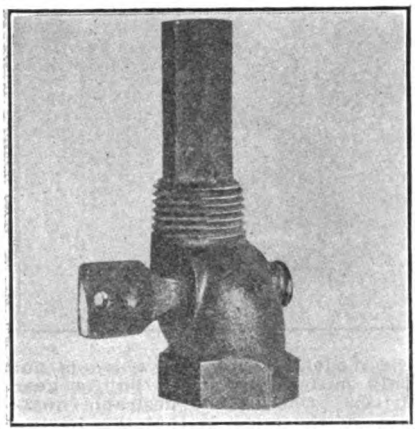
Digitized by Google

ACCESSORIES, SUPPLIES AND FITTINGS.

STRATEGY FUEL DEVICE.

Provides a Reserve of One Gallon of Gasoline for Ford Cars.

The Detroit Accessory Company, Detroit, Mich., is marketing the Strategy, a fuel reserve device built



exclusively for the model T Ford car. It provides a reserve of one gallon of fuel and this gasoline is not used until the regular supply is exhausted. The Strategy is a reserve valve and is fitted easily to the fuel tank between the last-named member and the fuel line. It is operated by a lever in the heel board. It sells for $1.

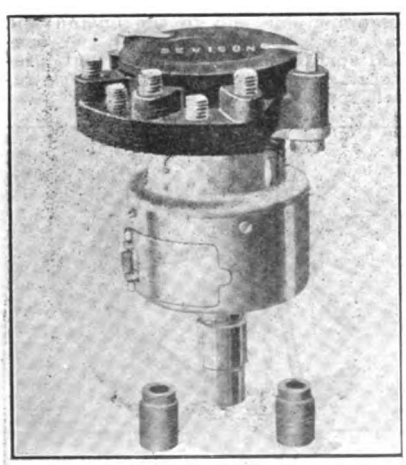
SEVISON IGNITION SYSTEM.

Designed for Cars Having Dynamo or Using Batteries.

The Sevison Electric Company, Elkhart, Ind, is manufacturing the Sevison ignition system, the invention of L. J. Sevison, who has been identified with the production of ignition apparatus for a number of years.

The system utilizes a direct current and consists of a mechanically operated circuit breaker, a single-unit transformer coil and dash switch. The arrangement provides for the current supply being a storage battery or dry cells and was primarily designed for motor vehicles equipped with a lighting system including a dynamo.

The circuit breaker has no oscillating journals and is made of large hardened steel parts. The maker calls particular attention to the contact points, stating that they will not arc or require filing. Only one



spark is produced, and the system is held to be very economical of current. All components are fully enclosed, water and dust proof, and are readily accessible. The Sevison system is adaptable to two, four and six-cylinder motors.

STA-TITE PISTON RING.

Is Produced for Ford as Well as Other Gasoline Motors.

The Sta-Tite piston ring is manufactured by the Piston Ring Company, Muskegon, Mich., and this company is producing a type of suitable dimensions for the model T Ford motor. The ring is made in three sections, two outer rings fitting over an inner member, and the maker states that this construction effectually prevents loss of compression, as well as oil from reaching the combustion chamber. They are particularly applicable to used motors and in cylin-

ders where loss of compression is due to the walls not being smooth and true.

GORDON RADIATOR COVER.

Is Employed to Keep Water and Motor Warm in Cold Weather.

The J. P. Gordon Company, Columbus, O., is marketing the Gordon radiator and hood cover, which is constructed of weather proof fabric on the outside and lined with a material which, it is stated, will prevent the escape of the heat from the motor. The cover is designed for service in cold weather and for keeping the water of the circulation system warm

when the engine is not running. The hood cover is so attached that the hood can be raised and the method of fastening is such that it cannot be easily stolen. The curtain is adjustable, so that the opening may be regulated according to the weather. Covers are made for the radiator, as well as for the double member.

BETHLEHEM SPARK PLUG.

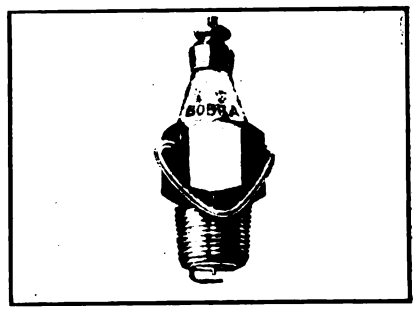
Especially Designed for Motorcycles, Having Four Sparking Points.

The Silvex Company, 171 Madison avenue, New York City, manufacturer of the well known Bethlehem five-point spark plugs, is producing a design for motorcycles. It is made in metric, ½ and ⅞-inch sizes. The feature of the plug is the use of four sparking points and if, for any reason, one of these become inoperative, the others are available. A desirable quality of the construction is that the spark is projected into the charge, making for motor efficiency.

BOBRA SPARK PLUG.

Provides Ready Means for Priming and Cleaning.

The Bobra Spark Plug Company, Dayton, O., is introducing the Bobra spark plug, which differs from con-



ventional practise in that the porcelain is not only removable, but carries both electrodes. As may be noted by the accompanying illustration, the porcelain is displaced from the shell without the aid of a wrench or other tool.

This arrangement makes it a simple matter to clean the plug, as well as to adjust the spark gap. One of the desirable qualities of the Bobra is that it provides ready means for priming a cylinder not fitted with petcocks. A bail is utilized to retain the insulator in position. The Bobra is made in three sizes, S. A. E., standard and metric. It retails for $1.

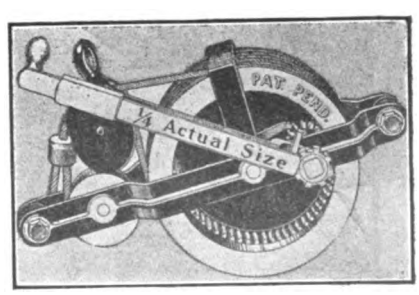
PULL-U-OUT.

A Device for Extricating Cars from Mud, Sand, Etc.

Pull-U-Out is a device marketed by the Pull-U-Out Manufacturing Company, 909 Pine street, St. Louis, Mo., and the maker states that it will not only extricate machines from places where the traction is poor, but it will right a car that has turned turtle, etc.

The illustration is one-quarter size and depicts the Pull-U-Out proper. It is operated by a handle and lever and is easily manipulated. The ratio is 70 to one, sufficient to move a heavy load with a minimum of effort, it being claimed that only five pounds pressure on the lever is necessary to lift the average car.

Three adjustable stakes are utilized for anchors and two seven-foot chains are included in each equipment. The winding drum carries 30 feet of ¼-inch steel rope, and the steel frame carrying the drum and gearing is equipped with hooks and a sheave or block. The Pull-U-Out can be employed for a number of useful purposes, such as lifting a power plant from the chassis, when overhauling the car, for example. The Pull-U-Out retails for $15.

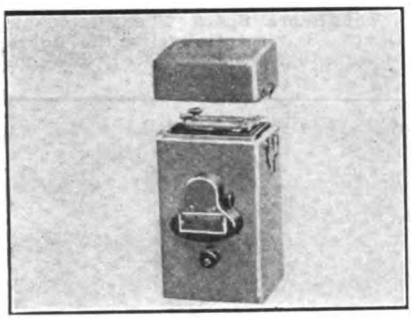


Digitized by Google

HOOSIER MASTER VIBRATOR.

Has Two Pairs of Contact Points, but Only One Is Used at a Time.

The Hoosier Coil Company, South Bend, Ind., has brought out a tandem master vibrator having two



pairs of contact points so connected that only one pair operates at a time. The other pair, however, remains in contact. The wiring or connection is such that, should the operating pair stick or become faulty, the other pair takes up the work. One of the features of the design is that should the original pair again resume operation, the others become inactive. This arrangement may be said to provide a double master vibrator. The Hoosier comes in a neat, substantial mahogany box, with kick type of switch. It retails for $15.

"MADE RIGHT" LUNCHEON CASE.

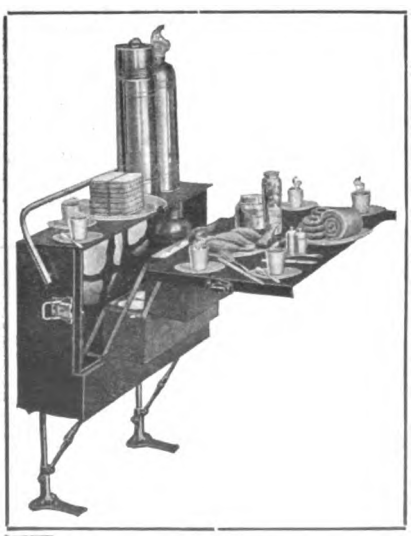
Equipment Includes Table, Plates, Knives, Forks, Etc.

The Knickerbocker Case Company, Fulton and Clinton streets, Chicago, Ill., is marketing the "Made Right" motor luncheon case and table, which is an ingenious arrangement that will appeal to automobilists who tour and desire to carry their luncheon.

As may be noted by the accompanying illustration, which depicts the style No. 1, it is easily placed in the tonneau of the car and does not occupy any more room than a suit case. It is retained against the seat without marring the same, and the container is adjustable as desired, making for convenience.

The equipment provides suitable conveniences for a day's outing or a long tour, as a considerable quantity of food and delicacies may be carried, and vacuum bottles are provided, these permitting of carrying hot and cold liquids, soups, etc. A feature of the outfit is that all cases will take any standard size of vacuum bottles or jars.

The equipment is most complete, including as it does knives, forks, spoons, plates, cups and saucers, glass jars, napkins, tray food boxes, salt and pepper shakers, etc.; in fact, all necessary articles.

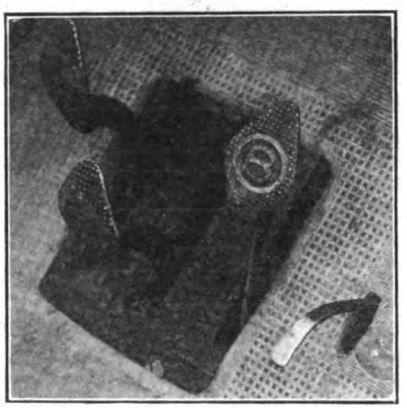


SIMPLEX FORD ACCELERATOR.

Controls Fuel Supply by Foot Independently of Throttle.

Will A. Sapp & Co., Elgin, Neb., is manufacturing the Simplex accelerator for the model T Ford motor, which is a simple and practical device for controlling the quantity of mixture passing to the cylinders. One of the desirable qualities of the Simplex is that it does not interfere with the operation of the usual throttle and either can be employed independently of the other.

The accelerator proper is attached to the inspection plate of the transmission housing and is connected by means of a chain and pulley to the throttle lever of the carburetor. A spring of proper tension returns the lever to a closed position, when the

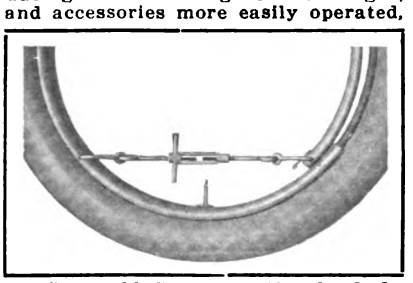


accelerator is relieved from the pressure of the foot. The tension, however, is adjustable. The Simplex enables control of the car speed without displacing the hands from the steering wheel. It lists at $1.65.

STANWELD RIM TOOL.

Adapted to Transversely Split Demountable Rims.

In keeping with its policy of producing material lighter in weight, and accessories more easily operated,

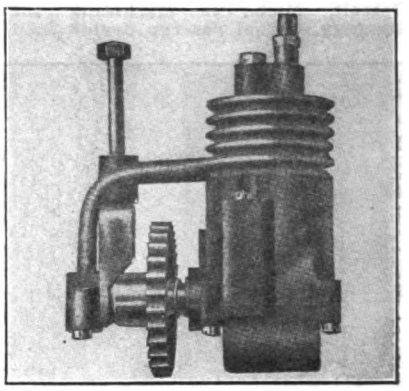


the Stanweld Company, Cleveland, O., has brought out a special tool for the transversely split type of demountable rims. These rims are very generally employed and the Stanweld Company, after much experimentation, has designed and patented the special tool shown in an accompanying illustration. It operates on the principle of a turnbuckle, is made in one size, and fits any make, diameter or width of split rim. The use of the device requires the drilling of four small holes, two in each side of the rim base. The Stanweld rim tool can be folded into a space nine by five inches and weighs 1½ pounds. It retails for $1.

SANFORD TIRE PUMP.

A High-Grade, Efficient Type for Ford Cars.

The Brown Company, Syracuse, N. Y., is manufacturing a practical as well as high-grade efficient pump for



the model T Ford car, which is not only moderately priced but is gear driven. One of the desirable qualities of the pump is that the driving and driven gear can be meshed easily and quickly by a lever. The pump is very compact and the workmanship and material are first-class in every respect.

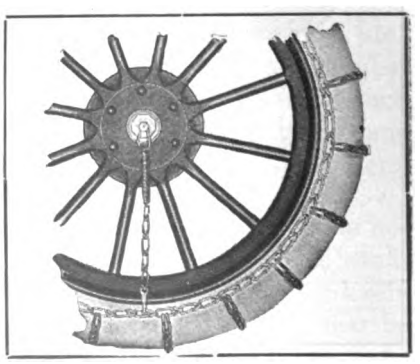
One of the features of the design that will appeal to those owners installing new equipment is that the SanFord can be attached in 30 minutes and that no drilling or machining is necessary. The pump supplies air free from lubricants, and the maker states that it is constructed to withstand hard service.

One of the features of the pump is the method of adjusting and packing. This is accomplished by means of a ring on the inside of the pump, so constructed that it may be adjusted from the outside for wear, etc. The retail price, complete, with gears, hose and gauge, is $8.50.

NON-SKID PROTECTOR.

Prevents Loss of Tire Chain and Is Easily Fitted.

Bornstein Brothers, 11 Caledonia avenue, Rochester, N. Y., is marketing the Non-Skid chain protecter, which the maker states will prevent loss of the tire chain in the event the retaining chain breaks. The device, which is stated to be patented, consists of a chain and a grooved nut or button. The last-named member is secured to the hub cap of the wheel by drilling a 5/16-inch hole and inserting a special bolt and button. The chain protector is attached by snapping one end to the button and the other to the tire chain. A special spring keeps the chain taut, preventing rattling. The protectors retail for $1.25 the pair.

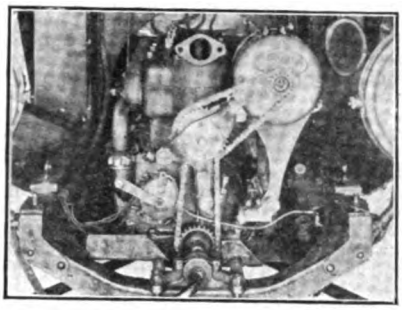


Digitized by Google

FORD MOTOR-GENERATOR.

North East Electric Company's Equipment Is Complete.

The North East Electric Company, Rochester, N. Y., maker of electric lighting and motor starting systems,



has brought out an equipment for the model T Ford. It is a motor-generator, the latter supplying current to a storage battery, which in turn energizes the electric motor and provides electricity for lighting.

The motor starter is operated by a push button, which cuts in the current from the battery and, upon releasing the button, the starter functions as a generator. The unit construction is very compact and is mounted by means of a special bracket at the left side of the motor.

The energy of the motor starter is conveyed to a sprocket on the crankshaft by a silent chain, which form of drive is employed for actuating the dynamo.

The complete equipment comprises the motor-generator, chains and sprockets, storage battery, lamps, wiring and switches. The North East system for the Ford car was granted a certificate of merit by the Royal Automobile Club, London, England, under its open competition rules.

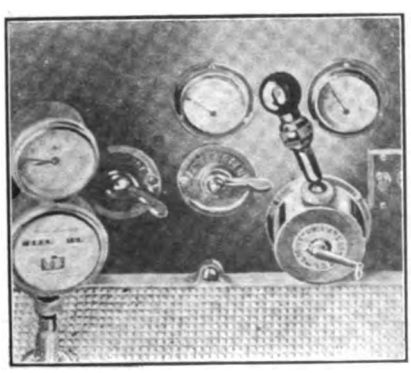
UNIVERSAL REEL LIGHT.

Has 12 Feet of Cord and May Be Used as a Dash or Hand Lamp.

The Universal reel light, which is a dash and hand or trouble lamp combined, is manufactured by Cummings Brothers, Flint, Mich. One of the features of the device is its compactness, the maker stating that it is no larger than an ordinary speedometer.

The stem or handle is provided with a ball and socket joint, enabling the user to direct the light as desired, and it can be locked in position by means of a thumb nut. The lamp is equipped with a reflector and this is adjustable, so that the Universal may be utilized to light the indicating instruments on the control board, as shown in the accompanying illustration.

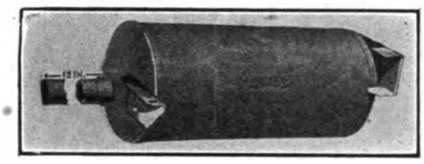
When employed as a trouble or inspection light, the lamp can be used quickly, as the reel unwinds 12 feet of cord. A small handle is used to rewind the cable. It is stated that the Universal is economical of current and that four batteries will last for a considerable length of time. The reel light comes nickel plated and equipped with a tungsten bulb. It sells for $4.



GEMCO FORD MUFFLER.

Is Constructed of Pressed Steel and Is Supplied with Brackets.

The Garage Equipment Company, Milwaukee, Wis., is producing a muffler for the model T Ford chassis, and one of the qualities claimed for the design is that it is indestructible. The Gemco is constructed entirely of pressed steel and is very light. All the parts are electrically welded, and it is stated that back pressure is reduced to a minimum. The interior of the muffler follows Gemco practise. The muffler comes complete with substantial steel brackets, ready for attaching to the tail pipe. The dimen-

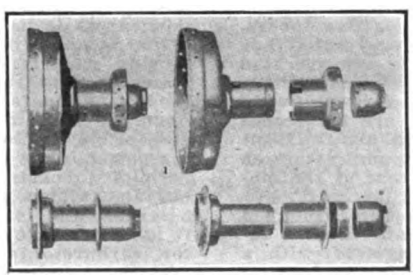


sions conform to those of the Ford design and the muffler is secured in the same manner.

LINDSAY WIRE WHEELS.

Designed for Ford Cars and to Replace Wooden Members.

The Great Western Manufacturing Company, La Porte, Ind., for which Brandenburg Brothers, New York City, is factory sales representative, is making the Lindsay patented wire



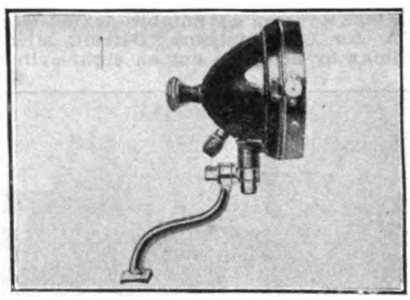
wheels for Ford cars. These wheels come complete with brake drum, ball bearings, hub cap, etc., and the maker states that anyone can attach them to the car in a few minutes, the work involving the removal of the wood wheel from the axle and slipping on the wire member.

The hubs are of specially prepared pressed steel, constructed to withstand severe service, as well as side strain. The brake drum is so made that the spokes are attached to the outside, affording convenience in replacing broken or damaged members with new without disturbing or removing the wheel from the axle. The application of the brake is on the interior, the braking surface being on the inside of the spoke line of the wheel itself. The spokes are of heavy .175-gauge drawn steel. A speedometer ring for either front wheel is supplied when desired at a slight extra cost. The set of four wheels weighs in the neighborhood of 100 pounds. The sizes produced include 28 by three-inch, 30 by three, 30 by 3½ and 32 by 3½ for clincher tires. A set of four wheels sells for $25.

ELECTRIC SPOT LIGHT.

Victor Auto Parts Company Marketing a Useful Lamp.

The Victor Auto Parts Company, Cincinnati, O., specialist in the manufacture of motor vehicle lamps, is



marketing what is termed the fore door electric spot light. It is designed to be attached to the door by means of a bracket having a universal joint, a construction that permits of swinging the light in any direction.

The swivel, although moved easily, is stated to be held rigidly in place by means of friction, and it is claimed that the lamp will not jar out of position. The reflector is not a true parabola, but of a special shape. The light is very serviceable in that it may be utilized to illuminate road signs, street numbers, etc., and highway curves. The lamp is 6½ inches in diameter, and retails for $7.50.

MAYO POWER TIRE PUMP.

Is Permanently Attached to the Valve Plug of Motor.

Announcement is made by the Mayo Manufacturing Company, 60 East 18th street, Chicago, Ill., of a new type of power tire pump. It is designed to be permanently attached to the motor and, as may be noted by the accompanying illustration, the pump is provided with a connection which screws into the valve cap. This connection is fitted with a standard ground poppet valve, similar to that employed in an internal combustion engine, and is held on its seat by a spring.

To employ the pump the handle is pressed downward and, with the motor running, air is pumped into the hose, thence to the tires, a suitable length of tubing and a gauge being provided with each outfit.

To attach the connection to the valve cap, the latter is drilled and tapped. A union joint permits of the easy connection of the valve member and the pump proper. The maker states that the pump will inflate a 34 by four-inch tire to 75 pounds in three minutes, and other sizes and pressures in proportion. After service, the pump handle is locked by giving it a quarter turn. The Mayo valve cap plug comes complete with specific instructions, and retails for $15.

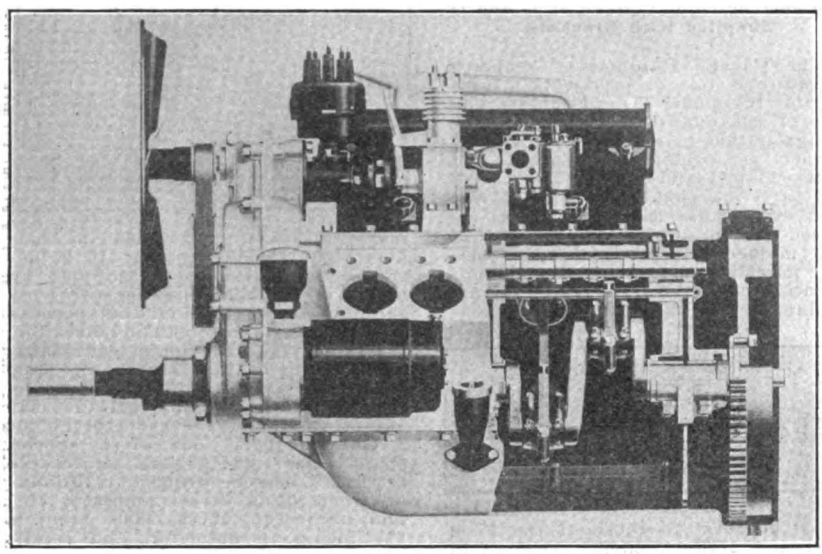
KING EIGHT-CYLINDER CAR.

New Model Sells for $1350, with Complete Equipment.

AFTER years of notable achievements, the King Motor Car Company, Detroit, Mich., has capped the climax by bringing out an eight-cylinder car, selling for $1350 complete. Deliveries will be made beginning Jan. 1, and the car will be exhibited at the forthcoming automobile shows.



The King Eight-Cylinder Motor, Partially in Section, to Depict the Cranks, Mounting of Attachments, Etc.

The new eight-cylinder King is of the pure streamline type, and is but two inches longer and wider than the King model C, with a wheelbase and tread of the same dimensions, namely, 113 and 56 inches respectively. The motor is of the V type, with two blocks of four cylinders set at 90 degrees to each other, the design being L head with intake manifold and heads integral in each block. The bore is 2¾, and the stroke is five inches, giving an S. A. E. rating of 24.2 horsepower, but it has developed 45 in tests. The poppet valves are operated from a single drop forged camshaft with integral cams, through intermediate rocker arms with hardened steel rollers, and adjustable push rods. They are 1⅝ inches in diameter, with a 15/32-inch opening, and are fully enclosed. The camshaft which, like the oil pump, is driven by a silent chain running in oil at the front of the motor, is carried on three bearings.

The cooling is by a thermo-syphon system through a ⅝-inch water jacket, and a cellular radiator with a 16-inch fan. The Ward Leonard electric system, with a Willard storage battery, is used for lighting and starting, the ignition being from a storage battery current, through a high-tension distributor. The carburetor is of special design and is mounted between the banks of cylinders.

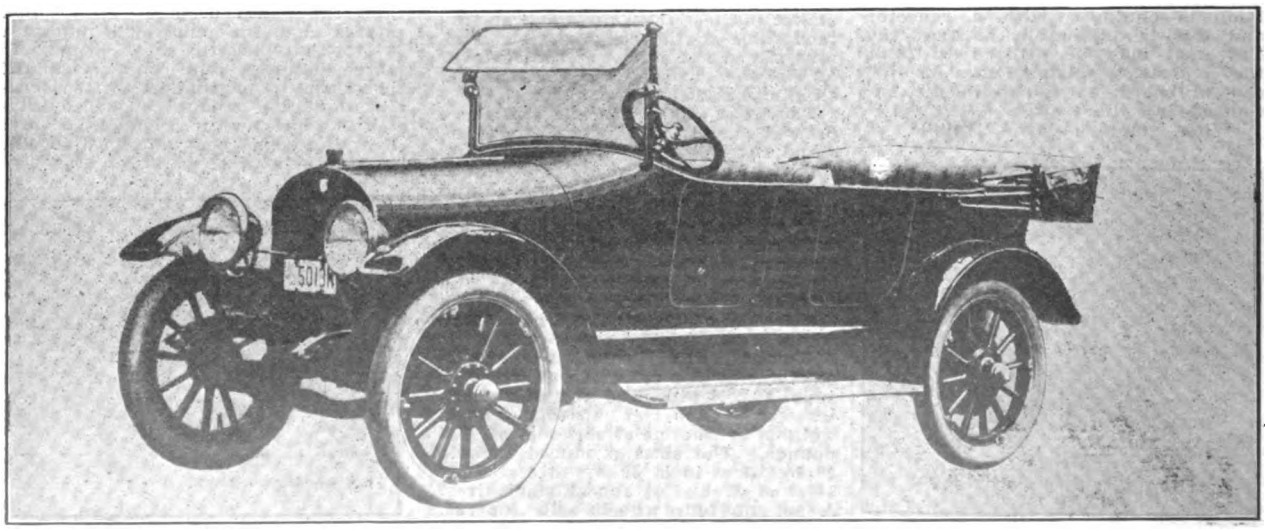
The frame is pressed steel, of four-inch channel section, with a three-inch flange and 5/32-inch side rails. The front axle is an I beam drop forging, and all the wheels are artillery type with demountable rims and 33 by four-inch tires. The steering gear is of the irreversible worm and gear type, located on the left and operated by an 18-inch hand wheel. Centre control is used, consisting of a ball and socket gear lever at the driver's right. The service brake is operated by the right pedal and the emergency brake by a hand lever, and the hand throttle and spark lever on the steering wheel are supplemented by a foot throttle. The gasoline tank is in the rear, with air pressure pump feed.

The base of the crank case forms an oil reservoir, the lubrication being force feed by a gear oil pump, which supplies each of the main bearings from which the lubricant flows through the drilled crank arms to the connecting rod bearings, the cylinder and cam bearings being lubricated by the oil thrown off by the crank.

The instrument board contains the electric light and ignition switches and the speedometer, which is electrically lighted. The finish is United States mail blue body, with black hood and fenders, black and nickel trimmings and straw colored wheels; the doors are full U type with concealed hinges and invisible latches.

The famous King cantilever spring rear suspension is retained, with semi-elliptic springs in front, overslung. The regular equipment consists of an engine power tire pump, rain vision ventilating windshield, silk mohair one-man top of extra rigid design, quick attachable curtains, a Jones speedometer driven from the propeller shaft, an electric horn operated from a button in the centre of the steering wheel, tire irons, pump, jack, tire repair outfit, tools and an extra rim; in fact, every device making for comfort and convenience.

In carrying out the definite purpose of producing a car which should be in the highest degree simple, convenient, low in price and economical in operation, no sacrifice has been made of strength and stability, and the whole construction is of that sturdiness and dependability which has always been noticeable in the King. The eight-cylinder motor, with its long stroke and small bore, delivering a constant power stream without intermission or substantial variation, should prove as economical as it is without question flexible and efficient. With a small piston displacement, and light, rapidly moving parts, the strains of explosion and the inertia losses, will be reduced to a minimum, and vibration is almost eliminated. Speeds from three to 50 miles an hour are said to be attained without gear change, or perceptible engine effort, and the mechanical source of the power is not in evidence. The V type motor not only permits a construction with the fewest possible parts, but also allows the moving members to be accurately balanced, and is held to eliminate undesirable stresses. It lends itself to the convenient placing of the distributor, carburetor and other attachments and accessories which are naturally located between the banks of cylinders. The same high-class workmanship is employed throughout that has featured the King product for years.



The King Eight-Cylinder Car, with Five-Passenger Touring Body, Which Will Be a Feature of the Shows.

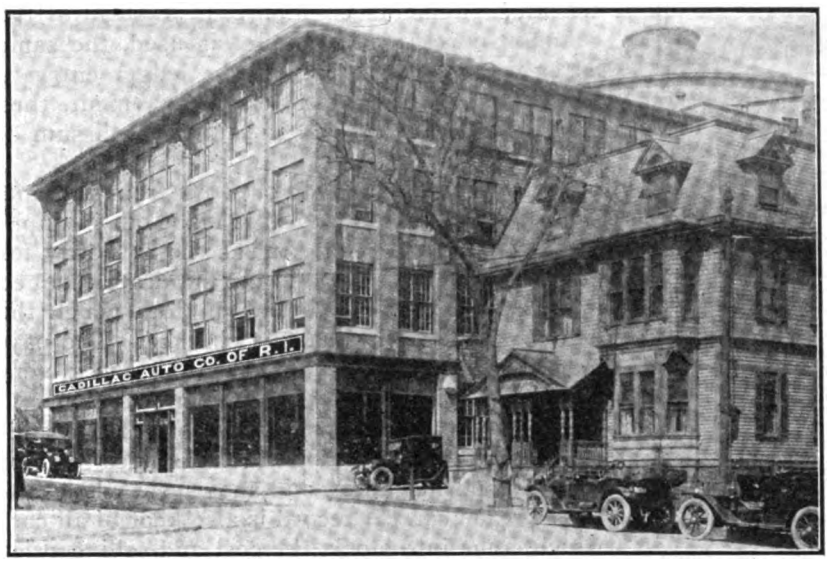
A MODEL GARAGE AND ACCOUNTING SYSTEM.

Simplicity and Accuracy Characterize the Methods Employed by the Cadillac Auto Company of Rhode Island, Providence, R. I., in Handling the Accounts of Its Service Station.

A SHOP and accounting system which is of particular interest because of its simplicity, combined with the greatest accuracy, is that



Headquarters and Service Station of Cadillac Auto Company of Rhode Island, Providence, R. I.

in use by the Cadillac Auto Company of Rhode Island, Providence, R. I., of which company Arthur J. Feltham is manager, and Edward B. Bowen in charge of the office and accounts. The system employed is the work of Mr. Bowen, who has revised, condensed and built up until such simplicity and efficiency have been attained that the many accounts of all sorts are easily handled by him with one assistant. Like most really effective business methods, it has been developed gradually to fit the particular needs, although many features are applicable, without change, to other and different conditions.

The Cadillac garage is operated primarily to serve Cadillac owners, and little work is done on other cars, but with this exception it is not unlike other well equipped garages, and the requirements to be met are much the same. Located at the junction of Federal street and Broadway, Providence, the Cadillac Auto Company occupies two floors of the building shown in the accompanying illustration. The front of the first floor contains the large show room, with the business office at one end, an almost equally large space in the rear being devoted to second-hand cars. On the second floor is the garage proper, reached by an outside incline from the rear, avoiding the necessity of an elevator. Here is the machine equipment for ordinary repair work, the repair pits, which are hung from the ceiling of the room below, being water and oil proof, as is the whole floor, and there is also accommodation for dead storage, communication with the stock room, which is on the first floor, being given by a parcel elevator or dumb waiter.

Cars coming in for repairs or overhauling are run directly on to the floor and a card, marked A in Fig. 1, is made out, showing what is to be done, with the license number noted for identification. The workman, starting on the job, takes the card from the rack and stamps it with a time clock, showing the exact time at which the work is commenced and, on finishing or leaving it, stamps this time in the same way, a new card being made out if the work is not completed at once. These cards form the complete record of the labor on each car, and are the basis of the charge therefor. Parts or material needed are called for by a requisition form (B, Fig. 1), on which is entered the license number of the car and the workman's name. This requisition is the authority for the delivery of stock from the stock room, and is also the basis for the charge for material used. Nothing whatever is allowed to leave the stock room without such a requisition, even gasoline and oil being stored under the supervision of the stock keeper and pumped

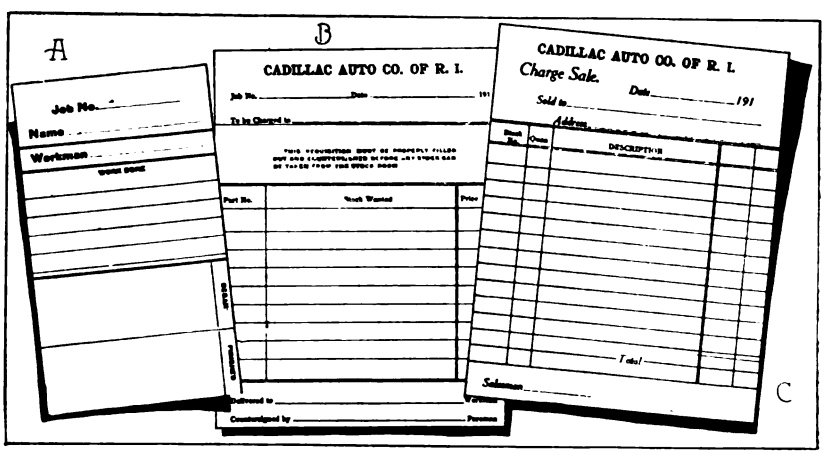


Fig. 1—The Labor Card, the Material Requisition and the Charge Sale Slip, from Which Charges Are Made Up.

Digitized by Google

to the floor above in measured quantities. A perpetual inventory is maintained on a card system, receipts, deliveries and balance being entered, and the exact state of stock being always shown. All sales of parts, etc., to customers outside the shop are handled in exactly the same way, a cash sale slip or a charge sale memorandum (C, Fig. 1) made out by the employee taking the place of the requisition used when parts or material go into the shop.

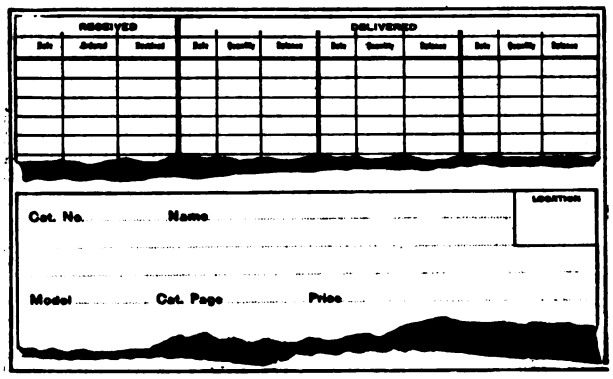

Fig. 2—The Card Used for Keeping the Record of the Stock Room.

The stock room is very complete and keeps on hand parts of all Cadillac models which have been built to date, together with much other material used in repairs. Attachments and accessories of second-hand cars which are in stock are made up into bundles and stored, so that there may be no confusion when the car goes out, and tool sets, inner tubes, etc., are similarly cared for. The system provides for the identification and definite location of everything which comes in. Every item carried is given a bin number, which is entered on the card, together with the name of piece, the car model to which it belongs, the page of catalogue where described, etc., the manufacturer's number being placed in the bin label.

The labor cards and the stock requisitions are collected at the office daily, and sorted according to the jobs which they represent. The time is then made up, the material prices added, and the charge made up for the whole. What may be called an analysis blank is used for this purpose, the items being grouped for convenience in billing and reference, and from this they are carried to a special form provided.

This (Fig. 3) is made in duplicate, the headings alone being different. The carbon copy forms the invoice going to the customer, and the original is bound in loose leaf binder and is the original entry of the transaction in the accounts of the office. It bears a serial number, which is also given to the envelope containing the data from which the charge was made. A ledger charge is then entered, reference being to this number, the ledger forming an alphabetical index to the numerically filed original entries. It will be seen that it is possible to start at any point in the system and, with any information, either number or name, to discover and check the entire transaction with ease. The whole accounting system is worked out with the idea of accuracy, but with the utmost simplicity, there being no superfluous forms, and no unnecessary work whatever. The journal used is of special ruling, giving instant information and permitting rapid checking and balancing. The ledger is of the usual form, but a very ingenious method of checking payments is employed. Instead of the common check mark, a letter is used, the same letter being placed opposite the ledger entry of the charge and the entry of the payment, thus identifying what invoice is paid by each sum of money received.

When ordering goods or work from the outside, an order form (Fig. 4) is made out in duplicate, the original being sent as the authority for delivery of goods, etc., and the duplicate retained in the office as a memorandum from which the delivery and charge may be checked. The payment of accounts is made by voucher check, very compact in size, but giving full information.

The company keeps a card record of all Cadillac users in its territory, which includes sales of second-hand machines, and shows the whole history of each car. A record is also kept of all cars which come into stock, the cost and selling price being given and, if another car is traded, the disposition of that as well, the profit on the whole transaction, whatever it may be, appearing by way of memorandum. This is particularly valuable in the case of customers out of town, as it enables the office to identify the model of any car, and to order parts or send out attachments and accessories without an inspection of the machine. While this index does not work the other way, in that no provision is made for locating the owner from the car number, it is, nevertheless, possible to do so through the grouping of the cars of each year and, consequently, within a

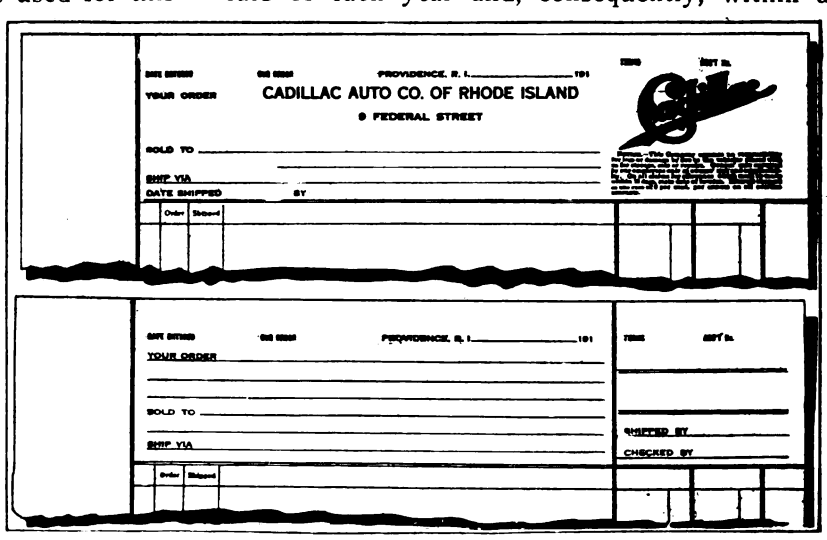

Fig. 3—The Original of This Form Is the Detailed Office Entry of the Account, and the Carbon Copy Is the Invoice to the Customer.

Digitized by Google

certain range of serial numbers. The number indicates the year and, by running through the list of cars of that year, it is possible to find the purchaser, from which point all other information can be reached without delay.

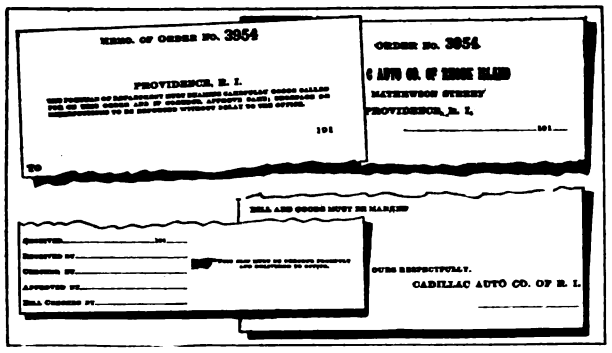

Fig. 4—The Form Used for Ordering and Checking Goods or Work Ordered from the Outside.

The matter of allowances under the guarantee is handled as a rebate, the regular charge being made for labor and material and, if it is finally determined that payment should not be made, a credit memorandum is issued for the amount decided upon, and this is credited to the customer and charged to the guarantee account, to which is set aside a fixed sum out of the profit on every new car sold. The procedure is the same in case of new parts or replacements, the charge being made whether covered by the guarantee or not, and whatever adjustment is fixed by the manager is represented by a credit. This has the advantage of getting the whole transaction into the accounts without delay and, in case it later becomes necessary to refer to it, the information is at hand.

If the system were to be summarized, this accessibility of information would without doubt be the most distinctive feature, together with the exceptional simplicity, and the almost complete elimination of possibility of error. In these points, which are the real essentials of any system, it leaves little to be desired.

BRUNNER COMPRESSORS.

Offered in a Variety of Forms to Cover the Requirements of Any Garage, Large or Small.

The well satisfied garage customer is the one who can get plenty of compressed air at a moment's notice, and the wise garage owner is the one who supplies it. The Brunner Manufacturing Company, Utica, N. Y., has specialized in compressors for a number of years and is producing a variety of types to meet the requirements of any size of garage.

A complete line is offered, covering everything from a motor driven portable outfit to large stationary automatic equipment. Reliability, durability and efficiency are emphasized in the Brunner compressors. Full particulars will be mailed and a catalogue supplied free upon request.

UNIQUE RATCHET WRENCH.

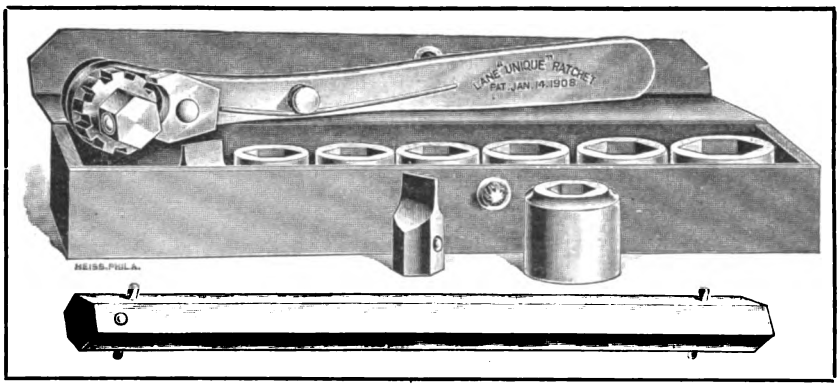
A Sturdy, Reversible Tool, Made Especially for Close Work on the Smaller Sized Nuts.

Will B. Lane, 180 North Dearborn street, Chicago, Ill., has brought out a new type of ratchet wrench that will not only appeal to the repairman, but should be in demand by motorists. The Unique ratchet wrench differs from the usual types of tools utilizing sockets in that it was designed exclusively for close work on the smaller sized nuts. The feature that will appeal to the user is that the ratchet wheel, being the diameter of the smallest, or ¼-inch socket, enables the user to turn nuts very close to the wall. This makes possible the use of the tool in places where the cold chisel is generally employed.

It fits three standards of nuts, namely, the United States (bolt) A. L. A. M. and cap screws, and in a range of sizes which embraces about 90 per cent. of all the nuts used on motor vehicles and machinery. The ratchet is easily and quickly reversed by shifting a wire on the handle from one side of the lug to the other. The Unique ratchet wrench is not only compact, but it is machine made and guaranteed to withstand hard service. It is a simple construction and has no parts to get out of order. The ratchet, pawl and screw driver bits are milled and carefully hardened, and the material is the best obtainable.

A desirable quality of the equipment is the sockets. These are turned from solid steel bars, cold broached and hardened, and are guaranteed not to break or split. In addition to the wrench, two screw driver blades and sockets, is an extension bar seven inches in length.

A special equipment is produced for the Ford car and it should appeal to those owners maintaining their own machines. The Unique wrench outfit comes in a heavy leather case and lists for $3. Without the extension bar, it retails for $2.50. Liberal discounts are given the trade. Complete details of the Unique ratchet wrench will be supplied by the maker on request.



Unique Ratchet Wrench Especially Serviceable for Close Work on the Smaller Sized Nuts and in Places Where a Cold Chisel Is Employed.

JOHNSON CARBURETOR.

A Low-Priced Type Especially Designed for Ford Cars and Sold Ready to Attach.

The Johnson model D carburetor, sold by the Perkins-Campbell Company, 603 Broadway, Cincinnati, O., is adapted especially for Ford cars and is sold, ready to install, at the very low price of $12. It is a most efficient and economical carburetor and, with the other products of the company, provides a good line to sell and install. Dealers, repair men and garage men are invited to write for full particulars, which will be furnished on request.

FITTING BEARINGS.

Harding Distributing Company Supplying Booklet Describing How to Save Time in Scraping Bearings.

"A New, Better and Quicker Way to Scrape Bearings", is the title of a new booklet issued by the Harding Distributing Company, 28 School street, Boston, distributor of the Martell aligning reamer. The subject of bearings is treated at great length and a practical method of scraping and accurate and quick alignment is described and illustrated. Garage and repair shops should send for the booklet, which will be mailed free upon request.

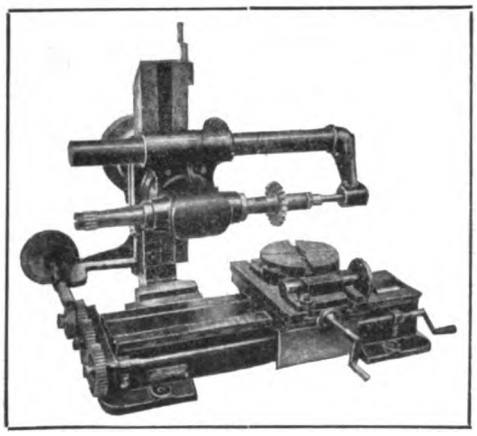
NEW MACHINERY AND EQUIPMENT.

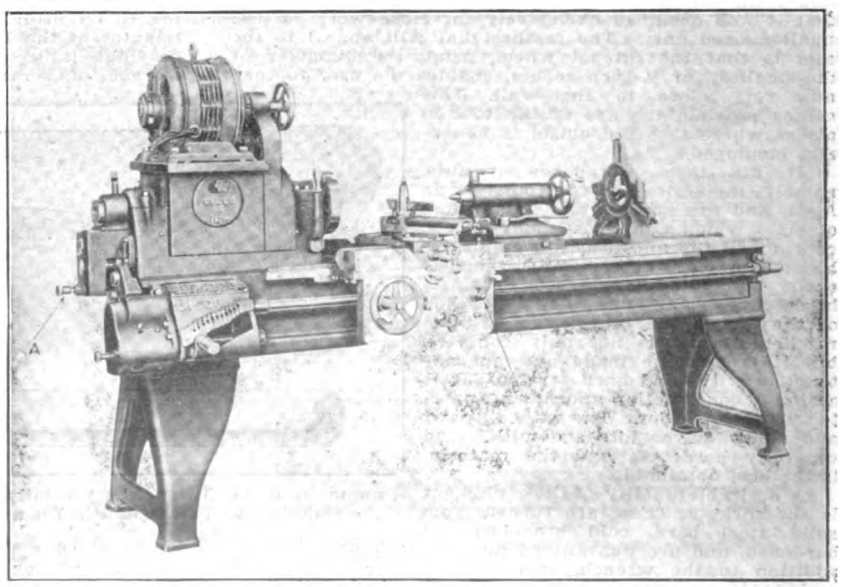
THE Hunt Engineering and Sales Agency, Los Angeles, Cal., is manufacturing a convenient bench machine, invented and patented by L. R. Wheeler of that city. The machine, which is small, economical, and adapted to a great variety of uses, is a combination lathe, milling machine and drill press, driven through a three-step cone pulley, and a telescoping shaft fitted with two universal joints. The spindle, one-inch in diameter, has a ½-inch bore, with standard No. 2 Morse taper; the plate is five inches in diameter, and drilling capacity ½-inch, it being possible also to cut standard threads from eight to 32. The power feed screw is actuated by a chain of gears on a radial arm, so arranged as to engage the end of the spindle when in a horizontal position, or with a special worm gear driven by a cone pulley. The range of small work which can be handled is very great, including milling, drilling and turning operations, routing of dies and cutting of both Woodruff and straight keyways.



The Wheeler Bench Machine.

CISCO MOTOR DRIVEN LATHE.

The Cisco, 16 by 8, motor driven engine lathe, shown herewith, which is to be a part of the exhibit of the manufacturer, the Cincinnati Iron and Steel Company, Cincinnati, O., at the Panama-Pacific exposition, presents some new features and improvements over former models, two of which are indicated. The pull pin at A is so arranged that the lathe can be run at high speed with all the gears from the first compound thrown out. Provision has been made at the point B to prevent the lock on the half-nut being clamped too tightly. It is also stated that all the beds are being made heavier and deeper, and that semi-steel will be employed, giving as near a perfect alignment as it seems possible to attain. The motor drive, with constant speed Westinghouse three-horsepower alternating current motor, running at 1100 revolutions a minute, is also shown. Of the three speeds, two are controlled by a lever in front operating friction inside, and the third, an open speed, is obtained through the face gear, with the front lever in neutral position. The head is open back and front. The main shaft has two bearings, with raw hide pinion drive on the motor. In addition to the particular points at which improvement has been noted, it is stated by the manufacturer that many other small changes have been made, such as the use of higher nuts on the tail stock, and that in every way the lathe has been brought to the highest point of construction obtainable. Other sizes are made, including a 14 by eight and an 18 by 10, which also will be exhibited at Los Angeles.



The Cisco Lathe to Be Exhibited at the Panama-Pacific Exposition.

WEAVER PORTABLE FORCING PRESS.

A portable forcing press of 20 tons capacity, and designed especially for garages and repair shops, has been placed on the market by the Weaver Company, Springfield, Ill. The design is compact, and the weight, 425 pounds, permits it to be moved about with comparative ease. The maximum capacity is 48 inches from the bottom of the screw, and the space inside the frame is 32 inches.

Its operation is by a hand wheel, which revolves a two-inch screw with a three-pitch Acme thread, mounted in bronze thrust bearings and having a movement of 12 inches. For heavy work, a lever system is provided, operating through a ratchet directly on the hand wheel, and giving a leverage of 1500 to one. For straightening shafts, pressing wheels, compressing springs, and similar work which is handled daily in the garage and repair shop, the Weaver press is held by the maker to be very efficient. Details and prices will be supplied upon request.

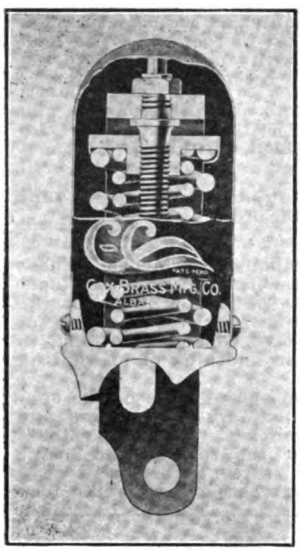
NEW AND DESIRABLE LINES IN DEMAND.

COX C-C SHOCK ABSORBERS.

Principle Involves Use of Two Springs and a Set of Four, Including Lubricating Bolts, Sells for $8.

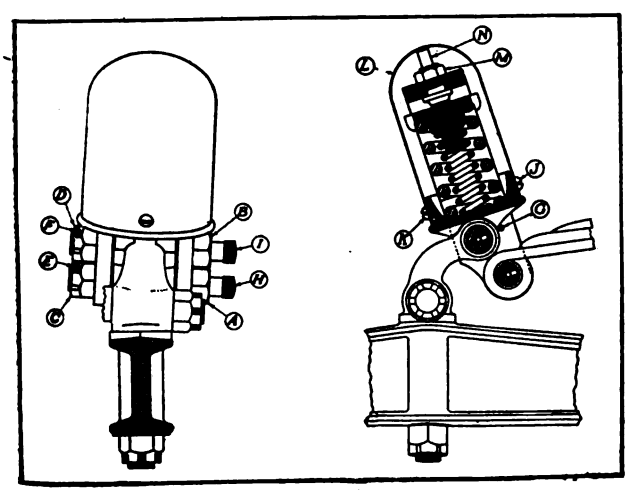
The Cox Brass Manufacturing Company, Albany, N. Y., well and favorably known to the trade as maker of metal products and a specialist in shock absorbers, is placing on the market a new design for the model T Ford car, termed the C-C. As may be noted by the accompanying sectional view, the new type is very compact and neatly constructed. One of their desirable qualities is simplicity; they can be easily and quickly attached without displacing the wheels, and there is no machining or fitting to be done.



C-C Shock Absorber for Ford Cars.

An accompanying drawing, with the components of the C-C lettered, shows the method of installation. The Ford shackle bolts A and B are displaced, also the oil cups H and I and, by raising the end of the car spring to relieve the strain upon the shackle, the bolt A is inserted through the C-C absorber and the spring. By pushing the absorber over on the top of the perch and releasing the pressure upon the car spring, the bolt B can be inserted through the spring and perch, after which the nuts C and D are fitted and locked by cotter pins. The oil cups are, of course, easily replaced. One of the desirable qualities of the C-C shock absorbers is that they will appeal to the owners who make it a practise to install new equipment on their cars.

The C-C comprises a slotted spring cage having two holes through which bolts run. Contained within the cage is a sturdy helical spring of finely tempered steel, which not only carries the weight of the car, but absorbs vibration and road shocks. Inside of the large spring is a smaller member, a compensating spring wound in an opposite direction and which assists the main member. Provision is made for adjusting the tension as may be desired, a nut at the top being employed for this purpose. The construction takes care of the compression, as well as the rebound of the car springs. The parts are completely enclosed and proof against the action of road dust or moisture and, throughout, the workmanship and material are in keeping with the high grade for which the products of the Cox Brass Manufacturing Company are noted. The C-C absorbers retail for $8 the set of four, and the price includes eight special lubricating bolts. A set of two sells for $4.50. The trade will do well to investigate the merits of the new product of the Cox Brass Manufacturing Company, which will supply trade discounts and details upon request.

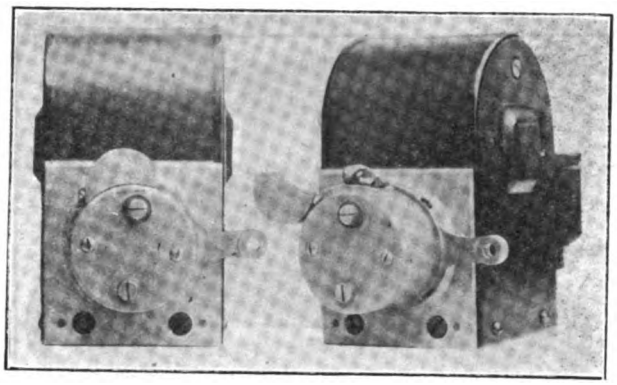


Illustrating the C-C Shock Absorbers Installed in Ford Car—Note the Simplicity of the Design and Its Compactness.

DIXIE MAGNETO.

Splitdorf Electrical Company Producing a New Design Especially Adapted to Motorcycles.

The Splitdorf Electrical Company, Newark, N. J., is marketing a new type of magneto, termed the Dixie, which is especially adaptable to motorcycles. It is a



New Motorcycle Magneto, Termed the Dixie, Brought Out Recently by the Splitdorf Electrical Company—Note the Accessibility of the Stationary Contact Points.

true high-tension instrument, and one of the advantages claimed for it is that it gives an intensely hot spark at low speeds. All parts requiring attention after considerable service are readily accessible.

The rotating member consists of two pieces of cast iron, separated by a brass centre field. This rotor, so called, revolves in a field structure composed of two laminated field pieces, riveted between two aluminum rings. The rotor bearings are mounted on iron plates against the poles of the magnets.

When the rotor revolves, the magnetic lines of force from each magnet pole are carried directly to the field pieces and through windings without reversal through the mass of the rotor and with only a single air gap It is stated that there are no losses in reversal.

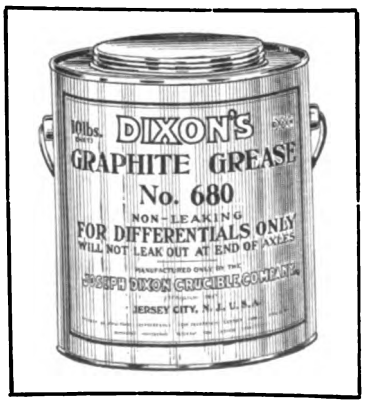
The advantages claimed for the construction are: A hot spark irrespective of the position of the timing lever, a stationary breaker with its points accessible through a hinged cover, a simple field coil housed in the arch of the magneto away from the lubricant, no change in polarity in the rotating member, an intensified current without the use of a coil, the elimination of the action of centrifugal force on the field winding, as well as the breaker mechanism, and a water, dust and oil proof construction.

As may be noted, the hinged cover referred to is locked by means of a screw, and the fact that the contact points are stationary makes for convenience when these members require cleaning or adjusting. Details and prices of the new equipment will be supplied upon request.

NEW DIXON LUBRICANT.

The No. 680 Is an Especially Prepared Compound for Use in Differential Gears, and Prevents Leakage.

The Joseph Dixon Crucible Company, Jersey City, N. J., maker of the well known line of Dixon's graphite and lubricants, has brought out a new compound, which is particularly adapted for service in motor vehicle differentials, from which ordinary oils and greases leak out through the axle housings. The company believed that a flake graphite properly prepared would overcome this trouble and, after much experimentation and thorough road tests, produced Dixon's No. 680. It is prepared for service only when the No. 677 and No. 675 will not remain in the differential with-



New Dixon Lubricant.

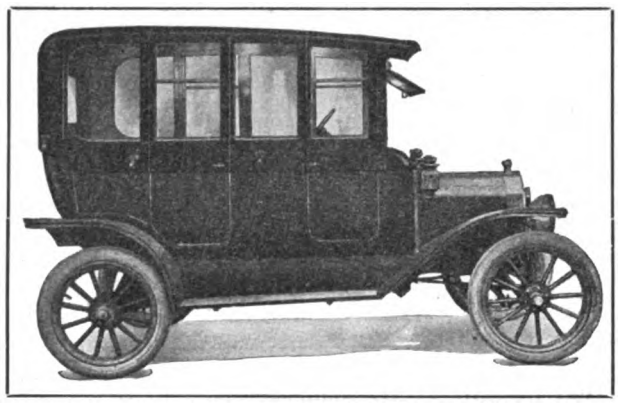
Digitized by Google

out leaking, and it is not adaptable to gearsets. The new product comes in a screw cap cover container, as shown in the accompanying illustration. The Dixon Crucible Company invites tests of its new product and details and trade discounts will be supplied upon the receipt of a letter or a postal.

MANDEL LIMOSETTE.

Chicago Concern Is Offering a High-Grade Enclosed Body for Ford Cars—Can Be Attached in 30 Minutes.

At this season of the year the Ford owner has but one thought—to secure an enclosed body that can be attached in a quick and easy manner. To meet this demand the Mandel Limousine Company, 1455-1457 Congress street, Chicago, Ill., is manufacturing the Mandel Limosette. This is constructed in two forms, one for the Ford roadster and the other for the touring car. One of the features of the Limosette is that the Ford doors are utilized. They are actuated by the handle on the Mandel body and become practically a part of the latter.



Mandel Limosette, a High-Grade Limousine Body for Ford Cars That Can Be Attached Without Alterations.

This body can be fitted to a Ford car without any change other than displacing the regular top and windshield. It can be attached in less than 30 minutes, and fits the body so snugly that it is difficult to distinguish between it and the conventional limousine. The Limosette for the touring car weighs but 150 pounds and, when attached, adds but 75 pounds, as the regular top and windshield are removed. The roadster adds 40 pounds.

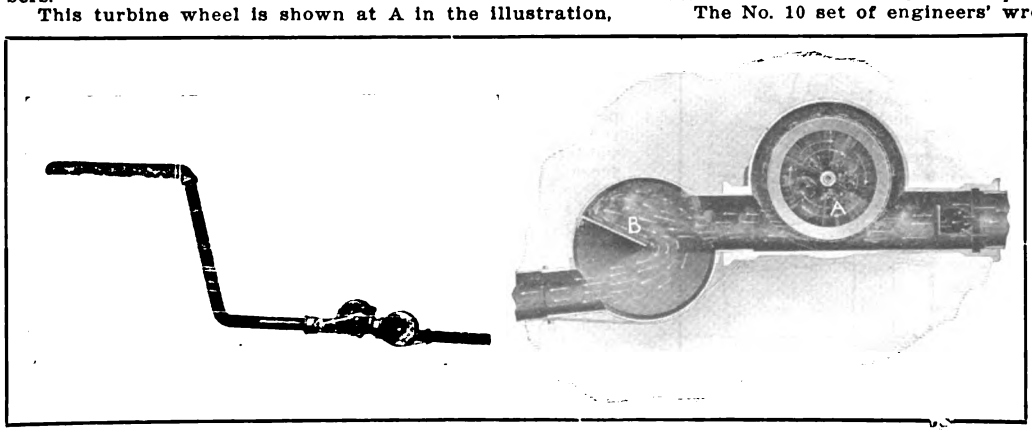
The finish and trimmings are high-grade and rich in every respect, and offer an exceptionally attractive proposition to the half million Ford owners. Prices and complete information will be supplied by dropping a line to the Chicago office.

KELLOGG TURBINE MUFFLER.

Not Only Effectually Silences Exhaust and Eliminates Back Pressure, but Reduces Heat.

The Kellogg Manufacturing Company, Rochester, N. Y., announces a new type of muffler, one that is not only a radical departure from conventional designs, but a construction that should prove highly efficient in service. As may be noted by the accompanying illustration, baffle plates, etc., are dispensed with, and a simple turbine wheel does the work generally performed by these members.

This turbine wheel is shown at A in the illustration, and it is mounted in the path of the exhaust gases. Just forward of it is an opening or by-pass, which leads to the centre of the turbine. The rapid turning of the turbine A, actuated by the exhaust gases, creates a powerful suction, which not only eliminates back pressure, but reduces the temperature of the gases to a considerable extent. Silencing of the exhaust is aided by a simple construction shown at B.



New Kellogg Turbine Muffler Having Turbine Wheel, Which Is Stated to Eliminate All Back Pressure and Is Silent in Operation.

The maker states that tests with the turbine muffler demonstrated that the same advantages are obtained as with the racing car, that from 15 to 35 per cent. of the fuel is saved, and that the complete scavenging removes carbon. It is also stated that the freeness of the exhaust reduces the temperature of the motor from 30 to 50 per cent.

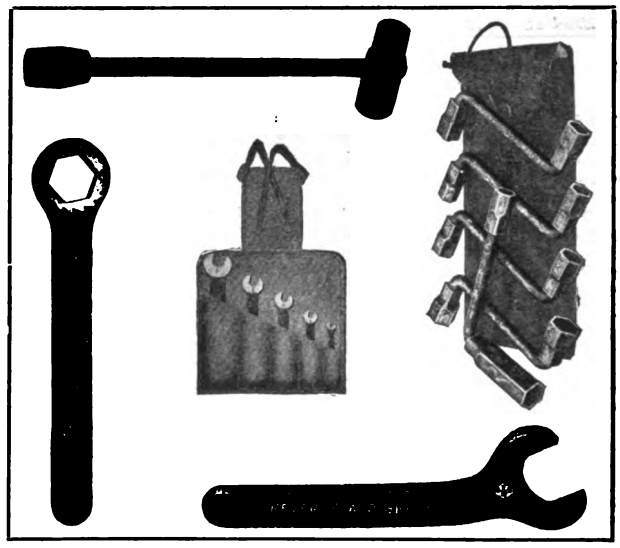
The turbine muffler should appeal particularly to owners whose motors heat unduly, as well as to those automobilists considering the cost of fuel, etc. The Kellogg Manufacturing Company will supply complete details and trade prices upon the receipt of a postal or a letter.

EFFICIENT MASTER TOOLS.

The Frank Mossberg Company Producing Complete Line of Wrenches for the Ford Car.

The Frank Mossberg Company, Attleboro, Mass., maker of the well known Mossberg wrenches and specialties, is manufacturing a line of master tools for the model T Ford car. This machine requires a number of special wrenches, etc., which save considerable time in the overhaul of the chassis, to say nothing of preventing injury to the parts.

An accompanying illustration shows some of the special tools produced, among which are the reverse and brake pedal tension spring wrenches. One is a ratchet wrench designed especially for the reverse and brake pedal springs, and the maker states that it will save over 30 minutes when adjusting these components. The



Some of the Master Tools Produced by the Frank Mossberg Company for the Ford Car, Including Two Wrench Sets, Cylinder Head Nut Wrench, Reverse and Brake Pedal Tension Spring Wrenches.

No. 640 wrench is a goose neck, having a plain open end, and is utilized on the reverse spring.

The No. 10 set of engineers' wrenches are of the thin model, open end type, and the set of five provides 10 openings. These tools are thoroughly hardened and nicely finished and are sold with the usual Mossberg guarantee. They come packed in a neat, substantial enamel duck case.

Another useful wrench set in the garage and repair shop is the equipment comprising 10 socket wrenches. These have hexagonal and square openings and include members for

Digitized by Google

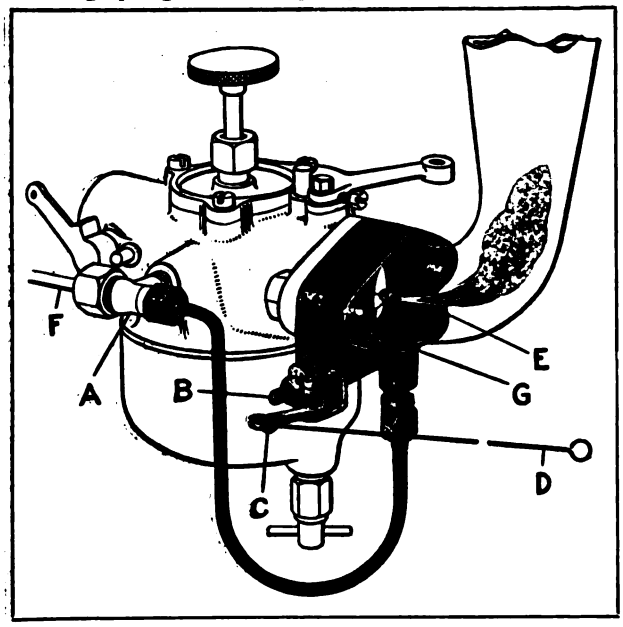
the 1915 model main bearings and main bearing nuts. A spark plug socket wrench is also included. The set comes in a canvas bag. The cylinder head nut wrench is another handy tool and, like the other described, sells for a small sum.

The Frank Mossberg Company will supply complete details and prices of its product, and garages and repair shops handling the model T Ford car will do well to investigate the Mossberg line of tools.

NEW INJEX PRIMER.

Device for Starting in Cold Weather Which Sprays Gasoline Directly into Intake Pipe or Manifold.

The Injex Primer, sold by the Reflex Ignition Company, 211 High avenue, Cleveland, O., is designed to make starting easy in cold weather by introducing gasoline directly into the intake passages of the motor. Unlike ordinary priming devices, however, the fuel is injected in the form of a fine spray, and will, therefore, mix at once with the air and produce an easily ignited mixture. The operation is as follows, reference being made to the illustration which shows the flange type, installed between the carburetor and intake pipe: Connection is made with the gasoline supply pipe F, by a T at A, fuel being led through the curved pipe to the nozzle E. The lever C, operated by a pull wire, terminating in the ring D, which may be located at the radiator or on the dash, operates the plunger B and, when the ring is pulled, causes a quantity of gasoline to be drawn into the cylinder of the primer. Upon the release of the ring a strong spring forces the plunger back, driving a jet of



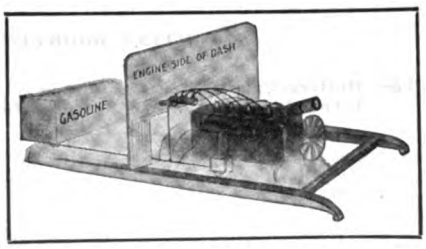
The Injex Primer, Which Injects Gasoline Directly into the Intake Pipe or Manifold.

gasoline through the nozzle E and into the intake. There are few parts to give trouble, and the installation is exceedingly simple. Full information will be given by the manufacturer upon request.

CHANEY SPECIALTIES.

Include Means for Priming Cylinders from the Seat and Dash Attachment for Eliminating Headlight Glare.

To meet the demand for a practical priming device, one that can be operated from the seat, the L. F. Chaney Company, Springfield, O., has brought out the Chaney spark plug primer shown herewith. This device enables the motorist to inject a charge of gasoline into the combustion chambers, through the medium of the spark plugs, without leaving the seat. The fuel is drawn the main line and is forced to the plugs by means of a plunger pump. This affords dual priming in that the electrodes of the plugs are surrounded by a gasoline vapor which ignites readily, and when the usual priming of the cylinders fails. The construction of the priming member is such that the fuel is broken up into a spray, making for a homogeneous mixture. One of the desirable qualities of the Chaney is that it is adaptable to any car, especially motors not fitted with priming petcocks. Dealers and garagemen looking for a practical priming device will do well to investigate the merits and obtain the trade discounts of the Chaney.



Chaney Spark Plug Primer.

The company also manufactures the Chaney headlight dimmer. This is an electrical device for controlling the electric headlights, and it differs from the usual constructions in that the driver can regulate the intensity of the beams, enabling him to control the light and to conform with any city ordinance or law in respect to use of headlights. One of the desirable qualities of the Chaney is that it is fitted to the dash, has a kick type of switch lever, and that the lights can be extinguished as well as controlled. Any person can attach it, as it is simplicity itself. The Chaney headlight dimmer retails for $3.50, is sold under a 10-year guarantee and offers exceptional opportunities to the trade. The maker has a dealer's proposition that is interesting.

THERMOID BRAKE LINING.

A Liberal Guarantee Is Made by Manufacturer of the Hydraulically Compressed Product.

The Thermoid Rubber Company, Trenton, N. J., maker of the widely known Thermoid hydraulically compressed brake lining, has an exceptionally attractive proposition to offer dealers throughout the country. This company has long been known for its liberal guarantees on its product, and its slogan, "Thermoid will make good, or we will", means exactly what it says.

One of the qualities emphasized is that Thermoid can be worn down to ribbon thinness without losing its efficiency. It is lining clear through, grips positively without chattering and is not affected by water, oil or gasoline. The lining comes in various sizes and thicknesses. Full particulars will be mailed upon receipt of a letter or postal card.

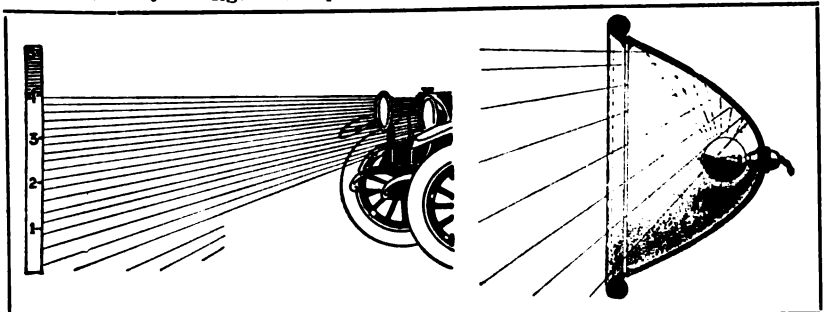
HICK-MYER DEFLECTOR.

Eliminates Glaring or Dazzling Rays by the Use of a Bowl Shaped Member Attached to the Bulb.

One of the latest devices for eliminating the glaring or dazzling rays of the electric headlight is the Hick-Myer, produced and marketed by the Hick-Myer Deflector Company, Toledo, O. The maker lays special emphasis on the fact that it is not a dimming device. It differs from the usual attachments for eliminating the dazzling rays of the electric headlight in that it is fitted to the bulb, as may be noted by an accompanying illustration.

One of the desirable qualities claimed for the construction is that none of the rays are projected higher than four feet from the ground, as indicated by the larger drawing. It is stated that it is the upward rays of the parabola lamps that dazzle, as they go first downward, then upward, as indicated in the illustration, showing the deflector fitted to a bulb.

The Hick-Myer device is bowl shaped and fits on the lower half of the bulb. It is constructed of metal and its function is to project the rays upward, then downward. The maker states that his product has been approved by the authorities of several cities and that it is manufactured under a patent which covers the silvering or frosting of the lower half of the bulb. It is also claimed that the deflector adds to efficiency of the headlight. Complete details and prices supplied on request.



Illustrating How Upward or Glaring Rays of Headlight Are Controlled by Hick-Myer Deflector—The Device Is Shown at the Right.

OPPORTUNITIES FOR DEALERS.

LIGHTING BOOKLET.

The Holtzer-Cabot Electric Company Mailing Free Information on Electric Systems for Used Cars.

Those in the trade interested in the problem of equipping the used automobile with electric lighting should write the Holtzer-Cabot Electric Company, Brookline, Mass., for booklet A-1807. It deals with the application of dynamos to all types of cars and includes data on the low-priced system for the model T Ford.

VALUABLE BEARING DATA.

Norma Company Will Supply Free Bulletins of Ball, Roller, Thrust and Combination Members.

The Norma Company of America, 1790 Broadway, New York City, manufacturer of Norma ball, roller, thrust and combination bearings, which are standard equipment on a large number of 1915 magnetos, starting motors and lighting dynamos, is issuing bulletins containing data on its products, and these will be supplied to the trade free upon request.

NEW DISPLAY SET.

Eagle Oil and Supply Company, Maker of Eagleine No-Karbon Oil, Makes Offer to the Trade.

The Eagle Oil and Supply Company, 104 Broad street, Boston, manufacturer of the well known Eagleine No-Karbon oil, has a new oil display set for the trade, which is invited to write for details of the offer. Eagleine oil is supplied in quantities to meet all trade requirements, and prices and data will be forwarded with particulars of the display set offer.

VALENTINE VARNISHES.

Manufacturer of the Famous Vanadium Goods Offers Attractive Proposition to Representatives.

Vanadium varnishes, made by Valentine & Co., 456 Fourth avenue, New York City, form a strong stock for the dealer to handle. This company manufactures a complete line of varnishes and colors which have been proven a standard since 1832.

It is the claim of the Valentine Company that from one to five days may be saved by using vanadium varnishes. Full particulars of the company's selling plan will be mailed upon request.

UNIVERSAL TEST CLIP FREE.

R. S. Mueller & Co. Will Give One to All Garages, Repairmen and Dealers Writing for Details.

Reference has been made in these columns to the Universal test clips, manufactured by R. S. Mueller & Co., 431 High avenue, Cleveland, O. These clips are big time savers when charging storage batteries and can be employed for a number of useful purposes in the garage and repair shop where electrical connections are to be made. To demonstrate the practicability of the Universal test clip as a time and labor saver, the company will give one free to each concern writing The application must be made on the letter head of the company, not a postal, to obtain the clip.

RUB-ON OFFERS CABINET.

Auto Top Renewer Manufacturer Has Particularly Strong Selling Feature for Dealers and Garage Men.

The Rub-On Manufacturing Company, Buffalo, N. Y., maker of the widely advertised Rub-On auto top, Sta-Fix radiator mend, the auto turn jack and numerous other well known automobile specialties, is making a generous offer to garages and dealers in the form of a selling cabinet.

This cabinet permits an excellent display of the company's varnishes, dyes, etc., and is considered an excellent salesman by the firms that have been using it thus far. The Rub-On Company is offering exceptional co-operation to its representatives and everything possible is being done to accomplish immediate and big sales. A letter addressed to the company's office will bring full particulars regarding the cabinet offer and selling plans.

STAYBESTOS LINING.

Maker of This Well Known Product Has Attractive Proposition That Should Interest Dealers.

In these days of constant safety first warnings, the dealer or repair man who handles a representative line of brake lining is indeed fortunate. The Staybestos Manufacturing Company, Germantown, Philadelphia, Penn., maker of the famous S-M-C brake lining, has a liberal selling plan to make to all reputable dealers. There is a special form for Ford cars.

In addition to this product the Staybestos Company manufactures asbestos and rubber packings, gaskets and radiator hose. The S-M-C improved brake lining is indestructible by heat, is not affected by gasoline, oil or water, and has long endurance. By dropping a line to the company's office, full particulars of the selling plan will be received.

FRICTION REPAIR TAPE.

Goodyear Tire & Rubber Company's Product Consists of Strong Fabric Thoroughly Frictioned.

The Goodyear Tire and Rubber Company, Akron, O., calls to mind the necessity of giving attention to the stocking and selling of small and inexpensive material, stating that it is little things, such as a roll of friction tape, that either win or lose the confidence of the customer.

The Goodyear friction repair tape is constructed to make regular customers of the purchasers of small material, and is made of unusually strong fabric thoroughly frictioned with high-grade material. It has a high adhesive quality and will not deteriorate or become hard with age.

The company is issuing data on its line of "Tire Savers", 22 in all, and particulars of these, as well as the free show case offer, will be forwarded by addressing desk 18, the Goodyear Tire and Rubber Company, Akron, O.

HOUK AGENCIES OPEN.

Opportunity for the Worth While Dealer to Handle Well Known Detachable Wire Wheels.

The European war and the recent racing records in this country have proved the worth of the wire wheel. Houk equipped is becoming a by-word in the racing world, and the recent records of Barney Oldfield in the Los Angeles-Phoenix race and again at Corona, prove that these offer the best there is in the way of wheels.

The Houk Manufacturing Company, 1699 Elmwood avenue, Buffalo, N. Y., announces that exclusive agencies are open in many localities for representative dealers who will have the greatest possible co-operation from the company in the sale of its product. The Houk wire wheels are made to fit all cars and one of their qualities is that they can be attached inside of an hour. The Houk Company has a special dealer's proposition, the details of which will be forwarded upon receipt of a postal card or letter.

ATTRACTIVE METZ OFFER.

Liberal Terms Made to Dealers on the Fore Door Streamline Body Line.

The Metz Company, Waltham, Mass., maker of the well known Metz car, is offering liberal terms to dealers and invites them to write for the new catalogue F, giving full particulars of the proposition. The new car has a fore door, streamline body and carries complete equipment for $495.

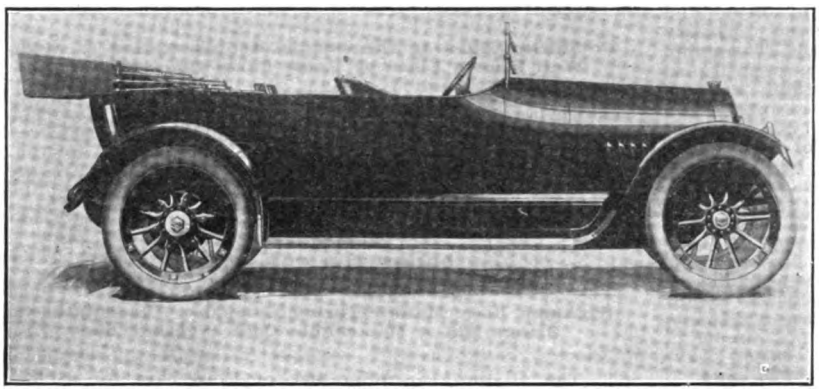
This offers an attractive line to the dealer who wishes to handle a light, popular-priced car that has proved to be a big seller. The Metz product has been prominent during the past season, having won numerous hill climbing contests against high-powered, expensive machines, and has established a reputation for durability and economy of operation. Among the achievements of the little Metz is that of winning the Glidden tour. A postal card or letter to the Waltham office will bring full details of the company's proposition.

Digitized by Google

COLE BRINGS OUT A FOUR.

A Seven-Passenger Car Having 120-Inch Wheelbase.

A standard seven-passenger four is the latest product of the Cole Motor Car Company, Indianapolis, Ind. This car has a 120-inch wheelbase, weighs approximately 3000 pounds and sells for $1485, nearly $200 under the price of the previous Cole four.



New Cole Standard Four, 120-Inch Wheelbase, Seven Passengers.

The latest Cole four has a Northway unit power plant, with a bore of 4¼ inches and a stroke of 5¼ inches. It is claimed by the manufacturer that 40 horsepower is developed at 1600 revolutions a minute. Cooling is by a centrifugal pump, which is mounted on the side of the crank case, and a propeller fan assists in the cooling. The carburetor is a model H Stromberg, with a hot air connection to a jacket on the exhaust manifold. The Stewart-Warner vacuum gravity gasoline tank draws the gasoline from the reserve tank in the rear of the frame and delivers it to the service tank, from which the gasoline is supplied direct to the carburetor by gravitation.

This latest Cole announcement follows the fuel economy, ton-mileage and speed tests conducted on the Indianapolis Motor Speedway, Oct. 8-9, under the sanction and supervision of the American Automobile Association. A stock car of the latest four design was used in the tests, and 24⅛ miles were covered to a gallon of gasoline, with the car carrying full equipment and seven passengers.

SAXON ANNOUNCES A SIX.

Has Electric Lighting and Starter and Will Sell for $785.

SELLING for $785, the Saxon six has the distinction of being one of the lowest-priced six-cylinder cars on the market. The Saxon Motor Car Company, Detroit, Mich., it will be recalled, created a sensation a year ago by producing the first four at a price below $400. The features of the new six are its long stroke, high-speed motor, developing, according to the maker, 30 to 35 horsepower; electric lighting and starting system; 112-inch wheelbase; standard tread; demountable rims and a full streamline body of five-passenger capacity. To take care of the added production facilities necessary in marketing the low-priced four and six-cylinder cars, the Saxon Company, as stated elsewhere in this issue, will take over the building formerly occupied by the Abbott Motor Company, Detroit, Mich. With this additional space, the company will be able to increase the output of fours, and that of the six will be 25,000 annually. It is on this production figure that the company bases its price.

The motor is a six-cylinder, L head type, cast en bloc, with a bore of 2⅞ inches and a stroke of 4½. The valve action is enclosed by cover plates and the valves are of nickel with carbon steel stems. A drop forged steel crankshaft 1⅞ inches in diameter is used. This is carried on three main bearings. The camshaft is also a drop forging of one-inch diameter, with cams integral with the shaft, which is driven by helical gears. The cam is carried on four bearings, these being babbitt lined. The connecting rods are of drop forged steel, I beam section.

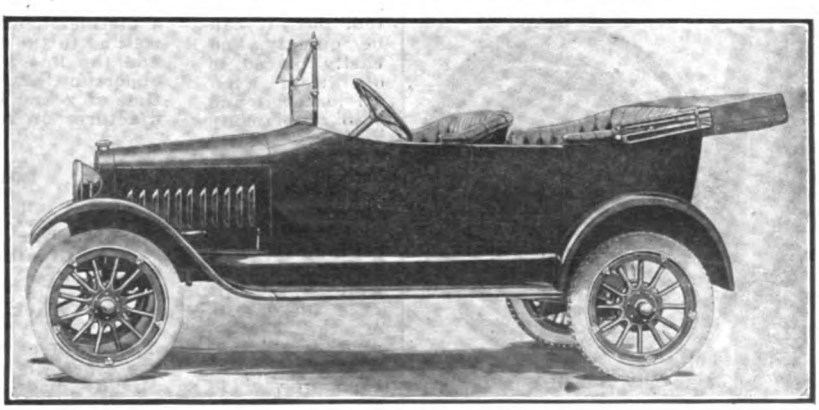
The oiling is by splash to the cylinders and pump circulation leading to the main bearings. The circulating pump takes the oil from the crank case to these bearings and from this point a gravity flow carries the oil into the splash trough. The oil passes through a strainer before again reaching the pump to be recirculated.

The cooling is by thermo-syphon with a cellular type of radiator and fan. The ignition is by the Atwater Kent system, which provides either automatic or hand control. Gasoline is fed by gravity from a tank of 10 gallons' capacity. This is located in the cowl.

The Saxon clutch is of the dry plate type, steel on Raybestos, the same design as is found on many high-priced cars. The gearset provides three speeds forward and reverse, and is mounted on the rear axle, being carried on Hyatt roller bearings with ball thrust. The driven pinion gear is adjustable and the shafts are all of nickel steel. The driving shaft is of solid alloy steel, one inch in diameter, with two universal joints, and with a concentric torque tube.

Two sets of brakes are used, both of which act on the rear wheels. The service brake is external contracting, 10 inches in diameter, with a two-inch face. The emergency is internal expanding, having a diameter of 9¾ inches, with a face width of two inches. Both brakes are lined with Thermoid.

The body of the new six is designed to give maximum room. The front doors are 19 inches wide and those in the rear, 21 inches wide, with concealed hinges. The standard color of this new model is Richelieu blue with black running gear.



The New Five-Passenger Saxon Six, Which Has an Electric Lighting and Starting System; a 112-Inch Wheelbase and a Standard Tread.

NEW MONROE LIGHT CAR.

Selling for $460 with Electric Generator, and Electric Starter $35 Extra.

Selling for $460, with electric generator, the new two-passenger Monroe car, made by the Monroe Motor Car Company, Flint, Mich., is the latest addition to the light car field. This car has a four-cylinder, valve in the head motor, with a bore of three inches and a stroke of 3¾. The cylinders are cast en bloc, and a cone clutch is employed, with a three-speed gearbox, enclosed shaft drive to a semi-floating rear axle.

The generator is driven from the timing gear, from the right side of the engine. Incorporated with the generator is an ignition distributor of Connecticut make. This is fed from a Willard storage battery. The automatic advance feature is part of the Connecticut system used on the Monroe car. On the generator side is an Auto-Lite cranking motor, which meshes with the flywheel teeth in the conventional manner. This starting system is $35 extra. The body is of the streamline type, and the equipment is complete throughout. The workmanship is of the highest class, and the company offers a sturdy and strong car for the money.

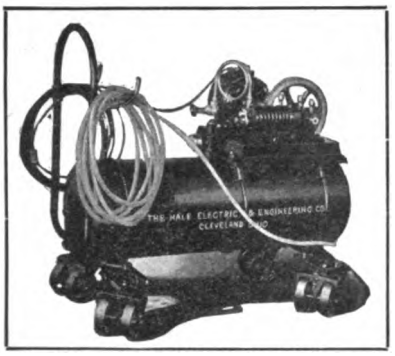
HALE AIR COMPRESSOR.

An Electric Outfit, Adapted for Public or Private Garages, Operated from Any Light Socket.

The Hale portable air compressor fills the need for an equipment which can be used anywhere without any special fittings whatever. The outfit consists of a steel tank, motor, compressor and gauges, with 12 feet of hose and the same quantity of cable. The pump has a capacity of 1½ cubic feet of air a minute, and a maximum pressure of 175 pounds can be attained. The construction is of the highest class. It is a profitable line to sell, and dealers and jobbers should be interested. Full information will be given by the manufacturer, the Hale Electric and Engineering Company, 1232 East Third street, Cleveland, O.



The Hale Portable Air Compressor.

MODERN POWER TIRE PUMP.

Dewey-Anderson Manufacturing Company Producing a High-Grade, Popular-Priced Equipment.

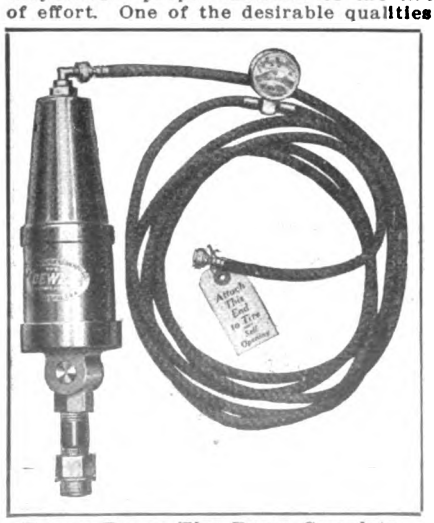
There is an increasing demand for power tire pumps among owners of the motor vehicle not fitted with this more modern convenience. The Dewey-Anderson Manufacturing Company, Toledo, O., which concern has been producing power tire pumps for some time, is offering the trade a popular-priced equipment, which may be permanently attached to the motor or carried in the tool box, as best meets the requirements of the purchaser.

The design for fitting to a spark plug opening is very easily utilized, and the company produces adapters for any spark plug opening, and self-opening connections for attaching hose to the valve stems.

The product of the Dewey-Anderson Manufacturing Company is well known. The shell of the pump shown herewith is of steel, handsomely finished, and all fittings are first-class in every respect. Each pump comes with a pressure gauge and 12 feet of special fabric covered hose, which is tested to 1000 pounds pressure.

The Dewey pump utilizes only pure air, as no oil is necessary for the working parts. The advantages of a power tire pump are well known and among them is that they assure proper inflation of the tires at a minimum of effort. One of the desirable qualities of the Dewey is that it can be conveniently stored in the tool box. It can be quickly and easily placed in operation, and all material and workmanship are first-class in every particular.

Dealers and garagemen in the market for power tire pumps will do well to investigate the merits of the Dewey. A postal addressed to the company will bring complete particulars of the proposition for dealers.



Dewey Power Tire Pump Complete.

AN ATTRACTIVE LINE.

Dover Stamped Metal Specialties, for Use on Motor Cars, Show Great Variety.

The line of stamped metal specialties, manufactured by the Dover Stamping and Manufacturing Company, Cambridge, Mass., includes many articles of the greatest practical value to the motorist or garage man. These goods are listed in the catalogue of this company, which will be sent free on request.

HANDLES IMPORTANT ACCESSORIES.

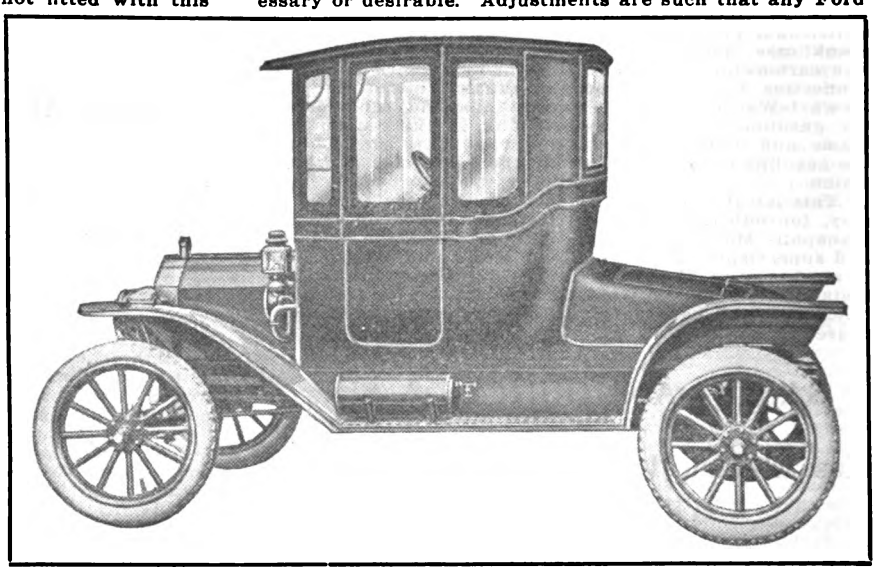
F. Shirley Boyd Is the Boston Representative of Some Well Known Lines of Motor Parts and Equipment.

Dorian demountable rims, the J. H. S. shock absorber and R. I. V. ball bearings, are among the accessories handled by F. Shirley Boyd, 903 Boylston street, Boston, Mass. Owners, garage men and repair men who are interested in any of these lines will be furnished full information on request.

COUPE TOP FOR FORDS.

Highland Body Manufacturing Company, Cincinnati, O., Brings Out a Detachable Cold Weather Body.

The all-the-year-round use of Ford cars for almost every purpose, and in nearly every sort of climate, has emphasized the need of some sort of protection for the driver in cold and stormy weather. For this purpose the Highland Body Company, Cincinnati, O., is offering a strongly built coupe body, which may be easily and quickly attached to a Ford runabout, and as quickly removed when weather conditions make it no longer necessary or desirable. Adjustments are such that any Ford runabout can be equipped without change, except the removal of the top and windshield, and no special tools are required for the work, which can almost wholly be done by one man. The body is finely finished, and so designed as to afford the fullest protection to the occupants. It is a distinct addition to the appearance of the vehicle, as well as to the comfort of the driver. Garage men should find the line a profitable one, as there should be many opportunities for the installation of coupe tops at this time of year. Full particulars will be given by the manufacturer on request.



The Easily Attached Highland Coupe Body Designed Especially for Fords.

POLACK GUARANTEED TIRES.

Manufacturer Says Careful Driving Secures Mileage Greatly Exceeding the 10,000 Warranted.

The Polack Tyre and Rubber Company, 246 West 59th street, New York City, is producing a line of tires which it guarantees to run 10,000 miles or more. These tires are especially adapted for commercial vehicles and have already made an enviable record in the most trying service. The experience of the F. & W. Schaefer Brewing Company, New York City, with this well known product, which showed a mileage of 12,157 miles, is an indication that the guarantee is frequently exceeded.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

SPECIAL OPPORTUNITIES.

76—New York House wants a three to four-ton truck, engine to be driven by alcohol. It is most important that the manufacturer guarantee the perfect operation of the engine when running with this fuel.

83—North Carolina Dealer wants to correspond with manufacturers of equipment for an automobile factory.

MOTORCYCLE AGENCIES.

125—Arkansas House is in the market to represent a line of motorcycles ranging in price from $100 to $300.

130—California Company wishes to secure a line of motorcycles selling from $125 to $250.

135—Ohio House wants information pertaining to motorcycles selling from $150 to $300.

CYCLECAR AGENCIES.

1793—California Company is in the market to represent a line of cyclecars selling from $200 to $500.

1798—Arkansas Company wishes to hear from a line of cyclecars selling from $300 to $400.

1801—Texas Dealer wants information relative to cyclecars ranging in price from $300 to $500.

GASOLINE PLEASURE CAR AGENCIES.

3068—Pennsylvania Dealer wants to secure the representation of gasoline pleasure cars selling between $500 and $1000.

3071—Ohio House wishes to represent a line of gasoline pleasure cars ranging in price from $400 to $750.

3074—Arkansas Dealer wants information relative to a line of gasoline pleasure cars selling from $300 to $400.

3077—Texas Company is in the market to secure the agency for gasoline pleasure cars selling from $500 to $1200.

3080—Michigan Concern wants information pertaining to gasoline pleasure cars selling from $500 to $1550.

3083—Ohio Firm wishes to secure the agency for a line of pleasure cars selling from $450 to $2000.

ACCESSORIES, EQUIPMENT, SUPPLIES.

565—Alaska House wants anti-rattlers, carburetors, curtains, fire extinguishers, gasoline, heaters, horns, magnetos, mechanical starters, patches, polishes, printed matter, pumps, carbon removers, rubber, searchlights, soaps, speedometers, starters, vulcanizers and washers. The goods to be used for Ford and Overland cars.

566—Ohio Company wants information relative to air compressors, autogenous welding equipment, batteries, bulbs, bumpers, burners, cans, carbide, carburetors, cements, chains, charging apparatus, coils, dimmers, fenders, fire extinguishers, gaskets, gauges, goggles, graphite, guns, headlights, heaters, horns, hose, hydrometers, indicators, jacks, magnetos, maps, mufflers, odometers, patches, platinum, plugs, polishes, primers, pumps, punches, radiators, ratchet drills, reamers, rectifiers, reflectors, carbon removers, rubber, scrapers, searchlights, seats, shock absorbers, soaps, solder, speedometers, springs, starters, storage systems, tape, terminals, testers, timers, tire accessories, tires, tools, tops and parts, vises, voltmeters, vulcanizers, washstands, waste, wheels, windshields, wire and wrenches. The goods to be used for resale.

568—Indiana Firm desires air compressors, air pumps, asbestos, axles, batteries, bearings, belts, bodies, bolts, brakes, brushes, bulbs, bumpers, burners, caps, carbide, carburetors, cements, clutches, commutators, connectors, cushions, cylinders, dashes, dimmers, elevators, gasoline, gears, generators, glass, goggles, guards, hammers, headlights, horns, hose, hubs, hydrometers, ignition, jacks, joints, knuckles, lamps, locks, lubricators, magnetos, mufflers, nuts, patches, pedals, pinions, pins, pistons, platinum, plugs, polishes, pumps, racks, radiators, reflectors, rests, rims, rods, rubber, screws, searchlights, seats, shafting, sockets, speedometers, springs, starters, steering wheels, tanks, tape, terminals, testers, timers, tire accessories, tires, tools, tops and parts, tubing, valves, voltmeters, vulcanizers, wheels, whistles, windshields, wire and wrenches. Goods to be used for retail and use.

569—Virginia Firm wants anti-rattlers, axles, batteries, bodies, boilers, brakes, brushes, bulbs, bumpers, burners, cabinets, camshafts, cans, caps, carbide, carburetors, cases, castings, celluloid, cements, chains, charging apparatus, chemical tanks, clamps, clips, cloth, clutches, coils, collars, commutators, cones, connectors, controllers, couplings, cranes, cups, curtains, cutters, cushions, cylinder machines, cylinders, dashes, dimmers, discs, doors, drills, drums, dynamos, elevators, engines, fans, fenders, gasoline, graphite, guards, guns, hammers, headlights, heaters, hoists, holders, horns, hose, hubs, ignition, indicators, injectors, jacks, jigs, joints, knuckles, lamps, lathes, leather, levers, locks, lubricators, machinery, magnetos, maps, mechanical starters, meters (measuring instruments), molds and cores, motor controllers, motors, nuts, odometers, packing, paints, pans, patches, pedals, pinions, pins, pistons, platinum, plugs, polishes, presses, primers, printed matter, pullers, pulleys, pumps, punches, purifiers, races, racks, radiators, ratchet drills, reamers, rectifiers, reflectors, regulators, carbon removers, rests, rheostats, rims, rods, rubber, scrapers, screws, searchlights, seats, separators, shafting, shapers, shims, shock absorbers, soaps, sockets, solder, speedometers, spokes, springs, stampings, starters, steel, steering wheels, steps, storage systems, strainers, switchboards, switches, tanks, tape, terminals, testers, timers, tire accessories, tires, tools, tops and parts, transmissions, trimmings, trunks, tubing, turntables, upholstery, valves, vaporizers, varnishes, ventilators, vises, voltmeters, vulcanizers, washers, washstands, waste, wearing apparel, wheels, whistles, wire and wrenches.

573—Indianapolis House is interested in air pumps, arbor presses, batteries, bulbs, charging apparatus, gaskets, grinders, maps, reamers, rectifiers, carbon removers, rheostats, voltmeters and waste.

FOREIGN TRADE OPPORTUNITIES.

No. 14,285. Motor Cars—An American consular officer in South America has transmitted the name and address of a company in his district which desires to be put in communication with American manufacturers of low-priced motor cars, or cyclecars. Manufacturers should submit catalogues, or specifications, and lowest export price f. o. b. New York or c. i. f. destination. It is stated that this firm is now doing a good business in the sale of two American-made cars.

No. 14,496. Small Motor Cars—A consul abroad reports that a firm of importers and dealers of good repute wishes to hear from American manufacturers of small light physician's motor cars, as well as larger ones averaging $1000. C. i. f. quotations preferred; if not, prices f. o. b. vessel should be quoted, together with all information in the first letter. Correspondence should be in English.

No. 14,505. Automobiles, Gasoline, Oils and Agricultural Machinery—An American consul in Europe has a request from an importer and exporter in his district for the above-mentioned articles. Correspondence should be in French or Portuguese.

No. 14,553. Automobiles with Knight Valveless Motor—A firm in good standing desires to communicate with American manufacturers of automobiles with Knight valveless motors. Catalogues and price lists should be sent as soon as possible f. o. b. any American seaport having direct connection with Spain. Correspondence should be in Spanish.

No. 14,648. Motor Trucks—An American consul in Europe reports that a firm in his district is desirous of obtaining an agency for American motor trucks. Prices should be given in English pounds. American firms to draw on 30 days' sight draft.

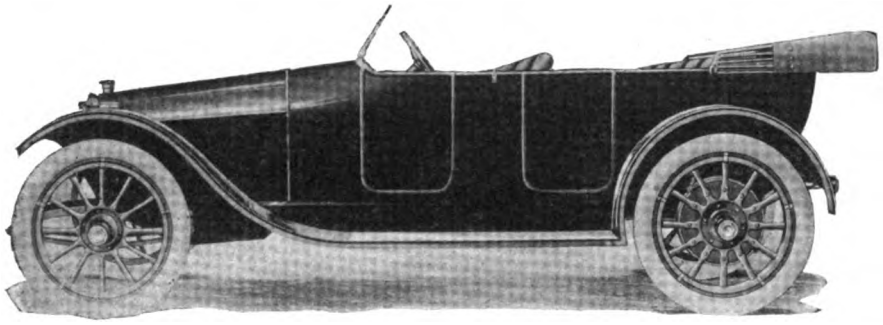
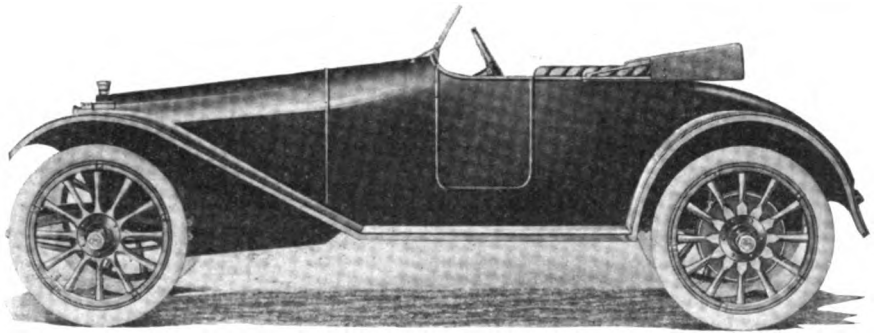
NEW REMINGTON HAS TWO NEW BODY STYLES.

THE 1915 line, announced by Remington Motor Company, 2 Columbus circle, New York City, which includes two body styles, a touring car weighing 1400 pounds and a roadster weighing 1350, should meet with instant approval from the public, and should command the interest of the trade. The specifications of the single chassis show a wheelbase of 106 inches, hickory wheels with demountable rims for 30 by 3½-inch tires, full streamline body, with left drive and centre control. The motor is 3⅛-inch bore by four-inch stroke, the four cylinders being cast en bloc and all the valves being on the right and fully enclosed. The transmission, giving three speeds forward and one reverse, is operated by the Remington automatic gearshift, and the nickel steel gears are mounted on Hyatt high-duty, quiet roller bearings, which are also employed on the ¾-floating rear axle. A shaft drive, with double Spicer universal joints, is used, through a bevel and pinion differential, the gears being special nickel steel, heat treated. The front axle is a drop forging of I beam section, with specially constructed ball bearings for the front wheels. The frame is pressed steel of three-inch channel section, with heavy cross members, and the springs are semi-elliptic, 1½ inches wide by 32 long in front, and cantilever, 1½ inches wide by 37½ inches long in the rear. Both brakes, the internal expanding, hand lever emergency and the external contracting, pedal operated service, operate on the rear wheel drums, and are directly adjustable without change in the leverage. The ignition is the Atwater Kent automatic advance, the carburetor is of the float feed type. Both are controlled by levers. The equipment comprises the Disco electric starting and lighting system, with a dimming device, mohair top, a specially designed windshield, concealed electric horn, speedometer, robe rail, tire pump, tools, jack, etc. The finish is of the best, the dash which carries all the instruments being Circassian walnut, and the exterior, which is in Brewster green, being painted and varnished by hand.





The New Remington Touring Car and Roadster, Having Electric Starting Lighting and Automatic Gearshift.

At the exceptionally low price of $695 for either the Remington touring car or the two-passenger roadster, the line should prove most attractive to the purchasing public and should meet the demand for a car of low price and high quality. At the New York and other shows, where the line will be exhibited, it is certain to attract much attention not only among prospective buyers, but in the trade as well. Dealers can handle most profitably those lines which supply to the greatest degree the demands of their customers, and as without question a very large proportion of the buying public is asking for a car which shall be low in price and economical in operation, the Remington line, which meets these requirements and offers in either of two body types a car of beauty and reliability, should prove most profitable for any dealer who is able to arrange to take it on. The Remington Motor Company is desirous of securing high-class dealers in such territory as is not already taken, and offers an attractive selling arrangement which, combined with the undoubted attractiveness of the line itself, cannot fail to be extremely profitable.

COURT CONFIRMS SALE.

American Voiturette Company Goes to Samuel L. Winternitz of Chicago for $100,000.

The sale of the American Voiturette Company, Detroit, Mich., has been confirmed by the court. Samuel L. Winternitz, Chicago, Ill., offered the receivers $100,000 for the property of the company.

DEALERS ORGANIZE.

The automobile dealers of Fort Wayne, Ind., have organized and the association will be known as the Automobile Trade Association of Fort Wayne. Fifteen of the 19 automobile sales company of the city are members. The new association was formed for the purpose of cooperating for the general good of the business. The following officers were elected: President, A. L. Randall; secretary, Louis Ohnhaus; treasurer, Louis Brase. Fred Gaskins, Lee Heller, James Porter and George Fox were appointed a committee to draught a constitution and by-laws.

VISITS APCO FACTORY.

Motorist Drives from Ogden, Utah, to Providence, R. I., to Take on Auto Parts Company's Line.

There arrived in Providence, R. I., recently, L. W. Clement and wife of Ogden, Utah. They made the trip East in their Ford car that was so arranged that the back of the front seat dropped in such a position as to make a full length bed, providing sleeping accommodations. During the trip, which consumed 21 days, the tourists did not put up at a hotel, and with three exceptions all meals were prepared by them on the road.

Arriving in Providence the couple visited Thomas Wilson, president of the Auto Parts Company, and Mr. Clement will, in the future, handle Apco specialties in the states of Utah and Nevada. Mr. and Mrs. Clement spent about six days touring in the New England states before starting home. They will return by the way of New York City, Washington, Philadelphia and Pittsburg, Penn., Lexington, Ky., Cincinnati, O., Frankford, Ky., South Bend and Indianapolis, Ind., St. Louis, Mo., Santa Fe, N. M., Phoenix, Ariz., and Los Angeles, Cal. Before proceeding to their home the couple will spend some time at the exposition. On the return trip the car was equipped with a number of specialties made by the Auto Parts Company.

BUILDING MANY CARBURETORS.

The Zenith Company Is Meeting with Great Success Not Only in This Country, but in Many Foreign Markets.

Zenith carburetors are not affected by the war, as four factories in as many different countries are busy turning them out, and nine prominent American manufacturers have adopted the Zenith as standard equipment. One of the important factors on which the manufacturer believes that its success is based, is the great care exercised in construction, and in the very thorough methods of testing employed, to eliminate every chance of imperfection. The float chamber, for example, has special attention both as to the action of the float and for the discovery of possible leaks in the casting, and other details are given the same care. The Zenith is made in standard sizes. Details will be supplied upon request.

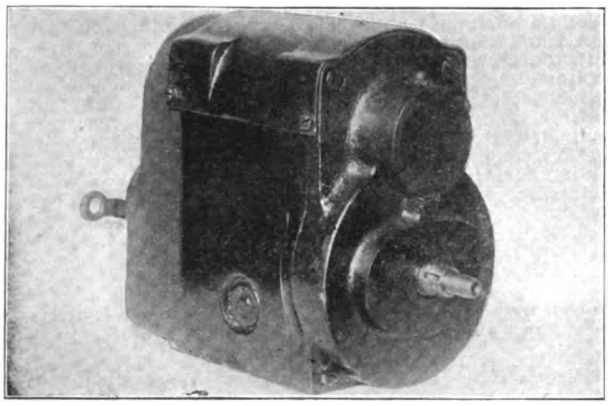
NEW MOTORCYCLE GENERATOR.

Remy Electric Company Manufacturing Lighting Dynamo Especially Adapted to Two-Wheeled Mount.

The Remy Electric Company, Anderson, Ind., is now offering a generator for motorcycles which provides current not only for lighting and horn, but for ignition.



Remy Model 15 Generator, Providing Electric Lighting and Ignition for Motorcycles.

The new product is known as the model 15, and has a tapered shaft for connection to the driving member, as in magneto practise. The circuit breaker is a part of the generator and provides variable ignition.

As with electric lighting systems for automobiles, means are provided for breaking the circuit between the generator and the battery when the engine is inoperative. This is accomplished by an automatic controller which is connected by a pipe to the intake manifold. Upon the motor starting, the suction produced in the intake manifold actuates the controller, which also cuts off the supply of current to the circuit breaker when the motor is not running. This eliminates the usual switch member.

The lighting switch has three positions, one for the main bulb of the headlight and tail lamp, one for the dimming bulb and rear light, and an off position. The switch has a locking device. The battery used with the system was specially designed to meet the requirements of motorcycle service and is stated to be non-spillable.

Complete details, including trade discounts, will be supplied by the company upon request.

"J. H." TONNEAU SHIELD.

Protects Rear Seat from Wind, Dust, Rain and Snow, and Provides the Comforts of a Limousine.

The Mutual Auto Accessories Company of America, 58-60 West 65th street, New York City, is manufacturing the "J. H." tonneau or rear seat shield, which is a French innovation, for protecting the occupants of the rear seat from the wind, dust, snow or rain. One of the desirable qualities of the device is that it is easily and quickly adjusted to a number of different positions and that, when not in service, it does not occupy any more room than a robe. It will appeal to those owners who prefer the open car and at the same time desire the comfort and protection obtained with a limousine in cold and stormy weather.

The shield is made in three-hinged sections and, sliding back and forth on arms attached to the back of the front seat, can be opened out and pulled up or pushed back as the weather conditions warrant. One of the qualities of the device is that the open car can be converted to a closed vehicle in less than a minute.

The model A is designed for large touring cars and has windows of the best grade of plate glass, also side windows of celluloid. The frame is black, brass or nickel as desired, or piano polished, satin finished mahogany. The trimmnigs are black or nickel.

The model B is for the Ford, Overland, Buick, Reo and similar types of cars. The windows are of celluloid with gun metal finish throughout. This model comes ready to attach and retails for $35. Dealers, agents and garage men should investigate the merits of the "J. H." tonneau shield, as it is a desirable device, particularly at this season of the year. The maker issues a very comprehensive pamphlet on the shield, showing its various applications, and the trade is invited to write for it and discounts.

Illustrating the "J. H." Tonneau or Rear Seat Shield, providing Protection to the Passengers in the Rear Seats from Wind, Dust, Rain or Snow—The Device Is Adjustable to Several Positions.

THE PHILADELPHIA COMPRESSOR.

Highly Efficient and Durable Equipment to Meet Any Requirement of Garage or Repair Shop.

A complete line of compressors for garages, repair shops, etc., are being manufactured by the Philadelphia Timer and Machine Company, 51st street and Lancaster avenue, Philadelphia, Penn. The compressor is air cooled and has a bore of 2½ inches and stroke of three inches.

This particular pump is a single-cylinder, straight belt driven stationary compressor, and is known as type C. It has a capacity of 1.6 free air at 200 revolutions a minute. In addition to this type, the Philadelphia concern makes portable compressors. The Velos is a complete portable electric machine, mounted on a three-wheel metal base, with long hose and wire connections, pressure gauge and safety valve. This will pump a three-inch tire tight from the flat in three minutes.

All of this equipment is of superior workmanship and of the strongest materials, thereby guaranteeing its durability. The upkeep cost is very low. Garages and repair shops contemplating a new compressor outfit will do well to investigate the merits of the Philadelphia Timer and Machine Company product. A letter or postal card addressed to the company's office will bring full particulars regarding price, selling plan, etc.

SPEDOLENE.

A Combination of Oils and Asbestos, Forming an Enduring Film Between All Contacting Surfaces.

Spedolene, manufactured by the Continental Asbestos Corporation, 7-11 Summer street, Worcester, Mass., is a combination of oils and asbestos that resists heat, obviates noise of gears and parts, and forms an enduring film between all contacting surfaces.

It is a high-grade and efficient lubricant for transmissions, differentials, timing gears, universal joints, bearings, etc., and embodies in lubricant form the heat, cold and friction resisting qualities of asbestos; in fact, Spedolene is asbestos rendered into a semi-liquid condition by a scientific process.

It is stated that Spedolene is permanent in its lubricating qualities, that it will not thin or congeal, and is especially adaptable to worn and noisy gears, obtaining quiet operation. One of the qualities of the lubricant emphasized is that it will not pack away. It completely covers the parts subject to friction. Spedolene is unaffected by climatic changes, and is impregnable to heat, cold, water or steam. It will not gum and contains no acid or other ingredients injurious to the finest metal. It comes in original packages, in five, 10, 25 and 50-pound cans. The selling proposition will be of interest to the trade, the details of which will be supplied upon request.

When writing for particulars and prices, always mention the Accessory and Garage Journal. This will assure prompt attention to all requests for information.

NEW CONCERNS RECENTLY INCORPORATED.

CAR MANUFACTURERS.

Boston Auto Auction Sales Company, Boston, Mass.; to manufacture automobiles; J. R. McPherson, J. M. Barry.

Ford Supply Shop Company, Cincinnati, O.; $5000; to manufacture automobiles; W. Pursell, Bruce Schoolfield, A. W. Kops, H. N. Smith, T. J. O'Neill.

Finley-Robertson-Porter Company, Albany, N. Y.; $100,000; to manufacture automobiles; F. Robertson, A. B. Porter, F. D. Veiller.

Simplex Tractor Company, Minneapolis, Minn.; $250,000; to manufacture tractors; J. W. Muir, G. H. Wilson, C. E. Cottrell, H. J. Hollister.

Motor Sales Company, Boston, Mass.; $50,000; to manufacture automobiles; A. L. West, R. F. Tift, W. J. Cronin.

R. H. B. Manufacturing Company, Irvington, N. J.; $20,000; W. P. Reibolt, H. J. Edinger.

Hartsough Tractor Company, Minneapolis, Minn.; $1,000,000; to manufacture tractors.

Safety Steering Gear Company, Gloucester, Mass.; $50,000; to manufacture automobiles; F. H. Tarr, H. C. Tufts.

General Transit Company, Portland, Me.; $1,000,000; to manufacture motor vehicles and accessories; E. E. Noble, E. V. Mann.

PARTS AND FITTINGS.

Auto and Machine Springs Company, New York City; $10,000; M. Kleinberg, E. Branson, I. Branson.

Auto Metal Body Works, Pittsburg, Penn.; $5000; Edward A. Schottle, L. T. Vremask, Rudolph Roitz, Anthony Gould, Charles Weggman.

Federal Body Company, New York City; $1000; O. D. Shonnard, S. Goldblatt, J. A. Cameron.

Pneumatic-Hub-Tire-Wheel Company, Wilmington, Del.; $500,000; to manufacture automobile wheels and tires; G. L. Lampton, N. M. Rowland, L. C. Evans.

Denver Ford Starter Company, Denver, Col.; $50,000; to manufacture starters; C. Miercort, A. A. Carnine.

Michigan Storage Battery Company, Detroit, Mich.; $50,000; to manufacture storage batteries; L. C. Knop, S. G. Knop, N. T. Lawson.

Globe Steel Products Corporation, Waterbury, Conn.; $5000; to manufacture ball bearings and parts; C. F. Sultemeyer, J. R. Quinn, M. Vieweger.

Perfection Coil Spring Company, Jackson, Mich.; $20,000; to manufacture coil springs; P. J. Foill, B. T. Sims, R. W. Foill, W. G. Lane.

Adams Motor and Manufacturing Company, Chicago, Ill.; $25,000; to manufacture motors and machinery; W. E. Adams, H. W. Beaton, T. J. Mullen.

H. & D. Company, Goodland, Ind.; $100,000; to manufacture shock absorbers and accessories; A. P. Hawn, C. A. Doland, J. E. Hawn.

GARAGES AND REPAIR SHOPS.

Alert Garage, Inc., Mt. Vernon, N. Y.; $10,000; P. E. Hendrick, Jr., M. C. Hendrick, F. C. Hendrick.

Cherokee Garage Company, New York City; $10,000; J. F. Fay, James Fay, F. Wengraf.

Fredonia Garage Company, Fredonia, N. Y.; $500,000; to operate a garage and conduct a general automobile business; F. Apgar, R. Forster, H. Lewis.

Fourth-Chestnut Auto Repair Company, Columbus, O.; $10,000; to operate a garage and repair shop; J. F. Steele, J. L. Steele, C. A. Lusch, E. T. Lusch, F. M. McSweeney.

Greater New York Garage Company, New York City; $5000; J. T. Owens, H. C. Owens, A. J. Beers.

Cochran's Garage, New York City; $1000; J. Spalla, L. Spalla, J. Spalla.

Salamanca Garage, Salamanca, N. Y.; $10,000; Robert N. Forbes, F. J. Eaton, C. E. Congdon.

Advance Garage Company, Chicago, Ill.; $2500; Samuel Topliff, Sigrid Erickson, Homer H. Cooper.

Ironton Garage Company, Ironton, O.; $10,000; to deal in automobile accessories; R. W. Rowland, I. L. Riley, T. N. Erskine, W. R. Edwards, A. C. Robinson.

Globe Garage Company, New York City; $3000; Philip Lauter, Ignatz Lauter, Morris M. Gruber.

Patnaud's Garage Company, Troy, N. Y.; $1000; to conduct a general automobile and garage business; Davis P. Benjamin, Harry Benjamin, Albert B. Wolf.

Princeton Motor Garage Company, Princeton, N. J.; $15,000; C. Grissom, C. H. Vaugh, E. M. Speakman, C. A. Gatt, J. W. Lowrey.

South Bend Garage Company, South Bend, Ind.; $5000; A. D. Parker, G. W. DeClements, D. C. Rogers.

Fireproof Garage Company, New York City; $5000; James R. Pierson, Samuel Riger, Thomas McD. Caffrey.

ACCESSORIES AND SUPPLIES.

Standard Tire and Rubber Company, Albany, N. Y.; $250,000; to manufacture tires and supplies; F. R. Hansell, G. H. Martin, S. C. Seymour.

Dewesee Auto Safety Signal Company, Detroit, Mich.; $1500; A. A. Gottfield, L. P. Gottfield, C. Edison, C. Young.

Hood Tire Company, Watertown, Mass.; $20,000; to deal in tires and supplies; E. L. Aldrich, H. C. Mason, H. E. Rose, R. Muir, C. W. Dailey, Jr.

Standard Auto Supply Company, South Bend, Ind.; $10,000; Ignatius K. Werwinski, James E. Scott, Joseph Kish, Jr., Julius Fodar, Charles Jones.

K. L. Manufacturing Company, Casey, Ill.; $100,000; to manufacture gasoline dispensers; W. B. Linn, C. E. Bennett, J. H. Parker.

Gibney Tire and Rubber Company, New York City; $100,000; to deal in tires and accessories; F. Netschert, J. Dunsmuir.

Webber Manufacturing Company, Needham, Mass.; $50,000; to manufacture automobile supplies; H. St. James, A. H. Webber, J. J. Kingsley.

Western Auto Supply Company, Kansas City, Mo.; $20,000; George Pepperdine, Lena Pepperdine and others.

Penn Traffic Company, Dover, Del.; $150,000; to deal in automobile tires; W. Boyd, W. I. N. Loffland, W. F. P. Loffland.

Traver Puncture Proof Tire Company, Far Rockaway, N. Y.; $400,000; to manufacture tires; O. D. Shonnard, S. Goldblatt, J. A. Cameron.

Eclipse Manufacturing Company, Indianapolis, Ind.; $50,000; to manufacture automobile accessories; Willis S. Brown, Willis S. Brown, Jr., and R. M. Franklin.

Brogan Graham Manufacturing Company, Philadelphia, Penn.; $5000; to manufacture automobile supplies; William T. Graham and others.

Protective Tire Company, New York City; $20,000; to manufacture tire protectors: I. Neustaedter, H. J. Rosenbloom, A. Alexander.

Simplex Tire Repair Company, Omaha, Neb.; $3000; to deal in automobile tires; Clement E. Lambert, Benjamin Mandelstam, May Mandelstam.

Maher Manufacturing Company, Libertyville, Ill.; $50,000; to manufacture and deal in automobile accessories; Nathan L. Maher, Lucas W. Maher, Elton C. Armitage.

Needham Tire Company, Boston, Mass.; $350,000; to manufacture automobile tires; J. S. Patterson.

Western Sales Corporation, Buffalo, N. Y.; $15,000; to manufacture tire fillers, automobile accessories, etc.; Charles H. Taylor, Thomas Catlin, Sherman A. Hooker.

Ford Tire and Tube Company, Cleveland, O.; $10,000; to manufacture tires; E. E. Rodd, C. V. Liggett, U. L. Henry, C. A. Levy, L. Ulmer.

Hanson Peacock Corporation, Brooklyn, N. Y.; $1000; to manufacture automobile tires; Joseph L. Young, Selma Hietenstein, E. Katherine Payne.

H. S. Macomber & Co., Boston, Mass.; $15,000; to deal in lubricants; H. S. Macomber, L. F. Macomber, F. L. Stone.

Arthur R. Tator Company, Brooklyn, N. Y.; $1000; to deal in automobiles and supplies; Arthur B. Tator, Hugh Foster, John F. Undutsch.

Auto Accessories Company, San Francisco, Cal.; $10,000; to deal in automobile accessories; H. K. Wolff, D. K. Seibert, S. Simmons.

Delaware Tire Sales Company, Indianapolis, Ind.; $1500; to deal in automobile accessories; Charles M. Nesbitt, William T. Allen, Collin L. Sawyer.

C. R. & J. J. Phillips Company, Mannington, W. Va.; $10,000; to conduct a garage; Charles R. Phillips, James I. Phillips, Mary E. Phillips, Otha Phillips, Laura McCrea.

AUTOMOBILE DEALERS.

Utica Mitchell Motor Car Company, Utica, N. Y.; $1000; L. Denosky, Isaac Denosky, J. William Seaton.

Parkside Automobile Company, Lorain, O.; $10,000; T. G. Row, R. G. Wurmser, H. G. Alger and others.

People's Garage Company, Davenport, Ia.; $10,000; Frank Jungjohann, Henry Jungjohann, August Youngerman.

Brosius Automobile Company, Fort Wayne, Ind.; $3600; Jesse Brosius, Harry Brosius, Andrew Brosius.

Automobile Securities Company, Chicago, Ill.; $2500; H. T. Potter, K. M. Lorenz, L. I. Bretz.

Armored Motor Car Corporation, New York City; $6000; J. H. Allen, R. J. Raulsir, R. E. Rogers.

Grand Concourse Service Company, New York City; $1000; J. M. Ireland, M. A. Ireland, C. Haffen.

Motorcycle Car Corporation, Buffalo, N. Y.; $10,000; A. E. Bennett, E. W. Bennett, C. M. Babbitt.

G4 EISEMANN MAGNETO.

Latest Instrument of the True High-Tension Type, Employing New Form of Interrupter Mechanism.

The Eisemann Magneto Company, Brooklyn, N. Y., has brought out a new form of true high-tension magneto which is designated as the type G4. It is intended for four-cylinder motors and not only is the construction very simple, but it is thoroughly water and dust proof.

One of the interesting features of the new instrument is the interrupter mechanism, which virtually comprises two springs, a pressure and a contact, and the last-named member carries the platinum contact point, which is normally in touch with an adjustable contact screw attached to a bronze plate. This plate rotates with the armature shaft.

The break of the points, or interruption of the primary current, is obtained by two fibre cams set at 180 degrees, or diametrically opposite. These cams are attached to the timing lever body and, as the armature shaft revolves, the cams move the contact spring and its point away from the fixed point.

Another feature of the type G4 is the method of attaching the high-tension cables to the distributor plate. The leads pass through the plate and the strands of wire are secured by a locking device. This construction prevents the entrance of moisture and also eliminates outside terminals. All components are easily accessible and, throughout, the same high-grade material and workmanship for which the products of the company are noted are incorporated. An interesting booklet, illustrating and describing the new instrument, will be supplied free for the asking.

RAYBESTOS SERVICE.

Royal Equipment Company Maintains Supply Stations Throughout Country, Carrying Complete Stock.

The attention of the trade is called to the announcement of the Royal Equipment Company, 1380 Bostwick avenue, Bridgeport, Conn., to the Raybestos service. The company has over 100 distributors, all carrying a complete stock of Raybestos brake lining, in 57 cities, and any mail, telephone or telegraph order will be promptly filled. Each service station will give attention equal to that obtained at the factory, to all requests for brake lining and brake data. The Royal Equipment Company guarantees Raybestos brake lining to endure for a year on all pleasure motor vehicles and light trucks, and an unusual feature of the guarantee is that no limitation is placed on the number of miles driven or the character of the service. The company maintains an engineering department whose services are at the disposal of the trade requiring information upon installing and maintaining brakes and linings.

ATTRACTING TRADE.

Weed Chain Tire Grip Company Co-Operating with Dealers in Building Up Business.

The Weed Chain Tire Grip Company, Bridgeport, Conn., is co-operating with the trade handling its well known tire chains, and offers to send an attractive board for the display of the cross chains which are constantly in demand by users of tire chains. The stocking of tire chains, particularly at this season of the year, means a quick turning over of the money invested, and a display of the chains will attract a desirable new clientele. New concerns, as well as old, should write to the company for the display board to which reference has been made.

BRINGS OUT NEW SIX.

Grant Motor Company Announces Machine Having Electric Lighting Starting, for $795.

Announcement is made by the Grant Motor Company, Findlay, O., of a six-cylinder, five-passenger car having complete equipment, including electric lighting and motor starting, and to sell for $795. The wheelbase is 106 inches and the body is the latest streamline design. The new machine will sell for $750 without electric lighting and starting, the lighting system supplied being acetylene.

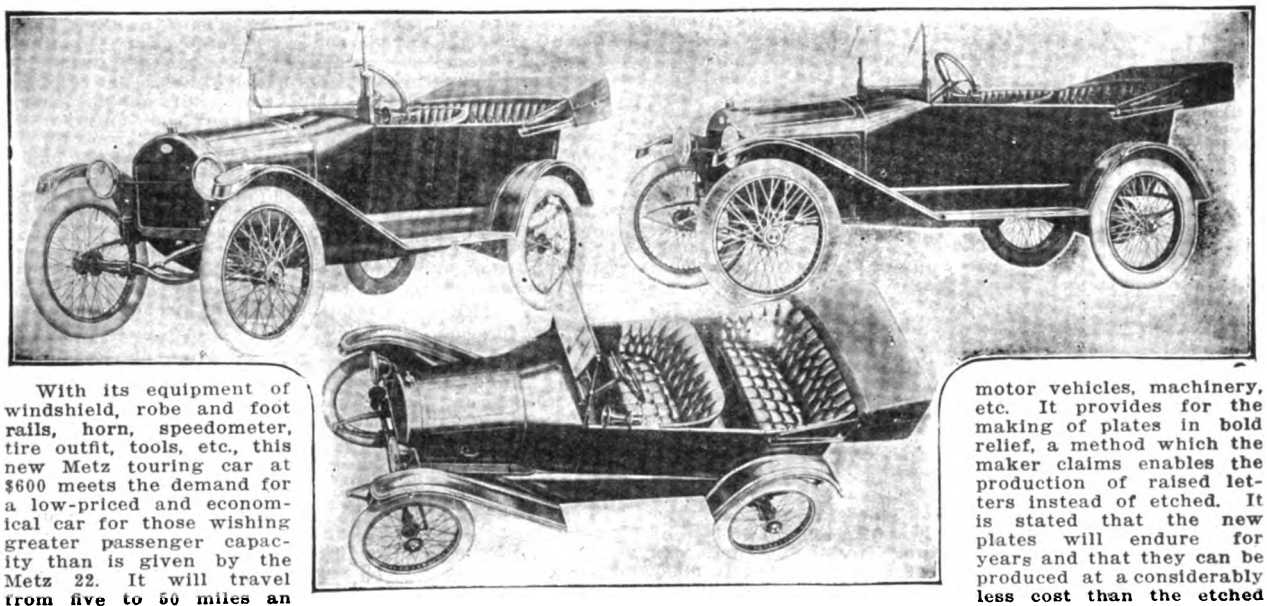
METZ OFFERS NEW LINE FOR 1915.

WITH the recent addition of the new touring car, the Metz Company offers a line which should prove most profitable for dealers. The Metz 22, with its new body and thoroughly up-to-date appointments and, what is of more importance, its unapproached record of performance under all conditions, needs no comment. Its position is established and its selling qualities known. The touring model, supplying the demand for a light and inexpensive car for the whole family, will without any doubt establish for itself an equally favorable position, for it possesses all of the distinctive Metz features and many individual refinements of its own. The motor is 3⅞-inch bore by four-inch stroke, developing 25 horsepower, and is equipped with a Bosch high-tension magneto and an A. W. T. carburetor. The Gray & Davis electric lighting and starting system is used, with two sets of bulbs in the searchlights for dimming. The wheelbase is 105 inches, with a streamline body mounted on full elliptical springs, tapering hood, and wire wheels equipped with 32 by 3½-inch Goodrich clincher tires. There is ample room in both compartments, which are fitted in the best manner, the seats being heavily upholstered in the best quality of material, with deep tilted cushions to ensure a maximum of comfort. The instant one-man top fits closely over the windshield so that, when the side curtains are raised, the interior is practically weather proof. The Metz fibre grip gearless transmission entirely eliminates clutch and gear troubles. The well known Hyatt roller bearings are used.



Three Views of the New Metz Touring Car, Showing Tapering Radiator, Streamline Body and Roomy Compartments.

With its equipment of windshield, robe and foot rails, horn, speedometer, tire outfit, tools, etc., this new Metz touring car at $600 meets the demand for a low-priced and economical car for those wishing greater passenger capacity than is given by the Metz 22. It will travel from five to 50 miles an hour, and at a cost for gasoline, tires and upkeep far below the average. Metz reliability has been demonstrated over and over again, and this latest product, embodying as it does every essential Metz feature, will give the same record of service as have the earlier models. Moreover, it is a beautiful car, and in no detail of appearance inferior to machines costing twice as much. It has style and is complete in all appointments—in short, it is a classy car which any owner may take pride in, and which will give him the maximum of pleasure and satisfaction, as well as service, at the minimum of expense. It would be hard to find a stronger combination from a selling standpoint than the two Metz models, which completely cover the light car field. From the standpoint of the dealer there is the very great advantage in this line of a long record, not only of actual service, but also of performance, which has surpassed some cars of the highest price. The dealer selling the Metz knows what it will do and the kind of service his customer is buying, and the purchaser knows, too, that he is running no risk. Metz cars are of known value, the prices, quality considered, cannot be approached, and their reliability and economy are established beyond question. Such a line cannot fail to be a source of profit and satisfaction to dealer and user alike.

MERCURY CYCLECAR COMPANY SOLD.

The Michigan State Auto School, Detroit, Mich., has purchased the Mercury Cyclecar Company of that city and will continue to produce Mercury cars at a reduced price. The new concern will supply parts for any Mercury model.

ANNULAR BEARINGS REGROUND.

Ahlberg Bearing Company Is Equipped to Refit All Types and to Supply All Sizes and Makes from Stock.

The business of the Ahlberg Bearing Company, with offices at 1790 Broadway, New York City, and in Chicago, Detroit and Boston, consists not only in regrinding bearings and the production of special types, but it carries on hand at all times a complete stock of standard types in a great variety of sizes. These are reground, but in every respect are of the same accuracy as new bearings, giving excellent service at a low price. A complete stock of new bearings of various kinds is also kept constantly on hand. Full information will be supplied on a request addressed to any branch.

NEW NAME PLATE PROCESS.

Obtains Plates with Letters Raised from Background and Is Adaptable to Motor Vehicle Parts.

The Federal Name Plate and Novelty Company, 732 Federal street, Chicago, Ill., which concern was reorganized recently, announces the perfection of a new process for the manufacture of name plates for radiators, motor vehicles, machinery, etc. It provides for the making of plates in bold relief, a method which the maker claims enables the production of raised letters instead of etched. It is stated that the new plates will endure for years and that they can be produced at a considerably less cost than the etched type. The material employed is a special hard metal, one that will withstand an extremely high temperature. The plates can be made in any desired thickness and in copper, brass or silver finish. The process is stated to be covered by patents. Samples and details will be supplied free upon request.

PORTER ENTERS AUTOMOBILE FIELD.

Former Chief Engineer of Mercer Automobile Company Organizes Concern to Build the F. R. P. Car.

F. R. Porter, formerly chief engineer of the Mercer Automobile Company, has organized the Finley Robertson Porter Company and will produce a 100-horsepower, 140-inch wheelbase model, completely equipped. The car is to be built in the old plant of the Metropole Car Company, Port Jefferson, Long Island. The motor has a bore of 4.6 inches and stroke of 6¾.

NUCKOLS JOINS VALVOLINE.

Former President of Columbia Motor Car Company Made a Director.

Announcement is made of the purchase of important interests in the Valvoline Oil Company, New York City, by Henry W. Nuckols, formerly president of the Columbia Motor Car Company, Hartford, Conn., and now with the Packard Motor Car Company of New York. Mr. Nuckols will become a director and an administrative officer of the Valvoline Company.

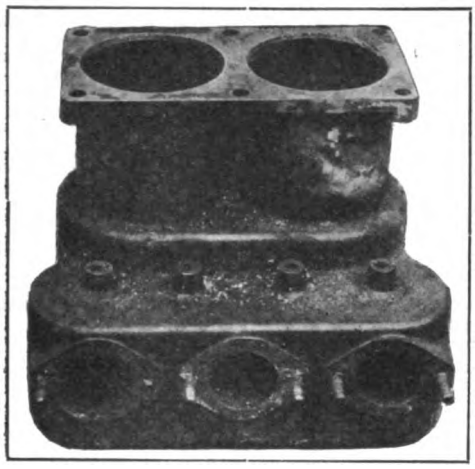
THE COMMERCIAL ADVANTAGES OF WELDING.

By O. W. Whiteman.

UNTIL recently there was only one thing that the garage man could do with a broken part, and that was scrap it, but today he can use it. This is made possible by the oxy-acetylene welding process. Perhaps there is nothing that would save the automobile owner more money than the saving of broken parts, and perhaps there is nothing that has netted the garage man more profits than the saving of broken parts for the car owner. Take for instance a broken automobile frame: The car owner is bewildered at cost of taking off the old frame, the time his car will be laid up while his new part is coming from the factory, and the cost of putting it on, but once he has learned the practicability of welding, his bewilderment will be at an end and, instead of losing the use of his car while the new part is being ordered and standing the additional expense of putting it on when it comes, he can take his broken car to a welder and, in two hours' time and for less cost than a new frame, he can have the broken one stronger than it ever was before.



A Welded Cylinder.

We might say in 99 per cent. of the cases, a broken part can be welded more cheaply than the cost of replacement with a new part. But a doctor who must use his car constantly does not think of the cost of the new part so much as he does of the time he will be unable to use his car. Here is where welding comes to the rescue and makes possible a rapid repair and gives the doctor the use of his car immediately, and oftentimes when the new part comes it is for an earlier or later model and does not quite fit, so there is a further delay, or perhaps the people who made the part are out of business and, if it were not for welding, a new part would have to be cast. Take, for instance, a $5000 truck with a crack in the intake manifold: This part could be very easily replaced and at not much expense; but the loss of the use of the truck means much to the owner. He would gladly buy a new part at any price, but it must come from the factory. Here the welder steps in and performs a real service; he takes the broken part, and in half an hour makes it as good as new. The car owner is willing to pay for this kind of service, so the garage man can make a good profit and still satisfy his customers.

Automobile manufacturers are oftentimes not very considerate of the car owner when he is broken down. If lower half of a crank case is broken, they may demand that he buy both upper and lower halves, when only the lower half is needed. The writer has in mind an example similar to this where the centre bearing was broken out of the lower half of the crank case and the car owner, asking the price of the lower half, was told that to get the lower half he would have to buy both the upper and lower. To do this meant the expenditure of about $200, $100 of which there was no need of at all, so the car owner began to look for a cheaper way and came to a welding shop. Here he found that he could have the broken case fixed for $12.50. The welder made some money and the car owner certainly saved a considerable sum.

Now that we have looked at the economical advantages of welding, let us look more directly to its character. Oxygen and acetylene are the two gases most generally used in welding. Oxygen is always used as oxygen must be present to support any flame. Compressed air could be used to produce a flame of low temperature, but at the same time it is oxygen in the compressed air that supports the combustion. Acetylene is used as it gives off more heat than can be produced by the burning of any other gas. Oxygen and acetylene burning together produce about 6300 degrees Fahrenheit, which is sufficient to melt any metal. The following metals melt at the temperature set opposite them:

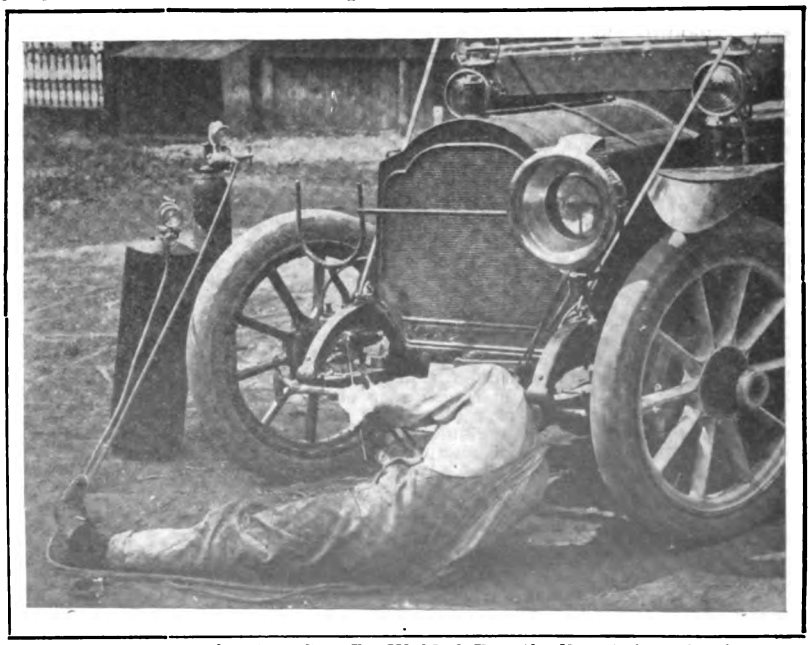
	Degrees Fahrenheit
Platinum	4500
Iron, wrought	3800
Iron, pig	2200–3000
Nickel	2900
Iron, cast	2700
Steel	2550
Glass	1600–2300
Brass, common	1500–1900
Phosphorous bronze	1850
Copper	1850
Aluminum	1300
Antimony	790
Zinc	775
Lead	620
Bismuth	518
Tin	512

One thing that has helped the welding industry as much as anything is the ease with which one can secure supplies of oxygen and acetylene. For an acetylene supply one can use the ordinary automobile lighting cylinder, or one can buy or lease a regular welding cylinder from the same companies that make the automobile lighting cylinders. Oxygen usually comes in cylinders which contain 100 feet. Most companies do not charge anything for the use of the cylinders, but only for the gas used. When the tank is empty it is returned for another, and if the tanks are returned within a reasonable time there is not even a rental charge made.

Now let us consider the equipment. Recently there has been great advancement in the welding industry, and a factor that has contributed largely towards this progress is the placing on the market, by the Waterhouse Welding Company, of a torch that will not flash, or permit the gases to burn back into the head of the torch, which has been the tendency of all torches heretofore.

Now as for reducing valves which must not be neglected: In a high pressure oxygen tank the oxygen is compressed to a pressure of 1800 pounds. Now it is of the utmost importance that the regulators and gauges be built strong enough to govern this great force, but today the greatest and largest welding manufacturers have it down to a science, and some of the better ones guarantee their regulators and gauges for one year, which really means that, if they will last for a year, they will last forever.

A few years ago the price of a welding equipment was almost prohibitive. Then there were too many manufacturers striving for the field, but today the question has come down to the survival of the fittest and, as a few are doing the business of the country, they are able to make equipments in large quantities and to sell at a much lower figure.



The Frame of a Car Can Be Welded Practically at Any Angle.

NEW APCO CATALOGUE.

Auto Parts Company Issues 1915 List of Ford Specialties, Parts, Etc., at New Prices.

The Auto Parts Company, Providence, R. I., maker of Ford specialties, equipment, parts, etc., and whose trade name, Apco, is known to every Ford dealer and owner in the country, announces that its 1915 advance catalogue is ready for distribution.

It contains illustrations and descriptions of a large number of new devices for the Ford car, and these will appeal to the owner, as they solve many of the operating and maintenance problems. Particularly noticeable are the winter accessories and equipment, these including a practical and efficient motor starter. All of these devices were thoroughly tried out before being placed upon the market.

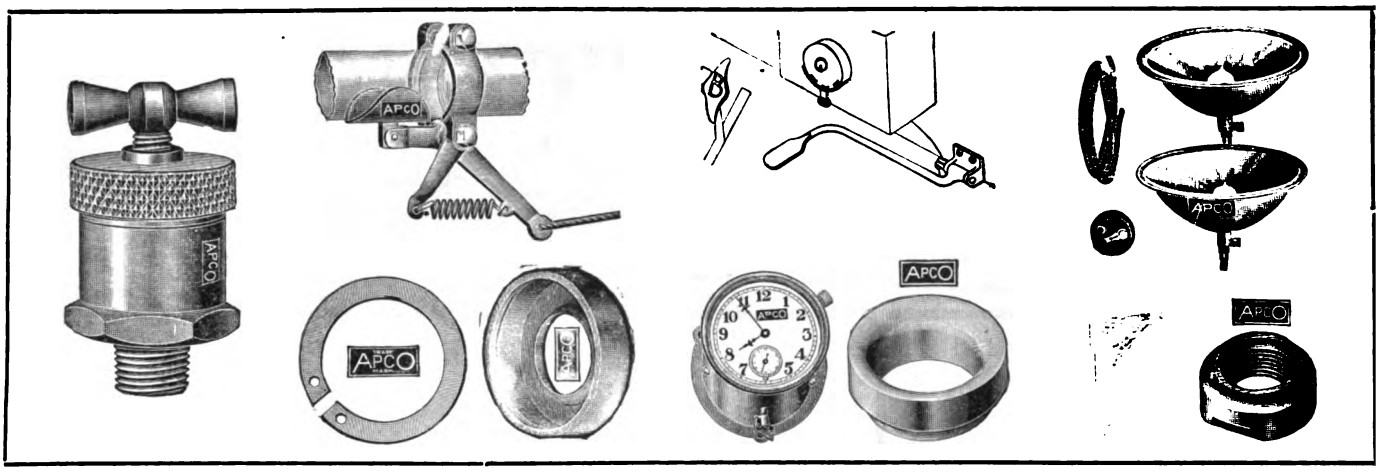
The owner who maintains his own car will be interested in the large number of tools and parts manufactured by the Auto Parts Company. The Apco tools make possible the complete overhaul of the chassis with a minimum of effort, and the line should be one of the best sellers of the year.

The prices of many of the Apco specialties have been reduced, enabling the dealer to obtain a large volume of business in his territory and, as in the past, the discounts are very attractive. Many of the devices marketed by the Auto Parts Company are covered by broad patents, protecting the dealer at all times.

Among the new parts brought out is a special piston ring, which prevents oil from working into the combustion chamber, electric lighting equipment, dash oil gauge, headlight brace, windshield cleaner, etc.

The products of the Auto Parts Company are sold with a very broad guarantee, and the trade mark Apco is an assurance that the workmanship and material are the best. The co-operative policy of the company is broad.

The 1915 catalogue and trade prices will be supplied upon request.



Showing a Few of the Apco Specialties Produced Especially for the Model T Ford Car by the Auto Parts Company, Providence, R. I.

BRUNNER AIR COMPRESSORS

TWO CENTS A YEAR

The Average Repair and Replacement Expense of All Brunner Compressors Sold During a Period of 6 1-2 Years.

A fact established by an audit of the books of the Brunner Mfg. Co., by Barrow, Wade, Guthrie & Co., Certifed Public Accountants. Your banker will inform you of the standing of this firm.

This record covered all Brunner machines in service, motors and accessories, for six years and seven months.

SPEDOLENE

THE WONDER LUBRICANT

IN ECONOMY

SPEDOLENE in every instance in service has given twice the mileage that could be obtained from the same volume of any other lubricant. Every test has proven this saving of at least 50 per cent. under all conditions of operation.

This is SPEDOLENE Economy.

IN EFFICIENCY

SPEDOLENE gives greater power, increasing the mileage from a given volume of fuel or the same mileage from a lesser volume. It cannot change chemically. It is not affected by low temperatures. It resists heat. It prevents noise and it will not flow or drip.

This is SPEDOLENE Efficiency.

IN LUBRICITY

SPEDOLENE consists of asbestos and the best mineral oil. It is a pure mineral lubricant. It is fluid and mobile, penetrates between all bearing surfaces. The asbestos cushions the gears and carries all the loads. It cannot gum, it cannot solidify, and it maintains its lubricating qualities to the last ounce. It is for all parts of a motor vehicle except the engine.

This is SPEDOLENE Lubricity.

Made in two grades—Grade S for the average machine, and grade SS for worn and noisy gears. Packed in 5, 10 25 and 50 lb. cans, and barrels and half-barrels. Delivered under seal.

Dealers proposition on request.

THIS BOOK MEANS PROFIT TO EVERY DEALER AND GARAGE MAN

IT'S THE DEALERS' MASTER PRICE LIST ON BRUSH, COLUMBIA, COURIER, EVERITT, MAXWELL-BRISCOE AND STODDARD-DAYTON CARS

Everywhere you will find some of the 122,000 cars that were built under the above names.

At some time or other each of their owners will require repair parts. **You—Mr. Dealer, Mr. Garage Man—might just as well secure some of the profits to be had on the parts and the work.**

This 417 page Master book, which is free for the asking, covers all the different models of the above cars and is conveniently arranged and indexed for handy reference.

The big Maxwell Plant at Newcastle, Indiana, is devoted exclusively to the manufacture and storage of parts for these cars. Twenty-four to forty-eight-hour service is given to any part of the country. Prompt and efficient service is guaranteed to dealers in the far West from the San Francisco warehouse.

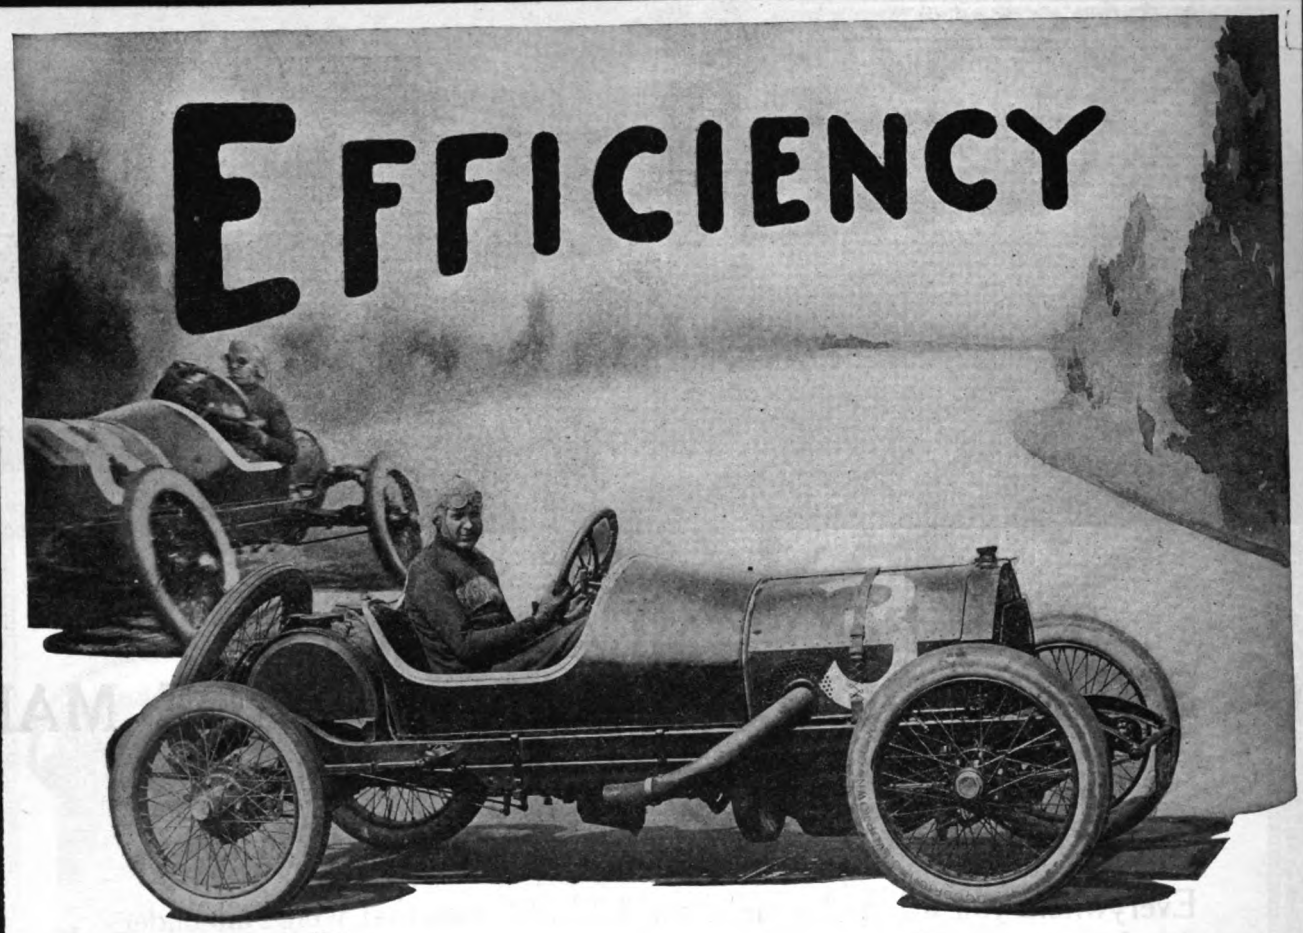
EFFICIENCY



JACK LE CAIN SAYS:

After a season of racing, covering the Brighton Beach, Galveston, Trenton, Hohokus and other events, my four tires still contain the original air from last June.

My wheels are Houks and I have never found it necessary to dismount them for any purpose whatever. From long experience I know that Houk Wire Wheels are easier on tires than any other made.

Jack LeCain

EFFICIENCY

If Jack Le Cain after long experience selected HOUK wire wheels for the equipment of his car, which he knew was to undergo unusual abuse—

And if the wheels which he did select met every requirement and fulfilled every need—

And if this is not a single incident but merely a part of a long record of successes—

What argument can there be strong enough to induce you to equip your car with any other wheel?

Exclusive agencies are open for the worth-while dealer in many localities. Every present owner of a car is a prospect, for HOUK wire wheels are made in sizes to fit all cars. Write to-day for proofs of our proposition.

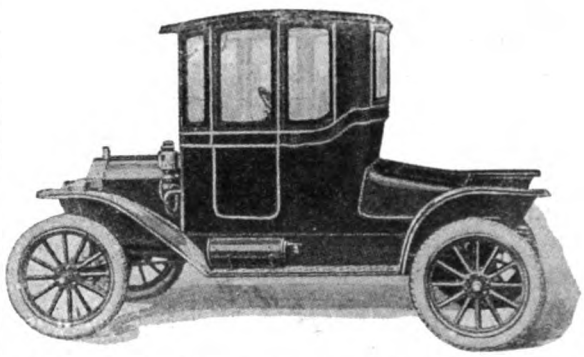
Runabout to Ford Coupe in 50 Minutes

Dealers: Ford Owners Are Certain Prospects!

No Investment to Make, No Stock to Carry, Immediate Deliveries, and with the Resources of One of the Largest Body Building Companies of America to Draw Upon, If You Sell Highland Equipment.

HIGHLAND COUPE TOPS

Are a standard stock equipment, that can be mounted on any Ford Runabout by removing the folding top and windshield, without changing fittings or the use of special tools. Two men can handle a top with ease. No mechanical experience is necessary. The change to a Runabout is as quickly made. At a very moderate cost the owner has an open or an enclosed car when the service of either can be best utilized.



HIGHLAND COUPE TOPS are standardized. They are designed to the best engineering principles, built of high grade materials, are handsomely trimmed and finished, are perfect in lines and consistent in appearance, and are equal to limousine construction in all details. They are guaranteed in every respect.

HIGHLAND COUPE TOPS are so constructed that any variation in the location of the original body irons is compensated for by the adjustment of the means of mounting. They can be changed from one car to another. The owner can change his machine and have the top serve equally well.

Little storage space is necessary when not used.

The Highland line of commercial bodies for Ford chassis is the largest and best produced by any body manufacturer in America. Types for all purposes ready for shipment.

Complete detail, catalogues, prices, etc., supplied at request.

PERFECT LUBRICATION WITH ANY FUEL

MONOGRAM OIL

"Zoline", a new motor fuel, was officially tested at the Indianapolis Speedway Nov. 19, 1914, a Marmon touring car, with top and windshield raised and carrying four passengers, being driven 1032 miles, at a rate of 50.2 miles for 20 hours and 32 minutes, making a world's record.

MONOGRAM OIL

was the lubricant used. Examination of the motor at the end of the trial showed it was in condition to continue indefinitely.

No greater demonstration was ever made of the perfect lubricating qualities of Monogram Oil.

PRIME FROM THE SEAT NOT FROM THE STREET

The coldest motor will start on the first turn when the cylinders are sprayed by the

Chaney Engine Primer

Operated from the seat, positive in action, unfailing in result. It forces a charge of gasoline spray directly into the combustion chamber. The first spark means sure fire. The primer is always ready for it draws its fuel supply direct from the gasoline line leading to the carburetor. This fuel is driven to the cylinders by a positive plunger pump on the dash, operated by the driver. Each cylinder is connected with the pump by a fine pipe line.

Wintry weather means hard starting with ordinary summer equipment. Gasoline is slow to vaporize, motor is chilled, oil stiff, piston rings stick, battery overworked. Under such conditions the best starting device needs re-enforcement. The Chaney Engine Primer does away with all starting difficulties and relieves the strain on the batteries of electrically started cars.

DEALERS:

Here is a business booster for the cold days. Now is the time to get in line. Write for details and selling terms.

R. S. MUELLER & CO., 431 High Ave., S. E., CLEVELAND, OHIO

Friction is slowly, surely sending your car to the scrap heap. In spite of the best lubricating oils and greases, it continually wears away the finest bearings. Every bearing is full of little holes and pin points that can readily be seen with a microscope. It is these that cause friction. Dixon's selected flake graphite is the only lubricant known that will fill up these holes and build up around these pin points a smooth, oily veneer that grows finer and more smooth by continual use and wear. It is unaffected by heat or cold. It will not turn thin.

DIXON'S GRAPHITE

AUTOMOBILE LUBRICANTS

The Joseph Dixon Crucible Company are the only people in the world who produce this peculiar form of graphite. With this rare form of flake as a basis we have produced a line of graphite lubricants specially designed for every separate part of the car. Try Dixon's Transmission and Differential Grease No. 677 on your car and see what a difference it will make in mileage and smoothness of running. Dealers who sell real service know and recommend Dixon's Graphite Greases.

Made in JERSEY CITY, N. J., by the

Joseph Dixon Crucible Co.

DO TIRE REPAIRING

Tire Repair Shops are needed everywhere. The millions of tires in use make it a whaling big business—and there's big profit in it.

How to Get the Bulk of the Brake Lining Business

Trade Advice:

Sell the Brake Lining you would buy yourself.

If you follow this plan you will build up a better business and make more money in the end.

Look at it from your customers' standpoint. They know that the quality of RAYBESTOS is supreme. They know that its service is superior to that of any other brake lining. They know that it is backed by the most comprehensive guarantee ever given any brake lining.

These factors are more potent in swinging the bulk of the brake lining business to you than any other consideration.

Getting the benefit of the prestige, quality and service of RAYBESTOS to help build up your business is worth far more to you than a little longer discount on some other brand of brake lining. Longer discounts are aimed to attract you.

Your customers do not benefit.

You cannot give them any better quality—nor more attractive prices. Service in a brake lining is what they want. Service and a cut price never yet went hand in hand. The quality—the prestige—and our business-like methods of distributing RAYBESTOS constitute too much of an asset to you for you to be tempted by smart selling methods.

RAYBESTOS discounts are fixed—the same to each and every dealer. We believe in a square deal for everybody and we treat everybody exactly alike.

Quality is put into RAYBESTOS to insure service. The service of RAYBESTOS is definitely guaranteed. In every big city in this country there is a good, reliable concern which carries a complete stock of RAYBESTOS, ready to supply your needs on telephoned, telegraphed or written order. Any one of these concerns will quote our standard discounts to the trade—their discounts are the same as we would quote you direct. Their nearness to you, and their ability to make immediate deliveries of either large or small quantities makes it unnecessary for you to carry more than an easily handled stock for your immediate requirements.

One Flash Shows the Way

The C-S SEARCHLIGHT will complete the equipment of the ideal car. A powerful searchlight, of small size and weight, mounted on a double-swivelled bracket, to be clamped to the windshield, it can be operated by the driver to throw a ray in any direction or angle, with which signs and numbers can be read at 200 feet.

The lamp is furnished with a self-contained switch, no additional installation being necessary. The lamp is highly polished brass, three inches diameter, with high-grade lens and an eight-candlepower helical coil tungsten bulb, and is fitted with a focussing device so that its full efficiency may be obtained at any distance.

This lamp is a decided ornament to a car, is useful in innumerable ways, and is the greatest value ever offered to the trade.

The C-S Searchlight equipment includes a lamp, bulb, bracket, extension cord and attachment plug.

The list price is $2.50. Dealers, discount sheets and catalogue are ready!

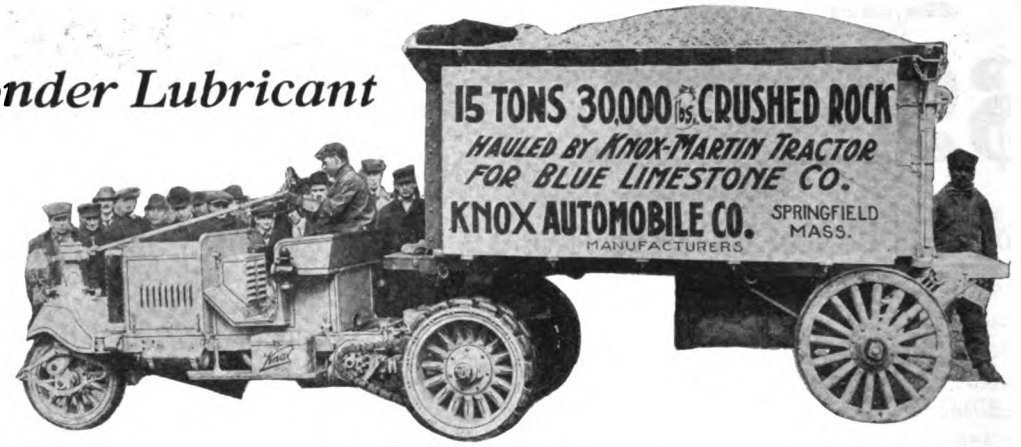
SPEDOLENE

The Wonder Lubricant

For Every Service



SPEDOLENE FOR BIG LOADS

Any machine, when worked to its capacity, must be thoroughly and perfectly lubricated. When not so lubricated, the wear is proportionate to the degree of lubrication.

SPEDOLENE is compounded from highest grade asbestos and refined mineral oil. It cannot change chemically, cannot affect metals, is heat resisting, and it cannot flow or drip.

SPEDOLENE has been proven for years by use by railroads and for heavy duty lubrication. It will penetrate between any bearing surfaces, affording lubricity and carrying the loads. It cushions all gears and effectually prevents wear and noise.

GREATEST ECONOMY! HIGHEST EFFICIENCY!

In economy SPEDOLENE cannot be equalled because it gives perfect lubrication for twice the mileage that can be obtained from a similar volume of any other lubricant, with less maintenance and upkeep cost, less fuel expense, and greater service life for the vehicle. It is equally efficient for all parts of a motor car except the engine.

Made in two grades—Grade S for the average machine, and Grade SS for worn and noisy gears. Packed in 5, 10, 25 and 50 lb. cans and barrels and half-barrels. Delivered under seal.
